PHILADELPHIA, EIGHTH MONTH 31, 1889.

HELP THAT IS HELPFUL.

ONE of the most difficult problems of our present civilization is what to do for that large class of its working force, mostly women, who are barely able to earn a living at the best of time and when disabled by accident or disease have nothing to fall back upon but the dole of charity. These struggling women are often widows or deserted wives with from one to five or six helpless children to provide for. We all know of such; they come into our houses for a few hours, or a few days, service as occasion requires, and if the milk of human kindness is not wanting we are moved with pity for their condition, and wonder how a burden so heavy can be carried without murmuring. We set about the effort to render them assistance and make the load of life less heavy. And how is this to be done? There is always a right method of doing everything we undertake, but to find that right way is a phase of the problem that is of the utmost importance both to ourselves and to those whom we are anxious to help. First of all let us follow the great Pattern and give them ourselves, reaching down to their level,—giving the hand of sympathy and encouragement and making them feel that we are their friends and are interested in their welfare. This is the entering wedge of influence. The heart of a true woman throbs in unison with the heart of every other woman who needs the infusion of a better life into her own; and it should not be grudgingly bestowed.

The money she has earned, is hers by right of service; but this that money cannot represent is hers also by right of the womanhood which she shares with all women and, though she may be wanting in all the finer instincts of the womanly nature, consider what has made you to differ, put thyself in her place without reservation, and find if thou canst, wherein the difference lies; then thou wilt be able, in a measure, to see how little reason there is for any to be boastful or presuming.

Then there should be the most scrupulous exactness in the payment for whatever service is rendered; to count every half-hour of overwork is but even-handed justice, the employer has no more right to

the extra service without its reward than has the laborer to ask full pay where full labor has not been given. This seems to many a very small matter, but the wage-worker who feels she has the confidence of her employer often wrongs herself in this way. The poor widow who, casting two mites into the treasury of the temple, cast in her whole living, is a fair example of her class, very many of whom are scarcely above want themselves because of the readiness with which they respond to the want of another.

While there should be no withholding of the reward of labor, nor any cheapening of the work below a fair compensation, it is equally important that we guard against a sudden impulse to over-pay, which has a tendency to make the recipient dissatisfied with the general rate of wages. While over-paying is an easy way to dismiss from the mind the concern that may arise in her behalf, it is not the right way to encourage her self-respect. If she is a good worker recommend her to others needing the service she can render; if she is not capable and needs training, point out to her where she fails, and help her to do better. Do not feel released while there is any willingness to take advice or any evidences of improvement. There are so many who are obliged to work at any service which may offer them a bare subsistence, who have grown to womanhood in ill-ordered homes and without the training in homely duties that was their due, that we are constantly put to extremities for lack of proper service from those to whom we apply and for whom our interests are awakened.

Then, again, there are the little children of our workers. How many ways a prudent but warm-hearted woman can find to be helpful to these, and if she embrace every right opportunity another bond is strengthened between them. Let all the intercourse be uplifting, and in the innumerable ways which only women can understand and utilize let the great sisterhood of struggling women be made to feel that they are necessary to the carrying out of the world's endeavor, and are none the less worthy of respect because the service is humble and laborious, needing more of brawn than brain, and accounted as drudgery by the thoughtless. The words of a quaint writer of two centuries ago are aptly in place here:

"Who sweeps a room as by God's law,
Makes it and the action fine."

WE shall be sure of Divinity if we find it in our own daily living, we shall be sure of heaven if we earn it by our own unselfish efforts; we shall be sure of progress, if—mind and heart in rhythm—our feet we set "Beyond the dark age, standing upright, soul-free, and with face to the morning light."—*Marion Murdock.*

DEATHS.

COMLY.—On Seventh-day, Eighth month 24th, 1889, Elizabeth Newbold, daughter of Robert and Lydia T. Comly; a member of the Monthly Meeting of Friends of Philadelphia, in her 12th year.

EYES.—At her home in Millville, Pa., Third month 11th, 1889, Della Eyes, daughter of Shadrach and Rachel Eyes, in the 23d year of her age; a member of Fishing Creek Monthly Meeting.

EYES.—Of typhoid pneumonia, at her home in Millville, Pa., Sixth month 4th, 1889, Eleanor Eyes, widow of the late Parvin Eyes, aged nearly 53 years; a member of Fishing Creek Monthly Meeting.

FENIMORE.—At his residence, Mt. Holly, N. J. Eighth month 21st, 1889, Allen Fenimore, in his 88th year.

KIRK.—In Fulton township, Lancaster county, Pa., on the 8th of Eighth month, 1889, after a short illness of cholera infantum, Phebe P. Kirk, aged 1 year, 8 months, and 22 days; and on the 15th of Eighth month, Hannah B. Kirk, aged 1 year, 8 months, and 29 days, twin daughters of Samuel J. and Lauretta A. Kirk.

"Fold them, O Father! in thine arms,
And let them henceforth be
Sweet messengers of love between
Our human hearts and thee."

LUKENS.—Eighth month 21st, 1889, at Spring Lake N. J., Helen, daughter of Reuben and Emily E. Lukens; a member of the Monthly Meeting of Friends held at Green Street Philadelphia.

MURPHY.—Eighth month 4th, 1889, at the residence of his son-in-law, J. M. Armstrong, Spokane Falls, Washington Territory, Charles Murphy, late of Washington, D. C., son of the late Mahlon Murphy, of Frankford, Philadelphia, aged 69 years; a member of Alexandria Monthly Meeting, Va.

PALMER.—Eighth month 24th, 1889, at West Grove, Pa., Jane S. Palmer, (formerly Griffith), in her 80th year; for many years a resident of Philadelphia.

PRICE.—Near Winfield, Iowa, Eighth month 5th, 1889, Thomas C. Price, in the 75th year of his age.

He was a valued member and elder of Prairie Grove Monthly Meeting, Iowa, which he attended as regularly as his failing strength would permit; and his interest in, and love for, our little meetings seemed to increase as the years passed by. He was always quiet and unassuming in manner; a man of few words, yet firm in his convictions of right. His homo was noted for that true hospitality that has a charm for both old and young, and he will be greatly missed by a large circle of friends.

P. E. R.

NEWS OF FRIENDS.

FAIRFAX QUARTERLY MEETING.

THE Quarterly Meeting of Fairfax, held on the 17th, 18th, and 19th of this month at Goose Creek, Va., (Lincoln), experienced delightful weather. The heat of mid summer had yielded to the first breath of the coming autumn, the rainy season had given way to glorious days of sunshine, the face of the country was an unbroken but varied green with the differing shades of forest and field.

The meeting of ministers and elders on Seventh-day was attended by some twenty-five women and men in about equal number. Abraham Shoemaker of Ohio, Joseph Powell of Pennsylvania, and Lydia H. Price, (the latter having a minute), were with us

and took part, as did one of our home ministers, in applying the gospel word to our condition as disclosed in the consideration of the queries and their answers.

On First-day morning, about the hour of eleven, the large meeting-house was filled with a quiet and appreciative audience, containing a large proportion of young people. The silence was first broken by William Williams, who in his simple and direct way opened up the subject of Divine Love—Love to God and to our fellow men; not opinions, but according to the teaching of the Blessed Son, love in the heart and directing the life is the test of discipleship in the church of God. Belief, to be effective, must transform the character into the likeness of the Blessed Pattern, else it is not a saving belief. Lydia H. Price spoke to the people. Some of us had followed her in sympathy in the recent past in her journey to the prairie land west of the Father of Waters, and again amid the flood and dangers of the present season with our friends in the mountain region of Pennsylvania. And now this gospel messenger was with us. She found inspiration in the scene before her, an audience in a receptive mood, apparently hungry for the word as the Master had sent her to deliver it. I shall not attempt to reproduce her message. Life is a school. The beautiful analogies between the secular school life, and the life of the child of God, were freshly and finely brought out. For perhaps an hour this went on with increasing interest and power. Joseph Powell bore testimony to the Christ, the Power and Wisdom of God as a spiritual force in the individual soul for its uplifting into the heavenly mansions even in the life that now is. The meeting closed, as it seemed owned by the Divine presence.

On Second-day the attendance was such that the seating space was well filled with quiet and attentive souls. J. P. had further and acceptable service and L. H. P. again spoke with fervor. One must see the countenance lightened up, as that of Moses, fresh from the Mount, hear the richly attuned voice, note the whole frame moved with the ardor of earnest conviction,—all this is needful to enable one to understand the unflagging attention with which the message of the speaker was followed by age and youth alike.

Then in the meeting for inquiry into the state of our Organization, when the answers to the First and Second Queries, as to the attendance of meetings and the presence of the love seen in the life of Jesus, seemed rather lame by confession of the members of the local meetings, the voice of loving entreaty of gentle remonstrance was raised and the truth was pressed home upon the whole body and especially the young that the meeting is *their* meeting and its perpetuation, with all the hallowed association connected with it as the House of our Father, depends upon us and upon our fidelity to its foundation principles.

This was our first quarterly meeting in which the sexes met in one body as they do in all our monthly meetings now. It was thought the meeting for business was larger than usual, many young people sitting throughout the rather prolonged session. L. H. P. was with our Friends of Fairfax, (Waterford), before

the Quarterly Meeting and to-day, the 20th, she has gone across the Blue Ridge into the Shenandoah Valley, home of the Hopewell Friends.

From *The Independent*, (New York.)

PENNSYLVANIA FRIENDS IN THE REVOLUTION.

WE gladly give space to the following letter, which speaks for itself:

To the Editor of *The Independent*:

In a notice of a recently published book (the biography of Eli and Sybil Jones), *The Independent* remarks that "when the Civil War broke out he [E. J.] did not imitate the Pennsylvania Quakers of the Revolution and turn Tory." The historical inaccuracy of this allusion is so notable, and the injustice done by it so great, that I venture to call your attention to the subject. Obviously, the impression to be produced by it is that the Quakers of Pennsylvania, during the Revolution, were substantially all Tories. As a matter of fact, very few of them took the Tory side. My own estimate would be not over ten per cent. If you will take the trouble to examine the lists of active Tories in Sabine's "Loyalists," you may be surprised to see how few, in Pennsylvania, were Friends. The Episcopal Church, not unnaturally, contributed many, the Presbyterians substantially none, the Quakers a small number.

The Friends, in Pennsylvania, in the Revolutionary period, furnished many men to the armies of independence. In my judgment, their contribution was at least as large, in proportion to numbers as that of any other religious body, the Presbyterians (who were the "borderers" of the time, active in contests with the Indians, and afterward in opposition to the revenue taxes), perhaps excepted; and it included many men of distinction. Millin was the most conspicuous of these, but there were many others, officers and privates, of eminent ability.

While it is true, of course, that the great body of the Friends were faithful to their testimony against war, and so did not take up the sword on either side, it is also true that of those who went out to the battle, very many more were on the side of independence than were opposed to it. Any examination of the records, in the spirit of candor and truth, will show this. The remark of *The Independent* is, therefore, so contrary to the facts as to require correction.

EDUCATIONAL.

"GUIDES FOR SCIENCE TEACHING."

EDITORS INTELLIGENCER AND JOURNAL:

YOUR York correspondent can get information in regard to "Guides for Science Teaching" by addressing the publishers, D. C. Heath & Co., No. 5 Somerset Street, Boston, Massachusetts. I enclose a list of eleven numbers, which have been issued, varying in price from ten to sixty cents, and four other numbers are, I believe, in course of preparation.

H. R. R.

From the *British Friend*, Eighth Month.

A DISCUSSION OF QUAKERISM, FROM AN ENGLISH STANDPOINT.

ON my way home from the late Yearly Meeting I spent a day or two with my old friend Weston at his pleasant country place in Blankshire. Weston was born a Friend, and if he lived near a good meeting would certainly still be at least a congregational member of the Society. Though circumstances have come in the way of this closer union with us, he is very much of a Quaker in his convictions and sympathies, and he is therefore greatly interested in the welfare and working of the Society. His early training has in fact spoiled him for all more restricted ecclesiastical systems. The monarchical rule of both church and chapel,—the stereotyped prearrangements for public worship, and the unbroken stream of words—not to say wordiness—which generally characterizes these religious services, try him more than a little. But he has married a wife—a worthy Christian lady—who has had a very different training, and so, having no Friends' meeting at hand, he, like a good husband and father, regularly accompanies his wife and children to church, and is friendly with the clergyman. He even presides every First-day afternoon at an adult Bible-class in the church schoolroom; and I fancy that the men, who attend the class in great numbers, often hear some broad Quaker teaching from his lips.

We had not met for nearly a twelvemonth, and our conversation therefore had a wide range. Among other subjects which we freely discussed was that of Quakerism, past and present, and my friend's "notes and comments on things new and old," although they were unsystematically presented, may be interesting to the readers of *The British Friend*; especially as being the views and impressions of a sympathetic outsider who understands us, and is practically one with us.

After reading to me one evening some striking portions of a magazine article on John Bright, he exclaimed, "They all say that: 'The Society is unique, its work is important, its powers immense;' but have these Christian writers who are so ready to admire the movement, have they any real confidence in the Quaker position or in its great fundamental? Is the simple truth as the Quakers believe it, getting hold of them and of the public? Tell me, Clio, how is the old Admiral's prophecy working out?"

"The old Admiral!" said I, "who is that?"—for the moment overlooking his historical allusion.

"Why, my friend, didn't old Admiral Penn, on his deathbed, utter a memorable prophecy as to the future of Quakerism?"

"Certainly," said I, "and his striking words are worth recalling, uttered as they were under the intense feeling and in the intense light that often attend the closing hours of a busy life. Were they not something like these?—*Son William, if you and your friends keep to your plain way of preaching, and your plain way of living, you will make an end of the Priests to the end of the world!*"

"And what do you think," said Weston, "the old Courtier had specially in view in using these words?"

"It is not perhaps very clear," I replied, "as to the actual points in the Quaker movement to which he particularly referred. But probably he meant to imply that 'plain living and high thinking' in the best sense of those words, would in the long run win against Formalism and Priestcraft."

"No doubt something of that sort was his meaning. Perhaps we may say in more definite terms, that the 'plain preaching' of the early Friends to which he referred, was its practical, untheological, and universal character: its evident spring and source in the spirit and power of the true Prophet, as all true preaching should be and must be; and its definite appeal to a real fact, (the Divine visitation), which everyone could verify from personal experience. And so the common people who had hearts prepared for a further visitation, heard it gladly, and multitudes from almost all ranks of society embraced the plain and simple truth that was proclaimed. The 'plain living' I take to mean the genuine, straightforward, self-sacrificing, heroic lives which these Quaker preachers lived, and which so commended the mighty Gospel which they preached. The admiral had seen the result in the changed character of his favorite son, so no wonder that he was deeply stirred, and that the spirit of prophecy came upon him. But, unfortunately, his words have not yet come true, and it would almost appear that the priests have still the best of it everywhere. It seems to me—to put the matter strongly—that the Society of Friends had a mandate from the Master Himself in the direction the admiral indicated, but that after the first forty years of a splendid enthusiasm, they have largely failed in putting it in force. Would it be too severe to say that thus far Quakerism has been a grand failure?"

"Oh! I cannot admit that," I exclaimed. "The results of the Movement, direct and indirect, have already proved an enormous gain to mankind, and the record of them occupies no unimportant page in modern history. It might with equal justice, or lack of justice, be said—as many do say—that Christianity itself is a failure; inasmuch as it has hitherto by no means fulfilled its mission. We must not forget that infinite Grace—the great moving Power—penetrates to us through very finite channels, and that, therefore, 'the wheels of God grind slowly.' None the less the transforming work has gone forward, and does still go forward. Note for instance, in connection with the admiral's words, how greatly the character of priests has altered for the better, and how greatly their arbitrary power has become weakened, since his days. And I mean by 'priests' all professional preachers, whether they call themselves Pastors, Ministers, or Clergymen; for the germ at least of the priestly character is in them all. Now in bringing about this change, I am satisfied that the Society of Friends—by its persistent stand against the sacerdotal system in all its forms—has had no small influence."

"Well, I can freely and gladly admit all that. Still, you know how it was—how the bright promise faded, and how the flood of waters got wasted and dissipated among the sands and shallows. How

sadly human the whole story is! Would it be too much to say that when the first enthusiasm that so impressed the admiral had passed away, the Society gradually withdrew from active ingathering labor, slid into formalism, hedged itself with the petty externals, lost much of its breadth and its boldness, and so fell out of touch with the people among whom it was called to work? There were of course many bright exceptions, and much noble service but, is this not a fair epitome of the general state of things among the Friends, for nearly one hundred and fifty years after George Fox's death? We might even make the contrast between aim and achievement more striking, by pointing out that the Quaker Church—the great Protestor against priestcraft—actually fell in some degree under the very influences that first generated and have since upheld the priestly system!"

"I doubt if thou couldst prove thy case there," said I. "At all events we find no tendency among the Friends during all that time, to institute a clerical order, or a paid Ministry in any form."

"No, truly," said Weston, "because they were too often content to do without any preaching at all; for reasons very different from those which led the early Friends to hold their meetings on the basis of silence, and to uphold, on gospel principles, a free and spontaneous Ministry. But does not the priestly system get its strength from the indolence of human nature, and from the readiness, on this account, to rest in the outward? These eighteenth century Friends were, I fancy, too much like Tennyson's Lotus-eaters. They 'dwelt in a land where it was always afternoon,' and a very sleepy and long afternoon it proved. They seemed to forget that the Gospel is an energizing, conquering Power, that is not content with anything short of a universal Kingdom. They seemed, also, strangely to overlook the fact, that it is possible to invent Forms and Observances as objectionable in their effect on the soul as those adopted by the majority of churches. When I think of the changed attitude of the Quaker Church at that time, the marvel to me is that the Society kept alive at all! There must be something wonderfully vital in its great principle, or your 'little sect,' as John Bright used to call it, would long ago have passed away and been forgotten."

"Well, I am bound to admit," said I "that 'the externals of Quakerism,' to which thou referest—the 'peculiarities,' as they used to be called—were often unduly dwelt upon, and that much indifference was to be found, even among Friends, about the essentials of true Religion. Still I think it is a mistake to characterize the 'middle ages' of Quakerism as an idle and dead time. There was, even then, I am convinced, much of true testimony-bearing by the Friends as to the spirituality and practical nature of the Gospel. At a time when Religion was at a low ebb in the country generally, I think it is evident that the little groups of Friends, scattered up and down, were often in many places, the centres of 'light and leading' in their districts. They had learned the responsibilities of life and the power of Divine Grace in the retirement of the home; and the

meeting-house; and they sought meekly to uphold in daily life the requirements of righteousness and justice and brotherly love. The England of to-day is, in not a few respects, reaping the results of their quiet but faithful work."

"That is well said, my friend, and I would not gainsay it for a moment. The results achieved were no doubt, in themselves great; but contrasted with the style and promise of the Movement under its first leaders, they seem grievously small. I cannot help regarding the Wesleyan revival in the eighteenth century, as a practical rebuke to the Friends, from the Lord Himself. If the Society had continued as faithful and energetic in its appointed mission as it was at starting, there would have been no need and no place for Wesley to commence a separate movement on a less spiritual basis. The freedom, the genuineness, the faithfulness, the fire of early Methodism, which so reached the people, were all within the range of the Friends, and they would have added to these something which Methodism failed to proclaim."

"Dost thou not think," said I, "that the Great Teacher, in His wonderful patience with human dullness, sometimes puts back His pupils when they are not equal to purely spiritual teaching, and permits a sort of picture-book instruction in Religion, by methods which are more demonstrative to the eye and ear? If this be so, will it not explain both the success of Wesley, and also that of the Salvation Army, besides some earlier efforts?"

"I think," said Weston, "that I see both truth and danger in that thought. It might be made to excuse every priestly invention, including even the pomp and splendor of High Mass in a grand Cathedral. But I suppose you speak of God permitting, in the same sense that we read He permitted the perverse Israelites to have a king, although this was contrary to His own plan for the government of the chosen people."

"Precisely so," said I. "He permitted a thing which, though not wrong in itself, would, with more faith have been quite unnecessary, and which in fact terribly retarded the progress of mankind."

After a pause, Weston said, "I think I can agree with you, with the reservation that there are some bearings of the thought which need further consideration. But we shall all admit that there must be a right way, and one in harmony with Divine Law, for teaching and helping unspiritual people whose surroundings have dulled their perceptions of God and His truth. If this be so, is the Society of Friends debarred by its great spiritual principle (which is, mind you, God's great Law), from using wisely some sort of Picture-book Teaching as you call it, in seeking to reach the people? What was the nature of those 'threshing meetings' which Edward Burrough and others went in for; and what are the lines on which the Society may now legitimately work in order to fulfill the admiral's prophecy? Quakerism must surely be adapted to all sorts and conditions of men, if it be what it always claimed to be—Primitive Christianity revived."

"I am sure it is that," said I; "I have no mis-

givings there. It is we who are lacking in courage and faith."

"Well, I wish you would tell me how you think that true and spiritual view of Christianity which, we agree, Quakerism presents, might be consistently pushed forward now, so as to meet the needs of this nineteenth century, with its sorrows and worries and doubts and daring researches into everything. I know you are dissatisfied with much that is being done, even by a section of the Friends, and so am I. I feel that many of them are becoming mere imitators of methods that have proved in my judgment disastrous in the past, and which are in fact largely the cause of 'the present distress.' But there must be a way out of the difficulty. My impression is, that Quakerism might be shown to be the grand Explainer of Gospel truth; and the true Restorative of faith in Gospel power, if it was rightly presented to the great multitude of unsettled seeking souls. But how is it to be done? The nineteenth century is very different from the seventeenth century, and no mere imitation of the early Quaker methods, or of any other methods, will necessarily meet the case."

"Thou art opening out a very large and important question," said I, "but it is one we are bound to face. Shall we fix to discuss it when thou pays me thy long-promised visit next month?"

"Well, it is evidently too late to begin a discussion on so great a subject to-night. But we must keep it in view, and see what light we can get on the matter. I have a strong conviction that careful and patient thought in this direction would pay."

CLIO.

ORTHODOX FRIENDS.

THE *Friends' Review* notes the statements made by William Tallack, (in the letter to the London *Globe*, copied in the INTELLIGENCER AND JOURNAL, two weeks ago), that there are among the English Friends "wide varieties of religious opinion," and remarks upon them with some severity. It says:

"We should have supposed it to be well known, not only that the Declaration adopted by the Conference of Friends at Richmond, Indiana, in 1887, was not a 'creed,' but that instead of being an attempt of American Friends to drag their English brethren, it was participated in, with equal responsibility, by several of the ablest and maturest of English Friends. If it be true that, in England or America, there are within our ranks varieties of religious opinion, ranging almost from 'Plymouth Brethrenism' to 'Unitarianism,' this may be accounted for among our individual members, by the system of birthright membership. Were the *ministry* of the Society guarded against unsound teaching, and were rationalistic or otherwise injurious publications openly and sufficiently discouraged, the responsibility of our body as a church might be as nearly met as is possible under a birthright system. But such expressions as those of William Tallack, above quoted, are very discouraging in regard to the prospect for the Society. When, if ever, it comes to be true of what is now the orthodox religious Society of Friends, that all varieties of opinion, from Plymouth Brethrenism to Unitarianism, have 'habitual freedom' of utterance and acceptance in its meetings for worship, then it will become the impulse, and may be almost the necessity, of those whose minds and hearts are wedded to the

truth 'once delivered to the saints,' to seek otherwise than within its lines that freedom with which only 'Truth makes free.' But we hope, though almost 'against hope,' for better things."

Dr. Richard Henry Thomas, of Baltimore, has written a strong pamphlet, with the title, "The Outlook," protesting against the growth of the paid pastorate system among Orthodox Friends. We quote the following passages:

"We see a number of our ministers assume the clerical dress, and some of them already allow themselves to be styled 'Reverend.' We find reports of committees in various yearly meetings speaking of the need of stationed pastors, and we now have the recent action in Iowa. In the meantime, one of the leading organs in our Society is teaching that a call to the ministry involves, generally at least, a call to leave off secular employments, and that it is as much our duty to support such as are called as to pay clerks in our offices. Finally the importance of an intellectually trained ministry is insisted upon, and in certain places initial steps looking to this end have been undertaken. Is not all this sufficient to show the goal toward which we are advancing? Could the advance have been more rapid than it has been? And because the customs and doctrines of 200 years have not already been upset in every place where the new pastoral system has obtained, are we justified in saying they *will not* be overturned? Or are we to wait till everything is swept away before we protest? A little boy in Holland was able, by thrusting his hand into a little break in the dyke, to keep out the ocean until assistance came. Had he let that little stream of water from the ocean flow on while he went to the village for help, the whole country would have been flooded. We see our position. Every new step taken has been one away from the position of Friends and of the early Church on the ministry, towards a professional clergy. We are not concerning ourselves with the motives or the reason for these steps, we are dealing with the facts of the case.

"Church history teaches the same lesson. Pastors, in the modern sense of the word, were unknown in the early days of Christianity. The separation between clergy and laity was then, as it is now amongst us, a gradual process. Again, Barclay of Reigate, in his recent work, points out that in the time of the Commonwealth in England, other churches besides Friends held that liberty of prophesying should be allowed to church members, and might be exercised fully in the congregation. Friends alone have retained this freedom. Why? Because they alone can keep clear of professional ministers and outward 'sacraments.' Let us accept either or both of these, and we have seen the last of the true freedom of the Gospel ministry. It may survive for a time, but its fate will be sealed.

"A line of separation between a regularly supported ministry and a professional ministry cannot long be maintained, if indeed it exists."

Illustrating the changes which Dr. Thomas objects to, the following paragraph from the *Christian Worker*, of Chicago, Eighth month 22, may be quoted here:

"Indianapolis meeting has greatly prospered under the pastoral care of Levi Rees. It is a good example of the working of this system. First, years ago, it had a ministry upon which it depended for somewhat regular service without special arrangement, being afraid of system about such things; then for years there was no dependence in such service; now they have a pastor with systematic provision

for his support. The first experience alluded to was good, the second was very unsatisfactory, the last is excellent. Levi Rees is at French Lick, Ind., resting and recuperating a while."

O'ER WINDS AND TIDES.

The white worlds rise, the white worlds sink,

And the tides they come and go;

All blank and dead the sky o'erhead,

And the beach lies bare below.

The white worlds sink, the white worlds rise,

And the tides they go and come,

The sky bends bright o'er waves at night

On the shores no longer dumb.

The wild wind blows; it cannot blow

The white worlds from their track.

The storm roars far, but cannot bar

The tides from coming back.

To all the worlds, to all the tides,

That none may say them nay,

An unseen Power hath set the hour,

And all things give it way.

O Life! O Death! O Chance! O Change!

I fear not what will be;

The Power that guides the stars and tides

Will make my path for me.

—S. V. Cole, in *Congregationalist*.

From The American, Philad'a

THE HERBS OF THE FIELD.

WANDERING recently in and out the woods and fields, tramping aimlessly whithersoever fancy led me, I crushed with my feet, at last, a stem of pennyroyal. Catching the warm fragrance of its pungent oil, straightway the little-loved present vanished. How true it is that many an odor, however faint, opens the closed doors of the past! Prosy and commonplace it may seem, but full many a time a whiff from the kitchen of some old farm house, where I have stopped for a drink of water recalls another farm-kitchen, redolent of marvelous ginger bread and pies, such as I have failed to find in recent years, and with their tempting spiciness went that subtle odor, from which indeed the whole house was never free, that of sweet-smelling herbs. I am daily thankful that the herbs at least have not changed, as the years roll by. It is the same pennyroyal that my grandmother gathered; and think to what strange use she put it! Made pennyroyal puddings! Let them go down to posterity by name only.

The herbs of the field and garden were gathered, each in its proper season, by the folks at home, and in great bunches were suspended from the exposed beams of the old kitchen. In early autumn they made quite a display, but as the winter wore away, became rather sorry looking reminders of the past summer. To a limited extent their bulk decreased and their odor became less pronounced, but how seldom were they ever disturbed! I have dared to think that herb-gathering was a survival from pre-historic times, but I never dared to hint this to my grandmother. The nearest to doing this was to coax a braver boy to ask if the old bunches were burned at midnight with secret ceremonies, for they gave place to the new crop each year, yet were not seen

lyng about the yard. Neither the braver boy nor I could get any satisfaction, but a forcible reprimand instead, for hinting at paganism. I hold, nevertheless, that a trace of it did exist then, and does. Was it not something akin to this that more than one medicinal herb had to be gathered at midnight? This, it is true, was not openly admitted, but unquestionably faith in its virtue as a remedy was diminished if the plant was not gathered as the superstition dictated. Try as we may, the crude faiths of our prehistoric ancestry we cannot snap asunder. As elastic bands, they may grow finer and finer with the tension of the centuries, but still, perhaps as but invisible threads, they hold.

However steadily herb-using may have been going out of date in my early boyhood, herb-gathering was not, and I may be mistaken when I say that except the pennyroyal in puddings, sage in sausage, and a bit of thyme and parsley in soup, the dozen others hung in old kitchens unused except as fly-roosts, a fact that scarcely added to their virtues.

When I last lounged on the old settle and counted the several kinds of herbs hanging over-head, an aged negress assured me that every "yarb" kept some disease at bay, and predicted disaster as the new kitchens with their plastered ceilings and modern stoves took the place of more primitive architecture and methods. And I am half inclined to believe that she was right. The old folks had their aches and pains, but not so much of that depressing languor that we call *malaria*. Might not the ever present odors of sweet smelling herbs have kept this at bay? I fancied I felt the better for the whiff of pennyroyal, and gathering a handful of its leaves breathed the spiciness until my lungs were filled. It is something to have an herb at hand that revives the past, and more perhaps to have many that add a charm to the present, for the pastures in August would be somewhat dreary, I think, was there not in almost every passing breeze the odor of sweet-smelling herbs.

But if pennyroyal, sweet cicely, and the spicy "mocker" nut carry me back some two score years, what shall be said of a faint odor that can yet be distilled from plants that flourished in the same pastures or where these pastures now are, perhaps a million years ago? One is not given to thinking of anthracite as at one time wood, but it is different in this instance, for the blackened fern-like plants in the underlying clays are still wood and not petrified; so that they burn with a feeble flame when dry, and when burning throw off a rich fragrance akin to frankincense. I have often placed a splinter of these ancient trees in the flame of a candle and sniffing the odor that arises, travel in fancy to New Jersey's upland and meadows before they were trodden by paleolithic man; before even the mastodon and gigantic beaver had appeared; when gigantic lizards and a few strange birds ruled the wide wastes. But the world here was not wholly strange, even then, for many a familiar tree was growing in this old river valley, as the delicate impressions of their leaves in the clay so clearly demonstrate.

If, then, one would indulge in retrospection,—and

therein lies one of life's most solid comforts,—it will be found that suggestive objects are ever about us, and the herbs of the field, in August, would scarcely be missed, if unhappily they ceased to grow. But, why, it may be asked, are these same herbs so suggestive of the past, so certain to give rise to retrospective thought? It is not a personal matter, for I have questioned many people, and in this they all agree. One reply is a fair representative of all. Offering a little bunch of garden herbs to an old man no longer able to wander out of doors, he immediately buried his nose in it, drew a long breath and remarked, "How that carries me back to the old homestead."

As by the touch of a magician's wand, in my walk to-day, the present vanished when I crushed the pennyroyal, and the ringing songs of the still tuneful summer birds were not exultant strains glorifying the present, but echoes of a dim past over which perhaps, I am too prone to brood.

It is absurdly contradictory, of course, to say that I love retrospection, and that in August one is more prone to think of the past than the present, and yet not to love that month, but such is the case. In other words, I am vacillating and contradictory, and fail to command the words that might set me right before the world; but it is August now, and summer's activity ended, why should I labor to think? Why not build air castles as I smell the herbs of the field; build and unbuild them until the day closes, and later, lulled by the monotonous of cricket and katydid, hum those ever melancholy lines—

"Backward, turn backward, O Time, in your flight,
Make me a child again, just for to-night."

CHARLES C. ABBOTT.

THE OLDEST AND SMALLEST SECT IN THE WORLD.

THERE is to be found in the heart of the small city of Nablus, in North Palestine, a little religious community—now numbering about one hundred and fifty souls—which has defied the ravages of war and poverty and oppression nearly three thousand years. Unlike the Vaudois, these Samaritans have had no friendly system of mountain buttresses to defend them through the centuries; and still more unlike the long-lived Savoyard Protestants, they have been right in the pathway along which the devastating armies have marched back and forth, from the time of Sargon to Napoleon. But they have lived on, and their unity has never been broken. They have clung to little Nablus and to their sacred Mount Gerizim, as the very cactus roots to the granite sides of the sombre Ebal that confronts them across their little enchanted valley. . . .

The feeling with which the present Samaritans regard the Mohammedans is of that intense bitterness which they have always manifested toward the Jews. And why not? Does not the Samaritan date his faith from Abraham, or rather from Adam? and has he not a right to call that an infant religion which has been in existence for only the trifle of twelve centuries? Is not the Koran one of your new catchpenny romances, while that mysterious copy of

the Pentateuch, made of sacred lamb-skins, which the Samaritans have been reading and kissing through these many ages, is the oldest copy in existence, written down by Aaron's own grandson, and the veritable original of all the Pentateuchs in the world?

As the population of Nablus is just about 12,000, the little Samaritan community is almost absorbed by the surrounding Mohammedan mass. Save to a careful observer, the very existence and presence of the Samaritans as a distinct element of citizenship in Nablus would not be noticed. The Samaritans wear a turban, much like that of their true Moslem neighbors, but between the history and theology of the two classes there is not a single point of positive resemblance.

The Samaritan synagogue is a small building in the centre of Nablus, half obscured by the surrounding buildings. I passed through arched and littered streets to a little court, in the middle of which was a little plot of grass, relieved by three trees, two of which were lemon. I here found a little Samaritan school, and at the sight of a stranger the children sprang from the floor where they were sitting, kissed my hand, and begged for backsheesh. The teacher was a youth of about fourteen, the son of Amram the high-priest. I was greatly disappointed at failing to find Amram himself, but in the end this circumstance aided me in my chief object, for the young man was willing, for a good fee, to show me the ancient Pentateuch. His father might have been deaf to all entreaties.

The claim of the Samaritans to have a copy of the Pentateuch older than the Jewish is supported by their own unbroken tradition, and by the opinion of some learned men of the present time in Christian countries. But the weight of internal evidence is against it—among which may be mentioned grammatical emendations, late glosses in the text, insertions of foreign passages, alterations, Samaritanisms, and changes in support of Samaritan doctrine.

There are three codices kept in the little synagogue in Nablus, two being generally shown to strangers. It is very rarely that the veritable one can be seen. My good fortune in getting a hasty look at it was due to the venturesome and avaricious spirit of Amram's son, rather than to any management of my own. Having first exhibited the two imitations, the young man, upon the offer of an additional fee, then brought out the original scroll from a chest. After the removal of the red satin cover I saw that the codex was enclosed in a silver cylindrical case, which had two doors opening on two sets of hinges. When these doors were thrown back the whole column was exposed to the vision. This cylinder is of rich workmanship. It is about two feet and a half long and nearly a foot in diameter, and presents, in exquisitely raised work, a good plan of the Tabernacle, with every part given with the utmost minuteness and rarest skill. The roll consists of dingy skins—prepared before the invention of parchment—sewed together with neat stitches, and worn and patched, and here and there entirely illegible. The skins are of equal size, and measure each twenty-five inches long and fifteen wide.

Before leaving Nablus I had the opportunity of spending an evening with Amram at his own house. He lived in the greatest simplicity, though in Palestine that is the rule rather than the exception. Mrs. El Karey, the wife of the missionary in Nablus in the employment of the Church Missionary Society of London, was good enough to accompany me and serve as interpreter. The venerable high-priest, who was bare-footed and clad in a great turban and loose flowing robe, received us with calm and dignified cordiality in his room—at once his parlor, dining-room and bedroom. His very aged mother was lying on the floor, covered with bed-clothing, and asleep. There were several children, half asleep, lying about the room. Amram's son-in-law was slowly copying a Pentateuch—for the Samaritans have no printing-press. It requires a year to make a copy, which is never sold, and is only used by the community. The aged mother of Amram arose after we had been present a few minutes, the many ornaments on her neck and in her ears making a harsh tinkling sound as she moved. I was invited to a seat on the floor, and to take coffee and cigarettes. The mother, on seeing guests in her presence, took a rude bellows and blew up the dull coals under the copper kettle. Coffee, the Oriental's unfailing proof of hospitality, was handed us in little cups.

The peculiar views of Amram may be said to represent very fairly the theology of his dying community. The world, he claimed, is about seven thousand years old. For fifty-five years men will go on increasing in wickedness, after which there will come a time of great peace and purity. Then there will come on a new period of consummated wickedness, which will last three hundred years. This time will be consummated by the total destruction of the world. After this the general judgment will take place, when the righteous will go to live with God and the wicked with Satan. There are some people who have clean hearts, or at least are accepted as clean, though none are absolutely pure. Just here Amram looked off, as if in the distance, and said, "God is one!" Here he intended a slight thrust at all Christians, because of their emphasis on Christ and His divine character.

He spoke with interest of the ruins on Mount Gerizim, and of the increase of his community within the last thirty years. He closed by expressing his firm belief that the time would come when the Samaritans would be the most numerous body in the world.

Amram has since died, and the sedate son-in-law, being the eldest male relative, has succeeded him in the high-priesthood.—*John F. Hurst, D. D., in Harper's Magazine.*

LIVE IT DOWN.

HAS your life a bitter sorrow?

Live it down.

Think about a bright to-morrow;

Live it down.

You will find it never pays

Just to sit wet-eyed, and gaze

On the grave of vanished days;

Live it down.

EARLY BIBLES IN AMERICA.

THE earliest publication on this continent of any portion of the Scriptures was the translation of the New Testament into the Natick dialect, the ordinary speech of the Indians at the time the Pilgrim Fathers landed, in 1620. This translation was made by John Eliot, a native of England, and a graduate of the University of Cambridge. Coming to Boston in 1631 and accepting as his special mission the conversion of Indians (whom he considered to be the descendants of the lost tribes of Israel) he acquired at the same time a thorough knowledge of their language, and determined to let them have the "Word of God" in their own tribal tongue. The work of translation, with the aid of an Indian, was the labor of eight years, and it is now conceded to be one of the most notable contributions to philology made in this country. The New Testament was first completed and printed at Cambridge, Mass., in 1661; the Old Testament followed in 1663. Both are very rare; bound together a copy has sold for \$1,250; the New Testament for \$700. A second edition of the New Testament was printed in 1680; this, bound up with the Old Testament, issued in 1685, constitutes the second and last edition of the Indian Bible.

A copy, formerly in the library of the Marquis of Hastings, sold for £200. John Eliot, "The Apostle to the Indians," a designation so appropriate that it has secured universal acceptance, died in 1690, in his 86th year. His fame rests upon his labors in Christianizing the Indians, and the translation of the Bible is his imperishable monument. To meet the demands of emigrants who had largely settled in Pennsylvania, the first edition of the Holy Scriptures in the German language, and the first in a European tongue, was printed by Christophe Saur, at Germantown, in 1743. Copied from Martin Luther's version it formed a ponderous quarto volume of 1,284 pages. The price was 18 shillings, bound in leather with brass clasps. However, to enable his needy countrymen to acquire copies at a reduced rate, one H. E. Luther, a wealthy type-founder of Frankfort, had sent as a gift the fonts of type in German text from which this edition was printed. At the Brinley sale, a few years since, a copy was sold for \$350. It is a notable fact that neither the Old nor the New Testament was ever printed here in the English language till after this country had declared independence. So oppressive was the monopoly that the British Government maintained over the exclusive printing of the Bible that it never transferred its authority to reprint it, even in her own colonies; and every copy had to be imported across the Atlantic. However, the critical condition of the country did not fail to stimulate local publishers to exertion, as Robert Aitkin, a native of Scotland, who had settled as a printer in Philadelphia, issued in 1777 an edition of the New Testament, the first in the English language with an American imprint. For this breach of privilege, and his attachment to the cause of American independence, Aitken was forthwith imprisoned.

After his release this zealous Scotchman announced to the members of Congress, then in session, his in-

tention to print an edition of "The Entire Bible," and asked for their imprimature, which was readily granted, together with the certificates of the chaplains, the venerable William White, the future Episcopal Bishop, and Rev. Dr. Duffield. Here the action of Congress properly terminated, and the circulation of the Bible was, ever after, left to the people and to their pastors.

Aitken's promised edition, copied from that pearl of great price, the authorized English version, appeared in 1782, printed in brevier type, without pagination and in two duodecimo volumes, having on the title-page the significant motto of "Virtue, Liberty, and Independence." This will always be prized as the first Bible in the English language ever printed in America. In 1790 a neat edition of the New Testament was printed at New York by Hugh Gaine, and another in New Haven by A. Morse, the latter replete with errors on every page.

In 1791 the first folio edition of a Bible, with fifty copper plates, was printed at Worcester, Mass., by Isaiah Thomas, known in his day as the Baskerville of America; the text revised by Dr. Bancroft, father of the historian and biographer of Washington. In the same year an edition of the Sacred Scriptures was carefully and correctly printed for the use of Quakers by one of the Friends at Trenton, in New Jersey. In 1794 the New Testament, without the Old, was issued at Boston, and in 1798 the first hot-pressed edition of a Bible appeared in handsome form at Philadelphia.

In Colonial days, under British rule, rigid penal laws were enacted and enforced against the printing and vending of Roman Catholic works; even their devotional books appeared by stealth. However, one of the earliest results of the Revolution was the freedom of the printing press. The Douai and Rheims version of the Bible was printed at Philadelphia in 1790 by Mathew Carey, "an exile from Erin," the only Roman Catholic publisher then in the United States. Well printed from the Clementine text, it is sold for \$6. Charles Carroll, of Carrollton, headed the subscription list, followed by the names of not a few of the most distinguished men in the South.—*Clement Ferguson, in Neuport (R. I.) News.*

REMEMBER the power of indirect influences; those which distil from a life, not from a sudden brilliant effort. The former never fail; the latter often. There is good done of which we can never predicate the when or where. . . . Let the weakest, let the humblest remember, that in his daily course he can, if he will, shed around him almost a heaven. Kindly words, sympathizing attentions, watchfulness against wounding men's sensitiveness,—these cost very little, but they are priceless in their value. Are they not almost the staple of our daily happiness? From hour to hour, from moment to moment, we are supported, blest, by small kindnesses.—*Robertsoq.*

"Do not go out in search of crucifixions, but when God permits them to reach you without your having sought them, they need never pass without your deriving profit from them."—*Fenelon.*

SUNLIGHT.

I beg for that joy and comfort and necessity of life which most housekeepers are eager to exclude from their dwellings, namely, sunlight.

A belief in the gentility of gloom is abroad in the community. We find it everywhere. I have often noticed the complacent, satisfied air with which the country housekeeper, after tidying up her rooms, goes from window to window, closing the blinds, or dropping the paper shades. The city housekeeper has the advantage of her country sister, her house being usually located in such a manner as to have windows only on two of its sides. She also has at her command heavy and abundant material, and with her three thicknesses of curtains can have the satisfaction of so darkening her parlors that across the room she can scarcely distinguish the features of her dearest friend.

The same worship of the dim prevails in many of our fashionable churches. There has been much eloquence consumed in praising that line of Scripture: "Let there be light!" But the very clergyman who reads these words of a bright Sunday morning may do so with his head inclined to a gas fixture. It is the common belief, I think, that light was produced by a distinct act of creation as a special and unspeakable blessing to mankind. But the civilized portion of mankind, as a general thing, seem to prefer being genteel to being blest. We see that plants and animals cannot thrive without sunlight; we know that in this respect the same law which governs them governs us, but shall we not have the house look well to neighbors? Shall they see the blinds open and this blessing which is to make us thrive pouring in on us? I wonder how Arctic explorers feel about the matter? I wonder if they do the correct thing, and when the sunlight streams forth upon them after a winter of darkness, screen their hatchways and cabin windows and so contrive to bring about this genteel gloom?

In our cities are many houses the chief apartments of which are kept shrouded in an almost Arctic obscurity. The fact that the air inside those houses needs what the sun's rays alone can give it, is ignored entirely, even by women who are obliged to live mostly within doors. Not many, even of the most intelligent of them, make a point of letting in this needful sunlight. The average housekeeper drops the curtains on leaving a room, and shades the windows of her sleeping chamber. "But," you will say, "this curtain dropping is not a matter of gentility alone, it is a matter of economy. We cannot afford to let the sun fade our carpets." This makes a very simple thing of it. The question becomes merely this: Shall our carpets last or we? The original purpose of houses was, I suppose, to shield us from unfavorable weather in order that we may live and thrive. But if we shut out from them the sunlight by which we live and thrive, they are thus made to defeat their own purpose. Now it stands to reason that carpets shall not regulate this matter. Are carpets made for houses or houses for carpets? If the latter, then let us put up small but tasteful buildings, carpet them richly, shut them carefully, and build

other houses close by for dwellings. We could step in to see the carpets occasionally and could take our friends in. For our dwelling houses we would have straw matting, or carpets which will bear fading, or stained wooden floors, or wood carpets, with rugs here and there as foot comforts.

A. M. DIAZ.

SOME AUTUMN WILD FLOWERS.

Yet the autumn, too, has its delicate blooms, though they are overshadowed and, as it were, put out of countenance by the coarser growths which must be said to characterize the harvest season. Nothing that May puts into her lap is more exquisite than are the purple gerardias with which August and September embroider the pasture and the woodland road. They have not the sweet breath of the arbutus, nor even the faint elusive odor of the violet, but for daintiness of form, perfection of color, and gracefulness of habit it would be impossible to praise them too highly. Of our three species, my own favorite is one of the narrow leaves (*Gerardia tenuifolia*), its longer and slighter flower-stems giving it an airiness and grace peculiarly its own. A lady to whom I had brought a handful the other day expressed it well when she said, "They look like fairy flowers." They are of my mind in this: they love a dry, sunny opening in the woods, or a grassy field on the edge of woods, especially if there be a seldom-used path running through it. I know not with what human beings to compare them. Perhaps their antitypes of our own kind are yet to be evolved. But I have before now seen a woman who might worthily be set in their company,—a person whose sweet and wise actions were so gracefully carried and so easily let fall as to suggest an order and quality of goodness quite out of relation to common flesh and blood.

What a contrast between such lowly-minded, unobtrusive beauties and egotists like our multitudinous asters and golden-rods! These, between them, almost take possession of the world for the two or three months of their reign. They are handsome, and they know it. What is beauty for, if not to be admired? They mass their tiny blossoms first into solid heads, then into panicles and racemes, and have no idea of hiding their constellated brightness under a bushel. "Let your light shine!" is the word they go on. How eagerly they crowd along the roadside, till the casual passer-by can see scarce anything else! If he does not see *them*, it is not their fault.

For myself, I am far from wishing them at all less numerous, or a jot less forward in displaying their charms. Let there be variety, I say. Because I speak well of the violet for its humility, I see no reason why I should quarrel with the aster for loving to make a show. Herein, too, plants are like men. An indisposition toward publicity is amiable in those to whom it is natural; but I am not clear that bashfulness is the only commendable quality. Let plants and men alike carry themselves according to their birthright.—Bradford Torrey, in *Atlantic Monthly*.

LIFE IN JAPAN.

In Japan women have always held a higher position than in other Asiatic countries. They go about freely wherever they please, and the seclusion of the Chinese is wholly unknown to them. The schools receive as many girls as boys; and as a result of my observations I can scarcely say, without idle compliment, that the former are brighter than the latter.

By degrees and under these favorable conditions for general observation, some of the causes of the people's happy spirit of independence began to be revealed to me. The simplicity of their lives, in which enters no selfish rivalry to outdo one another, accounts in a large measure for this enviable result. Regarding one another very much as belonging to one family, their mode of life is more or less on the same plane, and consequently a spirit of great harmony prevails. A very small income is sufficient to supply the ordinary necessities of life, and everything else is secured with but little effort. Household effects are few and inexpensive; and should everything be destroyed by fire or lost in any way, it is not an irreparable calamity. All can be replaced at a small outlay and life go on as before.

The tenant upon renting a house is put to little expense to furnish it; indeed, he requires absolutely no furniture at all. The clean, finely woven mats which cover the floor serve as table, chair, and bed; and as it is the universal custom to remove the shoes before entering a house, there is no danger of one's bringing with him the dirt from the streets.

His bedding consists of cotton quilts, which are spread out on the floor at night, rolled together in the morning, and stored away in a closet during the day. A few pictures (*kakemono*) and specimens of beautiful script decorate the walls, a few vases contain sprays of flowers, and a number of cushions on the floor complete the furnishing of a room. Yet it does not seem empty or cheerless; for the general arrangement of harmonious colors, the different woods employed in its visible construction, and the beauty of the finished workmanship, make a most harmonious and pleasing combination. Paint is never used to cover the wood, much less to substitute a false grain.—*The Century*.

NEWS AND OTHER GLEANINGS.

—The New York *Independent* raises a scientific doubt thus: "It is often a question whether the improvements in grains and fruits are, in a general way, anything more than a holding of his own by the cultivator. Thus we may suppose the improved forms to depreciate, and then the new introductions are better simply from degeneration of the old. Some very good apples, apparently, are found in the mud under the ancient lake dwellings in Switzerland. Recently comparisons have been made between modern varieties of wheat and grains in a semi-carbonized state found in Romano-British remains—as well as from the tombs of Thebes and Egypt; and no advance seems to have been made, in size at least, during these two or three thousand years."

—"It cannot be denied," says the *Whitehall Review*, "that, whatever her formularies say, the Church of England at the present time, by her living voice of prelates and priests, teaches contradictories. In one church you

find the whole sacramental system as taught by the Roman Church more or less accurately preached and proclaimed and the symbolic ritual practiced as exemplifying to eye and ear these verities. Within a stone's throw you find another church where all these points of doctrine and practice are proclaimed to be pernicious and soul-destroying; while in a third there is Broad Church toleration of or indifference to, all or any dogma, if not a denial of what is common to the belief of High and Low Church people."

—In a contribution to *Harper's Magazine*, Dean Lichtenburger reports that, so far as the mass of German people is concerned, religion "is no longer anything but a frame." He adds: Almost everywhere there are complaints of notable diminution in church attendance. Many churches in the towns and in the countries are three-quarters empty. At Berlin, where there are only forty-seven churches and twenty-seven chapels with 50,000 seats, for a Protestant population of nearly a million, the church service is very little attended. People go to the cathedral to hear the fine music and to see the Emperor. When the liturgical service is over, there is a considerable exodus: more than half of the congregation goes away; and before the sermon is at an end there is a formidable rush toward the door in order to get good places for seeing the imperial family go out. The service ends before empty benches; and at the celebration of the holy communion, which follows, there are often not a dozen communicants.

—When "school" begins we shall miss for a time from our land the presence of two of our most promising young women, Lizzie Stover, of Norwich, and Bertie Wilson, of Bloomfield. Both go to fill positions as teachers in Friends' schools in N. Y., the former in New York City, the latter near Albany.—*Young Friends' Review, Canada*.

—A letter from Anna E. Dickinson to the Philadelphia newspapers states (contrary to the purport of the item in this column, a week ago), that she is not "painfully and hopelessly ill," but that she will soon appear again before the public, "probably on the platform, and certainly on the theatrical stage."

—Japan holds a domestic industrial exhibition next year at Tokio—the third of its kind in the Mikado's empire. The leading native merchants of Yokohama and the capital intend to invite foreign firms to visit the exhibition.

—The disease in wood called dry rot is contagious. It may be spread from diseased wood to sound, and it has been surmised that the disease may be conveyed by tools that have been employed on diseased wood.

—Advices from Apia report the return to Samoa of ex-King Malietoa and other exiles. The ex-king was warmly welcomed by the natives, and his own flag was hoisted. King Mataafa also greeted Malietoa with cordiality. The German Consul informed Malietoa that he was at liberty to do as he pleased.

—Visitors at the Pike's Peak Observatory have for years been regaled with the statement that "this is the highest point on the globe which is inhabited the year around." It now appears that regular meteorological observations are made on the Andes, in Peru, at a height of 14,300 feet which is about 200 feet higher than the Pike's Peak station. In Europe there are but two stations at any considerable height, these being about 10,000 and 11,000 feet respectively.

—While excavating in a caisson for the enlargement of the water works above Louisville, Ky., recently, a workman dug up a tooth of a mastodon. It is 14 inches in circumference, and 5½ inches from the crown to the broken end of the tooth. It weighed one pound and fourteen ounces.

—The strongest wood in the United States, according to Prof. Sargent, is that of the nutmeg hickory of the Arkansas region; and the weakest is the West Indian birch. The most elastic is the tamarack, the white or shellbark hickory ranking far below it. The least elastic and the lowest in specific gravity is the wood of the *Ficus aurea*. The wood having the highest specific gravity, upon which the value as fuel in general depends, is the bluewood of Texas.

—An interesting report of a visit to the glaciers of Alaska and Mt. St. Elias was read before the Royal Geographical Society, London, and is published in the July Proceedings of that body. The party started from Sitka, and, after reaching the mountains, spent two days in attempts to reach the "crater," the summit of the mountain being 7,000 or 8,000 feet higher. The bottom of the crater is filled with ice, and the pit is overhung on all sides by great glaciers, which are gradually melting away. The author (Mr. H. W. Topham) believes that the long period of ice through which the land has been passing is now coming to an end. The height reached by the party was 11,461 feet and the author believes that greater success might attend an ascent from the north side.—*The American*.

—Mrs. Henry Fawcett and her daughter, Miss Philippa Garrett Fawcett, have jointly paid over to the National Association for Supplying Female Medical Aid to the Women of India the sum of £100, to be devoted toward the founding of two scholarships or prizes—one in Calcutta and the other in Bombay—for native female medical students.—*Christian Register*.

CURRENT EVENTS.

AFTER visiting Cincinnati and Indianapolis, President Harrison returned to Deer Park, last week. He is still remaining there until the middle of Ninth month.

The civil war in Hayti, between General Legitime who held the capital, Port-au-Prince, and General Hyppolite, who organized his followers in the northern part of the island, has ended by an agreement, in which Legitime gives up. He has left Port-au-Prince. Frederick Douglass, the new U. S. minister to Hayti, is waiting until a stable government is established, before repairing to his post.

A TELEGRAM from Johnstown (26th inst.) says the water in the rivers there is getting very low, and "a great deal of pestilence-breeding matter is being exposed. The stench along the river bank is becoming unbearable; especially along the point and near the stone bridge are the odors very nauseating. There are quite likely many dead bodies in the sand along the banks and also in the bottom of the river." There is much sickness in the valley and the physicians are kept busy. The proportion of deaths continues large.

THE six men who have been in prison at Chicago, charged with the murder of Dr. Cronin, were put on trial on the 26th inst., but several days have been occupied with preliminary proceedings.

THE North Dakota Millers' Association has decided to place an agent in London to dispose of flour to the bakers of Great Britain. It is thought this will have a strong tendency to strengthen the home wheat market, and, besides, will result in the building of a number of new mills.

AT Deer Park, on the 26th, President Harrison said to a press representative that he had made no announcement to any one as to calling an extra session of Congress." He said that he had of course discussed the pros and cons of the matter with various persons. It is understood that the question is not yet determined.

A VERY extensive strike is on, in London, among the dock laborers. They ask better wages. They have been parading through the streets of the city in immense numbers, without disorder.

LONDON, Aug. 26. A severe earthquake shock was felt throughout Greece to-day. Serious damage was done in several towns.

THE deaths in this city last week numbered 426, an increase of 37 over the previous week and a decrease of 25 from the corresponding week of 1888. Among the principal causes of death were: Bright's disease, 8; cancer, 19; cholera infantum, 12; consumption of the lungs, 35; dysentery, 6; typhoid fever, 18; inflammation of the lungs, 12; inflammation of the stomach and bowels, 23; old age, 17; and paralysis, 10.

NOTICES.

* * * An All-day Meeting on the subject of Temperance, under the care of Concord Quarterly Meeting's Committee, will be held at Friends' meeting-house, Middletown, Delaware county, on Seventh-day, Eighth month 31st, 1889, commencing at 10 o'clock.

Friends and others interested are cordially invited.
MARY McALLISTER, Clerk.

* * * Acknowledgments.—The Friends' Book Association acknowledges receipt of the following additional contributions to the Children's Country Week Association:

Edward, William, and Howard Biddle,	\$5.00
J.	3.00
Mrs. Dr. Parke,	5.00

Previously acknowledged,	13.00
	119.00

Amount,	\$132.00
---------	----------

JOHN COMLY, Supt.

Eighth month 26, 1889.

PUBLISHERS' NOTICES.

* * * As a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. Sold only in cans. ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

*Association of Friends to Promote the
Education of the Colored People
of the South.*

HOWARD M. JENKINS, Chairman, 921 Arch Street, Phila.
SARAH J. ASH, Secretary, 1717 Vine Street, Phila.
LYDIA A. SCHOFIELD, Correspondent, 1717 Vine St., Phila.
HENRY M. LAING, Treasurer, 30 N. Third St., Phila.

EXECUTIVE COMMITTEE—Edward H. Magill, Swarthmore, Pa.; Sarah H. Peirce, Philadelphia; George L. Maris, West Chester, Pa.; Mary Ann Fulton, Wilmington, Del.; Amos Hillborn, Philadelphia; Alfred Paschall Doylestown, Pa.; Estelle Hall, Swarthmore, Pa.; Clement M. Biddle, 815 Arch street, Phila.

WORK OF THE ASSOCIATION.

The work of the Association is chiefly to *raise funds*. These are sent to the support of two schools for colored youth in South Carolina,—the Schofield Normal and Industrial School, at Aikin, and the Mt. Pleasant School, near Charleston, in charge of Abby D. Munro.

RECOMPENSE.

Who lives but for himself alone
Life's sweetest pleasure loses;
The husks and shells he makes his own,
The kernel rich refuses.

Who lives to make the world most blest,
With self-denied endeavor,
Opens a mine within his breast
Whose wealth will flow forever;

For all unlike earth's veins of gold,
Which yielding will exhaust,
Its treasure grows fast as it flows,
And not one grain is lost;

For such is God's great law of love—
Its life and recompense—
Love feeds and lives on what it gives,
And draws its pleasures thence.

Receiving, giving, doing, make
The happiness of heaven;
'Tis only this which brings the bliss
Unto the angels given.

THE GOSPEL MINISTRY.

I HAVE felt that the wise counsel contained in the Epistles of George Fox to ministers, recently republished in this paper, has a place and service in the present condition of our Society, and is worthy the deep and earnest consideration of every one who has heard and answered the call, "Go, preach my Gospel." While it cannot be denied that every convinced member, by the simple framework of our profession, becomes in a certain sense a preacher of righteousness in the world, though the voice may never be heard in public testimony, it is also true that we have a ministry, called of God, as we believe, of whom it may be said, as Paul testified of himself, "Wo is me if I preach not the gospel;" and it is to those who are thus called and set apart for the work that our beloved father in the church addresses himself in the living concern that they may heed the injunction of the Divine Master "not to put the light they have received under a bushel, or hide the talent which has been bestowed upon them," nor tumber and entangle themselves "with the affairs of this world," but "be valiant for God's truth upon the earth, and spread it abroad in the day light of Christ." Thus, if followed, leaves no place for doubt or disengagement; the work is God's work, and the servant is not responsible for its success; his duty is

done when the work has been faithfully met results are his who gave the call.

And what are "the riches and glory of the world that is everlasting," which he recommends? Do we consider they are only to be entered upon as an inheritance in the life to come? Are they not rather the portion of every truly called minister of the Gospel whose affections are set upon things above,—the eternal riches from which he draws his daily sustenance; and are not these more to him than the earthly substance, in that the Divine nature in him, which cries out after God, will not be satisfied until it attains thereto? Thus being his experience, he is enabled through the grace that is given him, to call and persuade others to seek the same heavenly treasure, and thus the more earnestly as he sees the perishable things of the earthly condition the chief end and aim of so many who thus fail of the true riches. It is of the greatest importance in the work of the church that the responsibility be felt and acknowledged by every one who is called thereto, whether the measure be one or many talents; that they may commend the truth preached to the intelligent, thoughtful consideration of the bearers, and it become the power of God unto salvation to every one that believeth.

The world has not outgrown the need for such a ministry; nor has our Heavenly Father ever failed to fit and prepare the willing and obedient soul, upon whom he lays the burden, which if faithfully borne, comes to be, through divine help, an easy service. It is well to note the earnest exhortation to "stir up the gift of God in you; improve it, and do not sit down, Demas like, and embrace this present world that will have an end, lest you become idolaters." Demas was a fellow laborer with Paul and Luke, the beloved physician and Epaphras, all earnest, untiring laborers in the ministry, and for a while he was diligent and faithful, but the sacrifice was more than he had counted upon, and Paul writes to Timothy, "Demas has forsaken me having loved this present world." It is as true now as it ever was, that they who enter upon the Gospel Ministry must make it the chief concern of their lives. Every workman must give himself to his calling if he hopes to be successful, and how diligently men will apply their time and talent to the carrying forward some undertaking that promises a large return in worldly advantage. It is this same energy and application that enables the minister to "stir up the gift of God" which he has received, and improve it for the better performing of the work that has been laid upon him.

The hearts of the people to day need to be stirred to the very core by just such a ministry as in those early times became the "power of God unto salvation,"—not calling to some formulated system of religion as the only way to this salvation, but pointing to the efficacy of the Divine power to meet and supply the spiritual need of every seeking soul.

But to preach this great hope,—this great salvation,—the preacher must have come into its possession must be able to tell of what his own hands have handled of this good word of life and to bear testimony to the enduring value of the "unspeakable gift." The injunction "Tarry . . . till ye be endued with power from on high," was tentative, yet there was an imperative necessity that the power be bestowed before any went forth to make its salvation known to others. The tarrying was only to last while the work of preparation was being accomplished. The time in which we are called to take our part in this work does not differ essentially from that in which the apostles labored. They who are called to the ministry still need to be endued with power from above,—power that lifts the soul-life out of the cumbering cares of the earth, out of its useless anxieties, its unnecessary desires, its deceitfulness of riches, its yearning after the things that hinder its progress heavenward. And this is the only power that when it is received and nourished through watchful obedience to every manifestation of duty, can fit and qualify any to preach the gospel.

How stands the case with us, fellow-laborers and co-workers with Christ in this glorious calling? Are we yet tarrying,—waiting for a clearer manifestation, a louder call? All around us is a field white unto harvest, with its larger service and its small duties waiting the willing hand. He that is faithful in the little is promised to be made ruler over more, and the experience verifies the promise.

Many who have been called to labor in the little things that lie all about them have lost their crown while waiting and looking beyond for the greater things which are only reached through lowly service. "If the eye is single the whole body is full of light;" let us keep the eye single to Him who calls us into his service, embracing every right opening, and entering upon it as those who have not a hard master, but one who suffers none to lose their reward ready ever to give a reason for the hope that we cherish, and wherever we go see to it that we are true to our great Commission, and so present the Gospel that those who hear will be ready to acknowledge its power to save to the uttermost every one who believes in and accepts its offers of salvation.

L. J. R.

"THAT strange, awful thing, Time! sliding, gliding, fleeting on—on to the cataract; and then the deep, deep plunge down, bearing with it and swallowing up the world and the ages, until every interest that now seems so great and absorbing is as a straw on the bosom of the mighty flood! Let but a man possess his soul with this idea of Time, and then unworldliness will be the native atmosphere he breathes."—*Dr. Robinson.*

For Friends' Intelligencer and Journal.

VISITS TO FRIENDS IN VIRGINIA.—II.

WE left the home of A. B. and S. Davis, and the friends of Lincoln, on Third-day morning the 13th, at 9 o'clock, for a long ride with Hugh and Mary Lupton, in company with several others, and falling in with carriages and their occupants by the way. We soon came on to the Berryville and Winchester turnpike, which starts from Alexandria. The Blue Ridge was spread out before us, and we had a splendid view of the Loudoun Valley as we approached and ascended its heights, reminding of our own Chester Valley. We saw the walls of a barn still standing which was burned in the war, none having taken its place. Reaching the summit of the Blue Ridge, we had a fine view of the Shenandoah Valley; had the atmosphere been clear we could have seen the North Mountain range very distinctly in the distance. The apple and peach trees are loaded in many places, the limbs breaking with the weight of fruit. The early peaches are gone, and the later are scarcely ripe. At Castleman's Ferry we crossed the Shenandoah on a flat boat, three carriages at a time, nine in all. On the farther shore we passed a building where a public house was kept before the war, and a slave was whipped to death by his master, the proprietor of the house; one of the many incidents recorded of that unrighteous traffic. We could see how high the river had been in the recent floods, coming up to the second story of a building not far away. We passed by many of the fine old Virginia mansions with the slave quarters still standing, and thought of the great changes their owners had encountered with feelings of sympathy, accustomed as they had been to a retinue of servants indoors and out. In Clark county, through which we passed, there is some of the finest farming land in the State. It forms still many extensive estates, though some of them are much divided since the war. There were large fields of corn, some of it very fine. One of these is the home of Dangerfield Lewis, a relative of George Washington, and a very attractive place. We had expected to enjoy a social lunch together on the mountain, but some delay caused by the breaking of an axle, led to a separation, the advanced travelers not having understood the designated place for rest and refreshment. We were glad to reach Daniel Wood's, (he and his daughter being in company with us), and to find rest and refreshment in their comfortable home. H. and M. Lupton went on in the evening to their home at Hopewell, eight miles farther, making in all thirty miles for the day. We saw eight large loads of wheat straw pass by on their way to a paper mill where they manufacture the material for boxes, creating such a demand that the farmers can scarcely retain sufficient straw for home use. There is a very fine spring near Daniel Wood's, where the water pours out in a strong stream, and having a grist mill at his place it is called "Spouting Spring Mill."

On Fourth-day morning we went with them to Winchester meeting. We could see Round Top Mountain in the Allegheny Range, as we approached the town, the valley between the latter and Blue Ridge being about twenty miles wide. Nearly all

the way we traveled over ground occupied by the armies in the war, and where the battle of Winchester took place in 1861. Indeed there was skirmishing around D. W.'s home. Several bullet holes are in the house and the soldiers were quartered there for several weeks, to the great damage of furniture, etc. We passed the cemetery where the bodies of about 2,300 soldiers were laid, many of them unrecognized by relatives or friends. The old meeting-house was destroyed during the war and some years later Friends replaced it with a large brick building, thinking the time might come when it would be desirable to hold the Quarterly Meeting there. It was a pleasant surprise to find so many assembled, knowing how small is the company of Friends that usually meets there. Realizing that many of them did not bear *our name*, the desire arose that we should be careful not to appropriate the designation "Friends" in any self-righteous or exclusive sense, remembering "ye are my friends if ye do whatsoever I command you," and also that there are friends of God, of his Christ, and one another, to be found in every nation, kindred, tongue, and people. O, how precious is the covering when all distinctive terms and dividing lines are forgotten, and we bathe in a sea of universal love!

It was pleasant to meet with many of the friends we had seen at the Quarterly Meeting, coming from the different neighborhoods around. We went to the home of Joseph and Mary Jackson, some four miles distant, enjoying a visit with them, also with Jonah Rees and family, whose wife is their daughter. In the afternoon rode six miles further to Lewis and Susan T. Pidgeon's,—she the daughter of William Williams of Waterford. We were glad to meet Rebecca Janney, of Philadelphia, there. It is a pleasure to visit young people building up new home lives, and to cherish the hopes that centre therein, reaching out with influences of helpfulness as they build aright, to the community in which they live and the Religious Society of which they are members. Lewis's father and sisters live near and spent the evening with us. The flood had been very high about them, coming up very near to the house. The Opequan Creek, which we crossed both there and near Daniel Wood's, being close by.

Fifth day morning we went to Hopewell meeting. It is a large stone building, one half erected about a century ago, the other having stood some fifty years longer. During the war the members here met in each other's homes, their house being used continually for hospital and commissary stores. The floor is considerably burned around where their cook stove stood. We of Pennsylvania, who were removed from the centres of conflict and the scenes of carnage, can scarcely realize what these Friends and others suffered,—so many obliged to leave their homes, families separated for months together, often with no means of communication or knowledge of each other's welfare. But now we could hold our meeting in peace, with none to make us afraid. The importance of emphasizing *present good* presented, profiting by the examples of self-denial and faithfulness in our own day, rather than in magnifying those afar

off, in order that we might be truly grateful for and appreciative of present blessings and lessons of instruction, while gladly availing ourselves of all testimony, however remote, that evidences the fruits of righteousness. The need was presented for advancement in thought and action to higher levels, through all the helpful instrumentalities afforded, especially to be careful not to have the mind engrossed in worldly riches, neither to stumble because of the wrong-doing of others. "What is that to thee? follow thou me," which does not mean indifference, but dedication of life.

We came home with H. and M. Lupton, grateful for the rest and comfort afforded. Sixth-day we visited Nathaniel and Nancy H. Branson, he having been a pupil at Prospect Hill Boarding school many years ago, with pleasant reminiscences of familiar scenes and persons. They have been holding at Winchester, the last month, a normal school through the provision of the Peabody Fund, where several hundred teachers and others attended, and felt it to be an occasion of interest and profit. On Seventh-day we visited David and Ann Branson, she a daughter of the late Wm. and Sarah Bailey, of London Grove. Their home is the old mansion where David's father and grandfather lived, probably the oldest in the neighborhood. They were surrounded by soldiers of both armies during the war, and many marks of the bullets are in the house. We saw part of a shell, quite heavy, which passed through a 20-inch wall, and was picked up in their kitchen, the opening made being large enough for David to creep through.

We saw, alas! many mementoes of the sad and suffering time, even shutter fastenings made from bayonets approaching the converting of them into ploughshares. One hundred cavalrymen rode through their yard one day close to the door. Looking from the window, D. counted fifty camp fires in the orchard near the house. Seventeen of the first prisoners taken by the Confederates were confined in their carriage-house, they being compelled to feed them. Seventy-five men came one rainy night at 12 o'clock, calling them up and demanding food. Their cousin, Sarah Ann Branson, now Chandlee, whose home was with them, having a premonition of such an emergency was prepared, and all were satisfied. David told me concerning Hopewell meeting-house, that the first part had been built about 130 years, though a log house stood in the grave-yard many years earlier. The Monthly Meeting was first attached to Concord Quarter, Pa., afterward to the Western Quarter, and later to Warrington Quarter, until 1788, when the house was enlarged to hold a Quarterly Meeting. We also made a pleasant visit to another brother, Jonathan Branson and his wife Caroline. All live near together, making a community of themselves, yet not thus drawing the lines for social intercourse, but observing the warm hospitality of Virginians,—may we not say of Friends in general? In the afternoon, accompanied by H. and M. Lupton, we went to Hugh's brother David's, the old homestead, six miles on our way to the "Ridge," where we found all three sisters with their children—Mary Irish, whose home is there, Ann Bond, who lives near by, and Rebecca

Broomall, from Baltimore. It was a pleasant meeting for the little ones, and older as well. We traveled over some rough country, hilly and stony, crossing Little North Mountain, with the greater still in the distance. Although there has been mostly clear weather since being in Virginia, there is a hazy condition of atmosphere rendering the distant mountains dimly defined, which otherwise stand out so clearly. We passed through a large tract of woodland beyond Hopewell meeting house, where Lee and his army were encamped. Emerging from it we caught a fine view of the Shenandoah Valley. The autumn flowers line the road-side; whole fields were ablaze with golden-rod, the early species just coming into bloom, also iron-weed, asclepias, eupatorium, large patches of lobelia cardinalis,—more than I ever saw together,—and many other varieties. The Virginia thistle bears a bright blue blossom, and when in full bloom is very pretty, though considered as pernicious by the farmers as our own, which is also abundant here.

L. H. P.

For Friends' Intelligencer and Journal.

THE NEED OF TRAINING IN YOUTH.

THE Duke of Argyll in the January number of the *Nineteenth Century* has an admirable article on the evils of isolation, as exemplified in the history of the inhabitants of the Hebrides. These were a branch of a people active and progressive by nature, which became stranded in those remote islands and for a thousand years took not a single step forward in the path of civilization. The one great natural product of their country was grass of exceptional richness, and their principal subsistence was on cattle, yet of these hundreds died of starvation every winter, while their owners never dreamed of securing provender for them in winter. This gives occasion for the writer thus to moralize: "We are all stupid in our various degrees, and each generation of men wonders at the blindness and stupidity of those who have gone before them. Man only opens his owlish eyes by gradual winks and blinks, to the opportunities of nature and to his own powers in relation to them. Let us just think, for example, of the case of preserving grass in 'silos,' a resource only discovered or at least recognized within the last few years, yet a resource which supplies one essential want of agriculture in wet climates, at no greater cost of ingenuity or of trouble than digging a hole in the ground, covering the wet material with sticks, and weighting it with stones." One would think this device not above the capacity of the merest savage who could dry fish or flesh, yet the Hebrideans, gifted by nature with an intellect equal to that of any race, could not discover it in a thousand years. We wonder at their stupidity: but will not future generations wonder at ours?

We have an annual crop of humanity capable by proper treatment of being made a blessing to the nation: but as the grass of the Hebrides was suffered to rot in bogs and marshes, spreading pestilence through the land, so a great part of our annual crop of children, to drop the metaphor, are left to be trained in crime by brutal and vicious parents until they are a burden and a curse to the community, and

then, and not till then, the community takes them in hand, and with tenfold the labor that would have made them useful citizens if applied at first, imperfectly eradicates the implanted evil, and gives them some useful training. I read a few days ago of a boy somewhere in this country who at the age of ten years was sentenced to imprisonment for life for the murder of a year-old sister. He could not read, had never heard of God, and had no notion of right or wrong. The children had lost their father, and their mother had married again: and the boy said his step-father had hired him with a pair of new shoes, to rid him of the infant: but the man could not be convicted on the testimony of such a creature. The boy has now been in the penitentiary one year, has learned to read and write, displays quite an average degree of intelligence, and a kindly disposition, and is altogether a bright and good boy. Is it not monstrous that only by his crime he has gained such a blessing? What must be the folly of a social system when such an effect can result from such a cause?

Use blunts the perceptions. The vice and destitution that are under our eyes every day cease to excite attention. In our great cities are wretches who depend on the garbage boxes set out on the streets for the scavengers to remove, for the only meal they get during the day. They may be seen in the early morning turning up the contents of these boxes with a stick and devouring the morsels of food there found. But the sight arouses not a tenth of the sympathy that answers to an appeal in behalf of an African or Asiatic savage who is infinitely better off. The Earl of Meath is interested in the social question in England. His wife works among the poor and her pecuniary contribution besides her personal service is \$10,000 a year. In one article in the same number of the magazine above cited, the Earl says the condition of the London poor is "infinitely worse than the condition of absolute slavery;" yet to abolish slavery a million lives were paid in our country.

The misery of the poor is not in the scarcity of the necessaries of life, for never were they so plentiful or so cheap. Nor is it in the scarcity of employment, for if I correctly judge what I read, there is employment for every one who can do any useful art. The trouble is in the absolute worthlessness of the untaught, neglected classes. When all mankind were at war, every man who could carry a club was worth his food. Peace has reduced this class to starvation.

There was a time, not so very long ago, when pestilence was supposed to be sent by God to correct men's morals. That in fact it rendered them much worse did not at all undeceive men. Self-interest, the desire of self-preservation set science to work, and science has well nigh excluded pestilence from civilized lands. In a letter published two days ago Pasteur exhorts the English to extirpate hydrophobia in the British Islands, which he says can be readily done. There can be no question that moral depravity, greater I believe in the Anglo Saxon islands than in any other, can be cured, and the race elevated to the level of the honest, upright, industrious, chaste, Parsee cow-worshipper. But the evil must be dealt

with like other pests. The state must institute preventive measures, and to that end have rigid inspections. The father who is training his son for a burglar, the mother who is training her daughter for the brothel, must be arrested in their unholty courses. If small pox, and yellow fever, and hydrophobia can be arrested, so can drunkenness and prostitution. There are populations who have extirpated both. The subject is too extensive to pursue here. Volumes have been written and are yet insufficient to display the matter in all its aspects. And yet all the trouble resolves itself into two branches: Want of a proper social organization and want of early training of the people.

Of the magnitude of this latter want I am satisfied we have no adequate conception. We do not recognize the fund of good in the natural man, as he is born into the world, and far less do we recognize the necessity of a proper training to develop this natural good, and prevent its turning into evil. It is a maxim of experience that "*Corruptio optimi pessima*," the better the thing corrupted the worse the product of corruption. And judging from the vileness of the product, a vast deal of good has gone to waste in our poor. Within the last ten or twelve years the idea has been gaining ground that to improve the material condition of the helpless class we must improve their moral condition first. Experience shows it is useless to appeal to the sweater who is making a fortune off the work of girls to whom he pays ten cents a day, or to the liquor dealer who is making a hundred per cent. on his daily sales, or the railroad wrecker who is piling up millions by the ruin of enterprises in which the seamstress has invested the earnings of her life-time. It is equally useless to appeal to the drunkard, who spends, as many do, seven-eighths of all his earnings in drink. Nor can laws be devised to reach and restrain these, that would not at the same time, cripple or ruin the honest man. People can be protected only by being taught to protect themselves, or rather I should say by inspiring into them a spirit and intelligence which will render them desirous and capable of learning to take care of themselves. Various are the efforts now being made in this direction. Thousands of good men and many more good women are devoting their lives to the work, but the evil constantly gains upon them. Never was destitution so utter, never was degradation so gross, never was so much liquor per head used, never was the gulf between the poor and the rich so wide as at this moment. To give money seems useless if not actually injurious. Of the lives of this class, all the time not occupied in work is passed in vicious indulgence. Under the spur of hunger they may seek and find some occupation and thus secure a part of their time from brutality. Relieve their hunger and there is no check whatever upon them. The remedy must begin far back. How far? The Antioch of the Breakfast Table, whom I trust all your readers know—and they can't know him too well—the education of the child must begin long before its birth. It must begin with the parents. I feel sure it should begin as soon as the babe leaves its mother's breast. And I rejoice to see this idea gaining

ground. The kindergarten is its product, but the kindergarten is expensive, and it educates the intellect and the physical faculties principally, the moral incidentally. The moral nature is capable of a distinct education, and with the most beneficial results. We have not the means of judging, but I think it by no means impossible that if the moral training of the community were perfect, all the evils of poverty would disappear. People could and would regulate social questions by themselves.

Towards this Utopia, a most promising charity was started some twelve years ago in England and has attained vast dimensions there and has extended to this country, where I trust our greater energy will give it additional impulse. It originated in the Church of England in a number of associations called Girls' Friendly Societies. In the same church here they bear the same name, but in other churches have different names, I think. But they are all on the same plan, which is that of the prophet when he would bring the widow's dead son to life. He stretched himself upon the corpse and put his eye to its eye, his mouth to its mouth, his hand to its hand, and so communicated vital warmth to the cold clay. And so young women of the comfortable class meet young women of the working class, and of the class too that don't work, and pass certain hours with them every week in social intercourse on a footing of perfect equality. The result as I briefly stated in a former letter has been truly remarkable. One of the societies held a garden party some weeks ago at my house. There were fifty of these girls in attendance. They passed three hours in pleasant conversation, sitting under the trees, walking about and playing out-of-door games. They had tea and other refreshments, and during the whole time there was not an improper word spoken, or rude act committed, but their conduct evinced perfect good breeding. A few years ago, a similar society of the same church, working among the same class thought and perhaps found it necessary on such occasions to have a policeman in attendance.

The importance of this institution lies in the fact that these girls are to be the mothers of the next generation of men and women, and fitting them for their duties is the best possible means of giving that generation and thereby each succeeding generation a fair start in life.

A TRIBUTE TO SARAH HUNT.

The name of Sarah Hunt will long remain as precious incense upon the altar of our hearts. For the love and esteem I bore her I feel it a pleasure as well as a duty to offer this little testimony, hoping the remembrance will be an incentive to all to imitate her good traits, walk by the same rule, and mind the same light which was her guide through life.

There is something implanted in our nature by our Heavenly Father which induces sorrow in the loss of a relative or a friend. This sorrow is increased always in proportion to our love for them.

This is natural, for in our loss we feel a void, a loneliness, which naught of earth can fill.

My acquaintance with this friend commenced while I was young, as she was often a guest under my father's hospitable roof, and I was often a visitor at her home in Moorestown, with a happy circle of young friends, where the kind word of welcome, with the good cheer of the home, were extended alike to the friend or stranger. Being genial and social in her disposition, she extended the feeling of love and sympathy to those around her—entering into the pleasures and enjoyments of the young, and thereby gaining their confidence and affection. When in the exuberance of youthful spirits, we had sometimes exceeded the bounds, her loving words of caution would be gently given.

Her ministry was ever marked by humility and simplicity, and was like a great stream flowing freely to all, giving evidence that she dwelt near the Fountain of that water, "which if a man drink thereof, he will thirst no more." Many, no doubt, will remember her when as Sarah Underwood she stirred our spiritual natures with the sweetness, the earnestness, and the fullness of her gift. It was a ministry that from its nature eminently tended to gather all to the Truth, Love to God and the whole human family being its chief characteristic.

She had often said of late that her work was done, and she was waiting to be released. Desiring no doubt to realize the truth of the following lines, which she wrote at 86 years of age :

"A crown immortal
In a world of bliss,
Already at the portal
As we pass from this."

Her mind continued bright and clear, even to her sunset hour. Thus closed in peace the earthly life at a good old age. Long will her cherished counsels and bright record be remembered by her children and friends. S. M. H.

Brooklyn, N. Y., Eighth month 15.

EXTRACTS FROM JOHN WOOLMAN'S JOURNAL.

A THING remarkable in my childhood was, that once as I went to a neighbor's house, I saw, on the way, a robin sitting on her nest, and as I came near she went off, but having young ones, flew about, and with many cries expressed her concern for them.

I stood and threw stones at her till one striking her she fell down dead. At first I was pleased with the exploit; but after a few minutes was seized with horror, as having in a sportive way, killed an innocent creature while she was careful for her young. I beheld her lying dead, and thought those young ones, for which she was so careful, must now perish for want of their mother to nourish them; and after some painful considerations on the subject, I climbed up the tree, took all the young birds, and killed them; supposing that was better than to leave them to pine away and die miserably, and believed in this case that Scripture proverb was fulfilled, "The tender mercies of the wicked are cruel." I then went on

my errand, but for hours I could think of but little else but the cruelties I had committed, and was much troubled.

About the twelfth year of my age, my father being abroad, my mother reproved me for my misconduct, to which I made an unprofitable reply; and the next First-day (Sabbath) as my father and I were returning from meeting, he told me he understood I had behaved amiss to my mother, and advised me to be more careful in future. I knew myself blameable and in shame and confusion remained silent. Being thus awakened to a sense of my wickedness, I felt remorse in my mind, and getting home, I retired and prayed to the Lord to forgive me; and do not remember that I ever after that spoke unhandsonely to either of my parents, however foolish in some other things.

Dear young people, choose God for your portion; love his truth, and be not ashamed of it; choose for your company such who serve him in uprightness, and shun as most dangerous, the conversation of those whose lives are of an ill favor; for by frequenting such company, some hopeful young people have come to great loss, and been drawn from less evils to greater, to their utter ruin.

In the bloom of youth no ornament is so lovely as that of virtue, nor any enjoyments equal to those which we partake of, in fully resigning ourselves to the Divine will. These enjoyments add sweetness to all other comforts.

Treasures, though small, attained on a true principle of virtue, are sweet in the possession; and while we walk in the light of the Lord, there is true comfort and satisfaction.

Here neither the murmurs of an oppressed people, nor throbbing, uneasy conscience, nor anxious thoughts about the events of things, hinder the enjoyment of it. If the Lord be our God, in truth and reality, there is safety for us, for he is a stronghold in the day of trouble, and knoweth them that trust in Him.

Some glances of real beauty may be seen in their faces who dwell in true meekness. There is a harmony in the sound of that voice to which Divine love gives utterance; and some appearance of right order in their temper and conduct, whose passions are regulated; yet all these do not fully show forth that inward life to such who have not felt it; but this white stone and new name are known rightly to such only who have it. I find no narrowness respecting sects and opinions, but believe that sincere upright-hearted people, in every society who truly love God, are accepted of Him.

If a man dissemble, deceive, he deceives himself, and goes out of acquaintance with his own being. The least admixture of a lie—for example, the taint of vanity, the least attempt to make a good impression, a favorable appearance—will instantly vitiate the effect. But speak the truth, and all nature and all spirits help you with unexpected furtherance.—*Emerson.*

SCRIPTURE LESSON No. 35.

NINTH MONTH 15TH, 1859.

DAVID SPARING SAUL.

GOLDEN TEXT:—"Be not overcome of evil, but overcome evil with good."—Romans 12: 21.

READ I. Samuel 24: 1-17.

DAVID having become very popular, brings upon himself the jealousy of the King, and Saul having tried to take his life, David takes refuge in the wilderness. Saul pursues him, and finally reaches the cave where David and his men found shelter.

Behold the day in which the Lord said unto thee. The men with David were eager for Saul's death, and knowing the weight that words of prophecy had with all the Jews, endeavored to make David believe that it was the expressed will of God that he should slay Saul, but David did not listen to their foolish words, and led by his reverence for the leader of his people, whom he believed to have been called by God to fill that high position, he spared the King.

The Lord's Anointed. This was one of the many titles given to their kings by the Jews; it was the most holy title they could bestow, and it commanded the respect of the whole people, believing as they did that he whom their wise and holy men had made king over Israel had been specially chosen for that position by God himself. Another title for the king was Lord, and still another Father, corresponding to the use of Sire among the nations of Europe at the present time.

And David said to Saul. The whole of this speech of David's to Saul is a beautiful and simple avowal of innocence, and must have made a startling impression upon the mind of the revengeful king who had come out to kill this unoffending man. Think of young David, "ruddy, and withal of a beautiful countenance and goodly to look on," standing there confronting the king, proclaiming his innocence, and proving his generosity by letting Saul depart in safety, though the king's life had been in his hands; and then the reproach in the simple words: "I have not sinned against thee, yet thou huntest my soul to take it." Surely this is one of the most striking examples of generous conduct to be found in history.

The Lord judge between thee and me. David had not fallen into the grievous error that so many have done both before and after him. No dark schemes of vengeance is he plotting; he does not even withdraw one mark of the loyalty and honor that he has always shown his king. He leaves the judgment of his persecutor in the hands of the Lord. An instance of such true magnanimity was very rare among the Jews, whose law was "an eye for an eye, and a tooth for a tooth."

Selfishness in one form or another is man's greatest enemy. It runs the whole gamut of human sin and folly, from vengeance to vanity. The desire of one man to be avenged upon another for a personal injury is nothing more or less than to see another brought into suffering because the first man's person or possessions—his own mighty self—has suffered at the wrong doer's hands. There is no time in this world for human vengeance—no provision made for

it—it even *pays* better to be magnanimous. Two men have been injured, both disastrously; one yields to a desperate impulse to find his enemy and force him to make reparation or suffer for his wrong-doing. He spends years, golden years of his life, and wastes his substance in the pursuit; he worries and broods over his misfortunes, and becomes a hard and bitter man; in the end he conquers, and his enemy is laid low; he is paid in money for his loss, but the amount is less than he has expended for it; or his enemy is cast into prison. What reward is that for all his best years wasted, his health and happy belief in the goodness of God and his fellow-men? Meanwhile, his friend who has sustained the same injury has put out of his mind as far as possible all recollection of it, and has expended all his energies and means for repairing his loss, and succeeding in new directions. These years of his life are full of high purposes, noble ambitions; he finds new friends, new hopes, and, forgetful of his misfortunes, thanks God for his goodness to him. Which is the happier of the two men? There is a breadth, a growth, a strength in magnanimity, that enables a man who has once opened his heart to its genial influence to rise above all feeling of vengeance, leaving that to the Great Judge whose province He has Himself declared it to be.

NOTES ON THE LESSON.

David was no longer in doubt as to the true feeling of Saul towards him. He had certain evidence which Saul made no effort to conceal, that his life was in constant jeopardy from the hatred of him that Saul cherished; he felt himself as "a partridge hunted in the mountains," yet now that his enemy was entirely in his power he spared him. How easy it would have been for David to interpret the situation as an especial favor of God, who thus so plainly, he might have thought, gave his sanction to the removal of Saul by the hand of David. Ordinarily men would so interpret it and feel justified in the act. Not so with David. Saul was still "the anointed of the Lord," his reverence and loyalty were none the less strong for the king, though he sought the life of his subject. David was assured that in God's own time he would come to the kingly estate; he did not believe it was the Divine intention that an act of violence on his part was necessary to hasten that time.

As the dangers thicken around his pathway he is not dismayed; the finer traits of character are brought out, like the flower that must be bruised before its delicate perfume is exhaled. David seems to rise into the lofty attitude of him who leaves his vindication to the Supreme Judge, and is concerned only that he may be worthy of all the mercy shown him.

The types of human character with which the Hebrew Scriptures are so replete would not meet all conditions of men were David not among them; there is in him a blending of the best possibilities of human attainment with the weakness and imperfections of sensuous existence, and running through all a golden thread of faith and trust which finds its way to the very heart of the Divine perfection. We hear

him exclaim as he reflects upon the blessings he has been the recipient of, "As for me, I will behold thy face in righteousness; I will be satisfied when I awake with thy likeness." What a noble endeavor, worthy the emulation of every one who is seeking the better life. Though failure after failure may follow our efforts, if there is this resolve to be satisfied only when we find ourselves in any measure attaining to this high ideal, we may be assured of Divine help in our endeavor.

PHILADELPHIA, NINTH MONTH 7, 1889.

THE VALUE OF ASSEMBLING FOR DIVINE WORSHIP.

WE have been renewedly impressed of late with the great advantage that must arise to the multitudes that gather in the various places of worship on the Sabbath day, to express their adoration for the great Ruler of the universe. And not only to adore but to acknowledge—it may be without words or even formulated thought—the dependence of all upon the great First Cause who bestows life and sustains it. Underlying all the cumbrous machinery of the Church there is revealed in the act of assembling for divine worship, a universal need for some form in which to approach Him who is felt to be everpresent, lovingly entreating, not commanding recognition. And our public acknowledgement of this helps us in ways that we know not, and do not realize until circumstances deprive us of the privilege of thus gathering together. We are well aware that it is not alone in "temples made with hands" that God is to be worshipped, and that his "listening ear" is everywhere that life is, and that he is ever ready to yield his benefits and receive our homage. "As the sun doth not wait for prayers and rites that he may rise and shine at once and upon all," so God is ever near, ready to bless and prosper those who choose to follow in the path his light directs. Nor are we blind to the fact that many assemble without it may be even a thought of God, still this habit of devotion is not wholly lost even here; for putting one's self in the way of good may in time induce a craving for it; and to others, whose hearts respond with quickening warmth when the hour for assembling comes, the growth into higher and better life is sure and steady. For a time all the pressure of the outer world can be laid aside and here

in the presence of other needy souls we can turn our thoughts God-ward to our profit.

Differently constituted as we all are, we need the varied channels whereby the spiritual pulse can be quickened; so it is not for us to sit in judgment over any form that seems helpful to the seeker after Divine communion; but for us as Friends, let us welcome our seasons for assembling with our fellows in true humility of spirit, be these on the First, or any succeeding day of the week, that here, perchance, it may be our good fortune

"To feel, as flowers, the sun and dew,

The one true Life its own renew."

And as to the severing of our opportunities for social worship with those with whom we harmonize in religious thought, for the sake of greater earthly advantages, this should be a matter of most serious concern. We are often powerless to control circumstances, and must then yield with the cheerful faith that wherever we are we "cannot drift beyond his love and care." But this must not prevent us from well and wisely considering the effect that may be produced upon our spiritual growth by the separation of all congenial ties in this regard. And not alone for ourselves, for, to again quote from our venerated poet, "the soul is lost that's saved alone," and the spiritual welfare of those depending upon us and sometimes those who are associated with us, must be taken into account. In all such emergencies as these let all seek for Divine counsel, and then courageously follow its leadings, so that inward peace may be the result.

MARRIAGES.

GOODNO—NICHOLS.—On Eighth month 21st, 1889, at the residence of the bride's parents, by Friends' ceremony, George F. Goodno, of Dedham, Mass., and Anna L. Nichols, daughter of Benjamin F. and Lauretta H. Nichols, of State Centre, Iowa.

DEATHS.

CANBY.—At Mt. Washington, Md., on the 24th of Seventh month, 1889, William Canby, in the 67th year of his age; a member of Baltimore Monthly Meeting.

DEMOIT.—Eighth month 8th, 1889, at Bloomsburg, while in the dental chair, Lois M. Demott, wife of Hiram Demott, in her 30th year. She was the daughter of Ellis Eves, and granddaughter of the late George and Margaret Masters. A member of Fishing Creek Monthly Meeting.

KESTER.—Eighth month 5th, 1889, after a lingering illness, which was borne with patient resignation, Martha A. Kester, wife of Jacob Kester, an elder of Fishing Creek Monthly Meeting, aged nearly 68 years.

LLOYD.—Eighth month 29th, 1889, Arthur Howard, son of John and Annie W. Lloyd, of Hathoro, Pa., aged 5 years and 22 days.

MARSHALL.—At the residence of his brother, Milton Marshall, in East Marlborough, after a few days, illness, Pennock Marshall, of Philadelphia, aged 84 years.

NEEDLES.—Eighth month 26th, 1889, Patience J., wife of Edward M. Needles, and daughter of the late Hunn Jenkins, in her 51st year.

PARKER.—Seventh month 10th, 1889, at the home of his son, Webster Parker, J. Thompson Parker, an elder of Fishing Creek Monthly Meeting, aged 84 years, 1 month and 13 days.

TATE.—Seventh month 29th, 1889, Mary Tate, an esteemed elder of Goose Creek Monthly Meeting, Loudoun Co., Virginia, in the 81st year of her age.

TOWNSEND.—In Byberry, Pa., Eighth month 27th, 1889, Thomas Townsend, in his 75th year.

WIDDOS.—Eighth month 25th, 1889, at the residence of his brother-in-law, Thomas J. Allen, Darby, Pa., Edmund K. Widdos, aged 60 years.

OHIO YEARLY MEETING.

EDITORS INTELLIGENCER AND JOURNAL:

THE writer, in company with Samuel Sharp, left Broad street Station, Philadelphia, Eighth month 22d, for Salem, Ohio, to attend the Yearly Meeting there. On arriving at Pittsburgh we met with Allen Flitcraft and wife, en route like ourselves, and after taking dinner, took the Pittsburgh, Fort Wayne & Chicago road for the place of our destination. Arriving there about 4 o'clock, we were met by hospitable friends.

On Seventh-day, the meeting of ministers and elders convened, held one session, and adjourned till Fourth-day morning, at 8.30, the representative committee meeting in the afternoon, after which our kind friends Mahlon and Ruth Nichols gathered us with a number of other friends and took us to their home, four miles in the country. On First-day public meetings were held at 10 a. m. and 3 p. m. which were favored seasons, Darlington Hoopes and Allen Flitcraft speaking to edification on both occasions. The house was very well filled with an interested and attentive audience, many of whom were not members with us.

On Second-day morning the meeting for business commenced. On calling the representatives, all answered to their names, which was an evidence to my mind of a lively interest, as many have long distances to come. Minutes were read for Friends in attendance as follows: for Darlington Hoopes, from Baltimore Quarterly Meeting, Maryland; for Allen Flitcraft, and Sarah B. his wife, from Chester Monthly Meeting, Pa.; for Samuel Sharp and Geo. T. Haines, from Haddonfield Monthly Meeting, N. J., some others being present without minutes. Epistles were received and read from Illinois, Indiana, Baltimore, and Philadelphia, and after appointing a committee to essay replies thereto and some other routine business, the meeting adjourned till to-morrow morning at 10 o'clock, the afternoon being devoted to the First-day School Association.

Third-day morning the remaining epistles from New York and Genesee were read to edification. The state of the Society was then entered into by the reading and answering the queries which brought us into deep feeling and sympathy. Fourth-day morning being the time for public meeting, the business of the Yearly Meeting was resumed in the afternoon in joint session, when the minutes of the Representative

Committee were read, also the reports of the Temperance committee, the Indian committee, and some other business which claimed the attention of the meeting jointly. It was a session of interest and instruction.

Fifth-day, the remaining business was transacted separately, after which a solemn close in joint session was experienced.

For Friends' Intelligencer and Journal.

EUROPEAN DAYS.—I. THE VOYAGE.— ANTWERP.

The morning of Sixth month 26th was a very rainy one, and the steady down-pour through which our little party found its way to Washington street wharf was enough to dampen the ardor of more enthusiastic travelers. The *Nederland* seemed smaller than ever, the state-rooms more close and crowded in the hot, murky atmosphere, and with so many packages hastily deposited on berth and floor. The farewells said, amid the blowing of the whistle and the noise of the sailors, we slowly turned our back on "the land we love so well." A little group of waving handkerchiefs on the wharf held our eyes riveted upon it till the figures lost their distinctness and gradually passed from sight. Notwithstanding the unpromising beginning, the voyage proved a delightful one. Spared to a great degree the uncomfortable sensations so often experienced, we could thoroughly enjoy the pleasant weather and calm sea. Every vessel that came in sight was a delight simply because it carried beings like ourselves and proved to us that we were not alone on the waste of waters. Every one of the crew, from the captain to the humblest sailor, was kind and attentive, and we were made as comfortable as it is possible to be on shipboard. About 11 o'clock on the night of Seventh month 7th, we sighted the lights on the Scilly Islands, and at three the next morning we passed the Lizard. That first glimpse of land I shall never forget; we had talked of it and wished and looked for it so long, and there sharply outlined against the gray sky was a strip of darker gray, and that was all—and that was *terra firma*. The double electric light, brilliant even in the mist, and miles away, told us where we were, and in spirit our greetings to our dear ones at home accompanied the cable-message to America which announced our arrival here.

The run from the Scilly Islands along the coast of England is the most dangerous part of the trip, as so many routes converge here and the channel is narrow and the rocks numerous. So it requires very careful and skillful navigation to make it in safety; but our officers were equal to the occasion and we kept the even tenor of our way, sighting so many vessels now that they ceased to receive more than a passing notice, for our attention was riveted on the shore and our thoughts ran ahead to the many strange sights and new experiences yet to come. We were more than an hour in passing the Isle of Wight and we felt that a panorama of great beauty was being unrolled before us as one by one its chalk cliffs, its beautiful residences with here and there a church

spire, its hills and vales, came into view. The last day on board was full of interest.

The lowlands of Holland, the curious, fluted tile roofs just showing above the dikes, the long rows of trees all of one size, and the wind-mills with their gigantic arms, some in motion, others at rest, were all so new and strange and pleasant to look upon. The spire of the Antwerp Cathedral could be seen several miles away and seemed to beckon us to that quaint old city. It was nearly ten o'clock when we landed and a party of thankful people stepped once more on solid land. There was no time to sentimentalize, however; the business of the hour was to get to our hotel. Eagerly we scanned each cabman's hat till we found the one bearing "Le Grand Mirroir." This cab was filled with passengers from the *Nederland*, and it fell to our lot to wait for the second load. So we stood in the great depot, or leaned on some of the many barrels,—waiting there, like us, to be taken away,—when one of our party discovered that he was leaning on a barrel of picnic hams from Kansas City, Mo. We felt nearer home immediately, and forgot how nearly homesick we had been when we realized that in all the crowd of people who stood on the wharf and watched us disembark there was no familiar face.

Soon after reaching the hotel we laid our weary bodies down on good, comfortable beds, the first time in fourteen days, in order to be strong and well for the busy day before us on the morrow. Day began to dawn about 2 o'clock, and, tired as we were, there was little sleep for us after that. The cathedral chimes, rung every few minutes, were such frequent reminders of what lay before us, and soon the clack, clack, of the wooden shoes of the passers-by came up to us from the street below, and we knew that the town, at least the serving part of it, was awake. The streets were full of interest even at this early hour. Everywhere were little market-carts pulled by dogs or by a woman and a dog. Men rarely assist in bearing the burdens in Antwerp. We saw one who condescended to *drive* a cart which was pulled by a woman, (probably his *help meet*), and a dog. These dogs are very demure, and never give utterance to a single rebellious word, no matter how heavy the load. Dog-carts are a marked feature of Antwerp life. Fresh milk in tin or brass cans which are bright enough to answer for mirrors, is served from them and seems very inviting. Besides the baskets of green, tempting vegetables hanging from pegs around and under the cart, the market-women often bring cans of milk into town. Children go to school bare-headed. They wear wooden shoes and carry their books in a little hemp bag such as I have sometimes seen in the streets of Philadelphia. The bare-headed women knit as they walk, and even the little girls carry their balls of yarn in baskets on their thin, bare arms, and I suppose knit their appointed number of rounds before they are allowed to play. To a free American, the lot of a woman in Antwerp does not seem enviable. The Place Verte is not green at all. There is not a blade of grass on the whole square. How could there be when so many people tramp over it day by day. In the centre is a fine statue of Ru-

bens, and near by a pavilion for musicians, and here and there are benches for the weary to rest upon.

Our sight-seeing has to be done very hurriedly. The cathedral with its treasures, the museum with its wealth of pictures, to which weeks might be devoted with profit, we felt that we had merely glanced at, hoping that at some time again we might be permitted to make a longer visit. The interior of the Plantin Museum we did not get to see at all since it was closed before we were ready to leave the cathedral. We regretted this very much, since the picture of the social and business life of a wealthy merchant of the 16th century is here shown as nowhere else. But we walked around to the entrance court in the early evening, and excited the curiosity of a party of bare-headed children who vociferously offered the information that the museum was closed—was only open from ten to four. But at ten the next morning we would be far on our way to Cologne, so we were forced to content ourselves with a look at the quaint old buildings in the Place du Vendredi where the museum stands, and imagine what was within. In the exercise of our imagination an article in an old *Harper's*, read nearly a year ago, assisted us materially.

The city of Antwerp is very interesting with its mixture of French and Flemish customs. Business signs are nearly always in both French and Flemish, while French is the language mostly used in trade. Everywhere is shown the people's love for music, flowers, art, and unfortunately,—beer. In the evenings, the sidewalks and half the street are monopolized by the beer saloons and are covered with beer-tables, which are well patronized. The people sit and sip their beer and listen to the music, and the poor unfortunates who do not drink have to go wandering along in the middle of the streets in search of more interesting and instructive sights. The streets are crooked and exceedingly narrow and some of them change their names at every square. We had a delightful ride past the house of Rubens with its Latin inscription under the cornice, past the palace of the king, the Zoological Garden, the railroad station, where we had our first view of European passenger-coaches,—little, dingy looking things they seemed to us too, and through the Boulevard Leopold, which, as its name implies, is a wide, beautiful street and is lined with stately residences. It seemed very strange to see the Venetian blinds *outside* the windows but we find it is a European custom and it might seem strange now to see our ordinary inside-blinds or the old-fashioned shutter. The Pepiniere is a miniature park, beautifully laid out, and containing many shrubs and trees new to us and some old friends, among the latter the morocco tree. Everywhere we see flowers on the outside of the window-sills. In every available corner or cornice is a plant or plants;—if there is not ground enough to sustain them they are planted in boxes or tubs.

Of our ride to Cologne and the many new experiences on the way to Berlin I shall be glad to write later if it will be of any interest to our friends in America. E. H. E. P.

Berlin, Eighth month 16.

THE WESTERN "PAID PASTORATES."

THE issue for Eighth Month of *Western Friend*, (representative of the Wilbur Orthodox membership, in the West), has some severe remarks upon the "paid pastorate" system now pursued in different places by the evangelical or "progressive" wing of the Orthodox body. The editor, Cyrus W. Harvey, recently attended the meeting at Wichita, Kansas, and he thus describes its exercises:

"The First-day school—'Sunday school' as the superintendent repeatedly called it when addressing it—had ended. The organ, which stood in the meeting-room, which had accompanied the music during the school, was closed, though it is, I learned, at times used in meeting. The 'appointed pastor,' Caleb Johnson, announced that it was time for meeting. Instantly a number of young persons with Sankey hymn-books who had seated themselves together just in front of Johnson, began singing a hymn in concert from the books. The instant the singing ceased, Johnson, seated at a table, began a prayer. As soon as this closed, the singing again prevented any silence. Next, with not a moment of silence, a woman arose and read a part of a chapter and proceeded to comment on it for perhaps thirty-five minutes; followed at once by more singing; when it ceased, a man who seemed prominent, arose and crowned this utterly unquakerly performance, for worship there seemed to be none, only words words, words; and it, seemed, with no desire or expectation for anything else—by saying, 'We will now take up our regular collection;' when two individuals, in what ought to have been the most solemn part of a First-day meeting for worship, arose and proceeded to all parts of the house holding out their hats to everybody for a contribution. This over, the 'tip' was given a Presbyterian minister who was present, and he showed he understood it by previous arrangement, by arising and giving a benediction."

The editor of the *Western Friend* expresses strongly his regret to find Caleb Johnson, "who in his younger years was a consistent Friends' minister," should be so engaged now, and adds: "This Wichita meeting is nothing more than the ripened fruit of the 'pastoral system' now established in most of the bodies with which London Yearly Meeting corresponds on this continent. The rich and well-to-do meetings in both city and country have generally adopted this system, and now have their 'pastor' paid and stationed as other hireling ministers. And Wichita shows the result. The governing element of all these bodies,—the educated and wealthy,—live in these meetings and approve this system. And little regard is paid to the feeble protests of the meetings not able to pay for a 'pastor.' The prominent ministers, the \$500 to \$1,000 preachers, are now employed, so that there is now very little chance for the poor meetings to hear a \$1,000 preacher, and this no doubt gives such a color of selfishness to the protests of these poor meetings that the leaders care little for it.

"At Marion, Indiana, is one of the most influential meetings in Indiana Yearly Meeting. In it three prominent ministers are located. For a time one of them was duly installed as 'pastor.' The other two

and their friends did not like this arrangement, and protested with such force that the unity of the meeting was much disturbed. At last, as a correspondent from there writes, the matter has been adjusted by an 'arrangement' that provides that the three ministers shall 'preach,' one, one First-day, the other the next, and so on by 'turns.' It is claimed that the 'pastoral system' does not interfere with the exercise of the spiritual gifts of others, but this case is a good illustration of the result when these other gifts declined to be 'bossed' by the pastor. And it shows to what a ridiculous pass, in delusion, a meeting claiming to be Friends can be brought while pretending to be guided by the Holy Spirit. There is nothing of the true Friend in this system, and never can be; and we think that a few more incidents like this Marion case will open the eyes of London Yearly Meeting and every one who still has any of the principles of Friends left, to the inconsistency of claiming this 'pastoral system' as in any way in harmony with Quakerism."

NEWS OF FRIENDS.

THE old meeting-house at Merion has been repaired, painted, and put in good order, the interior wainscoted and new benches put in of a more comfortable form. The trustees of the property did not consider that they had a right to use the income from funds left by John M. George and Edwin Price, except for keeping the premises in a good condition; therefore those frequenting it, with their friends, have raised funds, had a neat carpet put down, and otherwise made the place attractive and comfortable. It would be well for Friends to bear them in remembrance, and go out to sit with the little remnant who are consecrated to keep aloft the standard of our Society in that locality. Quite a number of dwellings are being erected a short distance off, and it is probable some of their occupants may in the near future be of our communion. Cars leave Broad street depot on First-day at 8.45 a. m., for Elm Station, the meeting hour being 10 a. m.

For Friends' Intelligencer and Journal.

THE VICTORIA REGIA.

ATTENTION having been called, through a notice in the daily newspapers, to the blooming of the rare water lily "Victoria Regia," in the garden adjacent to Horticultural Hall, Fairmount Park, and as it was the first time it had been known to bloom in the open air (without the aid of artificial heat), I took some trouble to get a view of it. The first thing noticeable were five immense leaves, lying on the surface of the water, of a pale green color on the ont, or upper side, and a deep crimson on the lower. The largest of these (which were perfectly round) measured 14½ feet in circumference, and were all turned up around the edge thus resembling immense trays, more than leaves: between four of the largest was a space, and on looking beneath the surface of the water a flat looking flower was visible possibly ten inches across, of two or three shades of crimson (although I believe it was white when first opened.) In the situa-

tion in which it was placed, it resembled a painting with a glass over it, the clear water above it giving this appearance. The gardens around the Hall are very beautiful. C.

Ninth month 1.

WHEN MY SHIP COMES IN.

SOMEWHERE on the distant seas
Driven on by tide and breeze—
Blow softly, winds, and aid her
On her way to win—

There's a good ship sailing on
From the rosy gates of dawn.
Oh, what joy will fill my heart,
When my ship comes in!

Treasures richer far than gold,
Or than gems, my ship doth hold;
Half the store of wealth to tell you
I can scarce begin.

But with me, friends, you shall share;
There will be enough to spare—
Enough for one and all,
When my ship comes in.

When I sit (as here to-night)
Dreaming in the ruddy light,
In the embers of the hearth fire
I can almost see

Shape of every sail and mast
Of the ship that's sailing fast,
Drawing nearer, ever nearer,
On her way to me.

So what matter if to-day
I am poor and sad (I say),
Just a little longer waiting—
Fast the days will slip—
And I'll hasten to the shore:
All my sorrow will be o'er
As she sails across the harbor bar,
My own brave ship!

"But if (I hear you say)
Not to-day, nor any day,
For all your hopeful waiting, friend,
Your ship should come?
Oh, then what will you do
When you find that unto you
Nevermore, across the ocean,
Will your ship come home?"

She will come, or soon or late,
Well I know it; I can wait,
For my captain's sailing orders
Are from One most wise.
So I sing as I sit here.
Every moment brings more near
The happy hour my ship will greet
My wistful eyes.

She will come! Ay, it may be.
When the summons comes to me:
"Earth-life here is ended, soul!
Rise! Another life begin!"
When I take the angel's hand
And go downward to the strand,
I may see, then first, across the bay
My ship come in—

Come in, and waiting stay,
While a voice on board shall say:
"Hasten, all is ready now,
We but wait for thee."

Swiftly then I'll board my ship,
And her moorings she will slip,
And we'll sail out on the ocean
Of—Eternity.

—Alice Williams Brotherton, in *Independent*.

WHY HE SANG.

A wee little birdie stands and sings
On a mossy stone,
And all the air with his music rings,
Yet he sings alone.

No one to hear as he warbles and trills
His pretty song;
But a happy feeling his little heart fills
The whole day long.

"The grass is green and the flowers are bright!"
Sings he, sings he;
"And the old yellow sun sends down plenty of light
For me, for me!

"Way down in my heart are a great many thanks
For everything,
And up in my throat are a great many notes,
So I guess I'll sing!

"And maybe some one will know by this
How glad I can be;
While, if I were still, perhaps he would miss
A wee bit of glee!"

Oh, wouldn't the world be cheery and bright
If we all did this?
If we saug for every good thing we had,
With never a miss?

And like the wee little bird who stood
That day on the stone,
Sing just the same with a hundred near,
Or when we're alone!

—Junia Stafford, in *Unity*.

THE WISDOM OF IGNORANCE.

SAYS Charles Dudley Warner: "In making up a party to a traveling excursion, always be sure to have it include one ignorant woman. She will ask all the questions you are ashamed to ask, and you will secure the benefit of a vast deal of information you would otherwise lose."

Although this genial gentleman is one of the most humorous of our American writers, it is not certain that these utterances were in any sense jocose. Yet if they should appear to give cause for merriment, we should laugh at them almost through tears, for they are suggestive of much that is sad and sinful, as well as observed, in our social life.

It is evident that the making up of such a party as the one described is based upon the assumption that, although "honesty is the best policy," it is as rare as the "best" things of life usually are, for the "one ignorant woman" is the only one of the entire number honest enough to show herself as she really is. What a concession and revelation is this to begin with! It is not an encouraging condition of

things that, among people of intelligence and leisure, representing the class with the time, money, and culture which makes travel intellectually profitable, honesty should be the exception and not the rule. Yet, if not to this class of the community, to whom may we reasonably look for the moralities of life?

The social scientist is appalled at the general falsity of our social system, lamenting its low standards, unfair estimates, and deceitful customs. Everywhere is seen the effort to hide one's intellectual poverty, to pass off alloy as pure metal, to claim a social, mental, or moral valuation out of all proportion to real worth. All about us is the incessant struggle to "hold one's own" (which, unhappily, is not always one's own), to "put the best foot forward," and to "keep up appearances" in the matter of dress, establishment, entertainment. We smile at the shop girl who decks herself in cotton velvet and glass diamonds; at the clerk who, bolting his luncheon at a cheap restaurant, ostentatiously uses a toothpick on the steps of a high-priced hotel. But what are such exhibitions if not evidences of falsity and superficiality struggling to conceal itself and pass for something genuine and imposing? And is the principle underlying all such negative dishonesty different in kind from that which leads the traveling excursion to conceal its ignorance in the hope that there may be one of the party honest enough to reveal it?

What is the cause of this shame of sincerity? It is no new shame. Hundreds of years ago, in the opinion of the world's greatest dramatist, if "the world's grown honest then is doomsday near; for to be honest, as this world goes, is to be one man picked out of ten thousand." And the definition of honesty is not limited to the discharge of one's financial obligations—too often the only meaning attached to it; it is "to be furnished or clothed with honor," while Wordsworth defines honor as "the finest sense of justice which the human mind can frame."

It would not be likely to occur to any member of this party that the "one ignorant woman" was really the wisest one among them. Yet surely she must be so if, as Goethe says, "Wisdom is only in truth." She is wise enough to know that she does not know, wise enough to appreciate wisdom, and with so strong a desire to obtain it that she is willing to expose her ignorance,—the inevitable condition, under such circumstances, of the acquisition of knowledge. Socrates, who, Milton says, "the oracle pronounced wisest of men," declared in all sincerity, "As for me, all that I know is that I know nothing." Our poet Pope, whom some ill-natured critic, referring to his deformity and activity, called "an interrogation point—a little crooked thing that asks questions," asked this question, "Tell, if you can, what it is to be wise?" and answered, "Tis but to know how little can be known." Surely then the majority of the traveling excursion are not only dishonest, but wise only "in their own conceit," a condition which verifies the truth of the saying, "Too wise is foolish." They belong to the class so graphically described by the *Key Gratiano*, "who do a willful stiltiness entertain with purpose to be dressed in an opinion of wis-

dom, gravity, profound conceit." Still, that they have some consciousness of their lack of knowledge and some desire to add to their store is proved by their gratitude to the "ignorant woman" from whom they "secure the benefit of a vast deal of information they would otherwise lose." In the same round-about manner did the historic monkey secure the hot chestnuts, and with them our contempt for all time. Is there not, too, something in this of the spirit, if not the letter, of procuring goods on false pretenses?

Blessed be the "ignorant woman," and it is a credit to the sex that she is a woman. She is probably not one whit more ignorant than her hypocritical companions, "who only are accounted wise for saying nothing," and who, but for her, might forever remain in the mental obscurity from which they are ashamed to emerge. She, at least, can enjoy her trip with a clear conscience, for she is fulfilling the injunction of the apostle, "Provide things honest in the sight of all men."—*Caroline B. Le Row, in Christian Union.*

COURAGE OF DUTY.

A high degree of this courage may be manifested by those who are naturally timid, and who are by no means insensible of the risks they encounter; but in whom the sense of duty overpowers all emotions of fear. Such devotion to duty was manifested by Elisha Tyson, who lived in Baltimore in the early part of this century, and who devoted much of his time to rescuing from slavery those who were illegally held in bondage. Public sentiment had not then been fully awakened to the evils of slavery; so that E. Tyson's efforts met with little sympathy, but brought upon him the ill-will of many, and the charge of officious intermeddling, as well as often exposed him to personal dangers. The account preserved of him says, "Whenever he perceived the absence of a link in the chain of title to a slave, he filed a petition for the trial of the right, regardless of the vituperation and abuse, which, on these occasions, always flowed in plentiful streams. Indian origin, a free maternal ancestor, or the importation of progenitors from a foreign country, as they broke the fetters of bondage, were the object of his inquiries. He took his measures with great caution, and never filed a petition till his own mind, at least, was free from doubt as to the right of the slave to liberty. He is said, in the course of his life, to have been instrumental in liberating two thousand slaves!"

"Superior to fear himself, the terror of his name, and the firmness of his character, paralyzed the slave dealer. On one occasion, learning that a negro entitled to liberty was confined on board of a ship lying at anchor about a mile from Baltimore, just about to sail for New Orleans, he procured two officers and approached the vessel. When within hearing, he said to the dealer, 'I understand that a colored person in thy possession is entitled to his freedom.' Upon the trader's denial of the allegation, Tyson read some documents which described the negro's person and evidenced his manumission; but just at that instant, a breeze induced the captain to order

the hoisting of the sails to put to sea. Sensible of the importance of prompt exertion, our philanthropist declared his intention to board, desiring the constables to follow him; when the dealer, unsheathing his dagger, swore, 'that the first man that set foot upon that ship was a dead man.' Without consulting the cold dictates of prudence, Elisha Tyson leaped on board, crying out, 'Then I will be that man.' The ruffian retreated in dismay, suffering his victim to be dragged from the hold, where he was secured, without resistance and without a murmur. The trader was invited to contest his right to the negro in a court of justice, to which, he was informed, the case would be submitted; but aware of the worthlessness of his claim, or being obliged to depart, no opposition was made, and the man was restored to freedom."

In one of the dungeons in Baltimore, arranged for the reception of such wretches as were designed for transportation, "he ascertained that several free negroes who had been kidnapped, and destined for Georgia, were confined. Determining to liberate them, he solicited some friends to attend him; but they, aware of the danger, and believing an attempt at their rescue utterly hopeless, not only refused their assistance, but advised the relinquishment of so hazardous an enterprise. Having spent a great part of the night in vain efforts for aid, he set out alone at an advanced hour, to beard the tiger in his lair. Oaths, imprecations, and loud laughter, announced to him, on his arrival, the assemblage of several negro-traders, in gay carousal. He entered without hesitation, announcing thus the object of his visit—'I understand that there are persons in this place entitled to their freedom.' 'You have been wrongly informed,' replied the leader, 'and besides, what business is it of yours?' 'Whether I have been wrongly informed,' calmly rejoined the unwelcome visitor, 'can be soon made to appear; and I hold it to be my business, as it is the business of every good man in the community, to see that all doubts of this kind are settled'—at the same time approaching the door of the dungeon. 'You shall advance no further,' thundered the leader, placing himself in a hostile attitude, and uttering a tremendous oath. By an effort of strength, our hero broke through the arms of his opposer, and hastened to the dungeon. At the door stood a sentinel with a cocked pistol, which presenting to the breast of Tyson, he swore he would shoot unless he desisted. 'Shoot if thee dare!' answered his collected adversary in an elevated tone, 'but thee dare not! coward as thou art—for well does thee know that the gallows will be thy portion!' The menacing pistol fell harmless to the side of the miscreant, and Tyson, seizing the light which he held in his left hand, entered the dungeon without further molestation. There he beheld several miserable victims of cruelty, one of whom was gagged. Upon inquiry, he was informed that a mother and two boys among them were free—that they had been decoyed away, and placed there with a view to perpetual slavery in Georgia. Assuring them of succor, he went in pursuit of two constables, who, upon the execution of a bond of indemnity, rendered their assistance. The *finale* was, that the mother and boys

were declared free; and one of the traders was convicted of their kidnapping, and sentenced to the penitentiary."

Elisha Tyson died in 1824, at the advanced age of 75. It is related that for two days his house was crowded with those who came to look at his remains; and that 10,000 persons of color walked at his funeral.—*J. W., in Philadelphia Friend.*

MORAL VALUE OF MANUAL TRAINING.

In the organization of new methods of education designed to develop manual skill and impart knowledge of practical value to working people, one of the principles laid down by the most successful pedagogues is that the pupil must not be aided in his work. The teacher may tell him and show him how to handle a tool, but must not give a practical demonstration on the object at which the pupil is working. He may point out defects and tell how they may be remedied, but must not make the required correction. The pupil thus left to his own resources, although guided in what he does, is taught to be self-helpful.

In the Swedish schools the young workman, when he has produced a useful object satisfactory to the teacher, is allowed to take it home to his parents. If it is defective and the mistakes can not be corrected, the teacher is required to destroy it, and the pupil begins his work over again. There is a good deal of moral training associated with this kind of instruction; indeed, it is claimed by the advocates of the system that besides developing manual dexterity useful in all kinds of work, it quickens the mental faculties, strengthens the physical, and inculcates principles of morality. In the Swedish schools the moral purpose is kept in view so consistently that the pupils are not allowed to use paint or varnish to give an artificial finish to their work. Its defects must not be glossed over; the pupils are taught to appreciate what is, not what seems to be. So, also, by limiting the objects to be made in the school to simply useful home objects, they are taught habits of serious industry, and by being allowed to take them home for use in the family they are encouraged to work for the improvement of their own households. Some of the benefits to be obtained from such a course of instruction may be more or less fanciful, but they are rational, and under favorable conditions may be realized. There can be no doubt that the simple exercises in wood-work carried on in the primary schools of Sweden are of real value in developing hand skill, habits of close and careful observation, a sense of order and neatness. These developments would be of value even though there should be no direct moral gains. But such good habits, if they do nothing more, provide a favorable environment for the growth of morality, such as is not necessarily present in a school which confines itself to instruction in the three R's. It has been painfully demonstrated by prison statistics that education in reading and writing does not diminish crime as it was once hoped that it would, but these same statistics encourage the belief that the new system of edu-

cation having manual training for its object may have some influence in this direction.

Apart from any direct moral influence to be developed by the habits acquired in the school workshops, there is the hope that such training may develop a love of industry and a respect for manual work. If it should have this effect, then, if we may trust statistics, one of the chief incentives to crime against property—idleness—would be removed from those who have had the advantage of such instruction. It is easy to understand how a boy brought up to despise labor with the hands, unable to get employment satisfactory to his tastes, associating with companions well supplied with money, but himself with empty pockets, is put under great temptations to steal or to acquire the means of living in some other dishonest way. That temptation may be removed from him if he is given correct ideas of the dignity of labor, taught how to use his hands, and established in habits of industry. With such training it may reasonably be expected that he will find ready employment, and thus be delivered alike from idleness and from temptation to steal. Moral instruction should also be given, but to make it effective the environing conditions that lead to crime—idleness, bad associates, the want of ready money for ordinary wants,—should, if possible, be removed, and this can be accomplished in many cases by an education fitting boys to engage contentedly in manual employment.—*Baltimore Sun.*

MAKE THE CHILDREN HAPPY.

A LITTLE child sat on a door-step, looking very forlorn and lonely, as dusk was falling one chilly evening. There was a very sorrowful expression on her little homely face, a dissatisfied, hopeless look that would be sad to see on an old world-worn countenance, but in a little six-year-old was inexpressibly touching.

"What's the matter, little one," I said bending down to her.

"Nawthing," she answered, rather sullenly, looking away from me.

"Where do you live?" I asked.

"In here."

"Then why don't you go in out of the cold?" I asked, feeling her little blue hands, and noticing how she was shivering.

"I ain't goin' in," she said, "I'm always in the road, and ma said she wished I'd go away and never come back."

A mother had said that to her little girl, a tiresome, naughty, unattractive little girl, perhaps always in mother's way, and always hothering; but they were cruel words, not the less cruel that they must have been untrue. They had made a wound in a child's heart that the childish memory would retain for long years, perhaps a life time. Her faith in "mother's love" had been shaken, her belief in mother's kindness had received a rough shock that carresses and indulgence would not soon efface.

People are not sufficiently careful of children's feelings, they do not seem to remember how easily they were hurt when they themselves were young;

or if they do remember, it does not make them kind and pitiful as it should. They do not consider that the little ones are so much more sensitive to unkindness than grown people, and not having learned self-control in the hard school of suffering, they are less able to bear it. A rough wind may twist and warp, or utterly destroy a young sapling, that would only make a strong tree grow the stronger. Children have more capacity for pain or pleasure; less will make them happy and less will make them miserable, while they are young, than will be the case when their characters are formed.

People speak of the happy days of childhood, when childhood is to so very many one long martyrdom. Children live in a very little world, scantily populated. They see at first nothing beyond the home, and they see themselves the centre of that home. When their horizon broadens the sad fact that they are not the pivot upon which the universe revolves begins to dawn upon them, and how sad a fact that is to digest many who have believed themselves to be "everything" to one being on earth, and found that they were "nothing," can tell. The painful ordeal of being superseded by another baby, of going to school and running the gauntlet of strange, unfriendly, critical eyes, of being evolved from the pet of the family to an awkward hobbledoey, the butt of every joke, a fit subject for ridicule and sarcasm, has to be borne somehow, but is very hard to endure. The agony they suffer, the tears they shed, are known alone to themselves and to Him who sees and pities a sparrow's fall. And though the pain may be transient, the effects are lasting, and can be seen in the development of their characters to their life's end.

Oh, mothers and sisters, make the little children happy! Show them that consideration which they deserve; try to understand their feelings; win their confidence and show them all the love that you have for them. Be patient with them, they have not learned to reason yet; all they have is feeling. You can make them happy now, but in a few years time, so very few, your love will be powerless to fill their lives, you will find yourselves impotent to ward off sorrow and disappointment and heart-sickness from them. Make them happy while you can, while a little treat, a little present, a small indulgence, will fill them to overflowing with joy. Scold them seldom, and be sure you are just in doing it; never punish them unless you are sure that they deserve it and that punishment is the best way to correct their fault; never frighten them, never threaten them without good cause; always be loving, so that they may look back to their childhood days as days of joy, and to their first home without any bitter memories.

Help to make all the children you come in contact with as happy as you can. Remember, Christ blessed little children and pronounced a curse upon whosoever should offend one of the little ones.—*Selected.*

ALL through life there are wayside inns, where man may refresh his soul with love;
Even the lowest may quench his thirst at rivulets fed by springs from above.

—*The Golden Legend.*

ADVANCING HOUSEHOLD SCIENCE.

ONE of the latest societies, showing the strictly practical drift of the times, is the Association for the Advancement of Household Science. This is an organization of men as well as women who are interested in the best methods of housekeeping, and desirous of promoting the general happiness and comfort of home life. Its first annual meeting was held in May last at Purdue University, Lafayette, Indiana, when papers were read on Cooking Schools, First Steps in Good Housekeeping, Home Architecture, Home Sanitation, and the Proper Selection and Combination of Foods; all of which subjects bear very closely on the welfare of families. These papers will be shortly published in pamphlet form, and homely though household science may sound, there is no subject which needs more scientific investigation, and which, in the practical view of the matter, contributes not only to the home but to the national life. The objects of the Association, as given in the published circular, are:

1. To collect and disseminate information in regard to the most approved plans of building comfortable, convenient, well-ventilated houses; and the easiest and best methods of doing all kinds of housework.

2. To systematize those plans and methods, and put them into practical operation.

3. To study the principles of nutrition and the chemistry of foods; and to apply the knowledge obtained by such study to improving the character of our national cookery.

4. To make it a distinction and an honor among women to be good cooks and housekeepers; and to make domestic employments of equal repute with teaching, office work, or any occupation by which a woman earns money.

5. To promote in all possible ways the establishment of schools for the special education of housekeepers, matrons, stewards, caterers, cooks, and those having supervision of the diet of large numbers of people; to the end that such special education may be required in all cases of persons undertaking the duties of any such positions.

6. To insist upon skilled labor in all departments of the household, and upon making the rate of compensation for such labor dependent upon its character and quality.

Members of the Association are assigned different topics for investigation, and at future meetings the reports will be received and discussed. Already there are members in many of the States of the Union, and the subject is attracting general attention. The corresponding secretary is Professor W. P. Ewing, Purdue University, Lafayette, Indiana.—*Edward Everett Hale, in Cosmopolitan Magazine.*

I LOVE to hear thine earnest voice,
Wherever thou art hid,
Thou testy little dogmatist,
Thou pretty Katydid!
Thou mindest me of gentlefolks,—
Old gentlefolks are they,—
Thou say'st an undisputed thing
In such a solemn way.

HARDLY any object is now attracting so much attention in the West, or is likely to be so prominent in the future, as that of general and systematic irrigation of the vast regions of deficient rainfall. It is announced that a contract has just been let to a contractor of Kansas City for building a canal, at a cost of \$4,000,000, from Bear Lake, in Idaho, southward 150 miles to Ogden. It is to be ten feet deep and forty wide, and its flow will be 17,500 gallons a second. In its course it will irrigate half a million acres. Besides this it will supply the waterworks for Ogden and all the smaller towns in its course. Bear Lake is thirty miles long by seven wide, and is so fed by the snows and springs of the mountains that it is practically inexhaustible.

From the demonstrated utility and feasibility of works so great as this comes the suggestion which is now being earnestly discussed in Kansas, of constructing a vast irrigation system for the south-western section of that State. That wide region has again substantially lost its crops this year, from drought, yet its soil, if irrigated, would yield an immense return. It is believed that a supply could be drawn from the Arkansas river to reach a very large part of the State, and that by means of storage reservoirs it could be used throughout the season of growth. *The American.*

THE mind never puts forth greater power over itself than when, in great trials, it yields up calmly its desires, affections, interests to God. There are seasons when to *still* demands immeasurably higher strength than to act. Composure is often the highest result of power. Think you it demands no power to calm the stormy elements of passion, to moderate the vehemence of desire, to throw off the load of dejection, to suppress every repining thought, when the dearest hopes are withered, and to turn the wounded spirit from dangerous reveries and wasting grief, to the quiet discharge of ordinary duties? Is there no power put forth, when a man, stripped of his property, of the fruits of a life's labors, quells discontent and gloomy forebodings, and serenely and patiently returns to the h Providence assigns?—

Channing.

"HINDRANCES to progress are helps to progress in the path of a man who is determined to make progress. And helps to progress are hindrances to progress, unless a man treats his helps as though they were hindrances. Having a hard time in life is more likely to make a great man than having an easy time; and he who has an easy time to start with will have a hard time in rising to greatness. Herodotus, 'the father of history,' was so impressed with the truth that the more rugged regions and the more rigorous climates were the sources of strong character, that he said: 'It is a law of nature that faint-hearted men should be the fruit of luxurious countries; for we never find that the same soil produces delicacies and heroes.' And as it was in his day, so it is in ours; it requires hardships to make greatness an easy attainment for any man."—*S. S. Times.*

FAMILY LIFE IN NAZARETH.

He who has seen the children of Nazareth in their red caftans and bright tunics of silk or cloth, girded with a many-colored sash, and sometimes covered with a loose outer jacket of white or blue; he who has watched the idyllic picture of their games, and heard their ringing laughter as they wander about the hills of their native vale, or play in bands on the hillside beside their sweet and abundant fountain, may, perhaps, form some conception of how Jesus looked and played when he too was a child. And the traveler who has followed any of those children—as I have done—to their simple homes, and seen the scanty furniture, the plain but sweet and wholesome food, the uneventful, happy, patriarchal life, may form a vivid conception of the manner in which Jesus lived. Nothing can be plainer than those houses, with the doves sunning themselves on the white roofs and the vines wreathing about them. The mats or carpets, are laid loose along the walls; shoes and sandals are taken off at the threshold; from the centre hangs a lamp, which forms the only ornament of the room; in some recess in the wall is placed the wooden chest, painted with bright colors, which contains the books or other possessions of the family; on a ledge which runs along the wall within easy reach, are neatly rolled up the gay-colored quilts which serve as beds, and on the same ledge are ranged the earthen vessels for daily use; near the door stand the large common water jars, of red clay, with a few twigs and green leaves—often of aromatic shrubs—thrust into their orifices to keep the water cool. At meal time, a painted wooden stool is placed in the center of the apartment, a large tray is put upon it, and in the middle of the tray stands the dish of rice and meat, or *libban*, or stewed fruits, from which all help themselves in common. Both before and after the meal the servant, or the youngest member of the family, pours water over the hands from a brazen ewer into a brazen bowl. So quiet, so simple, so humble, so uneventful, was the outward life of the family of Nazareth.—*Farrar*.

PARL speaks of Christians as dead and yet as living. These are his words: "For ye are dead, and your life is hid with Christ in God." (Col. iii., 3.) Here is no contradiction, but a great spiritual truth, strongly stated. Christians are dead only as to the supreme control of this world over them. This control is subverted, and the new life which takes its place is described as being "hid with Christ in God." This new life is the new man created after Christ Jesus unto righteousness and holiness.—*Independent*.

ONE of the new ways in which electricity is used is to cut glass in factories. The glass cylinder is encircled by a fine wire that is connected to a small battery. The wire is then drawn tightly, and the current turned on. Naturally, the wire is heated, and the heat extends to the glass under it. When in this state, water is poured on, and a clean break effected on the path of the wire. Logically, the thicker the sides of the cylinder are, the cleaner will be the cut.

PEACH RAISING NEAR HARTFORD.

J. H. HALE, a fruit-grower of Connecticut, (near Hartford, we believe), writes in the *Hartford Courant* some practical details concerning the picking and handling of peaches, and the character of different varieties. He says:

For a friend who has recently started a new orchard, judging from experience, I made out a schedule of time of ripening some two months ago. Mountain Rose, August 25th to September 5th; Oldmixon, September 5th to 15th; Stump, September 10th to 20th; Late Crawford, September 20th to 28th, and so on. But 1889 is away off on most all matters, and in peach ripening here in Connecticut, we are many days ahead. Mountain Rose were in full blast August 16th, and the last were picked on the 26th, while first Oldmixon and Early Crawford were picked on the 23d, fully two weeks ahead of past years; and indications are that all others will be equally as early.

As to the varieties thus far marketed Mountain Rose is the first good peach to ripen. To be sure there are earlier varieties, but all are semi-cling, color highly white green at the pit, and are not of much value. Mountain Rose usually comes in from the South about August 10th, small, bright red fruit of fair quality, simply because the trees are overcrowded and the fruit cannot be perfected in size or flavor. Having thinned ours closely when the fruit was half grown, what were left on the tree grew to fine size, bright in color, and of such delicious flavor as to attract great attention. Now at the end of their season we have daily calls for "just a few more baskets of Mountain Rose—some of our customers will have no other." It's a thin skinned variety and will not ship well, and to be at its best should be eaten the day it's picked and here comes trouble. Dealers want to buy their fruit early in the morning and have it all fixed up in the stands by 7 a. m., therefore we must pick the day before and cart to the city during the night; and if Mountain Rose is picked firm enough to stand this, it's not at its best and customers complain; while if left till ripe it is soft and musky the next day.

As to picking, it is very nice work to do it right. The fruit must not be pinched or handled to see if it is ripe, but must be judged by the color on the shady side of each individual specimen; and this color will vary with each variety. The fruit is not all picked from the tree at any one time, but only a small part from the most sunny branches. Then in three or four days more pickers go over these trees again; and a week later finish the fruit that has been left on the lower shaded branches. Women make much the best pickers, as they handle the fruit more carefully, and have a quicker and better eye for color.

The fruit is all picked into half bushel market baskets, left in the row by the pickers, and later on gathered up and carted to the shed. The bending branches of the trees prevent the use of wagons in gathering it up, so we have taken stone drags, bolted two light carriage springs on top, and over these springs built a body that will hold twenty of the

baskets, and in this way haul them to the shed, where girls assort them into three grades and place them in labeled baskets according to grade. The girls are honest and faithful packers, and take pride in their work, yet are human like the rest of us, and make some mistakes, and so have to be looked after often by the orchard superintendent. This superintendent also inspects the work of each picker at least four times a day, besides going over the whole orchard twice a day and inspecting all the trees, and making plans for the next day's picking. With such a "boss" in each of the three orchards, and brother as master of transportation and "general pusher" for all hands, (35 to 50 pickers, 14 to 16 horses, and six big wagons, of about 100 baskets capacity, on the road all the time), it keeps myself and four assistants lively to sell the stock. Yet very little of it remains on hand more than a few hours at a time; in fact since the Oldmixons have come on we have orders for 200 to 300 baskets ahead all the time.

Speaking of that delicious peach I am reminded that the most people call it the Old Mixon peach. It is an old English variety, and was named in honor of Sir John Oldmixon, and should be pronounced as written. It's the best eating peach that grows. We planted more largely of it than any of the others, and expect to have not less than 5,000 baskets of this one variety. We have counted all along on having one "rush week" when they would pile in on us, and overcrowd the market and cause a drop in prices, that would make buyers happy, and ourselves sick. But here's luck, to our satisfaction! We find one orchard of this variety on light, sandy soil is ripening its fruit ten days ahead of other orchards, and these will all be out of the way before the others come on, and so prolong the season ten days. This will save the rush, and low prices. Consumers will be made happy by a longer season of this charming variety,—bright scarlet on the sunny side, and a bright, delicate cream on the shady one, makes a combination that is the perfection of beauty. The flesh is rich and juicy, and yet a solid good keeper and shipper, and the wonder to me is why people will can the sour, tough, yellow Crawfords, in place of the delicious Oldmixon.

NEWS AND OTHER GLEANINGS.

—A Madison county hopgrower informs a reporter of the *Syracuse Journal* that he goes as far west as Tonawanda to secure Indians to pick hops for him. He says he finds that the Indians "pick cleaner than the white pickers." How does this strike those who contend that the only good Indian is a dead Indian?—*N. Y. Tribune*.

—Denmark for twenty-five years past has spent \$50,000 yearly in the maintenance of dairy schools. As a result of the training the butter makers have received at this school, the butter of the country has so much improved in quality that within twenty years Denmark's exports of butter have increased from \$2,100,000 to \$13,000,000 per annum.

—William Warner, of Missouri, who was one of the Commissioners who treated with the Dakotas Sioux for the surrender of half of their reservation, asserts that the land acquired for public use "is nothing of an Eldorado, or Garden of Eden. He describes it as "a vast rolling prairie,

as large as the States of Massachusetts, Rhode Island, and Connecticut combined, covered with a rough sod and sagebrush, cut here and there by sluggish streams that run in gulleys, which have the appearance of cracks in half-baked brick." One-third of the region belongs to what were known as the "bad lands."

—According to the *Daily Journal* of Asbury Park, the experience of that place illustrates the need of an incessantly vigilant public sentiment in order to uphold prohibitory laws. It declares that "it is safe to say that there are to-day 100 places in Asbury Park where liquor is unlawfully sold. Prohibition is in fact and truth a dead letter here, but it is no fault of the law. By their apathy the people of this place have just as surely killed Prohibition as if they had gone to the polls and voted against it, for apathy is as bad as opposition."

—At the Pennsylvania Prohibitionist Convention, C. H. Meade, a minister, made this statement of the case: "Take twenty-five snakes," said he, "and turn them loose in your back yard; that's free whiskey. Put 'em in a box and bore twenty-five holes for them to crawl out of; that's low license. Stop up ten holes; that's high license. Throw the snakes over into your neighbor's yard; that's local option. Take a club and kill 'em; that's Prohibition."

—The retirement of a young woman of great wealth the daughter of the late Francis A. Drexel, of Philadelphia, to a Catholic nunnery in Pittsburg, attracted much notice some months ago. A Saratoga correspondent of the *Troy (N. Y.) Times* now writes: "I may say that Miss Kate Drexel is said to be perfectly happy in her cloistered home. The work to which she is looking forward to is the Christianization of the Indian and religious care of the colored race in this country. She has given \$150,000 already for Indian missions, and has done much for colored people. So far as she has gone she is bound to nothing. Her friends think she will not take up with a nun's life, but will return to the world. She is a *petite* woman, mild as a dove, but her will is like iron. The rules of the cloister cannot appear irksome to her, for in practice she has long followed them. Fancy this gentle girl with an income of \$300,000 a year, turning her back upon the world and devoting her life and fortune for the welfare of the Indians and colored people."

—The eightieth birthday of Oliver Wendell Holmes, the poet, was commemorated on the 29th ult. The *Boston Advertiser* printed tributes in prose and verse, among them the following from John G. Whittier:

"Climbing the path that leads back nevermore,
We heard behind his footsteps and his cheer;
Now, face to face, we greet him, standing here
Upon the lonely summit of Fourscore.
Welcome to us, o'er whom the lengthened day
Is closing, and the shadows deeper grow,
His genial presence like an afterglow
Following the one just vanishing away.
Long be it ere the Table shall be set
For the last breakfast of the Anteoctar,
And Love repeat, with smiles and tears thence
His own sweet songs, that time shall not forget.
Waiting with him the call to come up higher,
Life is not less, the heavens are only higher!"

—Pundita Ramabai writes from Bombay to the August number of *Lead-a-Hand*, under date of June 11, that she now has twenty-two girls in her school. She has completed the first quarter, and her prospects are encouraging.

—Aaron M. Powell, editor of the *Philanthropist*, sailed for Europe by the Cunard steamer *Aurania*, August 24, to attend as an American delegate the Fifth Triennial Congress of the International Federation for the Abolition of

State Regulation of Vice, to be held September 10 to 14, in Geneva, Switzerland. — *Philanthropist.*

CURRENT EVENTS.

ANNOUNCEMENT was made on the 23 inst. that the President would attend the Log College (Presbyterian) celebration, at Hartsville, Bucks county, on the 5th, and on the 9th would visit Baltimore, to review the industrial parade, in connection with the Exposition. (The latter is to be open from the 9th to the 14th inclusive.)

A PETITION signed by 9,685 brakemen and others has been sent to the Inter-State Commerce Commission, asking the Commission to bring about the adoption of automatic brakes and couplers on freight cars on the railroads throughout the United States. The petitioners say that such brakes and couplers are practicable, and many lives and limbs would be saved by their adoption.

The great strike of dock laborers and others, at London, continues at this writing (4th instant.) A great number of laboring people are engaged in it, and there has so far been good order. Other strikes have occurred in different parts of Great Britain.

The deaths in this city last week numbered 410, a decrease of 16 from the previous week, and an increase of 58 over the corresponding week of last year. Among the principal causes of death were: Bright's disease, 12; cancer, 14; cholera infantum, 22; consumption of the lungs, 49; diphtheria, 6; malarial fever, 4; scarlet fever, 3; typhoid fever, 21; old age, 18; and whooping cough, 5.

BERT WILLIAMS, aged 17 years, died in a hospital in Findlay, Ohio. He had injured one of his legs while playing ball, and a doctor stitched up the wound. The stitches were removed by believers in "faith cure" and the boy was prayed over by them until gangrene set in, with fatal result.

LONDON, Sept. 3.—A severe shock of earthquake was experienced in Erzerum, (Asia), to-day. The village of Kantzorik has been engulfed in lava. One hundred and thirty-six lives were lost.

NINIAN EDWARDS, ex-Attorney General of Illinois, and ex-member of the Legislature of that State, died on the 2nd inst., in Springfield, aged 81 years. He married a sister of the wife of President Abraham Lincoln.

NOTICES.

*² Memorial Meetings.—The Friends of West Grove meeting, at West Grove, Penna., propose to hold a meeting in memory of our lately deceased friend Sarah Hunt, and hereby extend an invitation to any of her friends who feel an interest, and have a concern, to participate by attending or by writing.

Impressive and interesting incidents connected with her public, religious service in times past, as well as pleasant memories of her later life, will be welcomed.

The meeting to be held in West Grove meeting-house on First-day, 9th. Mo. 22nd, 1889, at 2 o'clock p. m. Communications to be addressed to Sarah Ann Conard, West Grove Chester Co., Pa.

DAVID FERRIS, Wm. HUGHES,
SARAH ANN CONARD, PENNOCK SPENCER. } Com.

*² The regular stated meeting of Young Friends Association will be held on Second-day evening 9th Mo. 9th, at 8 o'clock in the Parlor 15th and Race Sts. All persons interested in the object of the Association are invited to attend.

*² The Salem First-day School will be held at Salem on Seventh-day Ninth Mo. 11th, at 10 o'clock, A. M.

We will be pleased to have members of other Unions meet with us.

RICHMAN CHILES,
LOUELLA WADDINGTON, } Clerk.

*² The Joint Committee on Temperance and Intoxicating Beverages of Philadelphia Yearly Meeting of Friends, will meet at Race street meeting-house, Philadelphia, on Seventh-day, Ninth month 21st, 1889, at 1 p. m.

JAMES H. ATKINSON, } Clerks.
ANNIE C. DORLAND, }

*² Quarterly Meetings in Ninth month will occur as follows:

7. Blue River, Benjaminville, Ill.
- Whitewater, Fall Creek, Ind.
9. Baltimore, Gunpowder, Md.
12. Prairie Grove, West Liberty, Io.
- Haddonfield, Moorestown, N. J.
13. Philadelphia Representative Committee.
16. Illinois Yearly Meeting.
28. Scipio, Scipio, N. Y.
30. Indiana Yearly Meeting, Richmond, Ind.
Canada H. Y. M., Yonge street, Ont.

*² Circular Meetings in Ninth month as follows:
22. Warrington, Pa.

*² Acknowledgments. The Friends' Book Association acknowledges receipt of the following additional contributions to the Children's Country Week Association:

Eleventh Hour,	\$2.00
Bessie C. Shooh, (a little girl), Norris-	
town, Pa.,	2.00

	\$4.00

Previously acknowledged,	132.00

Amount,	\$136.00

JOHN COMLY, Sup't.

Ninth month 2, 1889.

*² A stated meeting of the Philadelphia First-day School Union will be held on Sixth-day evening, Ninth month 13th, 1889, at eight o'clock. Friends interested in First-day School work are especially desired to be present.

DAVID L. LUKENS, } Clerks.
SARAH M. HOLCOMB, }

*² The Burlington First-day School Union will meet at Mansfield, Seventh-day, Ninth month 14, at 10.30 a. m. All interested friends are welcome.

Carriages will meet the morning train at Columbus.

WM. WALTON, } Clerks.
SALLIE T. BLACK, }

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. Sold only in cans. ROYAL BAKING POWDER CO., 106 WALL-ST., N. Y.

JARVIS-CONKLIN MORTGAGE TRUST COMPANY,

Capital Paid In, . . . \$1,500,000.

Six per cent. Guaranteed Mortgages on Farm and City properties.

Six per cent. Debenture Bonds interest payable half yearly.

Five per cent. Saving bonds in small or large amounts running six, twelve, eighteen, or twenty-four months.

These Bonds are issued under the supervision of the Bank examiners of the state of New York, with whom we have deposited 1-10th of our Capital in Government Bonds.

We issue instalment Saving Bonds, secured by real estate security, running 10, 15, and 20 years. Send for Pamphlet.

TEXAS LOAN AGENCY,

CORSICANA, TEXAS.

Established 1872. Incorporated 1884.

Capital Stock, \$300,000. Surplus, \$67,297.32.
(September 1, 1888).

- 7 PER CENT. MORTGAGE DEBENTURE BONDS.
Atlantic Trust Co., Trustees, New York
- 7 PER CENT. GUARANTEED FARM MORTGAGES

All secured by first liens on improved farms of the famous Black Waxy Lands of Northeastern Texas, where the mild climate and fertile soil permit the growing of cotton as well as all the cereals of the Western States, making it one of the most desirable Loaning fields of the West.

The TEXAS LOAN AGENCY guarantees the Prompt Payment of the Principal and Interest of all its securities, payable at the National Park Bank, New York.

The business of the Company has always been conducted by able, experienced, and prudent men, as is proven by the fact that the capital stock is now selling for \$175—par value \$100. A careful investigation will satisfy the most conservative that these are desirable investments for private means, or the funds of schools, colleges, or banking institutions.

CONARD & FORSYTHE, General Agents,
412 DREXEL BUILDING, PHILA'DA.

The use of the INTELLIGENCER AND JOURNAL as a medium for advertisements will, we think, be found very satisfactory. A careful supervision is exercised, and nothing known to be unworthy is admitted. The paper now goes to about 3300 persons, reaching, say, 15,000 readers, and its size and shape, and the character of its contents give special weight to each advertisement. When our readers answer an advertiser, please mention that they do it upon seeing the advertisement in this paper.

HAMILTON LOAN & TRUST COMPANY, OF NEW YORK CITY.

NATURE'S MIRACLES.

TOUCHED by a light that hath no name,

A glory never sung,

Aloft on sky and mountain wall

Are God's great pictures hung. . . .

The pause before the breaking seals

Of mystery is this;

The miracle-play of night and day

Makes dumb its witnesses.

What unseen altar crowns the hills

That reach up stair on stair?

What eyes look through, what white wings fan

These purple veils of air?

What Presence from the heavenly heights

To those of earth stoops down?

Not vainly Hellas dreamed of gods

On Ida's snowy crown!

—J. G. Whittier.

For Friends' Intelligencer and Journal.

VISITS TO FRIENDS IN VIRGINIA.

FIRST DAY morning (8th Mo. 18), we attended the Ridge meeting. The house is of logs, weather-boarded, one end being furnished for school purposes, but not used now. The building is about 100 years old. During the war "Stonewall" Jackson's men were encamped close by; some of them attended the meetings. This day, both ends were filled, requiring an effort to find seats for all. While grateful that so many were gathered, and having the pleasure of seeing friends from different neighborhoods, there was present, as often before, an overpowering sense of insufficiency to be instrumental for any good. But blessed the Power which can alone qualify and strengthen for service! How can we falter or doubt, with the multitude of witnesses and the evidence from time to time that He will be "strength in weakness and a present helper in the time of need." The conduct of life was emphasized, which, Matthew Arnold says, "is three-fourths of life," and however orthodox or radical the profession we make of religion, it can have no saving effect, only as it is applied to daily living with a regulating influence in every corner and department of life. Elisan Brown added testimony to the efficacy of right conduct, alluding to its prominence in some of the teachings at the late Normal School. We dined at John and Ann Bond's with other friends, wishing as often for more time to mingle socially with them, but we must proceed, a meeting being appointed for 3 o'clock at Buck Creek, about 6 miles distant, over the hills, the road very

good part of the way, and so much of it through the wood, often the "pines," as to make it very enjoyable. We were glad to have Rachel Steer in company.

Arriving at Gainsboro', we found the meeting had to be held in the Methodist Church, our meeting-house being small and inconvenient for those in the village. We could see it in the edge of the woods,—of logs and weather-boarded. A little meeting is held there on First-days. The fervent desire arises that they may be faithful, and find strength and refreshment therein. A circular meeting is held there in 6th Mo., which is looked forward to by people in the vicinity and much enjoyed. We found many already assembled,—some from Winchester and remote sections. Grateful feelings arose for the privilege of the house and the lowering of the dividing wall of sectarian prejudice. We were not there to proselyte to any sect or people, however strongly attached to our own and desiring its best welfare, but to encourage the pure life with God in the soul, and obedience to manifested duty. The pressing need on the part of some to practice self-denial was presented, citing S. Paul as willing to abstain to the end of the world rather than to cause his brother to offend," desiring that no one should accept what was handed forth without proving it; that if we allow others to do our thinking or judge for us, it is comparable to wrapping our talent in the napkin and burying it in the earth, and is not showing appreciative gratitude for the gifts conferred. The audience was very quiet,—as those composed mostly of other sects usually are, notwithstanding the great difference in the manner of conducting our meetings. We would gladly have visited some friends in that section, but it seemed best to divide the journey for the next day. We therefore returned to David Lupton's to lodge, with feelings of thankfulness for the favors of the day, having greatly enjoyed the ride in the cool of the evening with the varied scenery spread out before us. Second-day morning we had a pleasant drive to Hugh's home, which we left again in the afternoon, it being one of the convenient homes which can be closed as circumstances may require, the children contributing their share in the enjoyment of travel with a comfortable carriage and faithful animals to carry us over the hills.

We came 11 miles to the home of Alvina T. Haines, in Jefferson county, on Bull-Skin Run, an old family mansion she the only member left except nieces living with her. There used to be a Friends' meeting near here called Berkeley meeting, that hav-

ing been the name of the county. There has been no meeting held since 1836; the house was burned several years ago. We passed through some very rough country, seeing more rocks than in any previous travel, leading to a conjecture what forces ever occasioned such varied formations, also the query how could they plough or cultivate the soil; but we saw very fine farms, and enjoyed anew the hills and distant mountain scenery; we again approached the Blue Ridge within four miles. We felt it a privilege to visit this friend, so isolated and bereaved,—her brother Edward deceased only a few months ago, occasioning a feeling of desolation in heart and home. We were greatly interested in Susan Thornton, a colored woman, who has lived with them many years, coming before the war. She had been a slave, and was separated from her mother when four years old. She used to hear people expressing admiration for the mountains, marvelling how any one could enjoy that which was a wall between her and her mother. She learned to read herself without any help when about seven years old, mostly from the *Free Press*, an old Virginia paper, also from the children's books, among them John Comly's spelling-book. Her master was very severe, but her mistress exceedingly kind and greatly beloved. One time, the children having been whipped for not knowing their lessons, Susan feeling so much sympathy helped them, and her master finding how well they had learned, said he would know how to manage now seeing how well the whipping had worked. Then they told him Susan had aided them, which was such a surprise that she was sent for to explain, and being truthful told the whole story, and when they found no one had taught her, she was considered a prodigy, and brought forward often for exhibition.

Later it was a privilege to read to her mistress, and she was always sent to the library to bring them books. Once before it was known what she had gleaned, she dusting in the room, her mistress lying on the sofa, they were telling about a little girl that had been sold and carried away from her mother the night before, and Susan repeated "man's inhumanity to man makes countless thousands mourn," which caused great astonishment and she was asked where she had found it, being required to bring the book. She married a free man, who purchased her freedom, Edward Haines going his security for the payment. She has had fourteen children, of whom eight are living, some of them very bright, one especially, a little girl deceased, they speak of as very remarkable and precocious, and a very conscientious, religious child. Here was exemplification in a country where they once considered the negro incapable of culture,—little more than an animal,—of what he could attain. Susan has been invaluable to this family, having a little home close by and always ready to cheer and comfort.

It was with grateful feelings for all the kindness received that I parted with Hugh and Mary Lupton, they returning Third-day morning to their home, leaving me to be taken to Summit Point by these kind friends so willing to help. I had a two hours' wait at the station for a belated train, the engine hav-

ing given out. Passed through Charlestown, memorable as the place where John Brown was executed, then to Harper's Ferry, where his "fort" was pointed out. We had followed the Shenandoah River some distance and saw where it emptied into the Potomac. Following the Potomac for about ten miles, we enjoyed the valleys, hills, and mountains. The streams add so much of beauty and interest to the scene. Sarah T. Miller met me at Rockville, and we had a nine miles' ride to their pleasant home, missing so much the dear mother, Rebecca M. Thomas, who so recently has been translated to a higher mansion. These lines of Whittier's arise:

"And much we deemed she needed not
The changing of her sphere,
To add to Heaven a shining one
Who walked an angel here."

Fourth-day morning we attended their meeting at Sandy Spring, and while missing dear friends who had long been faithful and beloved, was comforted by the presence of so many young people and the hopes which centre in them. Truly this neighborhood is favored beyond many others in this respect, and we trust through faithfulness and obedience the harvest will be fruitful in much good. An Episcopal minister spending some time in this vicinity, spoke acceptably, regretting the many sects into which we were divided. He could not think they were ordered by God, but only permitted, and as we outgrew them they would be left behind.

We attended their Preparative Meeting of Ministers and Elders, encouraged by the living concern which seemed to exist among them. Came home with Samuel and Elizabeth Thomas; in the afternoon called at Edward and John Thomas', the latter the old home where their parents J. W. and Rebecca Thomas lived for many years. We spent several delightful days among the friends in this vicinity before returning home.

L. H. P.

Eighth month 30.

OLD YEARLY MEETING ADVICES.

SOME advices given forth from time to time by the Yearly Meetings for New Jersey and Pennsylvania, held alternately at Burlington and Philadelphia.

1705. This meeting being informed that some Friends in New England are desirous to correspond with Friends here; and it being thought necessary that there be a correspondence held not only with them, but other neighboring yearly meetings,—viz., Maryland, Virginia, Carolina, Long Island, Rhode Island, etc., Samuel Jennings, Thomas Story, Griffith Owen, Edward Shippen, and Thomas Gardner are appointed as correspondents for this meeting; and they or any two of them may act in that behalf as there may be occasion.

1756. Recommended to the Overseers of the Press to join with the meeting for Sufferings in completing an Essay made of some Extracts from the Holy Scriptures, and the writings of our ancient Friends, in support of our testimony against the formal observation of Fast Days and those called Holy Days, to be communicated to Friends in writ-

ing, or printed, as on consideration they may think necessary, and to strengthen Friends in the maintaining our ancient Testimony in this and every other branch of our Discipline, and to discourage every deviation therefrom.

Which being accordingly completed, was printed. Extract from the essay :

"We profess and acknowledge the same religious Principles our predecessors published to the world, and since by the permission of Infinite Wisdom the peace of this Province hath been interrupted, and the desolating calamities of war experienced by our distressed fellow-subjects on the frontier settlements, we have been affectionately concerned in true sympathy, freely contributed towards their relief, and often been engaged both in public and private to put up our supplications to Almighty God on their behalf; and by the constant tenor of our conduct, manifested that to fear God, honor the King, and promote Peace and Piety among men are acknowledged by us as our indispensable duties; yet ever since we were a People we have had a Testimony against mere formality and human injunctions in matters of religion and the worship of God; and being taught by the precepts of our Lord Jesus Christ, the testimonies of his apostles, and our own experience that the worship and prayer which God will accept, can only be performed and offered by the immediate existence of the Holy Spirit, we are conscientiously concerned to maintain our religious Dissent from formal and ceremonious injunctions, by which set forms and times are appointed in man's will for Divine worship.

"And we can appeal to the Searcher of Hearts that our testimony herein proceeds from inward conviction and a principle of conscience, and not from perverseness, obstinacy, or disrespect to our superiors. We hope the most charitable and Christian construction will be put upon our conduct, in thus dissenting from the practice of other professors of Christianity. For tho' we think ourselves well warranted in adhering to the precepts of our Lord Jesus Christ who enjoined his followers that 'when they fasted they should not appear unto men to fast, but unto their Father who seeth in secret.' Nevertheless it is far from us to censure or condemn such who sincerely esteem it their duty to observe in humility of soul days and times of fasting and prayer. Our intention and desire is to preserve our privileges, both religious and civil, and to maintain that liberty of conscience we are entitled to by the laws of this Province. Conscience is God's prerogative, he is the supreme Lord, Judge, and Guide thereof. We have ever believed that it is by the Light or gift of God that all true knowledge in things spiritual is received and revealed, and as the same is manifested and received in the heart by the strength and power thereof, all true believers in Christ, come to the clear and distinct knowledge of their duty; and will be taught thereby when to fast, and what to pray for as they ought.

"There are some yet living in this country, who are witnesses that so long as the people lived in the fear of God, walked in humility before him, and kept

his holy law and commandment, it went well with them and their children; the land rejoiced, the blessing of the Most High was known, and his powerful protecting providence remarkably conspicuous; for tho' we had no outward barrier, the sword was not permitted to enter within our borders, but the Salvation of the Lord was a defense round about us. But now blood has been spilt and the land is polluted therewith and the sound of war is heard. O, that the inhabitants may consider these things and lay them to heart, before it is too late, and cry mightily to the Lord our God, turning to him with all our heart and imploring his assistance, who, if our ways please him, can arise for our deliverance and cause our enemies to be at peace with us!"

1716. Advised that care be taken to prevent Friends, Children, and all professing Truth, from going to, or being any ways concerned in Plays, Games, Lotteries, Music, and Dancings.

1719. Advised that such be dealt with, as run races either on horseback or on foot, lay wagers, or use any gaming or needless and vain sports or pastimes. For our time swiftly passeth away, and our pleasure and delight ought to be in the law of the Lord.

For Friends' Intelligencer and Journal.

THE WESTERN ORTHODOX BODIES AND A "STRONG" ORGANIZATION.

THE operation of the forces which have been moving for years in the Yearly Meetings of Orthodox Friends is a process which no one interested in Quakerism can disregard. These forces are strong and earnest; they overleap old bounds, and condemn old usages. They use authority when it will serve them; they set it aside when it fails to meet their purpose.

One of the strongest of these is the tendency to a compact and centralized organization. The Western Yearly Meetings, which are now fairly unified in doctrine and methods, since the "Progressive" elements in them have obtained almost undisputed control, show a desire for this which it would seem cannot long be withstood. The Conference at Richmond in 1887 was a step towards it, and this was immediately followed by the proposal to hold more Conferences and to give them greater authority. The movement in this behalf is already of considerable size and importance. Indiana Yearly Meeting's Committee has formulated a programme for such a Conference, to be held when six yearly meetings will unite, its conclusions to be advisory only. Kansas Yearly Meeting's Committee goes further, however, in arguing that it be "a delegate body of ultimate authority and appeal in discipline, doctrine, and practice," and that it meet once in five years, beginning in 1892.

The proposition of Kansas represents an idea definite and logical. That of Indiana is a compromise. Yet the Indiana plan would amount, in practice, to much the same thing as that of Kansas, if once the Yearly Meetings were to submit their present independence to the higher authority, even "advisory," of a General Conference, convening at regular times. The thought is the same in both—that as to "discipline, doctrine, and practice" there

must be an authority above that of the yearly meetings, in order to secure uniformity and increase strength. In a letter to *Friends' Review*, of Philadelphia, Dr. William Nicholson, one of the secretaries of the Richmond Conference of 1887, sets forth this view. He strongly urges the Kansas proposal as a necessary means of holding the converts who are influenced by Friends, but who join other churches. "Our revival work," he says, "makes a profound impression upon many communities. Large numbers are reached. But the statistics of our yearly meetings do not show a corresponding increase of membership. What is the secret of this discrepancy? Largely it is due to the incompleteness of our church organization. It is wanting in compactness. Things go too loosely. Too much is confided to individual faithfulness, and individual faithfulness is often sadly lacking in prudence and good judgment. The church not only needs workers, but these workers must be organized and harmonized." And, in illustrating this subject, he says: "And if we put in our nets and make large draughts, (as we may do and are doing), then we must have efficient arrangements for taking care of what we catch. All churches find this to be the most difficult part of their work. It is easy to catch fish; it is hard to save them. . . . Those who have been reached by revival services are sometimes even encouraged to join other churches that are more strongly organized. Thus it turns out that after our laborers have reaped faithfully, a great deal of the grain gets into our neighbors' sacks. . . . *A loose church is fatal to orthodoxy.*"

The proposal of Kansas, Dr. Nicholson declares, is supported spontaneously by all classes. "It has moved steadily onward. It is already at the front as one of our living, vital questions." And as to those whose energy and activity now control the Western Yearly Meetings, it is very reasonable to presume that his enthusiasm of statement does not overstep the facts of the case. It can be easily seen that the "revival" methods need a central direction. Among the Methodists there are presiding elders, bishops, and conferences. In other churches there are officers and governing bodies of corresponding station and power. If the methods of the revivalist bodies are adopted, the system of church organization which they have found most suitable and most efficient will naturally follow.

Friends' Review, which holds a position between the Wilbur element and the Progressive Western element, argues against Dr. Nicholson. It regards the Kansas plan as being simply centralization, "while everything tends now, in religious organizations, toward congregational autonomy." But it adds its judgment that an advisory Conference held "every few years, has everything in its favor."

To the impartial observer of this discussion and of the state of facts from which it proceeds, it seems very plain that the force and the logic are on the side of the movement which Dr. Nicholson represents, and the Kansas Committee has formulated. The Western Yearly Meetings have a life and a purpose of their own. They maintain an ostensibly deferen-

tial attitude toward London Yearly Meeting, but in no instance, so far as we have observed, have they changed their course, or altered their methods, on account of the susceptibilities of that body. It will be found, no doubt, that they cannot do so. Their standpoint is very different from that of London. Their membership is essentially different. The circumstances confronting them,—the opportunity for catching fish,—is altogether different. However much regard they may desire to show toward London, it is impossible for them to do otherwise than live their own life, and go according to the impulse which their own forces give. Outside of Philadelphia Yearly Meeting, and the organizations of Wilbur Friends, they practically control the Orthodox body in America, the yearly meetings of the East, if we except Baltimore and New England, (which follow reluctantly and slowly at times), not venturing to seriously oppose their radical and resolute departures. The demand for a regular pastorate, systematically placed, and supported in a definite manner, is one which the Western Yearly Meetings cannot help but make, and when they find that a compact organization of these is necessary, that a system of work which includes so many workers needs a head, they cannot consent to have their necessities lightly regarded.

To those who see in such movements an entire departure from Friends' principles,—as, of course, we do,—study of the case is interesting because it shows the outcome of the striving after a compulsory uniformity of doctrine, and affords an example which those who hope to maintain the standards of Fox will wish to sedulously avoid. The "revival" path seemed to many not a very great straying away, when it was first entered upon, but it has led directly to the methods, characteristics, and systems of those church bodies from which Friends in the beginning considered themselves essentially and entirely separated. If Quakerism is to be preserved it will be by a close adherence to the principle on which it was originally founded, and this principle must of necessity work out its own methods and systems.

MISSION AND CIVILIZING WORK IN SOUTH AFRICA.

[We copy what follows from the issue for Ninth month of the *Andover Review*, a representative of the Orthodox Congregationalists. The extracts will furnish our readers with some idea of the work of Christianizing and civilizing the natives,—and other people,—in Southern Africa.—EDS. INTELLIGENCER AND JOURNAL.]

The French Protestant brethren connected with the Paris Society have a flourishing mission in southeastern Africa, in the British possessions, but extending beyond them. They have some 6,000 communicants, all of the Caffre or Zulu race, that vigorous branch of the vigorous Bantu family, which fills the greater part of Central and Southern Africa, until in the extreme south it abuts upon the peculiarly modified Hottentot race which by some unexplained mystery speaks a language allied to the Egyptian.

Christian Frenchmen are born to be missionaries. It seems to be almost a pity that a few millions more of them could not, by a friendly reversal of the dra-

gonnades, be forced back into Protestantism, in order to furnish more Protestant missionaries. We know that they are at once the most numerous, the most zealous, and the most effective of the Roman Catholic missionaries. One illustrious name and example will come up before every mind. He was not, indeed, a Frenchman in allegiance, but French in training, and probably largely in race. The sympathy and gayety of the French temperament, and the absence in it of the stiff British pride of race, have always made the French loved by inferior races, even when they have done much less for their advantage than the English. And, as Mrs. Stowe justly says, there is something in the French character which, when it receives Christ in very truth, reproduces his image in almost unique beauty. It may be that only a remnant will be saved of a republic which ages of superstitious tyranny have driven, almost, or quite irrevocably, into malignant atheism. But that remnant, Protestant, Jansenist, or Romanist, will assuredly have a seat very near the throne of Messiah the King. It is impossible to read the simple reports of the *Journal des Missions Evangeliques* without feeling a peculiar spirit of encouragement for the work of the Lord among the nations breathing from them.

The work of evangelizing the heathen villages within the range of the French mission is carried on entirely by native evangelists and private members, male and female. These evangelists are supported entirely by the people. This has been a growing burden for years, as money has, for some reason or other, been getting scarcer and scarcer. Thus far, however, the evangelists seem to have continued at their work, whether they received less or more, and of late, happily, the tide of prosperity seems to be returning. Within a year or two there has been a remarkable revival, less among the Christians than among the heathen, and large additions to the classes of inquirers and catechumens. The interest around each Christian village, it is remarked, corresponds almost exactly to the degree in which it has given a worthy example. Polygamy is a great barrier, especially with the chiefs and principal men, and so also is the refusal of the missionaries to compromise with the practice of selling daughters for wives. "Our daughters are our bank," they say, and they resist an interference with their bank account as warmly as if they were white men.

The French brethren have established an isolated mission on the banks of the great river Zambesi. This has as yet made scarcely any converts, but is establishing an influence amid extreme privations and monotonous miseries. The native king, Lewanika, is a thorough heathen, and a jealous, sanguinary tyrant, but is wonderfully proud that he enjoys the illustrious dignity of having white missionaries settled in his kingdom. Like the barbarian German kings who were breaking up the Roman empire, but valued themselves immensely on receiving some title or badge from the Emperor, this African tyrant contemns the law of God from morning till night, but thinks that he is sure of a blessing now that he has God's messengers with him.

Lewanika, however, is very desirous of frequent conferences with the missionaries, and allows them unrestricted freedom of speech, or rather, unlike some pious rulers of Christendom, seems to assume that this is an inherent attribute of God's prophets. And his conscience does seem at last to have been so far affected that he put an energetic veto on the scheme of a murdering and plundering foray against a weaker tribe, and only gave way when tumultuously overborne by his chiefs and people, who declared that in such a time of scarcity it was a simple necessity. An African king appears to have despotic power over individuals, but very little power as against the will of his tribe, and sometimes very little against that of his council.

Unpromising as these beginnings of the Zambesi Mission may appear, they show a readiness to be convinced of sin, though not as yet to depart from it, far greater than appeared in the beginning among some other Caffre tribes, which now number hundreds, or even thousands, of sincere Christians.

The Protestant churches of French Switzerland have an interesting mission in the Transvaal Republic, extending down to the coast, and to the Portuguese town of Lourenço-Marques. But a law of the jealous Boers now forbids more than five native families to reside on one plantation. This has already broken up several mission-stations, and may break up all in the Republic.

The Boers of South Africa, of whom the most are within the Cape Colony, are there, I believe, guilty of no intrigues against their British allegiance, to which, indeed, they have no great temptation under a power which is both Teutonic and Protestant, which allows them ample openings to a great career in other parts of the world, and which grants them wide powers of self-government at home. But in nationality, though they have a large admixture of Huguenot French blood, they still remain obstinately, or I should rather say perseveringly, Dutch. When the wealthier young men receive a University course, it is still taken in the Netherlands. I have seen it represented that Cape Colony is not a whit nearer being Anglicized than it was seventy years ago. And that peculiar harshness and insolence towards subject races, which has been remarked as distinguishing all branches of the Teutonic race, is more pronounced among the Boers of South Africa than even in our own South, although it is restrained from proceeding to brutal outrage by the ingrained sense of justice which Niebuhr has remarked as distinguishing the Dutch, and also by the firm hand of British authority. The Boers are intensely religious, and even pietistic. Not only the church, but the prayer-meeting is an undisputed power among them. No one, it is said, has any hope of social or political preëminence among them who is not supposed to be eminent in the spiritual life. Indeed, as has been sarcastically remarked by some unecclesiastical Englishmen, the arms of the Colony ought to be a Kirk rampart. But for a long time they were very unwilling to act as if the natives had any souls to be saved. The first Moravian missionary, George Schmidt, aroused such indignation by presuming to baptize some Hottentots'

that he was banished back to Europe. For fifty years the Brethren were kept away from the Cape.

Finally, however, the Boers have advanced so far as to allow that the inferior races are capable of an inferior salvation. They have provided them, or allowed them to provide themselves, or both, with spacious churches. They furnish them with regularly educated white pastors; but no exchange of pulpits is ever permitted, it is said, between these and the clergy of the Boers themselves.

The established Lutheran Church of Finland, the head of which is the Archbishop of Abo, has a mission, now some twenty years old, in King William's Land, in Southwestern Africa. The number of converts is small, some two hundred, but they are much encouraged that, after having in twelve years baptized their first convert, they then increased to one hundred, and within a year have just doubled their number. The heir to the throne of the native kingdom within which their work is done, who exercises an independent jurisdiction over a part of it, has lately been dealing so tyrannically with them that they have been fain to flee into the immediate territory of the king. The Christians, having to choose between their possessions and their religion, have almost unanimously chosen the latter, and have followed their teachers.

Rev. E. H. Richards, of the East Central African Mission of the American Board, reports some of the prayer-meeting expressions of his people. As the *Herald* remarks, the plain strength of religious feeling clothed in the unhackneyed language of these Africans is likely to be found refreshing. Temba, twenty-three years old, prays: "We thank thee, O God, thou hast helped us to-day; thou hast helped us many days in many ways. Put thy truth in our ears; remember us surely. Give us good hearts, Father, to hear thy truth. Take us out of the weeds and off from the rocks. Help everybody and teach them. Thou art able to send the missionaries, let them come in plenty. We worship thee; we serve thee; wash our hearts, all of us; make us to understand thy truth; do not forget us; lead us in thy pleasant paths. Help all people to understand and obey thy words. We thank thee in Christ's name. Amen." Mahkalue, twenty years old, prays: "We are in thy house, O God. Thou art the King of all lands and all peoples. Let down thy strength among us to save us. Abide with us; we love thee. Put good thoughts into our hearts and mouths; save her and make her well who is sick [Mrs. Richards]. Help her much. Show us thy path, for we stay in the forest like animals. Keep us; save us from within and without. Wash us thoroughly with strong soap; we love thee, care for us. We ask it earnestly in Christ's name. Amen." Perengi, twenty-five years old, says: "I have often left the King, but I have eaten bitter fruit. I have often stayed well in my heart. I am happy now. I am now the King's. I love his word and his law. I will not again leave him."

At Umwalume, in the Zulu Mission, Mr. Wilder reported, April 2, 1888, that 116 inquirers had announced themselves within a few months. They have dedicated a new church, into which they will

be able to crowd six hundred people. At the dedication thirty-nine were received on confession of faith, many of them parents, two were restored, and thirteen infants were baptized.—Mr. Wilder and Mr. Bates, of the East Central African Mission, had, June 15, 1888, reached the island of Chiloon, on their expedition to Unzila's country. "It is sad to learn that the Portuguese steamer which landed these brethren on their missionary errand landed also hundreds of cases of gin. Half of the porters who brought the cargo ashore were women, many of them with babes on their backs, who were driven to their task by an Arab, horsewhip in hand. These women marched into the water up to their waists, received loads from the side of the dhow, and carried them to the house of the Portuguese governor. No food was given these porters from morning to night, but in the afternoon whiskey was dealt out to all. Will not Christendom make its voice heard so that these atrocities shall cease?"

SCRIPTURE LESSON No. 36.

NINTH MONTH 22D, 1889.

DEATH OF SAUL AND HIS SON.

GOLDEN TEXT:—"Evil shall slay the wicked; and they that hate the righteous shall be condemned. The Lord redeemeth the soul of his servants; and none of them that trust in him shall be condemned."—

Psalm 34 : 21, 22.

READ I. Samuel 31 : 1-13.

SAUL, as we have seen, became the people's king, who, while "small in his own eyes," and willing to obey Divine instructions as made known through Samuel, prevailed against their enemies. Human nature was, however, strong in him, and instead of giving God the glory he became exalted and ambitious of applause. Taking counsels of his own wisdom he suffered such reverses that his army came to be openly defied by the Philistine host.

From this dilemma he was delivered by the young man David, who thereby won his favor for a season. But Saul finding David's greater achievements calling forth greater praises than were bestowed upon himself, his heart became filled with envy and jealousy, he sought to take the young man's life, dealing very treacherously with him; though David was doing very battle with and for the king and his people.

This course on the part of Saul proved an element of weakness in the nation, causing it to become to some extent divided against itself, a portion of the king's military forces being directed against one who, with his band of followers, had heretofore been and who also had continued to be his able captain and faithful servant. David was at last compelled to flee from his own country for refuge, which he found with the Philistines, and when the opposing armies drew near at Gilboa "where the king and his people were slaughtered together," he with his men was in the camp of the enemies of Israel, ready to fight for those amongst whom he had found safety. This brings us to the beginning of our lesson.

The battle went sore against Saul. He had witnessed the death of his three sons, and amongst them his trusted and faithful Jonathan, whom he had chosen for his successor as king of Israel.

Sore wounded of the archers. We may extend sympathy to Saul in his hour of retribution. Sorely wounded, bereft of his sons, his people slain, and the enemy gathering around him, at whose hands he could not hope for mercy. "The angel Pity shuns the walks of war."

He fell upon his own sword. In a twofold sense this was true. How often do those designing evil for others fall upon their own sword. How deep and full the lesson! "The Philistines came and dwelt in them" (the Cities of Israel). Saul, the king whom the people had asked for and trusted as a deliverer, had fallen, leaving them more in the hands of their enemies than when he came to rule over them. His was a wasted life,—the old, sad story of the sin of one bringing sorrow and suffering to many others who were innocent."

All adown the ages how many have been the repetitions of the errors of Saul,—that of dividing available strength against itself; in nations falling because weakened by internal dissensions arising from jealousy, ambition, and preferment of place amongst their rulers; in the denominations of the Christian Church spending their powers in contention with each other, instead of uniting their energies to do battle with their common foe—the evils around them.

Again, in discords springing up between prominent members of the same organization tending to greatly diminish their ability for good amongst the people. To bring the subject still closer home, do we not too often, when our duties have been clearly set before us, waste our time and our strength in efforts to resist the call or evade compliance therewith?

Yet on the other hand there always have been and still are those represented by David, who in the language of Saul rewarded good for evil. These, in their just lives, are in the daily practice of those noble virtues that exalt a nation. While they are the salt of the earth, they are preparing themselves an inheritance in the Kingdom of Heaven.

NOTES ON THE LESSON.

Israel under their first king had gained but little of worldly advantage over the rule of the judges. They had clamored for a king who might lead them in battle as did the kings of the surrounding nations. They thought of him as a leader in the cruel wars of those semi-barbarous times, and Saul was, in outward appearance, all that a people could ask. The higher ideal which Moses had placed before the tribes in the beginning of their career as a nation was too exalted for a people just escaped from bondage. The king must be one whom they could see with their eyes and hear with their ears. They were too low in the scale of moral and spiritual life to understand and appreciate a government in which a power they could not see dispensed justice, and led them to battle through an individual not of their own choice, who claimed to be called and appointed by Jehovah,—the God of Gods, and Lord of Lords, of whom they had no outward semblance.

And the Ark of the Testimony, the only visible link between them and Jehovah, had ceased to be the sacred altar of their highest good, prophet and judge alike having through the degeneracy of the times failed to appreciate this acknowledged centre of their religious faith.

There is instruction in all this for ourselves, as a people claiming to own and acknowledge the Lord of all as our priest and king, having no outward head, but sitting as in the presence of Him, whom seeing not we worship, and feel that His all-pervading spirit is near to bless, though no word be uttered. Let us ask ourselves individually, have I kept close to this divine Ideal, which is the foundation of the hope of our Israel? or am I looking around for some chosen human leader to direct my steps and show me the way of life? The light that enlighteneth every man, has it ceased to shine, are its beams only to come through an earthly channel? We have need to examine our position in the relation we bear towards this central truth of our profession. Are we turning again to the beggarly elements, the ceremonies and sacraments, which the apostle declared never made the comers thereto perfect, but the bringing in of a better hope did; a hope that maketh not ashamed, and that finds its fulfillment in the hearty acceptance of the declaration "The kingdom of God is within you."

And this is the light that will show us the path of duty and help us to walk therein, with a clear assurance that He, the Great Ruler over all, will so order and direct the affairs of each little kingdom, our individual kingdoms, that when he comes to gather his elect from the four quarters of the earth, not one shall be overlooked or forgotten. May we suffer him to reign in our hearts until every enemy of the soul's peace has been routed, and his right to rule over us is established forever.

The law of life is this: No one can be good, or great, or happy, except through inward efforts of his own, sustained by faith, and strengthened by the grace of God. The message of the Baptist must be repeated: "Change yourselves, or to you at least no kingdom of God can come." . . . In the mighty cycles in which God works, our years and ages are moments. And so shall we give up our hope of heaven and progress because it is so slow, when we remember that God has innumerable ages before him? or our hopes for our own personal improvement when we recollect our immortality?—Robertson

An interesting experiment is reported from one of the Leipzig hospitals. Pieces of skin from bodies of several white persons were some time since grafted upon a negro under treatment. These transplanted fragments gradually became darker and darker, finally assuming the same color as the rest of the patient's skin. This circumstance induced the further experiment of grafting black skin on a white body. That was fourteen weeks ago. After a few weeks, the transplanted piece began to whiten; and now it is impossible to mark any difference of color between it and the rest of the body.

WAITING UPON THE LORD.

THE testimony of the scriptures to the value of waiting upon the Lord, is very full and comprehensive. The figure is borrowed from the custom of ancient kings, which required that tried and trusty men should be chosen to stand in readiness to respond to the slightest wish of the king and to do his bidding without questioning; these were always in his presence or near his person, so that his will could at once receive proper attention.

The illustration is one of great force and beauty and full of instruction for those who are trying to be obedient to the Divine Will. It implies a watchful condition, a condition in which the chief desire is to know the mind of God upon every question that the soul is required to solve,—upon every doubt that may arise in the uncertainty of the affairs that concern the best interest of the soul.

These are so intimately associated with the life we lead in the world, and are in so great a degree restricted or enlarged by the circumstances of our earthly environment, that it is sometimes difficult to distinguish what is the direct will of God, and what has only a human desire for its origin. In this condition, the true safety lies in patient waiting. The Psalmist gives us his experience, when, after taking counsel of his earthly promptings he was led into a violation of the Divine law written not alone upon the stone tablet of Moses, but on the fleshy tablet of his own heart, he makes the record; "I waited patiently for the Lord, and he inclined unto me, and heard my cry . . . and set my feet upon a rock and established my goings." It is only by this continuous waiting, leaving our cause with him, that the strength to obey is found.

We must make haste slowly—give ourselves the benefit of every doubt and lose no measure of confidence that all our steps may thus be "ordered of the Lord." It is this confidence and trust that makes the waiting of avail. If there is unrest and doubt, we shall not attain to what we are waiting for. Let us ever bear this in mind, and in all we do commit our ways to Him who sees the end from the beginning, and suffers no affliction to come to any, that He does not make a way of escape or give the needed

strength and grace to overcome. We can place ourselves in no condition in life that we are beyond the need of Divine help or beyond the pale of His loving care. The apostle's injunction is worthy of being put in practice, "Whether we eat or drink or whatever we do, do all to the glory of God."

DEATHS.

COFFIN.—On Ninth month 3d, 1889, of typhoid fever, at his residence at Moxham, near Johnstown, Pa., John Coffin, in the 33d year of his age.

He was one of four men whose privilege it was to be enabled to save from drowning, during the awful flood of the Connemaugh Valley, about twelve hundred persons; and he has left a name which can never be forgotten as long as Johnstown is remembered.

He was a member of the Society of Friends, of the family of the Nantucket Coffins, and possessed those qualities of mind and heart which fitted him for social distinction, and for preëminence in business as an inventor. He was most fortunate in his domestic relations,—with nearly everything which readers length of days desirable.

CLAYTON.—At her home in Highland township, Chester county, Pa., on the morning of Fourth month 21st, 1889, Hannah B. Clayton; a member of Fallowfield Monthly Meeting.

HAIGHT.—At her residence in Farmington, N. Y. Sixth month 17th, 1889, Euphany, widow of James Haight, in the 92d year of her age; a member and elder of Farmington Monthly Meeting.

Thus has passed away one whose services were mostly within the home circle, as bodily infirmities in the later years of her life did not permit the diligent attendance of meetings which she so faithfully adhered to when health permitted. She retained to a remarkable degree an unclouded mind till near the close. She found much consolation in perusing *THE INTELLIGENCER AND JOURNAL* for which she had always been a liberal subscriber as well as for other Friends' writings and periodicals, which she donated to distant relatives. In obedience to Divine requisitions, her love and faith in the testimonies as held by Friends (which were embraced in her mature years) only strengthened with advancing time, and were, by her ever present, prayerful state of mind, held forth in her labors with others, which without doubt will leave a lasting impression for good. M. C. C.

HAINES.—Ninth month 5th, 1889, Ella B., daughter of John L. and Martha Haines, of Mantua, N. J. Interment at Upper Greenwich Meeting.

HEWES.—Ninth month 8th, 1889, at her home, 1523 Park Avenue, Baltimore, Md., Sarah M. Hewes, a member of Baltimore Monthly Meeting of Friends, aged 85 years and 7 months.

JOHNSON.—In Philadelphia, Ninth month 2d, 1889, Angeline V., widow of Wm. A. Johnson; a member of the Monthly Meeting held at Green street, Philadelphia.

PARRISH.—On the 8th instant, at Oxmead Farm, near Burlington, N. J., Joseph George, son of Sarah Longstreth and the late George Dillwyn Parrish, in the 24th year of his age.

PENNINGTON.—At his residence, West Philadelphia, Ninth month 7th, 1889, Ellis Pennington.

PRICE.—In Denver, Colorado, Ninth month 7th, 1889, Philip Price, son of Benjamin and Jane Price, of Chester county, Pa., in his 66th year.

WALTON.—In Philadelphia, Ninth month 6th, Edward H. Walton, in his 77th year; for a number of years employed in the U.S. Mint. Internment at Stroudsburg, Pa.

WOODNUTT.—At Salem, N. J., Ninth month 5th, 1889, Sarah H., daughter of Lydia P. and the late Richard Woodnutt, aged 33 years.

NEWS OF FRIENDS.

DUANESBURGH QUARTERLY MEETING.

This was held on the 1st and 2d of Ninth month. The meeting for Ministers and Elders, on Seventh-day, (Eighth month 31), was larger than usual and one of deep interest. Friends were present from Philadelphia and New York, and also from Shrewsbury and Purchase Quarterly Meetings. The silence in which we gathered was broken by our valued Friend, Frances J. Newlin, of Philadelphia, who bore a loving testimony from the lines of her own experience, and that we may advance spiritually, may even attain the high position of Elder or Minister in the church. Yet we must still remain as little children in the Father's house. That indeed this meek, teachable, quiet condition of spirit is the only way in which it is possible to hold loving intercourse with our Heavenly Father. Jacob Capron followed with a few thoughts in regard to the duties of Elders to those young in the ministry, and the necessity of early recognizing that which is valuable.

Robert S. Haviland expressed that his heart was full of praise and thanksgiving for the mingling together of Friends, for the privilege and desire for worship, and for the strong cords of Divine love cementing in one bond of union the hearts of the faithfully dedicated ones.

On First-day morning a large number of the visiting Friends gathered with the First-day school, at ten o'clock. The various exercises were interesting, especially the prompt and fine expression given to different points in the lesson; and the words of cheer and encouragement at the close were helpful and encouraging. As the hour for meeting arrived the house was well filled in every part. After a short silence Robert Haviland appeared in supplication. Frances J. Newlin followed with the words of Jesus to his disciples: "It is expedient for you that I go away; if I go not away the comforter will not come," her line of thought bearing mainly upon the spiritual mission of Jesus and the operation of this Christ-spirit upon the hearts and lives of men to-day.

Robert Haviland referred to the condition of David when he attempted to wear Saul's armor to protect him, but found it cumbersome and hindering. So it may often be when we depend upon outward influences and surroundings. Like David, we must put away all these and trust in the God of Israel alone for our success and preservation.

Wm. M. Jackson spoke of the importance attached to the proper development of the physical stature, and the long years of close application to develop the intellectual in our children; while there is so much neglect in the culture of that which is spiritual. That part of our nature that reaches out after the Infinite will only grow and develop by use. It is subject to the same conditions and governed by

the same law, that of use or exercise to secure proper development.

At 3.30 p. m. a meeting was held in the interests of Philanthropic Work, by members of that committee. A paper was read by Joseph A. Bogardus concerning the duty of Friends in regard to the Temperance question, bearing mainly upon its moral and educational aspect. This was followed by some discussion upon the License system. An appeal was then made by Wm. M. Jackson, of New York in behalf of the Colored People of the South, showing in some degree the working of schools now under the care of Friends and their beneficent results. The meeting was well attended, and thought to be a profitable occasion.

On Second-day morning, after a precious season of quiet, Robert Haviland again spoke to us with earnestness and deep feeling, in regard to the quality of the service we render to the Master: that he requires of us entire consecration. Then shall our duties be no longer heavy burdens, but a loving, tender service gladly rendered, which shall bring joy and thanksgiving to our hearts.

Frances J. Newlin followed with the words: "To him that overcometh will I give to eat of the Tree of Life that stands in the midst of the Paradise of God." After reviewing the different temptations which came to Jesus, she drew a beautiful lesson from each one, and brought us to that condition where we must turn from every worldly allurement with a "get thee behind me Satan," and experience a desire to worship the Lord our God, and serve Him only, thus realizing that sweet peace of mind which is to us the ministry of angels.

The business of the Quarterly Meeting was conducted in joint session, the answering of the Queries called forth some expression from exercised minds, which was strengthening and helpful, and the sweet social intercourse of Friends was feelingly referred to.

M. J. H.

In a private letter from a Friend in St. Thomas, Ontario, the Mission School opened there by Friends a year ago, is thus encouragingly referred to: "We are preparing for the anniversary of our Mission School on Ninth month 9th, and are going to give the scholars a free supper; they are very much excited over the prospect. We are preparing a few dialogues and recitations, trusting it will be a treat for the parents as well as the children. We had fifty six yesterday, (Ninth month 1), and such fine-looking children; how they have improved in outward appearance since we first started! We have received good encouragement from Lob and Sparta Friends, and feeling it to be our duty to go on with the work, we are endeavoring to do so to the best of our ability. I can see and feel no cause for discouragement, and feel we are growing stronger in the inner life which is the most essential. We count no labor lost in the work, and have over sixty names enrolled, and after several moving away and a few others leaving for other schools, our average attendance is from thirty-five to forty. To one woman in the Bible class who is very capable and anxious to help, we gave a class, in which she takes great interest."

—We are informed that the hour of gathering of Salem Quarterly Meeting of ministers and elders has been changed, as follows: At Woodbury, in Twelfth month, 2 p. m.; Woodstown, Third and Ninth months, 3 p. m.; and at Salem, in Sixth month, 3.30 o'clock p. m.

—A correspondent, B. H., thus writes us: "In speaking of the old meeting-house at Merion, it was Edward R. Price who left funds, and not Edwin Price. Please make the correction."

For Friends' Intelligencer and Journal.

A SYMBOL.

A VINE in its early periods of spring and summer growth creeps slowly and feebly on its way. Its stem and leaves enlarge in the ratio of distance from the root. Nature never gives a reason for her phenomena; it is the task of science to solve that. Each leaf is a lunglet of the tree or plant; and the office of these organs is to decompose the unseen poisonous gases in the air—to inhale the elements of growth and to purify the source of all vital life. The vine's strength and vigor is the resultant of its organs. Due in part to the root, its increase and energy are gained and promoted by agencies remote from its origin.

A vine may be called a symbol of a society. It was so used by one or more of the prophetic writers. We see in the simile that while the root never loosens its hold, it is not the chief sustaining power of growth. The life and vigor are due to organs born of to-day. In a society, these lunglets attack the poisonous evils in the social world and promote its own growth in the purity which they thus evolve. It has been noted that the course which a vine takes is some force of moisture attracting it; so in a society its will is not its way, its progress is due to wisdom not its own. In the ultimate of use the end is lost to our view. Does it go back and build on the ruins it has left? The dismantled fortresses of war it was called to leave and to testify against, can it go back to repair and garnish? The Minnesota massacre, in which entire families were slain, is referred to as revolting and awful, though the dark chapter was enacted by a barbarous and benighted tribe. Do we take our children back to scenes of slaughter as revolting in the national lessons of the Sabbath School? Do we not know that in the impressions on child memory we are forming pictures that we cannot erase? Can we get a child to see that "God is love" in scenes in which we are teaching that he has commanded the carnage of the innocent? In a few months, by another change, we lead our children to the Son of God and show them another scene where still waters and green pastures delight the flocks of sheep and lambs that under the guidance of the Good Shepherd live harmless and unharmed. Can it be that we are inciting our zeal to mislead our aims, and permit its little foxes to spoil our tender vines?

THE NARROW WAY.

WE are told in the scriptures of truth that "straight is the gate, and narrow is the way, which leadeth unto life; and few there be that find it," also "that wide is the gate, and broad is the way, that leadeth to destruction, and many there be which go in thereat."

As this subject presented it led to serious contemplation, with feelings of sorrow and regret, that only a few are willing to accept the way pointed out by Divine Wisdom, to procure peace and happiness, even an hundred-fold in this life, and in the world to come everlasting life, "which they who have tasted and handled of the good word of life, and the powers of the world to come," can set their seal to; and though it is called a narrow way, there is ample room for all that is right, only hedging out all evil and all wrong doing, which the broad way takes in of various shapes and forms. There is the lust of the flesh, of the eye, and the pride of life, ambition, avarice, and covetousness, and many temptations that allure the mind if not guarded against, from the path of peace, destroying all that is lovely, pure, and holy. Oh that we may be wise to consider our latter end so as to lay up treasures in heaven, wherein nothing that is impure can enter, for saith the poet.

"Pure are the joys above the skies:

And all the regions peace,
No wanton lips nor envious eyes
Can see or taste the bliss.

These holy gates forever bar
Pollution, sin, and shame,
None shall obtain admittance there,
But followers of the Lamb."

REBECCA PRICE.

Maryland, 8th. Mo. 31, 1889.

FACTS show conclusively that in both Great Britain and the United States the number of people who abstain entirely from the use of liquor is steadily increasing, and that those who use liquor of any sort are more and more inclined to drop rum, whiskey, and brandy for the lighter wines, ale, and beer. That these changes in habit have already gone far enough to produce noticeable effects is demonstrated by the wonderful sobriety of the recent vast crowds in this city. Public opinion now frowns on drunkenness, and a man suffers serious harm who allows himself to be overcome by liquor. The next step should be the organizing of a public sentiment which will suppress the saloon by making it disreputable for a man to enter such a place. That the next centennial celebration will find the United States a nation of total abstainers is in the highest degree improbable; but it is not too much to hope that it may find the country, although consuming a large amount of liquor, free from the demoralizing influences of "stand-up drinking" in rum-shops.—*The Nation.*

OUR reverence becomes more worthy, or, if you will, less unworthy of its Infinite Object in proportion as our intelligence is lifted and expanded to a higher and broader understanding of the divine methods of action.—*O. W. Holmes.*

SEPTEMBER DAYS.

CICADA plays his viol 'mid the grasses,
The last shrill sound at night, the first at morn;
Late poppies grow along the garden passes,
And light winds gossip in the ripening corn.

The sluggish creek in meadows lately greening
Is flanked with gold and purple, either brink;
From dusty hedge the late wild rose is leaving
A deathly pallor on her lovely pink.

With Tyrian fruit the lowly poke is laden;
Wych-hazel weaves "her thread of golden bloom;"
The wandering woodbine like a gypsy maiden
Warms with its color the deep forest's gloom.

The morn'ng sows with pearls Arachne's weaving;
The orchard peach looks out with cheeks a-blush;
From shady nook the ring-dove's note of grieving
Floats far and faint upon the woodtide hush.

By country roads the scarlet sumac's burning,
And over zigzag fences spread and shine
The lush dark elderberries, daily turning
Their loyal heart's blood into purple wine.

Down the lane-path, where cows come in the gloaming,
The thistles stand with faded armor on;
In buckwheat bloom the weary bees are roaming,
To gather sweets till the last day is done.

With all thy gift and grace, O fair September,
Some anniversaries it is thine to bring
That flood unwilling eyes but to remember
And choke with sighs the heart that fain would sing.

And yet, when God has filled the earth with beauty,
And given the soul a quickened consciousness,
One may go forth in pleasant ways of Duty,
And feel the chastening Hland in close career.

—*Eliot C. True, in The Independent.*

TWO SONNETS.

THE SPECTRUM.

How many colors here do we see set,
Like rings upon God's fingers? Some say three,
Some four, some six, some seven. All agree
To left of red, to right of violet,

Waits darkness deep as night and black as jet.

And so we know what Noah saw we see,
Nor less, nor more, of God's emblazoury

A shred—a sign of glory known not yet.

If red can glide to yellow, green to blue,

What joys may yet await our wiser eyes

When we awake upon a wider shore?

What deep pulsations, exquisite and new:

What keener, swifter raptures may surprise

Men born to see the rainbow and no more!

—*Cosmo Monkhouse, in the Academy.*

SLEEP.

THOU best of all God's choicest blessings—Sleep;

Better than earth can offer—wealth, power, fame.

They change, decay; thou always art the same.

Through all the years thy freshness thou dost keep;

Over all lands thine even pinions sweep.

The sick, the worn, the blind, the lone, the lame,

Hearing thy tranquil footsteps, bless thy name.

Anguish is soothed, sorrow forgets to weep;

Thou open'st the captive's cell and bidst him roam.

Thou giv'st the hunted refuge, freest the slave,

Show'at the outcast pity, call'at the exile home.

Beggar and king thine equal blessings reap.

We for our loved ones wealth, joy, honors, crave,

But God, He giveth His beloved—Sleep.

—*Thomas Nelson Page, in the Century.*

MOTHER'S BOY.

Two little clinging velvet arms;
Two little hands with rose-leaf palms;
Two brown eyes, in whose clear deeps
The brook's own sunshine laughs and leaps;
Two little ears like pick-white shells;
A snowy chin where a dimple dwells;
A dainty nose; two peach-bloom cheeks;
A red-lipped mouth that soft words speaks;
A brow reflecting the soul within,
Untouched by sorrow, unmarked by sin;
A crown of curls whose tresses hold
The chestnut's warmth and the sunbeam's gold;
A rounded body; two rosy limbs;
A voice like notes from cathedral hymns;
Two restless feet and a laugh of joy.
What is the total?—mother's boy.

—*Emma C. Dowd, in Harper's Young People.*

A DAY AT CHAPPAQUA.

EVERY one has heard of Chappaqua, the little Westchester county town on the Harlem Railroad, thirty-two miles from New York, famous as the home of Horace Greeley and the spot where he established his well known experimental farm. Many friends and admirers of the Chappaqua sage may like to hear how his pet farm looks to-day, managed, as it is, by his youngest daughter, the only surviving member of his household, a young and lovely woman who has chosen to withdraw in some degree from society and live here—"far from the madding crowd."

On a delightful day in early spring, the writer and a friend went to Chappaqua to visit Miss Greeley on her farm and to see the workings of the well known Mountain Institute, a Quaker school near by. We were met at the station by the Institute wagon, drawn by a pair of fat bays. The wagon was filled to overflowing by red-checked college girls under the charge of the kindly superintendent. They all jumped out and gave up to us their pretty wagonette, glad of the fun of walking back to the Institute, a mile and a half distant. We drove first to Miss Greeley's home. The picturesque cottage can be seen far off. It is perched on the side of one of the two long ranges of hills that inclose the village. Behind it rise wooded heights, and below it is the famous meadow which Mr. Greeley succeeded at such a cost in reclaiming from the swamp. Great was his pride in these redeemed acres. "Look at this," he was wont to say, sweeping his arm over the waving flat, "everything else I have attempted may be a failure, but here are solid results."

We drove some distance along the meadow,—part freshly ploughed, part green with growing grain. Along its uninclosed edge stands a row of old oaks. One of these with wide branches was pointed out as the tree into which Mr. Greeley used to climb by means of a step-ladder, and there, seated on the curve of a limb, scribble his editorials in that heroic

glyphic handwriting which was the terror of printers and proof readers. A long flight of wooden steps takes one up the side of the steep hill to the cottage. There is no inclosed yard around the house; no shrubbery or flowers; only a row of plummy Norway pines shuts it off from the edge of the cliff. A big dog met us with a friendly wag of his tail, and a pleasant looking little maid opened the door and led us into a large, sunny room, cosy and quaint, with a low ceiling, a polished wood floor spread with many rugs, many niches and alcoves, old-fashioned furniture, and walls almost lined with books. The worn covers of many of these volumes told of long and loving use. One was struck with the absence of flowers. The vases held neither roses nor other cultivated blossoms, but instead, branches of wild laurel and hemlock.

Everything in the room had some association with Mr. Greeley. Here was his easy chair; there his desk, just as he had risen from it last, the pigeon-holes crammed with papers; a pile of scribbled sheets lay upon the slab beside his inkstand, crusted with ink long dried. On the desk was a plaster cast of his hand. Opposite the desk, in a curtained recess, was a portrait of Mrs. Greeley, taken in her youth, and a smaller picture of her husband. While we were looking at the two striking and strongly contrasting faces, the door opened. We turned and saw Miss Greeley. We had pictured her as grave and pale. What we saw was a blooming, beautiful young woman, radiant with health and cheerfulness; dimples in her cheeks, her hazel eyes sparkling with animation. Her manner was full of cordial warmth and graceful vivacity. This was the recluse we had been prepared to see.

"Do you live here all alone?" the writer asked pleasantly.

"Oh, no, I have my dogs and my little maid. She is young, but she is a perfect treasure, and she is devoted to me."

"Do you not get very lonely?"

"No, indeed; I am too busy to be lonesome."

"You occupy yourself with books and music?" with a glance at the open piano.

"No; I am not at all musical. I read, of course, but I am no student."

"Then you superintend your farm? You look as though you lived a great deal in this bracing air."

"Half my time," she answered, laughing. "I often walk five or six miles a day. I know everything that goes on upon the farm, but I have a good man who takes care of it for me. He lives with his family in a cottage near by. However, I am to have cows this year, and a stone dairy built over a stream, where I can make butter. I think I shall like that."

She did not tell what kind of work it was that occupied her time and kept her from being lonely. That presently was disclosed, but by another.

"Is this the house that Mr. Greeley built, the one we have all heard about, the lodge in a vast wilderness?"

"Oh, no; that house was burned to the ground. This one was originally my father's carriage house. He had it remodelled and made into this rather

quaint, but very comfortable, cottage. Would you like to see the ruins of the old homestead in the hemlock wood?"

She tied on a shade-hat and we started out, accompanied by a friend of Miss Greeley's who is paying her a visit. The path lay along the terrace-like top of the long hill. Sloping heights, covered with century-old oaks, rose on our left. The trees were now just turning into green. Below us, on the right, lay the reclaimed swamp, transformed here into a white-blossomed orchard,—more results from Mr. Greeley's experiments. He had planted those apple-trees with his own hands. The hills on the left grew more broken as we went on. The oak woods gave way to a belt of cedar, then to a forest of hemlocks,—beautiful trees, with their trunks straight as masts, and their coronals of rich green foliage. In the midst of this hemlock wood we came upon the ruins of the old house. Only the foundations marked the spot where it stood. The hemlock trees had come to the very door. Mr. Greeley would not let any of them be cut down. He was famous for his little hatchet, but he did not cut down trees; he only had a passion for trimming them.

One of the trees, peculiarly graceful and beautiful, had been left when the house was built, so that its trunk came up through the floor of the piazza. "My father loved to sit under this tree," Miss Greeley said, "and watch the birds fluttering in the branches overhead. He was delighted when a bird built its nest in the tree." A stone's throw from the ruins is the ravine that was so dear to Mr. Greeley's heart,—a deep, rocky chasm, with a swift, foaming stream at the bottom. In the side of the ravine is the steep flight of rickety steps, down which he used to take his friends, that they might drink of his medicinal spring, bubbling out of the rocks, half way down the chasm. Following the ravine, we came to where the stream tumbled over a rocky declivity in a succession of cascades. Further on the water falls in a white sheet over a dam, which Mr. Greeley spent \$4,000 to build after Prof. Gillespie's model, that he might irrigate his fields at will. A freshet carried away the dam, to the Professor's consternation; but it was rebuilt, and now its solid, moss-covered masonry seems a part of the native rock. In the cliff that rises on one side of the dam are two oval excavations, which are called the "Indians' ovens," where the squaws are said to have baked their bread in the days when this hemlock glen was an Indian settlement.

We returned to the cottage by another path through the wood, and, on our way, passed a large, solidly-built barn. "Here," said Miss Greeley's friend, "is where Gabriella gives her barn parties."

"Barn parties?"

"Yes. She gives parties now and then to the working people of the neighborhood. They all come, young and old,—the grandmother and grandfather and the little tots. They even bring the babies. They dance old-fashioned dances, and play the games that were in vogue over a hundred years ago among the country people in England. Miss Greeley moves among them and seems heartily to enjoy seeing

them have a good time. Some simple refreshments are served,—cake and coffee or lemonade. Miss Greeley is a strong temperance advocate. She has formed a novel little Temperance Club, composed of some of the village and neighborhood women. She meets with them every week, and they take counsel together as to the best way to reform individual cases of drunkenness in the community, and they have done much good in their quiet way. In the winter the stone barn is put to another use. Miss Greeley meets her Sunday-afternoon Club here. In summer the place of meeting is this beautiful grove of pines. You can see the rustic seats and benches under the trees. The Club consists of the children and grown up people mostly of the uneducated class. They come to hear her read and to get the books and magazines she distributes among them. She does not read to them from the Bible or from religious books. They get enough of that at church. She picks out something entertaining, yet with a good moral. They are fond of Will Carleton's poems, of Tennyson, and of bits of biography and travel. They were delighted with Bunyan's 'Pilgrim's Progress,' some of them never having heard of it before. Miss Greeley also teaches a Sunday school of adults. She walks to the Episcopal Church at Pleasantville—nearly two miles off—every Sunday. But she thinks nothing of four or five miles. If any of the neighborhood people are sick or in trouble, she will walk to their houses over the rough hills, seldom riding except in bad weather."

The evening proved dark and cloudy, but Miss Greeley drove over to the Mountain Institute with us to hear a lecture on Alaska, given by Miss Mary Tucker Magill. It was a half-holiday, and the boys had been having a spirited ball game, and the girls a botanical ramble with their teachers. Miss Magill had an attentive audience, and the pupils sat as still as mice in the pretty, spacious lecture-room and listened intently, but they did not applaud. The speaker made good points and told a number of funny stories, at which they smiled and twinkled, but were too true to their Quaker teachings to give vent to any noisy demonstration.

Educating the two sexes together is said to work well, and to be stimulating to the intellect of the pupils and conducive to refinement in manner and morals. The boys and girls meet at table, in the classes, and in the evening study room. Once every two weeks the young ladies give a reception in the handsome parlors reserved for their use, to which the boys are invited. This hour of social intercourse in which the teachers pleasantly participate instructs the young people in the niceties of etiquette and the art of conversing. Lectures and elocutionary entertainments are provided weekly; and there seems to be no pains spared in the cultivation and refinement of the pupils, and in home care and influence.

Everything about the new and magnificent building gives the impression of light and cheerfulness. Its exterior is of brick and concrete, its interior throughout of Georgia pine, beautifully veined and polished. Its one hundred and fifty rooms are of ample size, well-ventilated, and exquisitely clean.

The building is situated on an eminence commanding a magnificent view of the Chappaqua Valley, bounded by a range of mountainous hills in the distance, while in the rear the Chappaqua Mountain begins to rise almost from the very doors. Its sides, covered with noble growth of oak, chestnut, and cedar, afford a wide ranging place for the pupils. The extensive grounds in front are beautifully green, and dotted with trees, hedges, and shrubbery.

Professor Collins, the president, is a fine type of the modern Friend. In matters of science and culture he keeps abreast of the age. Simplicity is the rule of the school, but plainness is not carried to the extreme of austerity. The parlors are handsomely furnished, decorated with flowers and pictures. Music is now taught, and great attention is paid to gymnastic exercises and to physical culture. The Quaker faith, though inculcated, is not enforced, and several of the teachers are of the other religions beliefs. But the pupils like to attend the venerable Quaker meeting house, which stands just beyond the college grounds. This house was built in colonial times, and during the Revolutionary War was converted into a hospital for sick and wounded soldiers.

It has often been said that the Mountain Institute was founded by Horace Greeley. This is not true. It was built by the Friends in order to carry out their distinctive ideas of education. But Mr. Greeley was in strong sympathy with its spirit, and when his family was in Europe, the year before his death, he wrote to his daughter Gabriella: "It is my wish, my dear, that you come home and graduate from our Quaker school at Chappaqua. If you will, you shall have a little pony to ride to and from the Institute." So there are many links of association between Greeley farm and the Quaker college.

—Mary E. Bryan.

THE FLIGHT OF BIRDS AND INSECTS.

Few questions in natural history are so fascinating as that which concerns the power and speed of flight of birds and insects, and none yields more startling results. Of all British birds none is so beautiful or so secluded in its habits as the kingfisher. Its low arrow-like flight, as it darts like a strip of azure, green, and gold, is familiar to every angler. He hears it far down stream; it comes under the old ivied bridge, passes like a flash, and is gone—how quickly a correspondent has been fortunate enough to find out, or at least approximately. He was traveling on the Great Western Railway, which between Pangbourne and Reading runs parallel with and close to the Thames. As the train approached the river, a kingfisher started from the bank and flew along the river for nearly a mile. Mr. George Rooper watched it the whole distance, and its relative position with the window never varied a yard, the bird flying at exactly the same pace at which the train traveled, and which the observer had just previously ascertained to be fifty-five miles an hour. This is about half the speed at which the eider duck flies, as, when fairly on the wing, it makes upward of 120 miles an hour. The rapidity with which all birds of the plover kind fly is well known, and golden plover have been seen

midway between Hawaii and the mainland. An officer in Donald Currie's line recently brought home with him a specimen of the St. Helen, a wax-bill which he caught when on watch on the bridge of the Grantully Castle. At the time the nearest land was distant 1,000 miles, and the captive was so distressed that it allowed the officer to capture it.

The power of pigeons on the wing is proverbial. In 1850, on the 6th of October, Sir John Ross despatched a pair of young pigeons from Assistance Bay, a little west of Wellington Sound, and on the 13th of October a pigeon made its appearance at the dovecot in Ayrshire, Scotland, from whence Sir John had the two pairs he took out. The distance direct between the two places is 2,000 miles. An instance is on record of a pigeon flying twenty-three miles in eleven minutes; and another flew from Rouen to Ghent—150 miles—in an hour and a half. An interesting incident of flight is that of a pigeon which in 1845 fell wounded and exhausted at Vauxhall Station, then the terminus of the Southwestern Railway. It bore a message to the effect that it was one of the three despatched to the Duke of Wellington from Ichaboe Island, 2,000 miles away. The message was immediately sent on to his Grace, and by him acknowledged. In a pigeon competition some years ago the winning bird flew from Ventnor to Manchester—208 miles—at the rate of fifty-five miles an hour. The following is still more interesting, as it entailed a race between birds and insects. A pigeon fancier of Hamme, in Westphalia, made a wager that a dozen bees liberated three miles from their hive would reach it in better time than a dozen pigeons would reach their cote from the same distance. The competitors were given wing at Rhybern, a village nearly a league from Hamme, and the first bee finished a quarter of a minute in advance of the first pigeon; three other bees reached the goal before the second pigeon; the main body of both detachments finished almost simultaneously an instant or two later. The bees, too, may be said to have been handicapped in the race, having been rolled in flour before starting, for purposes of identification.

Birds of prey, with their scythe-like sweep of wing, are not less remarkable for swiftness than long-sustained flight. Many of the falcons attain to a hundred and fifty miles an hour; while a peregrine which belonged to Henry IV. of France escaped from Fontainebleau, and in twenty-four hours after was found at Malta, a distance of not less than 1,530 miles—a velocity of nearly sixty-seven miles an hour, supposing the falcon to have been unceasingly on the wing. But such birds never fly by night, and allowing the day to be at the longest, its flight was perhaps equal to seventy-five miles an hour. The best speed of a railway train is only a little more than half the velocity of the golden eagle, the flight of which often attains to the rate of 140 miles an hour. Of all birds, the condor mounts the highest into the atmosphere. Humboldt describes the flight of this bird in the Andes to be at least 20,000 feet above the level of the sea. Upon one occasion a falcon was observed to cut a snipe in two, with such strength and speed did it strike down upon its

prey. Sparrow hawks and merlins have not unfrequently been known to crash through thick plate-glass windows in pursuit of prey or at caged birds. Swallows were long supposed to be the fastest birds that fly; but this is by no means the case. They attain to an immense speed in their rushes, but are among the most fatigable of birds. There is a well-authenticated instance of a swallow having flown twenty miles in thirteen minutes. The speed of a swallow flying straight and swift is about ninety-two miles an hour; its ordinary course sixty miles. The swift easily attains to 200 miles, and seems quite tireless on the wing. The Hobby falcon, which is a summer migrant to Britain, hawks for dragon flies—among the swiftest of insects—which it seizes with the foot and devours in the air. It also kills swifts, larks, doves, and (in Bulgaria) more rarely, bee-birds.

Leeuwenhoek relates an exciting chase, which he beheld in a menagerie about 100 feet long, between a swallow and a dragon fly (Morella). The insect flew with incredible speed and wheeled with such address that the swallow, notwithstanding its utmost efforts, completely failed to overtake and capture it. Chabrier states that the male of the silkworm moth travels upward of 100 miles a day, and it has been computed that the common house fly, in ordinary flight, makes 600 strokes per second, and advances twenty five feet; but the rate of speed, if the insect be alarmed, may be increased six or seven fold, so that under certain circumstances it can outstrip the fleetest race-horse. Every one, when riding on a warm summer day, must have been struck with the crowd of flies which buzz about his horse's ears, even when the animal is urged to its fastest pace, and it is no uncommon thing to see a bee or wasp endeavoring to get in at the window of a railway train in full motion. If a small insect like a fly can outstrip a race-horse, an insect as large as a horse would travel very much faster than a cannon ball.

Of all birds the albatross has, perhaps, the most extended powers of flight. It has been known to follow a vessel for several successive days without once touching the water, except to pick out food, and even then it does not settle. In describing the flight of this bird from personal observation, Capt. Hutton writes as follows: "The flight of the albatross is truly majestic, as with outstretched, motionless wings he sails over the surface of the sea—now rising high in the air, now with a bold sweep and wings inclined at an angle with the horizon, descending until the tip of the lower one all but touches the crests of the waves as he skims over them. I have sometimes watched narrowly one of these birds sailing and wheeling about in all directions for more than an hour without seeing the slightest movement of the wings, and have never witnessed anything to equal the ease and grace of this bird as he sweeps past, often within a few yards—every part of his body perfectly motionless except the head and eye, which turn slowly and seem to take notice of everything. 'Tranquil its spirit seemed and floated slow. Even in its very motion there was rest.'"—*St. James' Gazette, (London.)*

THE SCHOOL QUESTION.

THE best gift a father can bestow upon his children is the gift of a good education. Money given may be lost; and character may be lost with it. Such double wreck is not uncommon. Money given to an uneducated or ill-educated child is almost sure to be lost; for the fool and his money are soon parted. But a good education is inalienable. No one can rob the possessor of his inheritance, and he cannot give it away. There are holes in the pocket, and wealth slips out; but wealth of brain is safely invested. Moreover, it brings, if not the other wealth, what is better—a competence, and a capacity to enjoy it. Ignorance may buy books, but cannot read them; music, but cannot enjoy it; pictures, but cannot appreciate them. The wise poor man gets more out of life than the rich fool. Finally, on the lowest ground a good education is a noble bequest. For there is always an opportunity for brains in America, and America always pays a fair price for brains. Competence in brain is sure of competence in pocket. Wise men are rarely rich, but they are rarely poor, and never paupers. The well educated do not gravitate to the alms-house or the penitentiary.

The best provision a father can make for himself or his wife in old age is a good education given to his children. He who has three or four children well equipped in mind, strong in will, rich in love, has the best annuity and the best life insurance. The father who has sown bountifully will reap bountifully. Give, and it shall be given unto you; good measure, pressed down and shaken together and running over, shall your children give unto your bosom. The father in his maturity is the natural support of the child in his youth; the child in his maturity is the natural support of the father in his old age. The man whose savings bank is in his own children is the thriftiest of men. Tuition bills pay better interest on the capital invested than any other investment.

The parent is not his child's best teacher. Few parents have the time, the knowledge, the skill. Division of labor is the law of the century; it is the condition of progress. Tolstoy writes novels well, but he cobbles shoes badly. We employ a gardener for our flowers, a groom for our horses; why not a teacher for our children? He who is Jack-at-all-trades is master of none; and the well educated child is educated by a master, not by a Jack. Even the professional teacher does well to intrust his children to some other teacher, as a professional physician his children, when sick, to another physician. The father and mother ought to know what their children are studying; ought to share their intellectual life with them; but ought not to attempt to furnish it. Your child will get education from you unconsciously; send him to some one else for his purposeful studies. John Stuart Mill would have been a broader man if he had been educated away from home. Home is not a good place for study; interruptions come too easily. Even the minister and the writer find it difficult to study systematically at home. It is too much to expect systematic study of a child.

Boarding-school or day-school? A categorical reply is impossible. It depends—on the child, the

home, the school. The best boarding-school is better than the best day-school; a poor boarding-school is worse than a poor day-school. In the boarding-school the influence is more continuous, more persistent, more effective; if it is good it is better, if bad it is worse. All homes are not ideal homes; and even from very good homes it may be well for a boy to be separated for a while. Many a child first learns to love his home when he is away from home. The mother misses her child, sadly misses him; but that is not to weigh in the balance. The mother's enjoyment counts for nothing against the child's welfare. Speaking generally, it is wise for every boy to spend at least two or three years away from home in a boarding-school before he enters on life, whether in college or in business. Are there not dangers in boarding-school? There are. That is one of the advantages. For our boys must learn to meet dangers, and it is better to meet them at first, under guidance and supervision, than to be kept from them in youth and to be surprised by them in early manhood.

Three other things remain to be said, with emphasis, but without elaboration.

The best school is the cheapest school; we cannot afford to stint in providing for our children's education.

The school that builds the best character is the school that gives the best education. For education is character-building.

No school gives a good education unless it is pervaded by a spirit of deep, earnest, and practical religion.

This is the season when parents are selecting the school for their children. We hope that these suggestions—the product both of observation and experience—may serve such parents a useful purpose in their selection.—*Christian Union*.

WOMEN AND PUBLIC AFFAIRS.

It is not necessary, to-day, that anything should be said in advocacy of the higher intellectual education of women. For the question of woman's collegiate and university education is practically settled, and we may expect, in the next quarter of a century, to witness almost as great un wisdom in movements for the higher education of women, as has been manifested in the past in ignoring the subject altogether. The tendency of the time is to multiply women's colleges, while the present collegiate institutions of the country can be made available for all purposes, for some time to come. And if the funds expended in founding new colleges for women, which start only partially equipped for their work, were used for the endowment of institutions already in existence, the opportunities for woman's higher education would be immensely enhanced in value.

But there is one branch of higher education in which American women have little instruction, and, consequently, little interest. They are taught little concerning their own country—what are its immense resources, what its marvelous history, wherein its government and civilization differ from those of European nations, what are the perils of the Republic, and what the great issues pending at the time. In-

deed, there are many men and women who consider this ignorance creditable, and I have heard women boast of it, as if it glorified, rather than stultified them. Their reading of newspapers is mainly confined to those journals which treat of fashion, dress, household affairs, and polite society almost exclusively.

It is otherwise in England. The intelligent women of the middle class of England—the class with which Americans are chiefly brought in contact—take a very lively interest in politics, know what are the public questions of the day, and are accurately informed concerning them. They are ready with a defence of Gladstone's course in dealing with the Irish question, or, if they think it defective, they will tell you where and why. Since church and State are one in England, they are versed in the affairs of the English Church, even when they are non-conformists. They are familiar with colonial affairs, and have an opinion of their own concerning the wisdom or unwisdom, justice or injustice, of English management in India. And all the while they are never unwomanly, and one is held entranced by the charm of their intelligent speech.

A young Brahmin, visiting England, expressed his astonishment at her advanced legislation. "Why is it," he inquired of his companion, an enlightened Englishman, "that India has stood still these last eight or ten centuries, while England has made such astounding progress in the arts and sciences, and in good government?" His companion gave him a *résumé* of the underlying causes of modern civilization, and concluded as follows: "In addition your women are children even to old age, and do not stimulate men, but hold them back. But the women of the Occident are learning to keep step with men in scientific pursuits, a knowledge of art, and a study of social problems. And this is a stimulant to men to go farther." If the partial education of women has been productive of such good results, what may not be anticipated when women share with men every incentive to noble achievement, every opportunity for growth, with the right to debate and act with them on the great matters that have a bearing on the future of the nation?—*Mary A. Livermore, in Union Signal.*

A MEETING HOUSE IN WALES.

TWO CENTURIES ago the religious teachings of William Penn reached the inhabitants of these secluded glens, were examined, believed, and accepted by a sufficient number to form a society and to build a meeting house. Witnessing for truth and righteousness and growing in numbers aroused the persecuting spirit of the clergy of the Established Church, who secured the aid of civil magistracy to suppress the pestilent heresy and godly example of these true and faithful disciples of Christ, a thorn in their flesh, and a swift witness against the prevailing vices and ungodliness of the times, which they made no special and effectual effort to discourage or suppress. Suffering from persecution, many of these Quaker families emigrated to Pennsylvania and settled near Philadelphia.

In an old and interesting book, "A Collection of

Memorials Concerning the People Called Quakers," printed in Philadelphia originally, but reprinted in London, 1788, loaned by a friend, I find many facts illustrating the principles, character, and sufferings of those good people who lived in the vicinity of this town; and by a personal visit to their old meeting-house and cemetery my interest has been deepened. Following an up-hill and winding road three miles we reached, on the mountains, a farm house called "Tyddyn-y-Gareg" (rock farm), an old, antiquated, dilapidated building, where two hundred years ago a Quaker family lived, and near which is the old Quaker grave-yard, surrounded by a stone wall five feet high. The graves are unmarked, but there are several headstones of recent date, with Welsh inscriptions. The last Quaker burial was some fifty years ago. The meeting house, 30x25 feet, of rough stone, gray with age, is a little distance from the grave-yard. It is now called "Tabor," and is used as a house of worship by the Congregationalists.

Between this sacred spot and the town is a hill farm called "Bryn Mawr" (great hill), where an ancient and esteemed Quaker named Rowland Ellis lived. He was born in 1650, and "convinced of the truth" in 1672, united with the Quaker Society, and on account of his testimony suffered five years of imprisonment. In 1680 this true disciple of William Penn, because he would not violate his conscience by taking the oath of allegiance, was arrested. The judges before whom he appeared and stoutly refused condemned him to suffer a long imprisonment, and said: "That in case the Quakers refused the second time to take the oath, they should be proceeded against as traitors, the men hanged and quartered, and the women burned.

Rowland Ellis, released from prison in 1686, went to Pennsylvania, bought land a few miles out of Philadelphia, and came back for his family. He called his new home after the farm on which he had lived in Wales, "Bryn Mawr," which is now the name of a station, with beautiful surroundings, a few miles out on the Pennsylvania Railroad. Rowland Ellis was a minister, distinguished for his piety and service, an able advocate for civil and religious liberty, the doctrines and discipline of society, and the best interests of humanity. He died at the house of his son-in-law, John Evans, in 1729, was buried at the Plymouth burying grounds, and of whom it is said, "He rests, enjoying the reward of the righteous, and his works follow him."—*Dolgelly (Wales) Letter in Cincinnati Commercial-Gazette.*

We see but half the causes of our deeds,
Seeking them wholly in the outer life,
And heedless of the encircling spirit-world,
Which, though unseen, is felt, and sows in us
All germs of pure and world-wide purposes.
From one stage of our being to the next
We pass unconscious o'er a slender bridge.
The momentary work of unseen hands,
Which crumbles down behind us; looking back,
We see the other shore, the gulf between,
And, marvelling how we won to where we stand,
Content ourselves to call the builder Chance.

—Selected.

LITTLE VICTIMS.

In a recent issue of the *Home-Maker*, Dr. Mary Taylor Bissell, in an article entitled "Physical Culture At Home," urges the humanity of every house containing chairs and tables adjusted to the children's height. She says: "It is a not uncommon sight to see a child at home or in school painfully adjusting his body to the shape of chairs intended for adults, with his feet twisted in the front rounds of the chair for support, and his hips and spine so little supported by the seat and back of the chair as to recall the old whimsicality that Americans have found a use for the small of the back, for they sit on it. Such arrangements are little less than barbaric, for they cause a species of torture no less real than the Chinese shoe, and quite as far-reaching in its effects, for in no case can rest or comfort for tired muscles be gotten from these ill-adjusted supports."

Dr. Bissell suggests that, while chairs and tables cannot be arranged to suit the varying heights of each individual in the family, by a wise adjustment of hassocks for the feet and cushions for chairs, each member can at least be healthfully seated, and forced to endure the least physical discomfort and friction. Every adult arranges, so far as he can, to study or read in positions that make him least conscious of the body. Witness the patented chairs, adjustable to every conceivable position, book-rests, lamps that not only soften the light but can be adjusted to every changing position of the adjustable chair. Yet a child is expected in most families to become the adjustable material. Not being patented against injury, he may spend the greater portion of his after-life in trying to regain an erect figure, even shoulders, and adjustable glasses; and, besides, is forced to endure physical limitations that hamper and control his best efforts.

CIVILIZED BUFFALOES.

PETER RONAN, Indian agent at Flathead Agency, Montana, in his report for 1888, wrote:

"In 1878, one year after I took charge of the Flathead Reservation, believing that from the manner in which buffaloes were being slaughtered by the white hunters for their hides, and by travelers and would-be sportsmen, who shot the animals down and left their carcasses to taint the atmosphere where they fell, there would soon be none left, I conceived the idea that this noble beast, which is now almost extinct on the American plains, might be saved from total annihilation by getting some buffaloes on an Indian reservation, where they could be bred, herded, and cared for by the Indians. There were no buffalo west of the Rocky Mountains, and the nearest herd was on the eastern plains in the vicinity of Fort Shaw, in the Territory of Montana. At my suggestion, Indians undertook and succeeded in driving two young buffalo cows and a bull from a wild herd near Fort Shaw, through Cadotte's Pass, and across the main divide of the Rocky Mountain range into the Flathead reservation, on the Pacific slope. The buffaloes have increased from three to twenty-seven head. Besides, several males were

slaughtered by the Indians for their feasts. The buffaloes are now owned by two individual half-breed cattle owners of this reservation. Tempting offers have been made to them to sell the herd, but I advise a continuation of ownership. It seems to me that the Government should take steps to secure these buffaloes, which are among the last remnants of the millions that roamed the great American plains in former days. They could be herded, cared for, and the number increased in proportion to that of similar herds of stock cattle."

LITTLE THINGS IN LIFE.

LITTLE words, not eloquent speeches nor sermons; little deeds, not miracles nor battles; nor one great act nor mighty martyrdom make up the true Christian life. The little constant sunbeam, not the lightning; the waters of Siloam, "that go softly" on their meek mission of refreshment, not "the waters of rivers, great and mighty, rushing down in torrent noise and force, are the true symbols of a holy life."

The avoidance of little evils, little sins, little inconsistencies, little weaknesses, little follies, little indiscretions and imprudences, little foibles, little acts of indolence, or indecision, or slovenliness, or cowardice, little equivocations or aberrations from high integrity, little bits of worldliness and gayety, little indifferences to the feelings or wishes of others, little outbreaks of temper and crossness, or selfishness, or vanity; the avoidance of such little things as these go far to make up at least the negative beauty of life.

And then attention to the little duties of the day and hour in public transactions, to private dealings, or family arrangements, the little words and tones, little benevolences or forbearances, or tendernesses, little self-denials, self-restraints, and thoughtfulness, little plans of quiet kindness and thoughtful consideration for others; punctuality, and method, and true aim in the ordering of each day—these are the active developments of holy life, the rich and divine mosaics of which it is composed.

What makes you green hill so beautiful? Not the outstanding peak or stately elm, but the bright sward which clothes its slopes, composed of innumerable blades of grass. It is of small things that a great life is made up.—*Christian Union*.

RELIGION OF THE INDIANS.

WIRING of "Plymouth Woods" in the *New England Magazine* for Ninth Month, Marston Watson says:

"I do not think that most are aware how religious the Indians were. One of the first things the Pilgrims found in their explorations on Cape Cod, before they arrived at their final destination, was an enclosed cemetery. 'A great burying place,' says Winslow in his journal, 'one part whereof was encompassed with a large palisado, like a church-yard, with young spires four or five yards high, set as close one by another as they could, two or three foot in the ground. Within it was full of graves, some bigger and some less, some were also paled about,

others had like an Indian house made over them. Without the palisado were graves also, but not so costly.' These last were doubtless the graves of the common people, while the others were monuments of distinguished men. At one place they found a woman sitting in tears on the grave of a departed friend or relative, lamenting her loss. At the death of one of the family, the survivors put on mourning by blacking their faces and hands."

He doeth much who loveth much; and he also doeth much who doeth well.—*Thomas à Kempis.*

NEWS AND OTHER GLEANINGS.

—The Prohibition State Convention of New York, which met at Syracuse last week, nominated a State ticket, headed by Jesse H. Griffin, of Westchester county, for Secretary of State.

—The "Congress" of the Association for the Advancement of Women, of which Julia Ward Howe is President, is to be held this year at Denver, Colorado, on the 8th, 9th, and 10th of next month.

—The demand for woman suffrage now accompanies the movement for Prohibition very closely. The Prohibition Conventions of Pennsylvania, Massachusetts, and Nebraska have recently declared in favor of it.

—A dispatch from Johnstown, Pa., says: A new business directory of Johnstown and surrounding boroughs contains the names of over five hundred business and professional men. It also shows that there are now thirty-six grocery stores and fifty-one saloons open in the place. A complete list of the dead in Cambria Borough has been made by mail carrier Bridges, and he finds that there were 324 people drowned in the flood. This district was below the stone bridge, and the full force of the water did not catch it. It is the only absolutely correct list of any part of the flooded district yet published.

—The following advertisement appeared in a recent number of the *London Tablet*. "To Parents—Unruly girls and boys of any age visited and punished at their homes by a thorough disciplinarian accustomed to administer corporal punishment. All bad habits cured by one or two attendances. Fee, five shillings for two visits. Address 'Birch.'"

—The Kansas Equal Suffrage Association will hold its annual meeting at Wichita on the first three days of next (10th) month.

—Miss Ferguson, a graduate of Mt. Holyoke Seminary, (Mass.) went to Wellington, in the Western Province of Cape Colony, (Africa), fifteen years ago, to found a school for girls. The result of her work is Huguenot Seminary, with a corps of nineteen teachers, mostly Americans, with 225 pupils in attendance, mostly of Dutch parentage, with large buildings and grounds, an observatory and telescope, and excellent appliances in all the departments.—*Woman's Journal.*

—A Mutual Benefit Exchange for Woman's Work has been established at 134 West 23d street, New York, which differs in some respects from other exchanges. The most important improvement is that no entrance fee is charged. Articles are received only from women who are self-supporting, the main object being to aid working women. Contributors put their own prices upon articles, which are returned to the owner if not sold within three months after consignment. Only a reasonable percentage is deducted. Besides articles of ornament, decoration, and utility, home-made delicacies of all kinds are received and lunch is served daily.

—Rebecca Harding Davis, in the *Independent* of Eighth month 15, warns country girls against joining the ranks of poorly paid shop-girls in cities. The supply of saleswomen is far beyond the demand. In the second and lower grade shops, which make up a large majority of the whole, girls are paid but \$2.50, \$3, or \$4 per week for a service of fifteen hours daily. This low rate of wages is caused by the host of girls, daughters of laborers and mechanics in town, who board at home, and who can thereby clothe themselves for their wages. Girls from the country, who crowd into the city every spring and fall, with applications for places as saleswomen and cash girls, find it impossible to pay board and clothe themselves on their wages.

—The value of good roads can be better appreciated by those who digest the following notes of Prof. J. W. Jenks, in his "Road Legislation for the American State" on conditions in Illinois. It is there found that a full load can be carried on the State roads only three months during the year, two-thirds of a load three months, and half a load six months. Good dirt roads there would reduce the cost of hauling one-half and good permanent roads of macadam, three-fourths. The defective highways the State now possesses cost it an extra \$15,346,230 for hauling, and depreciate the value of its farms \$160,000,000. In other words, if it had a good system of roads, the farmers would be benefitted \$160,000,000 in the value on their farms, and save \$15,300,000 annually in hauling—a good interest on \$255,000,000.—*Engineering News.*

CURRENT EVENTS.

THE establishment of the Presbyterian Academy near Hartsville, (Bucks County, Pa.), called afterward "Log College," was celebrated on the 5th instant, near the place where the building stood. Among those present was President Harrison, who returned to Washington next day.

IT was decided at a Cabinet meeting on the 7th instant not to call an extra session of Congress.

THE Brooke Iron Company, at Birdsboro, Pa., has advanced the wages of its puddlers from \$3.25 to \$3.50 per ton. It is estimated that in the Schuylkill valley within the past two weeks 1,000 puddlers have had their wages increased, the advance affecting 5,000 men employed in other departments.

A TERRIBLE disaster occurred at Antwerp, Belgium, on the 6th and 7th insts. An explosion first happened in a dynamite cartridge factory, and this was followed by a terrific fire, in which further explosions constantly occurred, and two great storehouses of petroleum were destroyed. Eighty thousand barrels of oil were burning at one time. The loss of life is estimated at 200, most of them work-people, (including many girls), employed in the cartridge factory.

THE great strike of the dock laborers on the Thames has not yet been entirely settled at this writing but many employers have conceded the demands of the men. Their principal demand is for the payment of six-pence an hour, (about 12 cents), the old rate being five-pence. In New York the rate is 30 cents an hour.

NOTICES.

* * * The sub-committee for Concord Quarterly Meeting of the Yearly Meeting's committee to visit the Branch meetings, expect to attend:

Darby Meeting, First-day the 22d, at 10 a. m.
An appointed meeting at Providence, near Media, on the same day at 3 p. m.
Darby Monthly Meeting, Second-day 23rd, at 10 a. m.
Chester Monthly Meeting, Third-day 24th, at 10 a. m.

Goshen Monthly Meeting, Fourth-day 25th, at 10 a. m.
 Concord Monthly Meeting, Fifth-day 26th, at 10 a. m.
 Wilmington Monthly Meeting, Sixth-day 27th, at 10 a. m.
 Birmingham Monthly Meeting, Seventh-day 28th, at 10 a. m. at West Chester.

* A stated meeting of the Philadelphia First-day School Union will be held on Sixth-day evening, Ninth month 13th, 1889, at eight o'clock, in Friends' Meeting-house at 15th and Race streets. Friends interested in First-day School work are especially desired to be present.
 DAVID L. LUKENS, } Clerks.
 SARAH M. HOLCOMB, }

* The Burlington First-day School Union will meet at Maosfield, Seventh-day, Ninth Month 14, at 10.30 a. m. All interested friends are welcome.
 Carriages will meet the morning train at Columbus.
 WM. WALTON, } Clerks.
 SALLIE T. BLACK, }

* Acknowledgments. The Friends' Book Association acknowledges receipt of the following additional contributions to the Children's Country Week Association:
 R. B., \$ 10.00
 Previously acknowledged, . . . 136.00
 Amount, . . . \$146.00
 JOHN COMLY, Sup't.
 Ninth month 9, 1889.

* Quarterly Meetings in Ninth month will occur as follows:
 16. Illinois Yearly Meeting.
 28. Scipio, Scipio, N. Y.
 30. Indiana Yearly Meeting, Richmond, Ind.
 Canada H. Y. M., Yonge street, Ont.

* Circular Meetings in Ninth month as follows:
 22. Warrington, Pa.

* Memorial Meetings.—The Friends of West Grove meeting, at West Grove, Penna., propose to hold a meeting in memory of our lately deceased friend Sarah Hunt, and hereby extend an invitation to any of her friends who feel an interest, and have a concern, to participate by attending or by writing.

Impressive and interesting incidents connected with her public, religious service in times past, as well as pleasant memories of her later life, will be welcomed.
 The meeting to be held in West Grove meeting-house on First-day, 9th Mo. 2nd, 1889, at 2 o'clock p. m. Communications to be addressed to Sarah Ann Conard, West Grove Chester Co., Pa.
 DAVID FERRE, Wm. HUGHES, } Com.
 SARAH ANN CONARD, PENNOCK SPENCER, }

* The Salem First-day School will be held at Salem on Seventh-day Ninth Mo. 11th, at 10 o'clock, A. M.
 We will be pleased to have members of other Unions meet with us.

RICHMAN COLES, } Clerk.
 LOUELLA WADDINGTON, }

* The Joint Committee on Temperance and Intoxicating Beverages of Philadelphia Yearly Meeting of Friends, will meet at Race street meeting-house, Philadelphia, on Seventh-day, Ninth month 21st, 1889, at 1 p. m.
 JAMES H. ATKINSON, } Clerks.
 ANNIE C. DORLAND, }

PUBLISHERS' NOTICES.

* As a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

* We particularly ask that when money is forwarded to renew subscriptions, care be taken to give us the name of the person to whom the paper is now being sent. Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a new subscription, please say so, and this will also to help avoid mistakes.

* Matter Intended for insertion in the INTELLIGENCER AND JOURNAL should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance may be used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day and must be sent to press at noon of the day preceding.

Association of Friends to Promote the Education of the Colored People of the South.

HOWARD M. JENKINS, Chairman, 921 Arch Street, Phila.
 SARAH J. ASH, Secretary, 1717 Vine Street, Phila.
 LYDIA A. SCOFIELD, Correspondent, 1717 Vine St., Phila
 HENRY M. LAING, Treasurer, 30 N. Third St., Phila.

EXECUTIVE COMMITTEE—Edward H. Magill, Swarthmore, Pa.; Sarah H. Peirce, Philadelphia; George L. Maris, West Chester, Va.; Mary Ann Fenton, Wilmington, Del.; Amos Hillborn, Philadelphia; Alfred Paschall Doylestown, Pa.; Estelle Hall, Swarthmore, Pa.; Clement M. Biddle, 815 Arch street, Phila.

WORK OF THE ASSOCIATION.

The work of the Association is chiefly to raise funds. These are sent to the support of two schools for colored youth in South Carolina—the Schofield Normal and Industrial School, at Auku, and the Mt. Pleasant School, near Charleston, in charge of Abby D. Munro.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. Sold only in cans. ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

JARVIS-CONKLIN MORTGAGE TRUST COMPANY,

Capital Paid In, . . . \$1,500,000.

Six per cent. Guaranteed Mortgages on Farm and City properties.

Six per cent. Debenture Bonds interest payable half yearly.

Five per cent. Saving bonds in small or large amounts running six, twelve, eighteen, or twenty-four months.

These Bonds are issued under the supervision of the Bank examiners of the state of New York, with whom we have deposited 1-10th of our Capital in Government Bonds.

We issue instalment Saving Bonds, secured by real estate security, running 10, 15, and 20 years. Send for Pamphlet.

TEXAS LOAN AGENCY,

CORSICANA, TEXAS.

Established 1872. Incorporated 1884.

Capital Stock, \$300,000. Surplus, \$67,297.32.
(September 1, 1888).

7 PER CENT. MORTGAGE DEBENTURE BONDS.

Atlantic Trust Co., Trustees, New York.

7 PER CENT. GUARANTEED FARM MORTGAGES

All secured by first liens on improved farms of the famous Black Waxy Lands of Northeastern Texas, where the mild climate and fertile soil permit the growing of cotton as well as all the cereals of the Western States, making it one of the most desirable Loaning fields of the West.

The TEXAS LOAN AGENCY guarantees the Prompt Payment of the Principal and Interest of all its securities, payable at the National Park Bank, New York.

The business of the Company has always been conducted by able, experienced, and prudent men, as is proven by the fact that the capital stock is now selling for \$75—par value \$100. A careful investigation will satisfy the most conservative that these are desirable investments for private means, or the funds of schools, colleges, or banking institutions.

CONARD & FORSYTHE, General Agents,

412 DREXEL BUILDING, PHILA'DA.

The use of the INTELLIGENCER and JOURNAL as a medium for advertisements will, we think, be found very satisfactory. A careful supervision is exercised, and nothing known to be unworthy is admitted. The paper now goes to about 3300 persons, reaching, say, 15,000 readers, and its size and shape, and the character of its contents give special weight to each advertisement. When our readers answer an advertiser, please mention that they do it upon seeing the advertisement in this paper.

- "How does the rivulet find its way?
How does the doweret know it is day,
And open its cup to catch the ray?"
- "I see the germ to the sunlight reach,
And the nestling knows the old bird's speech.
I do not know who is there to teach.
- "I see the hare through the thicket glide,
And the stars through the trackless spaces ride.
I do not see who is there to guide.
- "Ho is eyes for all who is eyes for the mole,
All motion goes to the rightful goal.
O God, I can trust for the human soul."

From the Sunday School Times.

THE FOUNTAINS OF THE JORDAN.

RIVERS, like men, have their childhood and infancy. They are born and they grow. Sometimes it is not an easy matter to determine where they start from. The sources of the Nile were for many centuries a matter of conjecture, and there is some doubt whether they are yet definitely known. There is, however, no dispute about the sources of the Jordan. There are three of them,—one at the northern extremity of the Holy Land at Tel-el-Kady, and two just beyond the northern confines. It will be as pleasant an experience, and as pleasant a memory, to look down into the vigorous rivulets where they gush forth from the cool and copious springs, as to watch the full grown river just before it is about to lose itself in the Dead Sea. One of the usual camping-places in a trip through the Holy Land is at Cesarea Philippi, within hearing of the prattle and murmur of the rivulets as they break from the main spring of the Jordan at the base of Mount Hermon. Before describing it, however, I want to introduce you to our mode of traveling in the East.

In Syria and Palestine, travel is on horseback. Through the greater part of the country there are only indistinct and narrow paths. You must depend upon these entirely between Damascus and Jerusalem. Camels and donkeys are used for bearing burdens and for riding by the natives. Tourists use horses, and for the sake of protection and convenience, travel in parties led by a guide or dragoman, who speaks Arabic, the language of the country, and makes all the arrangements, provides for the meals, and is responsible for the safety of the party. There were eleven tourists in our party, twenty four campmen, fifty horses, and eight tents. Quite a cavalcade! Our horses were small Syrian horses, very

frisky, and free with their hind feet, but tough and sure-footed. After sitting on their backs for eight or ten hours a day for three weeks, each rider very naturally became attached to his own particular animal.

Three people occupied a tent, and each had his own cot and wash basin and pitcher. The campmen slept out in the open air. The tents were large, and thick rugs were spread on the floor. A fixed time of rising and starting on the day's journey was strictly observed. The gong aroused us at five, sonded for breakfast a half hour later, and at six we start off on the horses, following the sound of the dragoman's horn. While we are at breakfast the tents are being taken down, and, with the baggage, being packed on the mules. They started ahead, and without stopping, proceeded to the camping place for the night. When we reached it, the tents were ready for us, and our baggage in its proper place in them. At noon the luncheon tent was spread, and we were glad, after the forenoon's ride, to get its shelter from the sun, and to refresh ourselves with the usual bill of fare,—cold chicken, canned fish, bread, hard-boiled eggs, raisins, and nuts.

The traveling gait is a walk, for the paths are steep and often dangerous; and the average journey was eight hours a day. On arriving at the camp after a day's ride, we always found a refreshing cup of tea, which the cooks had ready for us. We had dinner at half-past seven, and spent the evening talking or reading in the dining-tent or at our own tent door. One of the most pleasant experiences of tent life in Palestine is sitting at the tent door in the cool of the evening, under the soft skies and mellow atmospheres of that land, meditating upon the localities seen during the day or to be visited on the morrow, and reading over in Bible and guide-book about sacred events which occurred in them centuries ago. You will remember that sitting in the tent door is a custom as old as Abraham (Gen. 18: 1).

The journey from Damascus southward to Cesarea Philippi requires two days. The distance must be forty miles. After leaving the fresh plain of the Syrian capital, the path passes through a dreary country, where nothing grows but briars and thorns, which are carried long distances and used for fire-wood. The first night the camp is pitched at Kefr Hawar, a little village alongside a branch of the Pharphar, which gets its name from the poplars which grow there. Soon after leaving this narrow strip of verdure the country is again barren. You are here on the side of the Hermon ridge, with that massive, majestic mountain on the right, nine thousand feet above the sea, and called by the natives

Jebel esh Shaykh,—“The Mountain of the Aged,” or “The Chief Mountain.” Clouds almost always obscure his brow, even on the clearest days; and we had reason to think, in the two evenings we encamped at his foot, of the Psalmist's expression “the dew of Hermon” (Psa. 133: 3).

From the southern spurs of Mount Hermon the first view of Northern Palestine is had. And when it is had in its full extent, just before you descend, it is singularly beautiful and impressive. We sat for more than an hour on the bastions of the Castle of Subeibeh looking down upon the first panorama of the Holy Land. The hills of Naphtali and Ashur stretch, like sentinels, from the east to the west, full of repose and great with strength, opposing a formidable and apparently impassable wall to the dwellers of the north. They are the Alps of the land. Between them and the base of Hermon lies a rich plain, at the southeastern extremity of which is a sheet of silver,—the waters of Lake Merom. At the very base of Hermon are clumps of orchards,—the site of Cæsarea Philippi, the northern limit of our Lord's journeys, and concealing the chief source of the Jordan.

The castle of Subeibeh dates from Saracenic and Crusader times. It is the most extensive ruin in the East, covering an area of 1,000 by 250 feet. The capacious cisterns, still full of water, the strong bastions, the massive beveled blocks of stone indicate that it was regarded as a fortress of much importance. It was abandoned in the seventeenth century. A steep descent over red soil and through olive orchards brought us to our camp at Cæsarea Philippi.

Cæsarea Philippi, at the main source of the Jordan, was adorned by the tetrarch Philip, who gave it the name of Cæsarea in honor of the reigning Roman Emperor Tiberius Cæsar. His own name was added to distinguish it from the Cæsarea on the Mediterranean, so often mentioned in the Acts. The location would naturally be chosen for a town. It is one of the most charming spots in all the land, fresh with grasses and trees, and fragrant with wild-flowers. The sacred river, the Jordan, gushes out from under a rock grotto, a large chamber at the base of Mount Hebron. The floor is covered with large fragments of red rock, which have fallen from the ceiling. On the face of the rock are some niches which are very old. Greek inscriptions show that they were associated with the worship of Pan. The water rushes forth in copious streams, and hurries along, through beds of mint and thickets of oleander, towards the open plain beyond. It is very cool and refreshing, and no one from afar will drink without thinking of friends and drinking some quaffs for them. If this spot were in America, it would be famed as a picnic-ground, or used for a Sunday-school assembly. I wonder whether it will not be used for Christian conventions when this land has heard and accepted the gospel.

Here, then, is the main source of the Jordan, in which our Lord was baptized, and which, after passing through Lake Merom and the Lake of Galilee, and traversing the entire length of the land, loses itself in the Dead Sea,—a sad destiny for such pure

and crystal waters as break forth from Mount Hermon. But so it often is in life. Many a one has the best start, begins with a good home, has a pure childhood, goes forth into the world with bright prospects, but at last is lost in an end of vice and sin, and buried in the grave of infamy or the drunkard.

The Jordan has two other sources; one, further north, rising in the Anti-Lebanon Mountains, and forming the Hasbeya River; the other, four miles south of Banias, is at Tel-el-Kady, “The Hill of the Judge,”—a name which refers back to Dan, which means “judge.” The hill is a bald knob on the plain. Two splendid springs gush forth from its base, the one where two large and wide-branching oaks grow. It was on this plain and around this hill that the Danities, not contented with their little slice of territory on the Mediterranean, “sought them a land to dwell in.” Six hundred of them, men appointed for war, went to this rich country and built a city, which they called “Dan, after the name of Dan their father. . . . Howbeit the name of the city was Laish at first.” Without a doubt, the Danities watered their flocks in the beautiful springs which are still pouring forth copious and life-giving streams of water. This is the northern extremity of the Holy Land. We shall now understand more clearly the expression of the Bible, “from Dan to Beersheba;” that is, from one end of the land to the other, just as we should mean by saying “from Maine to Florida.”

*EXPERIENCES AT SEA: LETTER FROM
EDWARD H. MAGILL.*

STEAMSHIP “CIRCASSIA”—At Sea.

A VOYAGE by sea is perhaps too common now, and too monotonous to be of special interest to your readers. And yet I believe there are many among them who will be glad to hear how we are faring in this the beginning of our year abroad. Well provided with books for reading and study, to make the long journey less wearisome, we bade farewell to our friends in New York, and set sail in this steamer on Seventh-day p. m., the 24th inst., at four o'clock. Kind letters and telegrams met us on board, which we answered as far as possible, by the pilot, who left us at 6.30, on passing the light-house at Sandy Hook. When we felt that we were fairly separated from our native land, and all the dear friends and interests that we were leaving behind us, much as we hoped from this year's leave of absence, so kindly granted us, it could but be with feelings of solemn sadness that we sat in the early twilight in the stern of the vessel, and looked far back over her boiling wake toward the rapidly receding land that we should not see again for so many months, and which we might be leaving for the last time. The next morning, as I was sitting in the saloon, writing to distant friends, sacred music from the music room above attracted my attention. I at once left my writing and joined the rest above, where the religious services were being held, it being First-day. Although the particular form of service, (Episcopal), was not our own, I always feel drawn, in the absence of our own

religious meetings, to mingle with earnest worshippers engaged in prayer. And no true Friend can censure me for this, I am sure, on the eve of encountering the uncertainties of the sea. With the exception of a hard wind and rather a high sea during Second-day and night, the first few days of our voyage passed pleasantly, the sea being mostly smooth, and the weather delightful. As icebergs had been met by our vessel on her way over, our Captain was directed by the owners to take on this return voyage, a more southern route, as they would be likely to be melted by the warmer waters of the Gulf Stream. Our course is therefore nearly 100 miles further south than is usually taken by vessels to Glasgow, (our place of destination), at this time of year.

Our time is spent quietly reading or writing, or conversing with friends, or walking the deck and looking at the sky and sea. As we met no vessel of any kind for a number of days together, the view might seem monotonous, with the broad expanse of ocean around us to the horizon on every side, and the over-arching sky above it. But to one who really loves the sea it has a thousand changing hues and aspects, and the changes from the light gray of the early morning to the deeper blue under the mid-day sun, and the varied tints of the evening twilight reflected on its surface, and above all, when the moon and the solemn stars look down into its depths by night,—all of these constant changes, and many more, make the voyage anything but monotonous, but full of attraction and delight every hour to every true lover of the sea. This is the fifth time that I have crossed it, and it has never lost the charm of novelty and variety in these twenty-two years. Of course there must ever be an element of uncertainty about a sea voyage in consequence of the necessarily inadequate nature of the very best of human devices to resist the fury of the elements upon its vast surface when they are once unleashed.

Up to Fourth-day afternoon our voyage was without incident or cause of the slightest anxiety, but that day, at 5.30, the movement of the screw suddenly stopped, the passengers asked each other, with anxious faces, what was the cause. Of course all knew better than to trouble the officers with questions at such a time. But in just fifteen minutes we started again, and all were relieved. But on Sixth-day, at 11.30 a. m., the vessel again stopped, and this time the delay was not to be of so short continuance. It was soon reported that the crank of the main propelling shaft had become, in some way, disarranged as to its proper connections with the driving rods; and that to repair the damage in the large machinery, so near the centre of the propelling power, much of it would have to be taken apart, and a tedious process of "chipping and filing" resorted to. Soon the engine room began to resound with the hammering of iron, and as we looked down from the skylight in the upper deck to its dark and gloomy depths below, and saw the torches moving rapidly about, and heard the deafening sounds, it did not require a very vivid imagination to recall the forges of Vulcan and the Cyclops. We were told that all would be right in two hours. But the day wore

slowly on; it became more and more cloudy and windy as night approached; the sea grew rougher every moment; and the compass on deck (with the proper allowance for variation), now plainly showed that instead of N. 70° E. which would be our normal course, we were actually heading considerably west of north. And our anxiety was not diminished on finding that during the repairs the steering apparatus was powerless, and we were drifting before the wind! The Captain had come to lunch from the engine room, his forehead dripping in perspiration, and looking worn and anxious, and at dinner he was absent entirely. All had great sympathy with him, and through the entire day were careful never to refer to the accident in his presence. So far as the passengers could know, the prospect of entering upon a dark and cloudy night, without a rudder, and powerless upon the troubled sea, was immediately before us. But at last, about 7.15 p. m., as we were anxiously watching from above, we saw the great pistons begin to move up and down, and the heart of the vessel began again to beat. The instant relief of all hearts on board was indescribable. That night, as the storm increased, and the ship pitched and rolled in the swelling waves, and kept arousing us in our berths at intervals by the sudden lurching, we sent up heartfelt prayers of thanksgiving to the Great Giver of all good that we were not tossing powerless upon an angry sea, but calmly and steadily, under full steam, ploughing our way through the rolling waves to our destined port.

It is due to the owners and officers of this excellent Anchor Line to say that our seeming risk and danger was only seeming; and that the repairs were made expeditiously, and at the most opportune time, in the day, and not in the night, and upon a comparatively smooth sea. I should further say that in all other respects the ship is admirably managed. Neatness and cleanliness are everywhere manifest; the rooms and passages are airy and pleasant; and the remarkable steadiness of the great steamer, even in a rough sea, is most acceptable, especially to those who are so unfortunate as to be affected with *mal de mer*.

Except for this accident, and the consequent delay, we have had a most enjoyable voyage. But I have been renewedly impressed, at each time in crossing the ocean, with the immense distance, which I never in the least realized before crossing it, and which the mere enumeration of 3,000 miles utterly fails to express. Its vast extent and utter loneliness can better be appreciated when we consider the time occupied in steaming day and night across it, and that, even in these days of great traffic between nations, it is not uncommon to be for several days together without the sight of a single sail. As we are nearing the coast there is one singular circumstance which I have observed each time in crossing over. It is that the increased possibility of rapid communication with the friends whom we have left behind us gives us the feeling as we steam onward for the last two days that we are actually approaching home.

The weather has been generally very pleasant; we have enjoyed our books; our conversations together

and with our fellow-passengers; our brisk and invigorating walks upon the deck in the day and evening; that inexpressible sense of perfect rest which comes from an ocean voyage; and the ever-changing views and hues of sky and sea. The voyage has been such that many times when far out upon the ocean, we have found it as smooth and calm as the waves of the Sound; and now, as I write these words, as we are approaching the Irish Coast, we have been having two of the most perfect days that I ever experienced at sea. The broad surface of the ocean has scarcely been broken by a ripple, except by our vessel's motion; and like a great gently undulating mirror it lies before us, a thin mist slightly veiling the otherwise dazzling rays of the sun as it is reflected upon it; and we have seemed to be literally sailing on a sea of glass. The only evidences of life outside our vessel that meet the eye are some low sailing seabirds that skim the water, and an occasional school of leaping porpoises, or a passing whale.

In a few hours more we expect to be sailing along the north coast of Ireland, and later passing up the Clyde, and then all eyes will be busy looking upon scenes that we, at least, have never seen before. We expect to spend between two and three weeks in Scotland and England, and then cross over into France. Of this part of our journey I will give some account in my next.

EDWARD H. MAGILL.

THE PILGRIMS' LIFE IN COMMON.

[From the article with the above title, in the *New England Magazine*, for Ninth Month, by Edward Everett Hale, we make the following extracts describing the life of the Pilgrims, after their arrival on Cape Cod, in the Mayflower, in 1620.—EDS. INTELLIGENCER AND JOURNAL.] As early as 1602 or 1603 the congregation which we know as the first church of Plymouth, was formed by "some of the Lord's free people," who "joined themselves (by a covenant of the Lord) into a church estate, in the fellowship of the Gospel, to walk in all the ways made known or to be made known unto them, according to their best endeavors, whatsoever it should cost them, the Lord assisting them."

Thousands of the readers of these lines have, at one or another time, joined themselves with other Christian men and women in a covenant which uses almost these words, perhaps these very words, for this has been a favorite expression in the old church covenants of New England. With the change of time, however, the phrases do not mean to us quite what they meant to the people who joined in church estate with William Bradford, with William Brewster, and others at Scrooby, or what they meant to those Englishmen and Englishwomen who afterwards joined with these people "in church estate" at Leyden. To these people there was the present idea that a church could act, one may say, as one person acts, in the bringing in of the Kingdom of God. In covenanting together as they did, they meant to be of use to each other, not simply in their interior life, but in the outward affairs of Christian men and women; "and that it cost them something, this ensuing history will declare." These are Wil-

liam Bradford's words, in the very beginning of his history of the emigration to Holland, and the after-emigration to New England.

It is an interesting thing, then, to trace the habits of social life which these men and women, so intense in their Christian sympathy and desire for common life, thought best to form. And it is somewhat curious to observe that the mere circumstances of their life in Holland, surrounded by people whose language they could not speak, brought them together, as they probably were not brought together in their scattered homes in Nottingham, in Yorkshire, and in Lincolnshire. So far as one may guess, they met each other in England on the Lord's Day, but probably not often on other days. But in Leyden they met each other all the time, they lived together, almost as they would live in a modern phalanstery, and they had opportunities for carrying out the life in common which they would not have had had the Fool-King permitted them to remain in England.

They all removed to Holland, living first in Amsterdam, and then removing *together* to Leyden. With hard and steady work they made a competence. So happy and comfortable was their condition, and so attractive their circumstances, and especially their union, that their numbers enlarged considerably from the outside while they were in Holland. This seems natural. For here was a society of Christian men, with whom pure men and women of tender conscience could unite in worship and religious sympathy, and could bear each other's burdens. They lived a life, not unpleasant, not oppressed by government, and fearing no man. Though they lived in a "foreign" city, there were so many of them that one could speak the dear English language as if he were at home. So was it that Edward Winslow and his young bride, that John Carver and his bride, and that Miles Standish joined them. Indeed, of all the little company who first landed at the American Plymouth, Brewster and Bradford are the only two of whom it can be certainly said that they belonged to the original Scrooby congregation. It is almost certain that Edward Southworth was a third, and there are the names of many, whose history is not known, who were probably of that company.

They had the additional good fortune of being able literally to live together. A modern phalanstery would not have been more sociable,—nor would it separate a community more definitely from the rest of mankind.

In January of 1611, Robinson, with three others of the company, bought a large house and garden near the University and Cathedral. The price they paid was eight thousand guilders, of which a quarter was paid down and the rest secured by mortgage. They obtained possession the next year, and from that time this large house became the place of worship of the church. One of the purchasers, Jepson by name, was a carpenter. He built on the vacant land twenty-one houses. These were occupied by the several families of the church, and they thus organized a visible settlement of their own within the city.

Almost all of us will remember dreams of our own,

—or even plans,—of similar settlements of congenial souls. Hundreds of such plans have taken to our Western States companies of people who agreed in some one ruling and central hope; who liked to converse on it with each other, and were willing, even by changing homes, to establish a town where at first, at least, there should be no unsympathetic neighbors. Thus the Moravians founded Bethlehem, the Icarians founded their town, the companions of Robert Dale Owen founded New Harmony. In the Leyden home of the Pilgrims there was no agreement to share and share. But they did make a town within a city. This little settlement, with its large house for the pastor, and its twenty-one small houses for the people, visibly suggested to all men who saw it what was the truth, that here was one company of men, who, without holding their goods in common, had made a covenant with each other to bear each other's burdens.

We do not know precisely how many there were in their company. Indeed, it varied from time to time. At the period of the embarkation for America, the "larger part" remained. One hundred sailed. Such an expression suggests that the full number then was about two hundred and fifty. The whole number of those who first and last crossed to America was apparently somewhat less than two hundred. But these were not all from Leyden. After they landed in Plymouth, in their first plans, they arranged for "two rows of houses and a fair street." "Then in the afternoon we went out to measure the grounds, and first took notice how many families there were, willing all single men who had no wives, to join with some family as they saw fit, that so we might build fewer houses, which was done, and we reduced them to nineteen families. To greater families we assigned larger plots." "And so lots were cast where every man should lie, which was done and staked out. We thought this proportion was large enough for the first."

This was on the 28th of December; on the 9th of January they divided the ground after the proportion which was made. "They agreed that every man should build his own house, thinking by that course men would make more haste than working in common. The common house in which for the first we made our rendezvous being near finished wanted only covering, it being about twenty feet square."

When the time for emigration to New England came, they needed ships and money for the great adventure. They needed much more than they had. They therefore went into partnership with certain English merchants, men who wanted to favor a Puritan enterprise, who advanced the necessary capital. It was just such an arrangement as many a young man makes to-day, who goes West to take up a ranch. In the case of the Forefathers the arrangements were somewhat hard, as one might expect, considering the distance of the colony, and the uncertainty of returns.

A negotiation was attempted for such a purpose in 1637, but nothing came of it. In a second effort Cushman and Brewster were sent to England, and made an agreement with the persons who eventually

furnished the money. Briefly it was this: About seventy merchants and other gentlemen in England, living mostly near London, "aiming to do good and to plant religion," subscribed at least ten pounds each to the adventure. Many subscribed more. To these the emigrants joined themselves. Whoever went in person, over the age of sixteen years, was counted as if he had subscribed ten pounds. If he chose to subscribe ten pounds more, in provisions or money, he was counted as having a double share of stock,—and in that proportion for each ten pounds.

All these adventurers, those who stayed at home and those who emigrated, became partners in trade, work, fishing, or any other enterprise. The emigrants were to be fed from the common stock. At the end of seven years there was to be a division, and each partner was to receive a dividend.

The particular point where the emigrants were most displeased was the failure of the agreement to give them any time to work for themselves. They also wished and expected each man to own his house and home lot at the end of the seven years. But when they arrived in England, their own agents had gone so far under the agreement that it was impossible to consider or re-adjust any details. The leaders were determined to go. In face of all disappointment they held the others up to the plan. . . .

The position, then, as I have said, was the same which our own time often sees when a person or a company in an eastern city of the United States sends out one or more emigrants to California, to Oregon, to Montana or Texas, providing the capital for the adventure. In this case it was agreed that, in the division of profits at the end of the seven years, each emigrant should share as if he had contributed ten pounds in the beginning, and, in the meantime, should receive his clothing, his food, and his home. Such in substance was the agreement. The emigrants lived up to it fairly, and, as has been said, at the end of seven years, paid the stayers at home £1,800, in discharge of their share in the joint enterprise.

Carver, Winslow, Bradford, Brewster, Standish, Fuller, and Allerton were the persons of largest means in the Leyden group of the emigrants. It seems as if their quota of subscription to the common stock were paid in "provisions" for the voyage and the colony, and that, by provisions, is meant such articles of food as could be best bought in Holland. When the little vessel arrived in England, the colonists met, to their dismay, the old story that there was not money enough yet, and they were obliged to sell from their stores sixty pounds' worth of butter which had been provided for the voyage. Cushman had already cut the emigrants short of beer, by taking that article from the list of necessary stores. And to after times it is an interesting thing that the first settlers, in spite of themselves, were made tea-tallers for a year by this enforced abstinence.³

³As late as 1821 this was counted as a hardship. In his anniversary address of that year, Edward Everett, in recounting the hardships of the first winter, says, "Depending on the charity of the shipmaster for a draught of beer on board, drinking nothing but water on shore." In 1628 Bradford counts it as a terrible extravagance that Morton and his ribald crew of perhaps fifty peo-

By such means the addition of one hundred pounds for things absolutely necessary was made as hastily as possible in England. The season was advancing,—and, indeed, it was to the loss of time here and now that the subsequent hardships of the first winter in America were due.

Writing on the 20th of June, Cushman, one of the London agents of the Leyden party, estimated £1,500 or £1,600 as the amount needed for the expedition. Of this he could only find that £1,200 had been paid in by all parties, besides some cloth, stockings, and shoes. There was so little money among the Holland adventurers that Cushman had to send them five hundred pounds, "though we may go scratch for it," which he did. With such help the Holland party now bought their provisions for the voyage and embarked. They had left for themselves "scarcely any butter, no oil, not a sole to mend a shoe, nor any man a sword to his side, and were wanting many muskets, much armor."

At the end of seven years the handful of the original company which was left closed this hard contract by a final payment amounting, as has been said, to £1,500.

It is from utter ignorance of these details that Robertson with his usual carelessness says: "The colonists of New Plymouth, in imitation of the primitive Christians, threw all their property into a common stock." The error is repeated by Grahame, and even by Chief-Justice Marshall.

Nothing can be more misleading. They had their separate homes, their separate property. They made their own purchases, their own contracts, their own wills. For the purpose of emigration, they were in a joint-stock company, and they agreed to work for that company, rather than for their own personal advantage, while the company's venture required. So does a man agree who makes himself a partner in any partnership. But the agreement in no sort involves the surrender of personal property in a common stock.

It is indeed rather a curious comment on Robertson's false statement, that it was these very men who invented the system of public Registration of Deeds and Wills, which is perhaps the strongest protection of Real Property now known. From the simple practice of their little state it has been borrowed in all the Registries of the English-speaking world.

The most precious gift given into man's possession is his individuality. It is his to preserve and protect. It is not self-sacrifice, but weakness, to yield simply for another's approval. Sometimes the highest evidence of love is firmness, for there is no more absorbing power than selfishness, and to minister to it by self-oblation is to influence for evil, not for good. Human guides are very fallible, and the law of God makes them unnecessary. Hold fast to the individuality that preserves identity, and do not mistake weak yielding for love.—*Selected.*

ple drank ten pounds' worth of wine and liquor at one night of debauch. And so it was,—if ten pounds then represent eighty pounds, or four hundred dollars now.

From the Christian Register.

AN UPWARD LOOK.

SCARCELY an hour ago, a dear friend and myself were seated on a breezy hill-top. A high mountain was before us, with lesser ones around. The soft music of the winds sighing through the pines, and their delicious fragrance floated over and around us. We talked of many things,—of books and of friends, of life with its possibilities and its failures. I lamented my want of persevering purpose and consequent shortcomings, asking what could be done as a remedy.

"Do the thing you can find to do," she said earnestly. "Take the duty that lies nearest you, whether it be for yourself or for others. Do not strive to reach beyond. The work will grow upon you, your hands and your heart will be full; and, above all, look up and without, not down and within. So shall you just *begin* to be satisfied, and there will be no time for lamentations."

And here let me dedicate to my friend the first thing I am moved to do as I reach my own room again. I would tell to others what this one true soul has been to me, hoping it may help them also.

Her life has been one of such high ideals and active hopes, such aspirations and energies, as I have hardly ever seen in any other person. With her the *ideal* has indeed been the *real*, and she has never let go its hold.

Years ago, when untoward circumstances environed me, and she would bid me, "Be brave, do your best!" I used to think, "Ah, how much easier to 'preach than to practice!' Just let you be tried, and we will see!" We have seen. Great trials have come to her in the years which have followed; but she has done as she bade me do,—her very best.

To-day I sat at her feet, and made my acknowledgments for wronging her, even in my thoughts. She has done better than I could have dreamed she would. With the thorns piercing her feet and brow, she has gone on, always cheerful, always helpful,—gone bravely on, doing good service both for God and man. She has but grown the stronger as the years have gone over her, and had she more love and help to give, the more she gave. To-day she stands my ideal among women,—not perfect, perhaps, but brave and helpful, loyal and true, thus going on to perfection.

I wish she could be to all others in need what she has been to me. Not that I have always profited by it as one ought; but it has been a strong tower to lean upon, and a light ever going before my weary feet.

As we sat on that breezy hill-top, with the grand old mountain before us, I felt it was indeed good to be there, and almost longed for the tabernacles, that we might dwell therein forever.

But that is not the order of earthly things. We must needs come down from the mount, and take up the burden of life again. Yet, on such heights and in such moments, what inspirations one gets! If we could but bring them down and *live* them, how blessed it would be!

O fellow-workers on life's highways together, let

us be more to each other than we have ever been before,—more loving, more helpful, as the years go on! Every life has its trials, every soul its Gethsemanes. Ours are not the exceptions. Trial is needful for us as well as success. Strength is born therein,—strength to do and to bear all that may await us here. Only let us look up, let us be brave and true, and the victory will be ours.

"Say not, the struggle naught availeth,
The labor and the wounds are vain;

"For, while the tired waves, vainly breaking,
Seem here no painful inch to gain,
Far back, through creeks and inlets making,
Comes silent, flooding in, the main.

"And not by eastern windows only,
When daylight comes, comes in the light;
In front the sun climbs slow,—how slowly!
But westward, look! the land is bright."

H.

RELIGION.

RELIGION should be a strength, guide, and comfort, not a source of intellectual anxiety or angry argument. To persecute for religion's sake implies belief in a jealous, cruel, and unjust deity. If we have done our best to arrive at the truth, to torment one's self about the result is to doubt the goodness of God, and, in the words of Bacon, "to bring down the Holy Ghost, instead of the likeness of a dove in the shape of a raven." "The letter killeth, but the spirit giveth life;" and the first duty of religion is to form the highest possible conception of God.

Many a man, however, and still more many a woman render themselves miserable on entering life by theological doubts and difficulties. These have reference, in ninety-nine cases out of a hundred, not to what we should do, but what we should think. As regards action, conscience is generally a ready guide. To follow it is the real difficulty. Theology, on the other hand, is a most abstruse science; but, as long as we honestly wish to arrive at truth, we need not fear that we shall be punished for unintentional error. "For what," says Micah, "doth the Lord require of thee, but to do justly, to love mercy, and to walk humbly with thy God?" There is very little theology in the Sermon on the Mount, or, indeed, in any part of the Gospels; and the differences which keep us apart have their origin rather in the study than the church. Religion was intended to bring peace on earth and good will toward men: and whatever tends to hatred and persecution, however correct in the letter, must be utterly wrong in the spirit.

We may be sure that quarrels will never advance religion, and that to persecute is no way to convert. No doubt those who consider that all who do not agree with them will suffer eternal torments seem logically justified in persecution even unto death. Such a course, if carried out consistently, might stamp out a particular sect; and any sufferings which could be inflicted here would on this hypothesis be as nothing in comparison with the pains of hell. Only it must be admitted that such a view of religion

is incompatible with any faith in the goodness of God, and seems quite irreconcilable with the teaching of Christ.

In religion, as with children at night, it is darkness and ignorance which create dread. Light and love cast out fear.

In looking forward to the future, we may fairly hope with Ruskin that "the charities of more and more widely extended peace are preparing the way for a Christian church which shall depend neither on ignorance for its continuance nor on controversy for its progress, but shall reign at once in light and love."—*Sir John Lubbock, in Pleasures of Life.*

THE SCRIPTURE LESSONS.

No Scripture Lesson has been prepared for the last First-day in this quarter,—Ninth month 29. This gives an opportunity for the several schools to review the lessons that have formed the subjects of study during the quarter. Or it may be devoted to the Temperance cause, or to any other question that it is thought profitable to bring to the attention of the schools.

The lessons for the succeeding quarter will continue the history of the Hebrew nation to the close of the reign of King Solomon.

While to many Friends these old narratives seem little else than recitals of bloody wars and lapses into barbarism of the Hebrews, the care and attention that has been given to bring before our young people the best religious thought of those early ages, and to find instruction in tracing the course of action, and the motives that governed the leaders of the nation, with the successes and the failures to which they led, has, it is believed, been profitable, as showing that then, as now, a living up to man's highest sense of what is his duty to the Divine Being has brought peace and quietness of spirit, while disobedience has led invariably to failure and alienation from God.

And running through all we have found a golden thread of truth linking the present and the past together in the eternal verities, which have never lacked for witnesses of their value to the human race in the darkest times of its apostasy.

—The lessons for 1890, it may be announced, are all taken from the New Testament. This may be some relief to the minds of those who have felt burdened with the necessity of studying the earlier Jewish history, with its details of wars, etc.

Why is it that we are so busy with the future? It is not *our* province: and is there not a criminal interference with *him* to whom it belongs, in our feverish, anxious attempts to dispose of it, and in filling it up with shadows of good and evil shaped by our own wild imaginations? To let God's will as fast as it is made known to us, to inquire hourly—I had almost said each moment—what he requires of us, and to leave ourselves, our friends, and every interest at his control, with a cheerful trust that the path which he marks out, leads to our perfection and to himself,—this is at once our duty and happiness; and why will we not walk in the plain, simple way?—*Channing.*

 DIVINE GIFTS.

How true it is that the Word of God is alike true to each inspired soul, and although not able always to formulate it into written or spoken words, when it is voiced by some gifted one, it is recognized and cheers and encourages as if the inspiration were direct to each individual. It comes too with such sweetness that it excites no jealousy, only gratitude that it is made a living power.

The ability to voice this Word is indeed a Divine gift, and should be prized by the recipient and cherished and guarded with most untiring care, that it be not hindered in its service by too much contact with that which partakes of the earthly nature. The higher realm of the spiritual should be given the kingly place, and this with no detriment to the moral, intellectual, or physical, for each being alike good has its own princely position upon which God has pronounced his approving verdict. The variety too that is ours from the right exercise of these gifts by each obedient man or woman, makes life broader, richer, fuller, and prepares us for the larger intercourse of spirit in the *great beyond*, to which we are all hastening, and of which we know absolutely nothing, but that our hope and faith and imagination makes it an essential that adds greatly to our life here.

When a gifted brother says that: "In every earnest life, there are weary flats to tread, with the heavens out of sight,—no sun, no moon,—and not a tint of light upon the path below; when the only guidance is the faith of brighter hours, and the secret Hand we are too numb and dark to feel," how the faithful ones of earth, hearing the words, respond to their truth and give thanks for their utterance; for they have awakened an echoing chord and although the note is a sad one it cheers, for there is the sympathetic touch in it of kindred feeling. Hope springs up and reveals the knowledge that was for the moment hidden out of sight, that beyond the clouds the sunlight is still lurking though for days and even weeks it lies obscured. And when he goes on to say that "God has so arranged the chronometry of our spirits that there shall be thousands of silent moments between the striking hours," we take up our

tasks again refreshed as with a cup of water, and welcome the silence and the work, for we feel the stronger for our brother's Divine gift.

A welcome must be given the exercise of a gift also, when it comes as a voice of chiding, else we may miss what is often important, a spur on the tender side to enable us to throw off the clog that keeps us weighted down to lower achievements, when we should rise above the small hindrances and follow the high aim till success is assured. So when we are shown, (as if a glass were held before us in which we see ourselves) that "if we listen to our self-love, we shall estimate our lot less by what it is, than by what it is not; shall dwell on its hindrances, and be blind to its possibilities; and, comparing it only with imaginary lives, shall indulge in flattering dreams of what we should do, if we had but power; and give, if we had but wealth; and be, if we had no temptations. We shall be forever querulously pleading our difficulties and privations as excuses for our unloving temper and unfruitful life; and fancying ourselves injured beings, virtually frowning at the dear Providence that loves us, and chafing with a self-torture which invites no pity. If we yield ourselves unto God, and sincerely accept our lot as assigned by him, we shall count up its contents, and disregard its omissions; and be it as feeble as a cripple's, and as narrow as a child's, shall find in it resources of good surpassing our best economy, and sacred claims that may keep awake our highest will;" hearing this we must accept it as a sermon meant for us; that our own spirit was not so attuned as to receive direct, and rejoice that another was made the gifted instrument for our benefit.

All along the lines these good gifts are showered, and to each one, if we so earnestly desire it as to wrestle for the blessing, some gift may fall; and then to use it wisely and well we shall need to let the voice ascend in prayer both for ourselves and those who call us friend, for all are "bound by gold chains about the feet of God."

We are much obliged to those of our subscribers who have kindly forwarded us, in reply to our request, copies of the issue of Eighth month 10. We have now about half a dozen, which may serve present purposes.

 DEATHS.

BUNTING.—Ninth month 9th, 1889, at Steelton, Pa., Mary P., daughter of Charles A. and Helen C. Bunting, aged 5 months.

CHAPMAN.—At his residence, Germantown, Ninth month 10th, 1889, Joseph Chapman, in his 66th year; a member of the Monthly Meeting of Friends of Philadelphia.

FOGG.—On the 25th of the Eighth month, 1889, at her residence in Elsinboro, Salem county, N. J., Ann Thomp-

son Fogg, widow of the late Thomas Fogg, in her 81 year. A valuable member of Lower Greenwich Monthly Meeting and an elder for many years, she possessed an even temperament, and was pleasant and agreeable to all her friends. She loved God, and the same divine feeling extended to the human family: hence her many acts of kindness to the poor and suffering; the needy never called her in vain, and many more sought out her comfort. Surely such a good Samaritan will long be remembered with gratitude and praise. Behold the just and upright; their end will be peace and quiet forever.

C. F.

HAINES.—At Malvern, Pa., Ninth month 12th, 1889, of diphtheric croup, Henry P., youngest son of John G. and Rebecca P. Haines, aged 2 years. Interment at Goshen Friends' ground.

HANCOCK.—At his residence, near Burlington, N. J., Ninth month 8th, 1889, Ridgway Hancock, in his 73d year.

JARRETT.—In Alton, Illinois, Eighth month 17th, 1889, Joseph Jarrett, formerly of Horsham, Pa., son of the late Jacob E. Jarrett, aged 57 years.

PEASLEE.—At his residence, near Clarksboro, N. J., on the afternoon of Ninth month 11th, 1889, of pneumonia, Amos J. Peaslee, in his 77th year; an elder of Upper Greenwich Preparative and Woodbury Monthly Meetings.

A son of the late Amos Peaslee (well known as a minister of our religious Society.) He was firmly attached to our principles, ever ready to aid in the furtherance of measures for their perpetuation, and was greatly useful in meetings for business.

When Swarthmore College was started he was one of the liberal contributors, and took an active part in the forming and carrying on of Friends' Publication Association, which afterward resulted in the organization of the present Friends' Book Association, of which he was a director for many years. He was also useful in civil society, being president of a bank at Woodbury, and in other public measures for the good of the community. He was affable and courteous in his demeanor, and had a large circle of warmly attached friends.

ROBERTS.—At his residence, Philadelphia, Ninth month 12th, 1889, Edward Darlington Roberts, aged 72 years, a member of Green Street Monthly Meeting. Interment at Westchester Friends' ground.

For thirty years or more he had been one of the city surveyors.

UNDERHILL.—At his late residence, near Wilson, Ellsworth county, Kansas, Ninth month 8th, 1889, Cyrus Underhill, in the 59th year of his age; a member of the Monthly Meeting of New York.

Although far separated from any members of his own Society he had made his influence felt in the community as a "Friend" in deed and in truth. A local paper says of him: "Cyrus Underhill was an old settler of Ellsworth county, having moved here from New York City in the country's early days. As a citizen he was highly respected, always unassuming, never seeking the emoluments of office, honor, or of praise. Simply doing right toward his neighbors and friends seemed to be the only principle of honor which he aspired toward."

But nature is not solitude;
Her many hands reach out to us,
Her many tongues are garrulous;
Perpetual riddles of surprise
She offers to our ears and eyes.

Whittier.

THE LIBRARY.

EXTRACTS FROM THE JOURNAL OF ELIZABETH DRINKER, FROM 1759 TO 1807, A. D. Edited by Henry D. Biddle. Pp. 423. \$2.00. Philadelphia: J. B. Lippincott Co.

This is a very interesting volume, made up of extracts from a journal kept for nearly half a century in Philadelphia, with some explanatory foot-notes added by the editor, a short introduction, and a good index.

Elizabeth Drinker's maiden name was Sandwith; her father, William Sandwith, was a shipping merchant in Philadelphia, and her mother was the daughter of Martyn Jervis. She was born in 1735, and died Eleventh month 24, 1807. In 1761 she married Henry Drinker, who was a prominent and quite prosperous shipping merchant, and a strict Friend. Her life, after marriage, as before, was almost entirely spent in the city, the exceptions being the summer absences at places in the country,—several of them under compulsion of the terrible yellow fever visitations of 1793, 1797, and other years. Her journal begins over two years before her marriage; she and her sister were then boarding with a family named Warner, on Front street between Arch and Race. Their house adjoined a large one built by Benjamin Shoemaker, and this, which stood on the corner of an alley, known afterwards as Drinker's Alley, she came to live in, in 1771, her husband having purchased it of the heirs of Benjamin Shoemaker. There they lived until both died, and the dwelling, a spacious double mansion of forty feet front, with a large garden in the rear, came to be well known as "Drinker's big house." Old residents may recall the name, and in "Watson's Annals" it is particularly mentioned.

Most of the journal consists of brief outlines, often relating to personal and domestic affairs, but all of them are of interest as mentioning persons, places, and family events, such as deaths and marriages, while many throw light on manners, customs, and social conditions. The whole book, attentively read from beginning to end, produces the impression of a frank and sympathetic autobiography. The outlook is that of a conscientious Friend, and the affairs of the world are measured by the Friends' standard. But while there are often glimpses of the precision and care with which all was arranged and ordered in her household, there is a kindly and cheerful tone in the comments which are dropped.

The first ten years of her married life were spent in a house on Water street,—doubtless connected with or near her husband's place of business. In 1771, as already stated, they removed to Front street. Their children were five in number. Sarah, born 1761, married Jacob Downing. She died in 1807, a few weeks before her mother. Ann, (Nancy) born 1761, married John Skyrin. William, born 1767, is referred to in the book in many places as not having good health. Henry S., born 1769, married Mary Smith, and had a large family,—fourteen children,—of whom some died in infancy. Mary, born 1774, married Samuel Rhoads; this branch of the family, the editor of the volume mentions in a note, is now

extinct. Mary's marriage occasions several notable entries in the Diary. Her husband was "gay,"—that is, he did not dress "plain," and despairing of getting father Drinker's consent, the young people were married, "out of the order," in 1796. Here are a few extracts from the Journal:

"Ang. 10. Day before yesterday, the 8th inst., Molly was gone, as I thought, with Sally Large, shopping. . . . After candlelight, a young man whom I had no knowledge of,—William told me afterwards it was Richard Jones,—came into the back parlor and gave a small, unsealed letter into William's hands. . . . It was directed to Henry and Elizabeth Drinker. William handed it to me,—I wondered from whom it came, directed to us both, and by that messenger, but upon opening it, and reading the address on ye top, 'My Dear Parents,' I cast my eye down, and to my unspeakable astonishment saw it was signed, 'Mary Rhoads.' I exclaimed something, and no doubt my countenance showed my inward feelings in a measure. 'What is that?' said my husband. . . . William told me since . . . the subscription of Rhoads took a great burden from his mind; not that he had any other particular person in his thoughts, but we did not know that she had seen or spoken to S. R. for six months past. . . . My husband was much displeas'd and angry, and when I wished to know where she was at present, he charged me not to stir in the affair."

The journal proceeds with further details, which we cannot insert at length. It proved that the marriage had taken place "at the widow Pemberton's house in Chestnut street, the family being all, her son Joe excepted, out of town. Robert Wharton, being a magistrate, had married them according to Friendly order," in the presence of twelve witnesses. After some time the Drinkers became reconciled with the young people, and ultimately the monthly meeting accepted their acknowledgments as sufficient. Here are some relating to the subject:

"Oct. 9. Our daughter Mary came in meeting time to see me this afternoon. 'Tis nine weeks to-morrow since she left us. I was pleas'd to see her, and heartily wish an amicable meeting would take place between her and her father."

"Oct. 15. Well! I have been this afternoon to S. R.'s without leave. William went with me; we stayed till night, moonshine,—nobody there but ye family. I feel best pleas'd that I went."

"Nov. 1. Sally Downing here after dinner. Molly came in while she was here. Molly staid until her Father came in; he came out of the Fourth street meeting unexpectedly, being unwell—the first time they have seen each other since her marriage. He talked to her plainly, and at the same time kindly. She wiped her eyes and made a speech, which I did not attend to, having feelings of my own at ye time."

"Nov. 4. H. D. paid his first visit to S. R.'s—glad am I that he has been there."

The mention of individuals, in all parts of the volume, is so continual that hundreds and possibly thousands of names are given. The Friends' families in Philadelphia during the latter half of last century are to a large degree indicated in one way or another. Many interesting details are also suggested concerning the Society. Thus:

"Oct. 5 [1759.] Went this morning to monthly meeting; saw four couples pass [names given].

"Oct. 26. Called this morning on Hannah Callender. She went with me to monthly meeting; five couples passed—three cleared and two entered."

"Nov. 28 [1761.] H. D. breakfasted with us. Went to monthly meeting this morning, A. Warner, Sen., and Sister [her own sister, Mary Sandwith] with me; declared my intentions of marriage with my friend H. D.; Sarah Sansom and Sarah Morris accompanied us to ye men's meeting. Stephen Collins and Polly Parrish, and two other couples passed."

"Dec. 26. I went to monthly meeting, A. Warner, Sen., and Sister with me. Informed Friends that I continued my intentions, etc. Sarah Sansom, Sarah Morris, A. Warner, and Sister went up to the men's meeting with us. Israel Morris and Phebe Brown passed their first meeting."

"July 22 [1762.] Took up an abode during the warm weather at our place near Frankford. Did it suit H. D. to be constantly here, I think I could be very happy in the country."

"Aug. 17. Sister and Hannah [Sansom] went to meeting this morning; it being Frankford week-day meeting. It consisted of two persons besides themselves."

"Sept. 4, [1794.] A number of young men of our Society have lately been with the elders of the three monthly meetings; two have been with H. D., to propose a more easy method of passing marriages than has hitherto been in practice. They propose that a Friend shall be appointed to make mention of the intentions of A. B. and C. D., and that the parties may be excused making a public appearance. I am apt to think this scheme will not take place."

"April 17, [1796.] H. D., in his sulky, set off from our door between 3 and 4 in the afternoon. He expects to lodge to-night at Joseph Potts's, Plymouth; to-morrow to proceed to Pottstown, and lodge there; then to go forward over hill, dale, and a mountain to Catawissa, where he expects if nothing occurs to hinder, to arrive on Sixth-day next. A new monthly meeting is to be opened or settled there. James Cresson, John Morton, Ellis Yaraall, Arthur Howel, etc., etc., are also going."

"May 14. Philip Atkins, master of the ship *Sussex*, for Liverpool, was here this evening. H. D. paid him 210 pounds [Penna. currency] equal to 120 guineas, for the passages of Samuel Emlen, William Savery, Deborah Darby, Rebecca Young, Phebe Speakman, and Sarah Talbot; H. D. being treasurer for the Yearly Meeting."

"Nov. 9 [1801.] They are levelling Friends' burying-ground, as I saw from J. Downing's chamber window. A shameful innovation in my opinion."

"June 10, [1802.] My husband met a committee at the Fourth street meeting-house on the business of erecting a meeting-house in ye graveyard."

"June 6, [1803.] My husband is gone to meet a Committee to consider ye propriety of building a meeting-house in ye burial-ground—or rather to settle ye plan, etc. To build a house in ye burial-ground H. D. says has long been concluded. They meet to put it forward."

"April 15, [1805.] Sally Downing called. She is in good health. She had been to the new meeting in the burying-ground, but it was so crowded she came away. This is the first time of its being used for a woman's meeting-house."

"April 17. A man who stood for the express purpose of counting the number of women who went into the new meeting-house in ye burying ground counted 1,600; from another we heard it was 1,700; so that we may suppose there were about 1,650—a great number of zealous women."

She mentions, in 1772, attending meeting at Buckingham, in Bucks county, "said to be the largest house and body of Friends belonging to it of any

country meeting in the Province." In the Ninth month, 1777, a few days before the battle of Brandywine, (and about three weeks before the occupancy of the city by the British army), her husband, Henry Drinker, was arrested by order of the Revolutionary authorities, and confined in the "Freemasons' Lodge" with James, John, and Israel Pemberton, John Hunt, and others, the party making about twenty altogether, and being the "Friends Exiled to Virginia," who are so often mentioned in the history of that time. (A paper upon this transaction, prepared by Annie Cooper, was published in the INTELLIGENCER AND JOURNAL, Twelfth month 15, 1888.) They were kept under surveillance at Winchester, Va., until the following spring, when they were released. There is no evidence that these Friends,—with possibly one or two exceptions,—had shown any particular activity in behalf of the British, or had done anything to warrant their arrest. But that they had discouraged their own members from enlisting in the army,—on either side,—was of course true, this being according to their peaceable profession, and consistent simply with their long-maintained and well-known discipline. The entries by Elizabeth Drinker, during the autumn and winter of 1777-8, show her great concern for her husband's situation, but they give no sign at all of her preference for either of the combatants in the war. In the Fourth month, 1778, she was one of the four wives of the imprisoned Friends, (the others being Susanna Jones, Phoebe Pemberton, and Mary Pleasants), who went to Valley Forge to see General Washington, and then to Lancaster to urge the State authorities to release their husbands. The details of this journey, over the bad roads and through the rains of the early spring, she graphically describes. Both General Washington and his wife received them courteously and entertained them at dinner, which was elegant, but soon over, the journal says.

There are many details showing the terrible character of the yellow fever visitations in 1793, 1797, and other years. In 1803 one of E. D.'s domestics, Sally Dawson, died of it, but other than this the Drinker family appear to have entirely escaped. They went, however, into the country, each summer when it prevailed. The entries on the subject of the fever give many names of its victims, and show the general alarm and distress. But nothing is more notable, perhaps, than the view they give us of the practice of medicine in that day, and the nature of the remedies which the physicians employed. We may be able, at another time, to make some extracts from the diary exemplifying this topic.

It is a great art in the Christian life to learn to be silent. Under oppositions, rebukes, injuries, still to be silent. It is better to say nothing than to speak in an excited or angry manner, even if the occasion should seem to justify a degree of anger. By remaining silent, the mind is enabled to collect itself, and to call upon God in secret aspirations of prayer. And thus you will speak to the honor of your holy profession, as well as to the good of those who have injured you, when you speak from God.—*T. C. Upham.*

NEWS OF FRIENDS.

BLUE RIVER QUARTERLY MEETING.

This was held Ninth month 7th, 1889. Select Meeting assembled at 2 o'clock Sixth-day afternoon, and I am informed it was an interesting session. The First-day School Conference met that evening with a fair attendance. The general routine business being transacted, a programme was presented consisting first of an essay by E. H. Coale, followed by the reading of a poem and some remarks as to best ways to interest scholars from fifteen to twenty years of age. Then a question was discussed as to the benefit of a united action with township and county organization of other societies. This was opened by one of our number and replied to by one of another denomination. The distinctive principle of our Society was brought forth and elicited some remarks. In the reply theory was denounced, and a teaching of vital truths complimented, but an apparent difference was visible. Still a spirit was manifest that it would be best to associate with the township and county organization, but no action was taken.

On Seventh-day the Quarterly Meeting convened at ten o'clock and while there was but a small body of Friends present, a general feeling was that we had a profitable meeting. The silence that pervaded the gathering evinced to us that God still taught his people himself. The ministry was full of deep inspiration and tended to arouse the indifferent and encourage all to a more faithful life. Some of the answers to the queries were marked by an unusual degree of fullness, while others were inclined to the opposite, and we pray that the inquiry that is springing up may be guarded that a growth may be felt and every monition of duty may be obeyed. First-day morning dawned clear and pleasant and the commodious house was filled, and an earnest, solemn, impressive quiet spread over the assembly. The ministry was felt to be of the Divine Union, and "Abide with me" was the exhortation repeated so touchingly with a power that all seemed to be bowed in the spirit of Love. The requisite of a Christian life, with an exhortation to more faithfulness, all bearing upon practical Christianity as the essential element to our success in spiritual advancement.

Thus closed another season of refreshment under the power of Divine guidance, and as we believe this, we trust that it may spread out and reach to the innermost parts of our Society; and not only this but to all mankind.

MARY G. SMITH.

Hoopeston, Ill.

PELHAM HALF-YEARLY MEETING.

We take the following report of the sittings of Pelham Half-Yearly Meeting from *Young Friends' Review* for Ninth month:

Norwich Monthly Meeting is held in Eighth month on the day previous to the Half-Yearly Meeting, coming this year on the 231. We of Lobo, therefore, about forty in number, started on the morning of the 231, mostly in our own conveyances. The day was hot and the roads extremely dusty, and we were unfortunate enough to have to travel with the dust much of the way. We found the thirty-five or forty

miles a sufficiently long journey for one such day. However, with the kindly greeting of Friends, the refreshing effects of water applied, and the benefit from a good meal, we soon forgot our baptism of dust.

Select Preparative Meeting met at 9.30 on the morning of the 23d, Monthly Meeting at 11 a. m., and the Half-Yearly Meeting of Ministers and Elders at 3 p. m. Friends belonging to Pelham and Norwich Monthly Meeting were in attendance. None from Battle Creek, Mich.

Sunderland P. Gardner had come to be with us at our Half-Yearly Meeting, accompanied by his son Anson L. They attended the Monthly Meeting, when Sunderland spoke with his usual clearness and power. At the close of the first meeting, becoming ill, he was obliged to leave, and was unable to attend the sessions of the Half-Yearly Meeting, much to the regret of those in attendance. The spirit was indeed willing, but the flesh was weak. Hopes are entertained of his speedy recovery. But a man at eighty-seven has lost to a large extent his recuperative powers. [A note elsewhere in the same issue of *Y. F. Review* says: "We are glad to learn and inform our readers that Sunderland P. Gardner arrived home safely and is improving in health."]

The Monthly and Half-Yearly Meetings of business were not above their usual size, nor was there much business out of the ordinary line transacted, but the house on First-day was filled to overflowing. Nearly a thousand people must have gathered. The meeting was orderly and interesting. The speakers were William Cornell, Samuel P. Zavitz, and Serena Minard, closing with prayer by S. P. Zavitz. Serena spoke long and to great satisfaction. Many had come, no doubt, in the hope of hearing Sunderland, and in that were disappointed, but it was felt that the meeting had been one of unusual favor, and many expressions to that effect were afterwards heard. The exercises all tended to draw the hearers to the indwelling Word as the great teacher and guide in spiritual things.

—Although the day was exceedingly stormy, Haddonfield Quarterly Meeting, at Moorestown, N. J., Ninth month 12, was very well attended, a liberal representation from the neighboring quarters of Salem, Burlington, Bucks, Philadelphia, and Concord being acceptably with us. Living testimonies were borne by Louisa J. Roberts, Rachel Bond, Ezra Fell, Isaac H. Hillborn, and Franklin T. Haines. A portion of the sub-committee of the yearly meeting's committee to visit and encourage our members in the more faithful attendance to the requirements of our discipline and upholding and sustaining the testimonies of our Religious Society, were present, and gave counsel and encouragement. Allusion was made by a member of another quarterly meeting to the habit of some Friends not observing the ancient practice of the society for the past two hundred years of rising in time of public prayer,—that being considered not only a mark of respect, but of entering into a unity of spirit.

G. T. H.

—A note from our friend Aaron B. Ivins, (received too late for last week's paper), states that he is now

at Poland Springs, South Poland, Maine, and contemplates returning home the last of this month. We print this with the view of serving his numerous correspondents.

SWARTHMORE NOTES.

THE twenty-first year of the College was opened on Fifth-day last by a very appropriate address by Acting President William Hyde Appleton, in the College hall. In his remarks Dr. Appleton paid a high tribute to President Magill's long service as head of the College.

—Some important changes have been made in the methods of discipline by the Faculty. The several classes will hereafter each consult a certain member of the Faculty on questions relating to their college welfare. Professor Appleton will advise the Seniors; Professor Beardsley, the Juniors; Professor Rolfe, the Sophomores, and Professor Hoadley, the Freshmen. Professor Benjamin Smith will have entire disciplinary charge of the Preparatory School, and he has also been made Vice-President of the Faculty.

—The new Freshman Class numbers 54, and the total number of students in the College is about the same as it was last year.

—H. S. Williamson, of Lancaster, has presented the College with a handsomely executed crayon portrait of the late Isaiah V. Williamson, who was among those who did much for the institution in a financial way.

—The old enforced attendance of Freshmen in the college assembly room for study has been done away with, and all the college classes are now allowed to study in their rooms. The nine o'clock retiring regulation for the Preparatory School has also been abolished.

—A member of the Faculty says that the entrance examinations this year were of a higher standard than ever before in the history of the college.

—A letter from President Magill announces his safe arrival in England after a very pleasant voyage.

—The students have begun their foot-ball practice and the prospects for this exhilarating and healthful game are very good. The grounds recently graded within the track on Whittierfield will be used as a game field this year.

—Professors Hoadley and Weaver have been added to the Faculty of Instruction.

S.

THE "STRAIT" GATE.

EDITORS INTELLIGENCER AND JOURNAL:

IN the letter from Rebecca Price, published in your issue of last week there is an orthographical or perhaps a typographical error. The true reading of the text quoted is "*strait* is the gate" etc., not *straight*. Matthew 7: 13-14, Luke 13: 24. This may seem at first view an unimportant difference, but it is very far from being such. The two words, apparently much alike, are entirely distinct in meaning and a proper understanding of the text depends upon the use of the correct word. Jesus says: "Enter ye in at the *strait* gate, for *wide* is the gate and broad is the

way that leadeth to destruction." "Strive to enter in at the *strait* gate for many, I say unto you, will seek to enter in and shall not be able."

The word *strait* is the equivalent of *narrow* and as used in the text suggests most forcibly the sad contrast between the wide and beaten thoroughfare in which the mass of mankind prefer to travel, and the small gate and narrow path which suffices for the few who deny themselves the sinful joys of this world for the sake of eternal life in the world to come. The improper use of the word "straight" deprives the passage of much of its force and meaning.

NOT QUAKERS OF THE GEORGE FOX TYPE.

A FRIEND who was recently in Washington has handed us a copy of the *Post* of that city of the 2d inst., in which is an account of a "revival" conducted in a tent in that city by four so-called "Quaker evangelists." The report says:

"There's an old-time religion,
And it's good enough for me;
There's an old-time religion,
And it's good enough for me;
There's an old-time religion,
And it's good enough for me,
As we go marching on.

"This was the refrain that floated in the air at the corner of East Capitol and Ninth streets yesterday afternoon. The tented tabernacle of the Quaker evangelists was pitched upon a vacant lot, and the work of 'converting sinners and perfecting believers,' as announced from the platform, was in progress.

"Quaker meetings are popularly supposed to be conducted on stringent principles of quiet and decorum, but the visiting Quaker evangelists will dispel that illusion. Nothing formal is attempted. Whenever there is a lapse in the proceedings some sister will break in with a song, which the rest of the congregation assist in finishing.

"In short, the meetings of the Quaker evangelists are conducted just as an old-fashioned Methodist revival. The exhorter calls upon those present to stimulate the cause by relating their experiences, and there is never any lack of responses.

"The meetings will be held every evening hereafter except on Saturday evenings. The evangelists comprise Rev. J. B. Shockley, Brother Cyrus Hall, Sister Phæbe L. Hall, and Sister Sarah Hall. The exhorting is done by the former, and the ladies conduct the singing and Bible instruction. The evangelical institution being conducted in this city is a branch of a larger enterprise, now in progress at Portsmouth, Ohio. Rev. Mr. Shockley is himself a Methodist, but the remainder of the evangelists are Ohio Quakers. He stated to the representative of *The Post* that in Ohio and Indiana many of the Quaker bodies had given up the quiet method of worship and followed the plan of evangelization upon which the present series of meetings is conducted. There is nothing about them to indicate anything pertaining to the usual Quaker form of worship."

It is suggested to us that we should explain that

this proceeding is not any sort of Quakerism whatever. Doubtless our readers generally are aware of this, but the public outside may not be so well informed. Those who are carrying on their "revival" so entirely in the "old-fashioned Methodist" manner would do well, we think, not to call it a "Quaker" proceeding, at all. It is unjust to all parties.

NOT YET.

JOHN XII. 7.

Not yet thou knowest what I do,

O feeble child of earth!

Whose life is but to angel view

The morning of thy birth!

The smallest leaf, the simplest flower,

The wild bee's honey-cell,

Have lessons of My love and power

Too hard for thee to spell.

Thou knowest not how I uphold

The little thou dost scan;

And how much less canst thou unfold

My universal plan,

Where all thy mind can grasp of space

Is but a grain of sand;—

The time thy boldest thought can trace

One ripple on the strand!

Not yet thou knowest what I do

In this wild, warring world,

Whose prince doth still triumphant view

Confusion's flag unfurled;

Nor how each proud and daring thought

Is subject to My will,

Each strong and secret purpose brought

My counsel to fulfil.

Nor yet thou knowest how I bid

Each passing hour entwine

Its grief or joy, its hope or fear,

In one great love-design;

Nor how I lead thee through the night

By many a various way,

Still upward to unclouded light

And onward to the day.

Not yet thou knowest what I do

Within thine own weak breast,

To mould thee to My image true,

And fit thee for My rest.

But yield thee to My loving skill;

The veiled work of grace,

From day to day progressing still,

It is not thine to trace.

Yes, walk by faith and not by sight,

Fast clinging to My hand;

Content to feel My love and might,

Not yet to understand.

A little while thy course pursue,

Till grace to glory grow;

Then what I am, and what I do,

Hereafter thou shalt know.

—F. R. Havergal.

Feeling is deep and still; and the world that floats on the surface

Is as the tossing buoy, that betrays where the anchor is hidden.

—Longfellow.

AUTUMN DREAMS.

WHEN the maple turns to crimson,
And the sassafras to gold;
When the gentian's in the meadow
And the aster on the wold;
When the moon is lapped in vapor,
And the night is frosty cold;

When the chestnut burrs are opened,
And the acorns drop like hail,
And the drowsy air is startled
With the thumping of the flail—
With the drumming of the partridge,
And the whistle of the quail;

Through the rustling woods I wander,
Through the jewels of the year,
From the yellow nplands calling,
Seeking her who still is dear:
She is near me in the autumn,
She, the beautiful, is near.

Through the smoke of burning summer,
When the weary winds are still,
I can see her in the valley,
I can hear her on the hill,
In the splendor of the woodlands,
In the whisper of the rill.

For the shores of earth and heaven
Meet, and mingle in the blue;
She can wander down the glory
To the places that she knew.
Where the happy lovers wandered
In the days when life was true.

So I think when days are sweetest,
And the world is wholly fair,
She may sometimes steal upon me,
Through the dimness of the air,
With the cross upon her bosom,
And the amaranth in her hair.

Once to her, ah! to meet her,
And to hold her gently fast.
Till I blessed her, till she blessed me—
That were happiness at last,
That were bliss beyond our meetings
In the autumn of the past.

—Bayard Taylor.

FROM MARTHA SCHOFIELD: THE STORY OF AN OLD COLORED MAN.

EDITORS INTELLIGENCER AND JOURNAL:

AFTER school closed we visited some country churches, driving from twenty to thirty-six miles a day, often long distances through woods, and once eighteen miles without crossing the smallest stream of water. Turning into the woods we find a good sized church, and the people coming by trails that would soon lose a white man. Children of all ages and sizes, always clean, and boys just beyond the creeping height in pants. Shawls spread on the floor before the pulpit or along the aisles served for sleeping places, and once we counted six infants sprawled on the same one, all quiet in day dreams. The women take little part, for everywhere the superiority of man has been drilled into both sexes, and if the the superintendent is absent a thirteen year old boy is expected to take charge of the Sabbath School, in-

stead of a much better educated woman. To arouse men to their duties as husbands and fathers is partly our mission, to make them see that, believing themselves better than horses and cows, they do less for their wives when they let them raise a family of children in one or two rooms.

Slavery encouraged immorality, and many a woman was sold for no other reason than because of the few children she brought her "owner."

In these visits to new places there are always some amusing things. At one, a very tall, thin mulatto, with white hair, old-fashioned light linen pants, came trembling to the front, and addressed me with "the Bible says the man must be head, but I'd hate mightily for you to bin my wife, you so far ahead I'd had to follow." Then turning to the audience—"I've bin waitin twenty year to hear such talk, prayen for it; I've hear'n ministers plenty, but she's the three wise men." No one thought of smiling except our own party, and we dare not then.

The prayers are often full of pathos and earnestness, given with a tune which rises and falls like music. They talk in a conversational way to a Living Presence. "O Lord, go down to the corner of the lane, and turn our children back, for they are going in de road to destruction fast as de heel of time can turn." "Come in Lord and take all our sins and cast them overboard into the sea of forgetfulness where they may not condemn us." "Stand by the Deacon; he aint well; ease his pains and cool his fevers."

One minister told his people: "Many of us is like a man that was arrested for a crime, and when the judge asked him if he had a lawyer, replied, no, he had no money"; and the judge said, 'well, the State will give you justice!' The man answered, 'that's what I don't want. Now if the Lord gives us justice we wont want it, for our sins is great. We might gain the whole world and lose our souls. I knew a white woman, and she got sick, and grew worse, and her cry was, 'Doctor, save me, save me; there's plenty of money,—save me; there's money plenty, and niggers plenty.' She had onto a hundred head, but they didn't save her."

There is so much native dramatic power and skillful intonation, that even with bad grammar it is real oratory. No one criticised a little mistake, as when the deacon prayed "for the one who is to stand up and speak to us. Give him the tongue of a ready writer, that he may inscribe righteousness to the people gathered before Thee."

No wonder the race love the forms of religion. History will never gather up the martyrs who endured and suffered, faithful as Martin Luther or George Fox. Lately an old man, whom we have known a score of years, called to borrow a little money to keep his horse until the crop was ready. He owns a few acres, but the house and all its contents were burned a short time since, and the rebuilding took all he had. He came in fear and trembling, not liking to borrow and never begging. "Miss, I come to see you. I beg de Lord, (the lowland people always say *de* for *the*), to come front of de battle. He carry me all long dis far in de sum-

mer, de Lord do it; sometime some one bring us mouthful to eat, cause me to shed tears, to thank Him!" He is a genuine Uncle Tom in name and nature, and some remarks of his caused me to draw from him the following incidents in his life:

"Dear Miss, de Lord can fill us, we have enuf to eat, but if we aint got Him there's an achin' void, for dat Spirit of God will still gnaw de mind. My owner was a hard man, but God made me able to bear it. He had a butler who used to go round and preach and pray with de people. He was letter-learn't; he teach em de catechism. After while Mass'r told h'm he woul'dent have singing and prayin on his plantation. (He had a good many young gals, he sort a will, beast-like, fraid de singing and prayin' break his evil progress.) He had em all called round de steps and made de butler tell em. The spirit of de people fell, and de butler wasent strong in de faith, an he give up.

I told em I had a little house; come there and I would try and pray for 'em. Den de people meet, and we went on. Master, he domineer and do all he could to punish me for it, but I coul'dent stop; if I could ha' stop I would, but God woul'dent let me stop. I went on for five year, and Mass'r everlastin domineer an cuss me about it, but I coul'dent stop—de Lord woul'dent let me. At de end of five year, gwine into de six, Mass'r went to driver and told him if I sing on dat pace agin he punish h'm. Driver cum an told me, den I feels struck; I didnt know what to do. I takes de people and went out in de wilderness bont a mile from home, and made a brush tent, and we sing and pray and preach dare. Master find it out: his son saw de light when we going, and told he father, and Mass'r taken his horse and ride and ride in every swamp until he find where we make de camp. Next day he sent driver fetch me to house. I was down in swamp cuttin' wood; soon as driver holler for me, my mind struck me, dar is a mountain for me to clime. He asked me, when I had meetin? I told him las' night. Where about? I point, and say right in there. He say that man find it out, I tole him, he didnt find out where I kil a hog—(meaning not stolen one). He say I mas' tis' yer han behin yor back an fetch you to house. I answer he woul'dent tie me han for breakin de law (stealin' corn). I walk home dat mile, behin' his horse, but I feel empty, empty as a chip, feel like a dead man; coul'dent even pray. After I get to de house, driver call and tell him I come, he cum out in de hall an I pick up de whip off de table, an ask de driver "where de han enuf?"—he "doin't know"; he ask, where de stock, dat what ye have people feelin, and ye lay on your back and ye han' stretch out to another one—so. I told him none here but one made for Lee Walker (he run away) an dat was too big for me. Den he jump right out de piazza an ketch me by throat to choke me, he find I talkin' too strong. I raise me han', and me conscience tole me to remember Peter, an I hold me han' down, jus' so; he choke me long as he coul'd, and I felt tho' I gittin some life—not so dead like. He carry (took) me in his barn, and strip me naked as I born in de world, took his hankerchief an tie me eyes, tied me han's up to de bars, pulled me up tight as he

could. He giv' me ten cuts an stop an say "what is de order?" "I tole him," Master I carry de people in de woods because de shouten worried you. Him ask me whether I think he would rather he have 'em in de house or in de swamp where dey catch de plursity? He was mighty cold.

He gave me ten cuts more, t'ank God I feel den I no longer dead. I was *grown'*. He ask me again, and said, "I aint to preach on de earth, I aint to preach on de tree top, I aint to preach in de cloud, I aint to preach in heaven." He gave me ten cuts again; dat was thirty lash. When he gib me de last he ask me de same again. I tell him, "Master your judgment severe against my flesh, but de wrath of God is still worse for my soul, and I 'bliged to pray." He drop he whip and let driver lose me. Marks are there now; every lash cut de flesh and brought blood. I put on my clothes an come out; he was in de lot and stop me, talkin' about Elders and Bishops didn't die in de faith, an' I woul'dnt either. While he was talkin', you mivent believe it, Missus, but God knows, de eye of faith, de eye within, see me breast fly open, and a white dove fly in me breast, de spirit of God cum as a dove. I fell against de fence, and when he see me fell and me eye burst in tears, he told me to go to my work. I went home and after sundown people all run to me and ask what I gwine to do, an I tell 'em de devil has run for me five years, dis one de six, he carry me to de slaughter pen, but I aint give up my shield. I tell 'em, I take 'em back in my house an sing an pray just as long as God abla me to do it; aint my work, *its God's work*. If you'll come I'll sing and pray and talk with you. If you'll come, and if they fetch all de whip an all de han-enuf dey aint gwine to hurt none of *you*. I'll be de one dey'll destroy. An dey *did* come, we went on more dan we was before. He find he coul'dent stop me, de Lord woul'dent let me stop, and he send me to Columbia an I worked on de State House three years." (Carpenter.)

After I left a young maa converted under me went in and did de best he could for de people. Master see de Spirit of de Lord in me, an' he break down; he let de young man do it. In Columbia de church put me in high position, an' when Massa took me back he let me have de whole swing. He come down nateral, den, and tell me how good religion is, he wants it hisself, but he had so much property he coul'dnt get it. He tell me to pray for him, and I tell him I pray so often and it don't seem to do him no good. Den he say de Scripture told us after long rain it *peck hole in de rock*. I thank God for that whippin'; tho' I was sore it gave me so much *u'thin*, and I've got it yet; I only want to get it stronger and stronger; my ups and downs is great; when I whip de devil he won't stay whipped, and when he whip me I won't stay whipped, I keep prayin' and fight n' with all my soul, believin' God will give me grace to conquer him. May a time I eat a piece of bread and water, but if anybody know de goodness of God I know. He strengthens our bodies and souls. Dis summer I like to die, an' dey start for de doctor. I tell 'em no, my doctor always with me, and sure enough, I git up an' go on wid de crop. Thank God

I ever was born, to be born again." Says he "was ten years old before the Jackson war."

When we put the amount for horse feed—until corn ready—into that honest, gnarled hand, the divine light made the wrinkled face under its crown of white hair radiant with thankfulness, not to us first, but with a devout bending of the whole body to Him who gave the manna in the wilderness. Very few were the words of thanks to us, but far more impressive the aged form that passed down the steps trembling with a gratitude that could not be uttered except for the murmured "Thank God, thank God," coming from a soul that had tasted heavenly bliss.

Aiken, S. C.

M. S.

WASTE BY DIFFUSION.

In this country men and women of energy and capacity are in constant danger of dissipating their strength by expending it in too many directions. Any kind of executive ability is certain to be overworked among us unless it is resolutely protected by an intelligent purpose. In every small community the man or woman who has the power of doing things is likely to be loaded with the work of the community in every department unless he or she strenuously resists. Church work, charitable work, the interests of the village school and the village library and the village government, seem to gravitate into the hands of the man of executive capacity, and unless he recognizes the limits of his power he is certain to transcend them. In the cities the man of capacity finds himself in constant demand on boards of direction, in churches, societies, clubs, and organizations of every description. The woman of energy is sought for on every hand, and may devote her entire time to committee meetings if she is willing to make that disposition of it. In the larger field of any kind of public life the man of prominence is solicited from all quarters; he is invited to numberless conventions and assemblies; he is urged to speak on all sorts of topics, to lend his name to all sorts of enterprises.

All this indicates the tireless activity of our people, and that latent idealism which foreigners do not always recognize, but which is constantly manifested in the determination to make things better. It is all very good so far as the public interest is concerned, but it imposes a terrible strain on individuals, and is constantly destroying the power of the highest achievement by a diffusion of energy which ought to be concentrated. Americans who are thorough acquire this quality in spite of temperament and the atmosphere in which they live. Our inborn tendency and the impulse we receive from the life about us constantly tempt us to do many things, and to endeavor to reach results in too short a period of time. A lack of quiet growth and of unbending adherence to a single line of work tells against the thoroughness and solidity of our work in literature, art, education, and the higher politics, more than anything else. We are not only in too great haste, but we are determined to do too many things. We overwork ourselves and we dissipate our strength at the same time.

Every one ought to have some interest in public matters, ought to give a certain amount of time and

strength to the general interests of the community in which he lives; but the highest obligation which a man owes to himself, to his family, and to his country is to secure the most thorough development and unfolding of whatever character and power he possesses. This can only be done by concentrating his energy and work along the line of effort which nature marks out for him. If a man is to paint pictures, let that be the supreme interest of his life, and, while he holds himself in ready sympathy with his fellows and identifies himself with all good causes, let him see to it that his art does not suffer by reason of his membership of innumerable committees. He may do well for his country by serving on the school board, or hospital board, but he will do better if he make himself an artist of the first rank. There are thousands of women in America whose energies and strength are like water spilled on the ground because they are given in so many directions. It is simply impossible to accomplish thoroughly a great many things. What must be done to secure really good results is to elect the special direction in which one will serve one's community, and then hold to that. If one has time for charitable work—and every one ought to have some time for such a purpose—one ought to decide where one can work the most efficiently, and then put all one's strength on the objective point. Capable men and women are sacrificed in every community by having too many different kinds of work thrust upon them, and sacrifice themselves by submitting to an unreasonable demand. Except in great crises no community has the right to demand an entire sacrifice of self from any of its members; but this is what a great many communities practically ask when they lay upon the shoulders of men and women, already heavily loaded, burdens too heavy to be borne. Remember that your first duty is to make the most of yourself. Everything that diverts strength and dissipates energy reduces your power to attain your own highest good. See clearly what the good is, and pursue it with a resolute concentration which will not be impeded, delayed, or dissipated by the temptation to do too many things.—*Christian Union*.

NEW BRITAIN, Conn., has a Young Woman's Christian Temperance Union, whose sensible enterprise deserves wide emulation. Organized about a year ago, it immediately began mission work among the young girls employed in the factories of the place, hoping to keep them from spending their evenings on the street by arousing an interest in useful studies. From the small nucleus of one room and twenty or thirty girls, the work has grown rapidly, until now a tenement of seven rooms is required to accommodate the large number of regular attendants. The rooms are open four evenings in the week and two hours on Sunday. There are classes in dressmaking, penmanship, and singing, and reading matter is supplied by a circulating library.

It is singular how impatient men are with overpraise of others, how patient with overpraise of themselves; and yet the one does them no injury, while the other may be their ruin.—*Selected*.

PROGRESS OF FEMALE EDUCATION.

THE recent semi-centennial celebration at Mount Holyoke, (Mass.) Seminary suggests a few words regarding Mary Lyon, a pioneer in the work of female education. Few of the women of this day know what they owe to Miss Lyon, and those like her, who have so smoothly paved for them the pleasant ways of learning. One hundred years ago girls were not allowed to attend any of the public schools of the country, even, to say nothing of the colleges and higher institutions of learning. In 1788 it was voted in town-meeting in Northampton, Mass., not "to be at any expense for schooling girls." In Hatfield, where the founder of what is now Smith College was born and buried, the only privilege which girls possessed less than a hundred years ago was to sit on the door-step of the school-house and hear the boys read and recite their lessons. Less than a century ago the laws of Massachusetts did not recognize a woman as a teacher in the public schools. When the first high school for girls was opened in Boston, in 1825, there was such a great outcry against the innovation, and so many girls applied for admission, that the scheme was abandoned, and was not again attempted until 1853. In 1826 the school committee of Concord, Mass., passed a resolution that "from the first day of December to the first day of April, no misses under ten years of age shall attend school in the centre of the town; nor any over the age of ten years where there are forty male scholars attending the school."

Such was the actual position of young women in this country, with reference to the means and opportunities of an education, when, in 1837, Mary Lyon opened her school at South Hadley. When her scheme became known, and she began to ask assistance to build and furnish such a school, the whole thing was declared to be unpractical, unnatural, unscriptural, unfeminine, unchristian, and whatever else was wrong and visionary. It was declared to be an innovation unheard of and uncalled for; the women did not want to be educated,—and this in the face of the fact that the girls' school in Boston was closed because so many sought admission,—and if women were educated it would ruin their health, impair their womanly delicacy and modesty, unsex them, unfit them for their proper sphere. Against these railing accusations Miss Lyon had nothing to plead but her heavenly vision, and she pleaded as for her own life.—*Mary De Long, in The Universalist.*

THE FORESTRY CONVENTION.

THAT the joint meeting of the American Forestry Congress and Pennsylvania Forestry Association in Philadelphia, October 15th to 18th, will be well attended is already evident, and it is desirable that those who expect to be present should give notice of such intention by mail to Mr. John Birkinbine, Chairman of the General Committee of Arrangements, No. 25 North Juniper street, Philadelphia. Correspondence in relation to details should be sent to the chairman of the proper sub-committees, as follows:

Dr. H. M. Fisher, Chairman Sub-committee on

Finance, 921 Walnut street; Mr. Herbert Welsh, Chairman Sub-committee on Meetings, 1395 Arch street; Mr. J. Edmund Paul, Chairman Sub-committee on Hall, 298 South Fifth street; Mr. C. Channey Binney, Chairman Sub-committee on Printing, 218 South Fourth street; Dr. J. M. Anders, Chairman Sub-committee on Advertising, 1529 North Eighth street; Mr. George M. Coates, Chairman Sub-committee on Hotels and Railroads, 1817 DeLancey Place. The general correspondence of the committee will be conducted by Mr. F. D. Hartzell, Secretary, 25 North Juniper street.

The committee in charge of the arrangements for the Convention held a meeting Sept. 24, to hear the reports of the sub-committees. The Committee on Programme reported the following papers as promised: "Forest Reserves in the West," by Col. E. T. Ensign, of Colorado; "The Present Administration of Our National Timber Domain," by Mr. Bowers, late of the Land Office; "The Tan-bark Industry," by Jackson S. Schulz, of New York; "The Hemlock," by Prof. Albert M. Prentiss, of Cornell University; "Forestry Education," by Adolph Lehl, of Ohio; "The Pitch Pine; its Home and its Uses" (illustrated), by Prof. J. T. Rothrock, of the University of Pennsylvania. Various other papers have been promised conditionally, and the indications are for a very instructive convention.—*Forest Leaves.*

AN INDIAN ON HOME BUILDING.

At one of our Indian meetings, Dr. Susan La Flesch said: "The plan to loan \$100 or \$200 to worthy Indians is working well. The Indian takes that money and builds himself a house, and begins to live in the right way, or as many of them say, 'to live in the white man's way,' which they consider the best. And then, in three years, he is to pay back the money in installments, or as soon as he can get an income from his crops. And this has great influence over all the other Indians; they want to go and do likewise. The plan is growing and bearing fruit; it is a practical example how much better the white man's ways are. The Indians receive the money *only as a loan*: it is not given to them. And as soon as this money is returned it is given to other Indians who wish to do the same thing. People say our tribe is in the best condition, still they need much help. We are now like little children, without father or mother, and we have to do for ourselves, even if we are, as so many say, 'further advanced.'"—*Southern Workman, (Hampton, Va.)*

As we pass beneath the hills which have been shaken by the earthquake and torn by convulsion, we find that periods of perfect repose succeed those of destruction. The pools of calm water lie beneath their fallen rocks, the water lilies gleam, and the reeds whisper among the shadows; the village rises again over their forgotten graves, and its church-tower white through the storm twilight, proclaims a renewed appeal to His protection, "in whose hands are all the corners of the earth, and the strength of the hills is His also."—*Ruskin.*

A GREAT majority of men go far beyond what may be called the temperate use of tobacco, and evidences of injury are easily found. It is only necessary to have some record of what the general health was previous to the taking up of the habit, and to have observation over a long enough time. The history of tobacco in the island of New Zealand furnishes a quite suggestive illustration for our purpose, and one on a large scale. When Europeans first visited New Zealand, they found in the native Maoris the most finely developed and powerful men of any of the tribes inhabiting the islands of the Pacific. Since the introduction of tobacco, for which the Maoris developed a passionate liking, they have from this cause alone, it is said, become decimated in numbers, and at the same time reduced in stature and in physical well-doing so as to be an altogether inferior type of men.—*Medical Journal*.

THE main and proper business of every traveler who would succeed in his journey, is to keep close to his guide, whether the road be joyous or more afflictive.—*Samuel Fothergill*.

How a man's truth comes to mind, long after we have forgotten all his words! How it comes to us in silent hours, that truth is our only armor in all passages of life and death!—*Selected*.

It is not growing like a tree
In bulk, doth make Man better he;
Or standing long an oak, three hundred year,
To fall a log at last, dry, bald, and sere:

A lily of a day
Is fairer far in May,
Although it fall and die that night—
It was the plaut and flower of Light.
In small proportions we just beauties see;
And in short measure life may perfect be.

—*Ben Jonson*.

NEWS AND OTHER GLEANINGS.

—The annoyance of insects to humanity, especially that of mosquitoes, seems to be attracting increased attention. In the *North American Review*, (Ninth month), Dr. H. C. McCook, of Philadelphia, discusses the question, "Can the Mosquito be Exterminated?" and we observe also the announcement that Robert H. Lamborn has placed in the hands of Morris K. Jesup, of the American Museum of Natural History, New York, the sum of \$200, to be paid in three prizes of \$150, \$30, and \$20, for the three best essays on the destructions of mosquitoes and flies by other insects. May it not be possible, by the way, that since it has become usual simply to shut flies out of (country) houses, their numbers have increased, the old methods being to destroy them?

—We find the following item in the news columns of the Columbus (O.) *Press* of the 7th inst.

"Rev. Oliver White completes three months of service at the Friends' church on Ohio Avenue to-morrow, and desires to see all the members and others interested at the service. The morning subject will be 'Our Celestial Father.' Evening service will begin at 7.30 o'clock."

—Of the 247 Indian students sent home from Hampton in 10 years who are now living, only 17 are doing poorly or have fallen back into their old ways of living.

—Most of the Indian girls from Carlisle who have been employed during the summer, or for a longer time, in families in the neighborhood of Philadelphia, returned to the school on the 13th instant. A few others came out the same day, to take places for the winter. Several are at Raucocas, N. J., and in that vicinity.

—In the Eastern Penitentiary of Pennsylvania, at Philadelphia, there are now confined, according to the statement of the Warden, 1,060 men. Of these only 19 were bred to mechanical trades, serving their full time, and acquiring a thorough knowledge of their trade.

—We have received a copy of *The Alaskan*, published at Sitka, Alaska,—“the most westerly newspaper in the United States of America.” The date is Eighth month 24, and as it came to us on the 12th instant, this must be regarded as a quick trip. It chronicles the arrival at Sitka, on the 20th, “shortly after noon,” of the steamship *Ancon* of the Pacific Coast Steamship Company's line, nine days from Tacoma, Wash. Territory, with one hundred passengers, mail, and freight. The passengers' list is printed in full, and among the names we observe those of M. K. Paist, and Harriet W. Paist, of Philadelphia.

—Four hundred women and children are said to be regular customers at one beer and wine establishment in London.

—There are now one hundred and one geographical societies in the world. France comes first with twenty-nine, Germany next with twenty-two, and Great Britain third with nine societies.

—New uses for the phonograph suggest themselves daily. An ingenious application is that just made by an enterprising auctioneer in Brooklyn, who, in disposing of land at his periodical sales, has a phonograph to repeat the rules and conditions of sale.—*Electrical World*.

—There is a college for horses in New York, where horses are trained for the fire department service. The college is in charge of a veterinary surgeon, Dr. Sheer, who says that in his opinion horses and boys are very much alike, both amenable to kindness. A whip is never used in the college.

—The Texas negroes, according to statistics produced at the recent Waco convention, now own about a million acres of land, and pay taxes on \$20,000,000 of property. They have 2,000 churches, as many Sunday-schools and benevolent associations, 10 high schools, 2,500 common schools, 3,000 teachers, and 125,000 children at school. They number 25 doctors, 25 lawyers, 100 merchants, “hundreds” of farmers and stockmen, and “several” inventors. They have also 15 newspapers edited by men of their own race.

—One of the oldest engineering projects in the world is now gradually approaching completion, and the work will probably be finished during the present year. This is the canal through the Isthmus of Corinth, in Greece. Work was actually begun on the canal under the Emperor Nero, so that over seventeen hundred years will have passed between its beginning and its final completion. As finally excavated, the canal will be four miles long, with a depth of eight metres, or sufficient for the largest vessels which usually navigate the adjacent seas.

—Clara Barton is still at Jobstown, Pa., engaged in the Red Cross Society relief work. She has had erected a large wooden building, with thirty-six bedrooms, dining hall, kitchen, etc., as a temporary residence for families who lost their homes in the flood, until they shall be able to go to housekeeping again. This “Red Cross House” is cooperative in character, and has proved so beneficial a haven of rest and shelter that Miss Barton has authorized

the putting up of two similar buildings. "These," she writes, "will probably be followed by others, with reasonable hope that many hundreds will find in them protection from the cold storms of winter who could not possibly in these few coming weeks get a home all their own. It is in the work of this kind that donations will be expected."

CURRENT EVENTS.

A SEVERE cyclonic storm prevailed along the Atlantic coast, and for some distance inland, on the 10th and 11th instants. Much damage was done at some of the seashore resorts, especially Coney Island and Sea Isle City, and Atlantic City was cut off from railroad communication for two days by the overflow of the marshes across which the tracks run. Except in the piers, and the light frame structures on the beach,—bath-houses, etc.—the city was not seriously damaged. At the mouth of Delaware Bay many ships, (about 25 of all classes), were wrecked, and a number of lives were lost. Several ships were also wrecked at sea, but mostly of a minor class. No disasters to steamships are reported.

THE Flood Relief Commission completed its work in Harrisburg, Penna., on the 14th instant. It was agreed to give Johnstown \$1,000,000 now. This will be distributed on about the same basis as the first distribution. Up to that date the Commission had received \$2,005,114.22, and had on hand \$1,669,456.50, subject to contracts not yet completed amounting to \$43,000, and appropriations to other parts of the State of \$81,190.05. In the Conemaugh Valley \$769,382.70 has been expended, and in other parts of the State \$169,275.02. Subscriptions are still being received by the Commission.

PRESIDENT HARRISON returned to Deer Park, Md., at the close of last week.

THE first snow of the season at Laramie, Wyoming, and Leadville, Colorado, fell on the morning of the 14th inst.

THE strike of the dock laborers of London ended at the close of last week, their demands being conceded. The increase of a penny an hour in wages will not begin, however, until next month.

THE elections of members of the Chamber of Deputies, (corresponding to our House of Representatives), will take place throughout France on next First-day, the 22d inst. There is much excitement over them.

NOTICES.

. Haddonfield First-day School Union will be held at Camden on Seventh-day, the 29th of Ninth month, commencing at 10 a. m.

All interested are cordially invited.
 MARTHA C. DECOU, } Clerks.
 RACHEL L. DECOU, }

. Bucks County First-day School Union will be held at Wrightstown meeting-house, on Seventh-day, Ninth month 25th, at 10 a. m.

AMOR ELLIS, } Clerks.
 M. ELLA LONGSHORE, }

. A Temperance Meeting under the care of Concord Quarterly Meeting's Committee will be held at Friends' meeting-house, West Chester, on Seventh-day evening, 9th Month 25th, 1889, at 7.15 o'clock. Friends, and others interested are cordially invited.

MARY McALLISTER, Clerk.

. Henry T. Child expects to deliver an illustrated lecture on Temperance, at Friends' Meeting House, West

Chester, Pa., on Seventh-day the 29th inst., at 7.45 p. m., and to attend Friends' Meeting on First-day morning, the 29th inst., at that place.

. The sub-committee for Concord Quarterly Meeting of the Yearly Meeting's committee to visit the branch meetings, expect to attend:

- Darby Meeting, First-day the 22nd, at 10 a. m.
- An appointed meeting at Providence, near Media, on the same day at 3 p. m.
- Darby Monthly Meeting, Second-day 23rd, at 10 a. m.
- Chester Monthly Meeting, Third-day 24th, at 10 a. m.
- Fosken Monthly Meeting, Fourth-day 25th, at 10 a. m.
- Concord Monthly Meeting, Fifth-day 26th, at 10 a. m.
- Wilmington Monthly Meeting, Sixth-day 27th, at 10 a. m.
- Birmingham Monthly Meeting, Seventh-day 28th, at 10 a. m. at West Chester.

. Quarterly Meetings in Ninth month will occur as follows:

- 25. Scipio, Scipio, N. Y.
- 30. Indiana Yearly Meeting, Richmond, Ind.
- Canada H. Y. M., Yonge street, Ont.

. Circular Meetings in Ninth month as follows:
 22. Warrington, Pa.

. Memorial Meetings.—The Friends of West Grove meeting, at West Grove, Penna., propose to hold a meeting in memory of our lately deceased friend Sarah Hunt, and hereby extend an invitation to any of her friends who feel an interest, and have a concern, to participate by attending or by writing.

Impressive and interesting incidents connected with her public, religious service in times past, as well as pleasant memories of her later life, will be welcomed.

The meeting to be held in West Grove meeting-house on First-day, 9th Mo. 22nd, 1889, at 2 o'clock p. m. Communications to be addressed to Sarah Ann Conrad, West Grove Chester Co., Pa.

DAVID FERRIS, WM. HUGHES, } Com.
 SARAH ANN CONRAD, PENNOCK SPENCER, }

. The Joint Committee on Temperance and Intoxicating Beverages of Philadelphia Yearly Meeting of Friends, will meet at Race street meeting-house, Philadelphia, on Seventh-day, Ninth month 21st, 1889, at 1 p. m.

JAMES H. ATKINSON, } Clerks.
 ANNIE C. DORLAND, }

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only in cans.* ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

JARVIS-CONKLIN MORTGAGE TRUST COMPANY,

Capital Paid In, . . . \$1,500,000.

Six per cent. Guaranteed Mortgages on Farm and City properties.

Six per cent. Debenture Bonds interest payable half yearly.

Five per cent. Saving bonds in small or large amounts running six, twelve, eighteen, or twenty-four months.

These Bonds are issued under the supervision of the Bank examiners of the state of New York, with whom we have deposited 1-10th of our Capital in Government Bonds.

We issue instalment Saving Bonds, secured by real estate security, running 10, 15, and 20 years. Send for Pamphlet.

BEYOND.

The stranger wandering in the Switzer's land,
Before its awful mountain-tops afraid,—
Who yet, with patient toil, hath gained his stand
On the bare summit, where all life is stayed,

Sees far, far down, beneath his blood-dimmed eyes,
Another country, golden to the shore,
Where a new passion and new hopes arise,
Where Southern blooms unfold forevermore.

And I, lone sitting by the twilight blaze,
Think of another wanderer in the snows,
And on more perilous mountain-tops I gaze
Thau ever frowned above the vine and rose.

Yet courage, soul, nor hold thy strength in vain,
In hope o'ercome the steep's God set for thee;
For past the Alpine summits of great pain
Lie thine Italy.

—Rose Terry Cooke.

From William Pollard's "Quaker Reformation." ESSENTIAL FEATURES OF *QUAKERISM*.

A RECENT writer, in treating of the Quaker Reformation, has formulated the principles therein proclaimed, and has called them the "Ten Talents of Quakerism." They may be summarized somewhat thus:

1. God's Spiritual Light that lighteth every man.
2. The indwelling of the Spirit with the disciple.
3. The Headship of Christ in His Church.
4. The priesthood of all believers.
5. The freedom of the Gospel Ministry.
6. The spiritual equality of the Sexes.
7. Spiritual Baptism, and Spiritual Communion.
8. The unlawfulness of war to the Christian.
9. The unlawfulness of oaths.
10. The duty of brotherly love; and of simplicity of life.

The list even in its bareness indicates the striking resemblance that existed between the Primitive Church and that of the early Friends,—as to their creed,—the character of their religious meetings,—the basis of their ministry, and their views on Church Government. They both accepted in all its fulness the truth of the Real Presence and Headship of Christ: they were both free from the burden of Ritualism and Ceremonialism, and from the bondage and hindrance, in any form, of an order of clergy. They were both remarkable for their brotherly love, and for their care of the poor, the suffering, and the unfortunate.

The religious meetings in Apostolic times, though held on the same spiritual and free basis, took doubt-

less a somewhat different shape from the Quaker meetings—for reasons that are obvious. They were composed mainly of people just gathered out of heathenism, who had had practically no religious training; and the meetings had, therefore, of necessity, to be largely devoted to the work of "teaching." That is, they sought in various ways, under the power of the Spirit, to remind and inform one another of the great facts of Religion, and of God's dealings and revelations to men in the past: and this teaching-meeting was generally followed by a social gathering or "Love Feast," for spiritual edification and devotion.

We may mention another point of comparison. There were some of the teachings of the early Friends, which, while really constituting part of the Quaker Reformation, were more of the nature of testimonies, specially belonging to that particular age. Such were doubtless based upon true principles into which these faithful disciples were led by the Spirit of Christ. But we have to remember that the application of principles may and does vary under the same Divine guidance. It had been so with the Primitive Christians. They had their strong testimony to bear about meats offered to idols;—against the use of blood; and so on. But these expressions of a true principle have long passed away, with the need of them. Though the injunction on these subjects was given to Gentle Christians, in the most solemn and unqualified terms (Acts xv.: 28), no believer, Gentle or otherwise, feels any longer bound by it.

So with the early Friends. Admitting that there may have been in their protests against certain evils and extravagances of the time some degree of crudeness and exaggeration—for instance, in the use of what they called plain and truthful language; on the subject of dress and personal demeanor;—and in respect to some recreations;—still they testified in their seventeenth-century style to some important truths that may now be upheld in other ways. In these things we have our own responsibility; which is not met by mere imitation.

We sometimes hear Quakerism described as if it were identical with what is known as "Evangelicalism," plus a few specialties about the ordinances, war, and oaths. On this point we may appeal both to the early Friends, and to their contemporaries the "Evangelicals," of the seventeenth century;—and we shall find the answer from each clear and unmistakable. Leaders of the "Evangelical" sects in those days—such as Baxter and Bunyan—never would admit that the fathers of Quakerism were in harmony with themselves as regards even primary

Christian doctrine. They stigmatized them as *one-sided*,—as *tending to Socinianism*—as *undervaluing the Bible*, and so on; charges which one still hears at times applied by “Evangelicals” to old-fashioned Quakerism; though more unfounded statements as regards each particular, both then and now, could hardly be made. So far from being one-sided, they proclaimed afresh the *central truth* of Christianity. Their testimony to Christ, as Almighty and Divine, was a practical testimony;—and as such it was more definite and unequivocal than that of any other religious community. And their reverence and love for the Bible were so marked, that its plain teachings were accepted by them at great cost and suffering, on points respecting which other churches seem still “halting as between two opinions.”

The Friends themselves—on this question of agreement in what were regarded as fundamentals—were equally uncompromising. While they gladly avowed that they did not differ materially from many other religious communities, in what William Penn called “the common doctrines of Christianity,” they did not hesitate to assert that they differed almost radically in the definition—the understanding—and even in the place of some of these teachings.

The “Evangelical sects—as we have already pointed out—declared, and still declare, their central truth to be the Death of Christ. The early Friends, going wider and deeper, proclaimed the great central and foundation truth to be Christ Himself;—the Living Saviour—the same yesterday, to-day, and forever. They ignored no revealed truth;—the human life of Christ—His death—His resurrection—His ascension—all for our sakes—they thankfully accepted and believed. But Christ the Living—the Indivisible—He who had been God manifest in the flesh, and now is God manifest in the Spirit,—was their foundation Rock. And on that Rock they built, and found safety and rest.

One characteristic achievement of the Quaker movement which is of primary importance was the rousing impulse it gave to individual Conscience. Christ—as these Reformers preached Him—was not only present in the Church as its Head, but He was present in the heart of each disciple. Therefore the Conscience—that wonderful organ or indicator, by which the Divine Presence is noted and its purpose revealed—was not to be a mere collective church instrument, interpreted and controlled by the priest or pastor, or even by the congregation; but a personal indicator, under Christ's direction, planted in the secret of each heart. Under this Divine Guidance, people were to think for themselves—seek for themselves—and act for themselves. And yet not as mere detached and isolated units. The one Supreme Guide who dwelt in each soul, and understood and loved each soul, became—as He was trusted—the true bond of union to His people. This practical faith in Christ's direct revelation of Himself to each believer—as it is held in humility and charity—is still found—even amidst great diversities of operations—to give true unity of purpose and an aggregate of wisdom; and so enables the Brotherhood to work harmoniously together for mutual help, and for the

promotion of the truth. Here we have the true constitution of that union of many diverse spiritual natures, under the Headship and control of one Lord,—which we recognize as a Divine institution, and which we call the Church.

A Church that felt itself so constituted would naturally be continually saying to its members—(in other words, the members would be continually saying to one another)—“Christ is your Master:—take heed to Him:—take heed to His invisible and unsearchable influence,—the convictions of the Spirit,—the guidance and teaching of the Spirit,—the restraints of the Spirit.” And the early Quaker Church *did* constantly reiterate this teaching. George Fox's epistles, and the addresses of his compatriots, are full of such injunctions. The supremacy of Conscience, controlled and enlightened by the Spirit of Christ, was in fact their prominent theme.

Personal Conscience was the rudder which, in the Divine Hand, steered their bark through the stormy sea which these brave men had to traverse. In obedience to it they went forth as Preachers;—they held meetings;—they organized communities for promoting God's truth;—they went to prison;—they laid down their lives; proving faithful to this Light of Christ in the Lamp of Conscience, even unto Death.

But further than that, they did their duty, and were seen to do their duty, in the petty details of every-daylife. Perhaps this is as great a test of a tender and active conscience as can be found. George Fox tells us, “When people came to have experience of Friends' honesty and faithfulness,—that they kept to a word in their dealings, and would not cheat them; but that if they sent a child to their shops for anything, they were as well used as if they had come themselves,—the lives of Friends did preach, and reached the *witness of God* in the people. Then the enquiry was, ‘Where is there a draper, or shopkeeper, or tailor, or shoemaker, or any other tradesman, that is a Quaker?’”

This active personal Conscience, which leads to a self-reliance based on the assurance of Christ's presence and help, was the root of that sturdy independence of character which was once (and which is still, to some extent, let us hope) a distinguishing feature of Quaker people. It has been through this true staying power so much needed in the battle of life, that the individual conscience has come to tell upon the whole community. Probably when George Fox spoke of one true Quaker shaking the country for ten miles round, he had in view not merely or mainly preaching, or other public efforts; but rather this integrity and uprightness—this unswerving fidelity to the truth however manifest in the soul,—this conspicuous loyalty to Christ, which brought about the whole movement.

It is a measure of culture, the number of things taken for granted. When a man begins to speak, the churl will take him up by disputing his first words, so he cannot come at his scope. The wise man takes all for granted until he sees the parallelism of that which puzzled him with his own view—*Emerson*.

OLD YEARLY MEETING ADVICES.

SOME Advices given forth from time to time by the Yearly Meetings for New Jersey and Pennsylvania, held alternately at Burlington and Philadelphia.

1715. Advised, That the care and good endeavors of Friends may be exerted in all our particular meetings of business, for preservation of good order and wholesome Discipline; we cannot but earnestly recommend the same to you, in your several places and stations, that your hands slack not therein, but that Friends may everywhere apply to the Lord, who gives wisdom, and will not fail those who seek it in humility and fear.

1739. Recommended to the several Monthly Meetings within the verge of this meeting, once in each quarter of the year, and at such other times as they shall think fit, to call upon their respective overseers to know in what manner they have discharged their trust, and to this end, that such questions be proposed to them as the meeting shall judge proper.

1759.—The spirit of love and concord which hath presided through the course of this meeting, still very sensibly prevailing, and exciting thankfulness in the mind of Friends in general. Under a sense thereof an united concern to maintain every branch of our Christian Discipline is weightily recommended to Friends in their respective stations, with desires that in the meekness of wisdom, we may be qualified in the present sifting times to strengthen and confirm each other therein, and manifest to the world the sincerity of our faith and confidence in the protection of Divine Providence, which hath hitherto been signally manifested for the preservation of the faithful in the most trying dispensations.

1714. This meeting agrees that the Quarterly Meetings do recommend to each Monthly Meeting within their respective limits, that they choose two or more Friends out of each Monthly Meeting (where meetings of ministers are, or shall be held) to sit with the ministers in their meetings, taking care that the Friends chosen for that service be prudent, solid Friends, and that they do carefully discharge their trust in such matters, and in such manner as the Monthly Meetings shall from time to time see occasion to appoint them.

1740. This meeting being informed that doubts have arisen concerning the intent of the minute of 1714 about the appointment of elders to sit with ministers in their meetings, this meeting, for the removing thereof, declares it as their opinion, it ought to be understood to extend to the appointment of prudent, solid women Friends to that service as well as of men.

1747. This meeting recommends it to the several Quarterly and Monthly Meetings within the verge of this meeting, to revive and continue the practice of appointing solid and weighty Friends and elders together with some of their ministers to visit the particular families within their respective meetings, the good effects of which wholesome and serviceable part of our ancient practice and Discipline hath been often

attended with the Divine blessing to the great satisfaction of those concerned therein, and hath been a means of preventing many growing inconveniences and customs amongst us, which it may be difficult guarding against in a more public manner.

1735. In answer to that part of the report of Chester Quarterly Meeting relating to Lotteries. This Meeting are of the opinion that Friends should be careful not to engage in any thing of that kind.

1773. It being observed that a number of Lotteries have been set up for some time past by some of the inhabitants of these Provinces, and a desire of gain in this way being contrary to our religious profession and unjustifiable, and from some of the accounts now received there is cause to apprehend that some professing with us have been drawn in to countenance and encourage this dishonorable and unjust practice; Monthly Meetings are desired to labor to maintain our testimony against it by advising and admonishing any who may be in danger of being ensnared by such temptations, and where any persist either to promote or encourage such means of obtaining unjust gain, that they endeavor to bring them to a due sense of their error, and if they cannot prevail with them to acknowledge and condemn it, the testimony of Truth should be maintained against them.

1706. This meeting do give it as their sense and judgment that it is altogether wrong and of evil tendency to have any grave-stone, or any other sort of monuments over or about the graves in any of Friends' burying grounds, and further, that those monuments that are already in the burying grounds, either of wood or stone, shall be taken away and no new put up, but to be as sparing as Friends well can be for those who were not Friends, and put up before the burying ground was solely confirmed to Friends.

1701. Dear Friends and Brothers, we recommend to you peace and concord as the great fruits of charity, without which we are nothing; and that we labor to approve ourselves men of peace; and makers of peace, which is our ornament, duty, and ensign as the disciples of Jesus.

1735. This meeting recommends it to such magistrates who are Friends to be careful to exert their authority as occasion may require to suppress swearing, cursing, drunkenness, and other growing evils properly within their cognizance.

1746. We entreat all seriously to consider the signal occasion we now have, with the utmost thankfulness and humility to acknowledge the gracious interposition of the Divine Providence in the deliverance vouchsafed to our King, and to our fellow subjects in Great Britain from the difficulties and dangers to which many have been exposed by the base, wicked, and perfidious attempts of unreasonable and ungrateful men, who have combined against our happiness, and were desperately engaged in attempting the subversion of our liberties, in order to subject us to the tyranny of a Popish Pretender, and to the superstition and idolatry of the Church of Rome. And we do fervently desire that all who profess fellowship with us may be zealously concerned by the whole

course of their conduct to give most convincing testimonies of fidelity and loyalty to our King, who on this occasion hath manifested a paternal care for the safety and protection of all his faithful subjects.

1776. And as we have for some years past been frequently concerned to exhort and advise Friends to withdraw from being active in civil government, it now appearing to us that the power and authority exercised at this time over the several Provinces within the compass of our Yearly Meeting are founded and supported in the spirit of wars and fightings, we find it necessary to give our sense and judgment that if any making profession with us do accept of, or continue in public offices of any kind, either of profit or trust, under the present commotions and unsettled state of public affairs, such are acting therein contrary to the profession and principles we have ever maintained since we were a religious Society; and we therefore think it a necessity to advise, exhort, and caution our Brethren in profession, against being concerned in electing any person, or being themselves elected to such places and stations.

1780. It appears to be our unanimous sense and judgment, that a living concern for the advancement of our testimony to the peaceable Kingdom of Christ, by refraining from such compliances as evidently tend to war and bloodshed still continues to spread in many minds, and a fervent desire hath prevailed amongst us, that according to the advices given forth by this meeting, at sundry times, respecting the payment of taxes, selling of property for the use of the armies, etc., the members of our religious Society be again exhorted strictly to attend to the monitions of Divine Grace, and carefully guard against suppressing them, either in themselves or others, that so they may be preserved.

For Friends' Intelligencer and Journal.

SCENES IN SCOTLAND: LETTER FROM
EDWARD H. MAGILL.

MORLAND, WESTMORELAND, ENGLAND,
Ninth month 11th, 1839. }

I CLOSED my last letter just before we finished our ocean voyage. We arrived at Glasgow on the 5th, that being the twelfth day after we left New York. Our steamer usually makes the voyage in ten days, but our slow progress was the result of an accident to the vessel, the serious nature of which we did not know until we were in port, or it would have caused us great anxiety. As we drew near the Irish coast, of course all were eager to catch sight of land once more, and we were early on deck, in a thick mist, on Fifth-day morning for that purpose. Just before 8 a. m. we saw it like a low line of cloud, close to the sea and it took experienced eyes to determine that land was actually in sight. But in another hour all doubt vanished, the mist partially cleared away, and the long, irregular line of the rocky coast of Donegal, the north-western county of Ireland, was plain to be seen. The sea was so smooth that there was no danger in venturing near to what, in a stormy sea, is really a dangerous coast. Soon the dark cliffs of the rocky isle of Inistrahull rose upon our left and as we passed between it and the mainland, the story was

told of the *Cambria* of our line, which came into these waters on her homeward passage on a stormy night twenty years ago, and mistaking the light on the Island for the one on the shore, steered too far northward, went upon the breakers and was lost, with every passenger on board except one. This, I believe, is the last serious accident which has happened to this generally well managed ["Anchor"] line.

As soon as the coast was sufficiently near, we saw that all the cliffs and steep slopes were remarkably green,—the moist atmosphere of Ireland causing grass to grow readily in places which on our shores would be without vegetation. Of course the origin of the name of the Emerald Isle was very obvious. After we touched at Moville, and let off some passengers, we were soon steaming on opposite the Giant's Causeway, and the Captain kindly steered the vessel very near the shore, that we might view this wonderful formation from near at hand. The great basaltic columns somewhat resemble the finest part of the Palisades on the Hudson, but in most of its extent the effect is much finer. The debris at the foot of the cliff, unlike the dark unsightly piles of broken stones and rocks on the Hudson, were all covered with grass and presented the appearance of a sodded sloping terrace along the shore.

Soon we passed the Scotch headland on our left called the "Mull of Kintyre," and entered the Firth of Clyde. On reaching the mouth of the river Clyde we had to stop and wait several hours for the tide, as the little river will not float the great Ocean Steamer except at or near to flood tide. Soon after daylight on Fifth-day morning, with two little steam tugs, one behind and one in front, to keep us in the narrow channels of the stream, we started for Glasgow, now only about 30 miles away. As we slowly crept along between the walled banks of the river,—for it is much like an artificial canal all the way,—we soon came to the great ship-yards. This is a centre of the ship-building business, and we counted not less than forty vessels, of various sizes, on the way up, in progress of building. Iron (and steel) is the chief material now used, and the merry sound of hammers was kept up a great part of the way. It is said that any one may tell whether times are dull or active by the sound of the ship-builders' hammers on the river Clyde. The work going on that morning would plainly indicate that business was far from dull at this time, and it is said that all the leading yards have orders from various parts of the world which they cannot hope to fill for two or three years.

At Glasgow we mailed our letters, and felt that once more we were within the reach of the facilities of mail and telegraph, which is a great comfort when home and dear ones are so far away. We only saw in Glasgow the ancient cathedral, and the neighboring cemeteries, old and new. The latter is especially attractive to a stranger as occupying a very high point of land, giving a fine general view of the city from its upper slopes. A striking feature of the city is that it is built almost entirely of stone instead of brick; that the walls are dark and gloomy like those of Pittsburg, only more so, and from the same cause, and it has some of the highest chimneys to carry off

the fumes of the chemical works that we ever saw. Two of these are said to be each about 325 feet high, and although doubtless strong enough, look frail indeed, with their slender shafts towering in the air.

The next morning we went on our baggage directly to Edinburgh, and taking only hand satchels with us started for the same place, by way of the Trosachs. We passed by rail down the Clyde again towards its mouth, and near where we left that river we saw the great double-rock rising to a great height almost out of the water, and although scarcely any evidences of a building was on its top, the rooms being hewn out of the solid rock below, this was the Tower of Dumbarton, so familiar to all who have followed the strange and adventurous career of the unhappy Mary, Queen of Scots. At Balloch we took a little steamer, and sailed northward on Loch Lomond, and although a heavy "Scotch mist" shrouded the lovely islands and the grand mountain slopes along its shores, we got glimpses enough of them as we passed to make us constantly wish for more, and it is possible that we have carried away with us in memory a far more characteristic scene of the Scotch highlands than we should have done had we seen this lake on a bright, sunny day. At Inversnaid we took coaches and rode over the foot-hills of the northern slope of Ben Lomond to Loch Katrine. On the way we had some commanding views of fine mountain scenery, the mist now fairly rising, and promising us a bright day. On this drive the humble home was pointed out where Rob Roy's wife, Helen MacGregor, was born. Taking another steamer at the west end of Loch Katrine, we started on a boat ride of some two hours that seemed to me, as I now look back upon it, the nearest approach to fairy land that I have ever yet experienced. The first part of the ride was not especially remarkable, but as we approached the eastern end of the lake, the mountains rising higher and higher as we passed, and the lake winding about in a labyrinthian maze among them, and islands rising on every hand, beautifully adorned with the bright colors of ferns and the purple heather in full flower, and shaded by cedars, firs, and larches, the effect was truly magical. And this beauty constantly increased, reaching its climax in Ellen's Isle, just before we reached the end of the lake.

We next took stage again, and leaving the old road through the Trosachs just as we come in sight of the far-famed Trosachs Hotel, we turn off to the right over a splendid mountain-road built a few years ago, at great expense, by the present Earl of Montrose. Our greatest elevation as we drove over to Aberfoyle was 770 feet, and all of these slopes were not at all wooded, but literally covered, most of the way, with the purple heather,—so characteristic of Scotch scenery. Taking cars at Aberfoyle, we soon reach Stirling, where we had planned to spend the night. On our arrival we went to the Castle, as soon as we were settled in a hotel, and there we hoped to have from the walls, what is said to be "the finest view in Britain." But in this we were disappointed, as the mist completely cut off all distant view. So we had to content ourselves with seeing the usual accessories of all of these old castles,—the massive

walls, the moat, the arched entrance, the drawbridge, the portcullis, and the usual display of soldiers performing their evolutions in the open squares which was, I need hardly say, to me anything but an attractive sight.

The next morning being still misty, we started early for Edinburgh. I surely hazard nothing in saying that we found this by far the most beautiful city we had ever seen. The character of the ground is such that it has wonderful natural advantages. The deep ravine through its centre, (the drained bed of a former lake), and the highlands on each side—with the spur of cliff upon which the Castle is situated at one end of the old tower, and Salisbury Crags and Arthur's Seat at the other,—all give advantages of situation to this city that never could have been given by the hand of art. We saw it from the Tower, from Calton Hill, and from Arthur's Seat, and explored it by tramway and carriage and on foot pretty thoroughly during our two days' stay, and the greatest regret that we had when we turned our back upon the fair city was that all our friends at home could not see what we had seen and so greatly enjoyed. I would gladly describe many of the lovely scenes in and around this charming city, but space forbids, and I must be content with this very general allusion to a visit which has left impressions upon our minds which will endure while memory lasts, and be an endless source of pleasure to us in the retrospect.

We next turned southward, toward the home of our friend, Charles Thompson, of this place, where we had been cordially invited to make a visit. On our way down we stopped at Melrose; "did" the Abbey; sat there upon Walter Scott's favorite stone seat; looked up at the sky between its ruined walls, regretted that we could not "see it by the pale moonlight." Then we drove a few miles along the banks of the Tweed to the home of the great poet, at Abbotsford; and saw his study, his library, his drawing-room, his curious collections of arms of every description, the entrance hall filled with relics of many kinds,—all kept just as he left it. The grounds are exquisitely beautiful, just on the banks of the Tweed, and are kept in the most perfect order. They are surrounded by a massive ivy-covered wall. The situation of Abbotsford would strike many as peculiar, (being on ground so low that it is quite invisible until you approach very near)—and especially as there are so many fine sites upon the neighboring hills around. But he evidently preferred to look up rather than down upon the landscape around his home.

From Melrose to Carlisle we made the most rapid run that I ever remember to have made by train, and the swaying of the cars was almost comparable to that of a ship upon a stormy sea. We stopped a few hours at Carlisle; visited the Cathedral and the Castle, from the walls of which we had a fine view of the productive country around it. We were shown a little dungeon,—some 10 by 12 feet in dimensions, where not a ray of the light of day ever enters—and but a scanty supply of air—our guide assured us that George Fox had been imprisoned here at one time for a period of three months.

We shall rest here at a friend's delightful old Eng-

lish home, (built by his great-great-grandfather in 1722), for a few days, and then visit some of the most interesting scenery among the English lakes.

EDWARD H. MAGILL.

SCRIPTURE LESSON No. 37.

TENTH MONTH 6TH, 1889.

THE TRIBES UNITED UNDER DAVID.

GOLDEN TEXT:—"Behold how good and how pleasant it is for brethren to dwell together in unity."—Psalm 133 : 1.

READ II. Samuel 5 : 1-12.

DAVID remained loyal to Saul, reverencing him as "the Lord's anointed;" yet, Saul, perceiving how the hearts of the people were turning to him, and being of a morbid temperament, soon became filled with jealousy, and would gladly have sacrificed him, which was in various ways attempted, but through the strong affection existing between David and Jonathan, the son of Saul, the former was kept informed of much that was planned by his father for the destruction of his friend. This, added to the prudence and ever-abiding trust and confidence in God that were so conspicuous in the character of David, preserved him through all the dangers that were planned for his overthrow. On two occasions Saul was completely in the power of David, yet he was not unmindful of the fact that it was his king who had become his enemy, and he could not lift his hand to do him harm. Not until the death of Saul and Jonathan did David take any steps to bring himself into power. At Hebron, the capital of the tribe of Judah, to which David belonged, he was the second time anointed with the sacred oil and proclaimed king of his tribe. The only remaining son of Saul was placed upon the throne of his father, and ruled over all the rest of Israel. The condition of the divided nation was one of strife and bloody carnage "between the house of Saul and the house of David," the latter becoming stronger and stronger. This continued for more than seven years, when the union of all the tribes under David was agreed upon, and he, for the third time, received the oil of consecration, and was proclaimed king over the whole nation. This brings us to the date of our present lesson.

Then came all the tribes of Israel to David. Hebron was thus made the royal city. It is one of the most ancient cities in the world that is still in existence, and was a well-built town when Abraham entered Canaan more than thirty-eight centuries ago. Here came the elders, and chief men of all the tribes to make a league or covenant with David, as their king, whom they believed was the chosen of the Lord.

And the king and his men went to Jerusalem, etc. This was the great fortress of the Jebusites, a portion of the former inhabitants of the land, whose territory, in the division of Canaan by Joshua, was allotted to the tribe of Judah. A battle was afterwards fought, and this almost impregnable city was captured and set on fire, but the men of Judah were not strong enough to dispossess the Jebusites (Josh. 15 : 63.) It remained for David to get possession of the stronghold which the people thought was so secure that "the blind and the lame" might be its champions.

David went on and grew great, etc. The admirable qualities of David as a leader and ruler, so strongly in contrast with Saul's late administration, placed Israel at once among the foremost of the nations of western Asia. He ruled in the fear of God. He was poet and musician, and the loftiest strains of his fervid imagination were psalms of praise and thanksgiving to Jehovah. Some of these were written during this period of his life.

Hiram, king of Tyre, etc. Tyre was a city of Phœnicia, a strip of country lying along the Mediterranean Sea, and forming the western boundary of Israel. It was a famous commercial city, its ships traversing the waters of every part of the globe then known. Many of the Israelites are said to have been employed by these adventurous navigators. Hiram was perhaps the first to recognize the growing importance of Israel, and to enter into friendly relations with its king.

When our hearts are warmly in accord with any movement, our thoughts and actions bend and turn to every phase of the subject. Instinctively the necessity of unity is impressed upon our minds, and as each wandering thought is brought under the guidance of the first motive, we are aware of added strength. "See the Friends, how they love one another," has been said of our Society, and it is this union in love that has made in our assemblies the absence of church government an assured possibility.

The perfect love that casteth out fear unites with truth and forms right judgments in the mind that is prayerfully intent. And without the union of these two—love and truth—our hearts and homes would sadly drift into discomfort and unhappiness.

The union of the tribes of Israel under David brought the Jewish nation into greater prominence in the world, so when our wandering thoughts and aims are brought under the guidance of our Heavenly Father's love and care, our lives will have an influence on those around us, strong in the cause of goodness, and thus fulfill the grand purposes of our being. And that God may be with us in everything we do, is surely all that is essential to make us happy creatures. To unite ourselves with Him as we would with a tender, solicitous parent, to strive to *know* his will and *do* it, and to love mankind, should all be parts of the great plan by which struggling humanity hopes to reach the higher plane of perfect obedience to that Supreme Power, of which obedience we find in King David's a fitting type.

NOTES ON THE LESSON.

Samuel the prophet had shown great unwillingness to yield to the demand of Israel for a king. The idea prevailed that it was not the purpose of Jehovah to place the nation under any such rule, he being their sovereign and the judges administering the law under his direction. This had been the course pursued from the time of their taking possession of Canaan under the leadership of Joshua, to the placing of Saul at the head of the nation as its king.

But we find by reference to Deut. 17 : 15, that be-

fore Israel came into the land, Moses, speaking for God, had charged with great earnestness, "Thou shalt in any wise set him king over thee whom the Lord thy God shall choose; one from among thy brethren shalt thou set king over thee; thou mayest not put a foreigner over thee which is not thy brother."

It is in reference to this requirement of the law that the leaders and elders of the tribes when they came to Hebron to make David king over all the people of Israel, reminded him that they were his kinsmen, his bone, and his flesh. It was a great step in the onward progress of the nation when this decision to unite all the tribes under one government with David at its head, was reached. He had shown himself worthy of their confidence and capable to administer the affairs of state with equity and good judgment. With the frankness and modesty that characterize a truly noble nature he never forgot or tried to conceal his humble origin. He "perceived that the Lord chose him from the shepherds and brought him to feed Jacob, his people, so he fed them according to the integrity of his heart, and guided them by the skillfulness of his hands."

He felt that his being so exalted was not to minister to his own glory, but for the sake of Israel. Herein is a lesson for us all; whatever of prosperity or greatness we may have attained is not to be used for the gratification of any selfish desires or indulgences that make us insensible to the claims of others. Position or power is not wisely used unless it brings blessing to other lives less fortunate than our own. Wealth is despoiled of its highest good when he who is its possessor fails to recognize that he is but the custodian of a trust committed to his keeping to be employed for the advancement of the best interests of mankind. And wealth is not always in the "current money with the merchant." The talents entrusted to our care are as valuable and as various as the needs to which they may be applied. Every virtue, every grace, every endowment, represents so much capital, to be increased and made available for our own advancement in all worthy directions and for helpful service to those about us who need our help.

This is the great law of progress and we are fulfilling that law when we employ our talents of whatever sort, whether they be many or few, as only ours to occupy until called upon "to give an account of our stewardship." While in the efforts we make there may be many failures and deviations, and our lives may fall very far short of the ideal for which we aspired, yet if there is this abiding sense of stewardship so faithfully exemplified by David in assuming the responsibilities of the kingly office, we may safely leave our cause in the hands of the Great Judge, who is cognizant of the secret spring of every action, and renders to each one the just reward of his effort.

As the bones are necessary to the human system, so Scripture must have its historical matters. The expositor who nullifies the historical ground-work of Scripture for the sake of finding only spiritual truths everywhere, brings death on all correct interpretation. *A. Bengel.*

EARN YOUR SUCCESS.

ONE of the most futile things in life is the attempt to make men fill places for which they are not fitted, or to do work to which they are not equal. There are few things which cause so much disappointment and general irritation as the mistaken acts of friendship which push a man higher than he can stand, and, in a blind desire to serve him, load him down with responsibilities which he cannot bear. A true friendship is always wise and candid. It recognizes the limitations of one whom it would aid, and does not endeavor to pass over those limitations and set at naught that general law of life which creates an affinity between a man's capacity and the work he is to do. There is, in fact, very little which friendship can do for a man beyond securing him a good opportunity; it cannot, with the best intentions and the utmost zeal, make him equal to the opportunity. Friendship stands at the door and holds it open, but it cannot make him who enters at home in a new place unless there is that within himself which makes it possible for him to adapt himself to his new surroundings. There are a great many men who seem to think that by the assistance of their friends all things are possible to them, and who hold their friends responsible for their failure to secure the places and emoluments which they believe are their due. Such persons are entirely ignorant of that great law of life which imposes upon each man the necessity of working out his own salvation. Character can never be formed by deputy, nor can great works be done, great responsibilities met, and great results realized, by delegation to another. For our opportunities we may well look to our friends; for our successful dealing with our opportunities we must look only to ourselves. Friendship can put a man in the right place and give him the proper tools, but it cannot direct his work, nor can it bring out the skill which nature has denied or which inefficiency has refused to acquire.

There is a broad justice running through life which is only the more apparent because one sometimes finds exceptions to it. As a rule, men achieve the success which they deserve, and obtain the places for which they are fitted. There are some who, by the accidents of the time in which they live, are thwarted of results which might properly have been theirs under more favorable conditions; but the great majority of those who fail are responsible for their failures. Their intentions may have been good, but they have lacked either the wise discernment of their duties or the resolute industry which turns opportunity into achievement. A Napoleon without social or political backing will somehow come to the head of the army and will use it as if it were a part of himself; a McClellan, with the best intentions in the world and the most sincere patriotism, when an army is placed at his hand, and every possible instrument of success put into his hand, will remain paralyzed and, to a large degree, impotent. He has the opportunity, but it is too great for him, and in the light of history it is seen to be a misfortune that he was advanced to a place which he could not hold and from which he could not progress. All that we can ask justly from

our most devoted friends is that they shall help us to the possession of the things we need to work with. When they have done that, we can ask nothing more of them which they can wisely render to us. If we fail, the responsibility is upon us and not upon them. Neither their love, their services, nor their resources can fit us for positions to which nature or our own inefficiency have not made us equal. It is easy to lay to our souls the flattery of having been defeated by forces against which no human will could have striven successfully, or to have been thwarted in our effort to work out whatever is in us by lack of opportunities; but if we analyze the causes of our failure honestly, we shall generally find that they have been due to some defect in ourselves—a defect which could not have been remedied by all the friendship and coöperation in the world, and a defect which ought not to have been remedied by any one but ourselves. There is a fundamental immorality in the attainment of success for which a man has not striven; there is an element of falsehood in the holding of a place which has not come to one as a recognition of his ability to fill it. Better a thousand times obscurity and humble work than prominence or opulence gained by accident or secured by favor. There is a kind of aid which it is immoral for a friend to give and equally immoral for another to receive: it is the aid which takes the place of some work we ought to have done, some energy we ought to have put forth, some strength and power of character we ought to have attained. No success is real or lasting or worth having which does not come as the outward recognition of some inward quality by the man who achieves it.—*Christian Union.*

TWO SORTS OF BIOGRAPHIES.

WHAT sort of biographies shall any special young man select to read? Two sorts, I answer. Those of men most like himself in character and vocation, and those of men who are most unlike. Let him read the first sort for light and intensity; let him read the second for sympathy and breadth. Here is a young naturalist. Let him read the life of Agassiz. What preparation can be better for the life that is to deal immediately with nature than to see how nature filled and satisfied a very large, rich human life; what a great, fresh, happy, and hopeful man it made; how sacred nature was to him? Such a life well read must rescue the pursuit of natural science from its abstractness, and clothe it with human interest. Before I undertake any work, I think that it will do me good to meet and walk through the pages of his biography with the best and greatest man who ever did that thing before. But at the same time my young naturalist should also read such a book as Dr. Holmes' "Life of Emerson." He should see how full of strength and goodness a man might be who knew nothing of scientific studies; he should learn the poetic and philosophic value of the stars, and the mountains, and the fields; he should provide himself with humility by learning the dignity and worth of thought and knowledge which is beyond his power, or outside of his range to attain.—*Phillips Brooks.*

DISCIPLINE AND ITS USES.

The use of Discipline is two-fold; it combines instruction, education, the cultivation and improvement in morals and manners, with subordination to authority, and the infliction of penalties enjoined against offenders. As education and cultivation are not stationary but progressive in their development, leading away from that condition of society in which the fear of punishment is the restraining influence in manners and morals, it follows that in the exercise of the functions of Discipline, consideration must be given to the nature of the offense, the circumstances that led to its commission, and the principle involved therein. These are general rules recognized and observed in the administration of the laws by every enlightened community.

When Discipline is considered in its relation to the authority of the church over its constituents, which is our present purpose, it is of the greatest importance that its enforcement shall depend upon such instruction and education in the several particulars over which its jurisdiction extends as shall make its rules and penalties plain and easily understood by every one who is amenable thereto.

No religious organization can be regarded as fairly just to its membership, which does not in some degree provide definite training in the discipline by which it is governed, nor do we see how it can rightfully claim to have a clear charge against an offender of its order, who has not had the benefit of such instruction. In our own case, as a distinctive religious body, holding a fundamental principle, and some testimonies that differ essentially from most, if not all other Christian organizations, it is vital to our continuance as a society that the rules of Discipline by which we are governed and which are binding upon every member who has attained to an age capable of judging for himself,—these rules to which he is amenable, shall be made a part of the "guarded religious training" which our children are to receive not only to "fit them for business," but for membership in the Society which claims them as its own by right of birth.

Members who come into our fold by conviction, are not received until they are acquainted with and ready to subscribe to its rules and regula-

tions, but the children who have no right of choice in the matter, are left to the chance instruction they may pick up in the family, or in meetings for discipline, at which only a small proportion of them are ever seen.

In the early years of the existence of the Society, home instruction was insisted upon, and the reading of the scriptures in the family was very generally observed. Barclay's catechism, Barclay's Apology, the essays and dissertations on the doctrines and testimonies of the Society, were in the library and on the book-shelves of all, whether rich or poor. In the absence of other reading the young people found encouragement and incitement to duty from the perusal of the journals and other writings of men who were still among them, or who, departing, had left a sweet savor of patient endurance and faithfulness to duty, that stirred the very foundations of the soul to noble emulation,—all this in our days is changed, and we have little to take its place. Few of the books that the Representative Committees of our yearly meetings are willing to endorse, are written for the young,—there is a fear of that which is modern,—and we are left to find among the current literature with which our libraries are overflowing, the expositions of our own views without endorsement but in the popular modes of thought and the manner of expressing that thought which now prevail, yet giving in some degree the cardinal principles of our profession. But coming back to the uses of Discipline, we find in nearly every case of deviation from "the order of Society" brought before our meetings, that there has not been the necessary care given in the first steps which led to the deviation. Parents are themselves often without the knowledge that would enable them to wisely direct their sons and daughters in the understanding of its provisions and penalties, which is much to be regretted. Were we alive to this necessity there would be a cooperation with the parents on the part of the meeting, and that watchful care extended which our holy profession calls for. "A word in season," how helpful it is; how many become violators for want of the single word, kindly spoken. Let us remember this when offenses are brought to our notice. Discipline to be effectual must be administered in restoring love. The illustration used by the Great Teacher contains a mine of instruction. The offender, who had wasted his substance in the grossest and most debasing sensuality, when he came to himself and began to be in want, remembered the father's house, the father's love, and there arose in his heart a desire to go back to what he had strayed from,—and while he was yet "a great way off" his father had compassion upon him, and went to meet him and give him welcome.

How harsh and unfeeling our petty exactions appear when seen in the light of a love which responds to the first faint breathings—of the prodigal—for the better life from which he has by wrong-doing exiled himself, and this is the lesson that the "Lips of Truth" left on record for our instruction in dealing with the degraded. If the same tenderness, the same forgiveness is enjoined upon those who are his disciples,—if forgiveness is not to cease until the seventy times seven is exhausted, with what shame and confusion of face, have we to acknowledge the hardness of heart that will condemn the erring ones whose violations are often more in the line of omission than commission, who, through the manifestation of a loving, tender forbearance, and a charity that "thinketh no evil" are won over, and made to feel that it is indeed in the spirit of restoring love and a yearning for their preservation in best things, that the Discipline of the Society is administered. There is an increasing necessity that we recognize this in our dealing with violations that relate simply to points of order and have no bearing whatever upon questions of morals, and until some wiser methods of acquainting our young members with the duties and responsibilities which a right in the Society involves have been adopted, there ought to be a very tender care observed in dealing with such cases that we "hurt not the wine and the oil" in these precious ones, who if kindly taken by the hand and encouraged to "hold fast the profession of their faith without wavering," may become valiant standard-bearers, ready to take our places when we are called to leave the field of action.

We are desired to say that a Friend, willing to aid two or three young people to an education that will fit them for teaching, proposes to send them to Swarthmore College. Preference will be given to young women and Friends. Application, stating age, sex, where educated, and for what class the applicant is fitted should be made to "L." office of FRIENDS' INTELLIGENCER AND JOURNAL, 921 Arch street, Philadelphia.

MARRIAGES.

GREEN—WYLIE.—Eighth mo. 20th, 1889, by Friends' ceremony, J. Walter Green, of St. Louis, and Ida J. Wylie, of Philadelphia.

DEATHS.

MORRIS.—Ninth month 20th, 1889, Gulielma Morris, widow of the late Thomas Morris, in her 80th year.

This dear friend served Blue River Monthly Meeting faithfully for many years as overseer and elder. She was the last of a large family that moved from the eastern shore of North Carolina to escape the degradation of human slavery, and settled in the Territory of Indiana in the year 1845. The vile influence of Slavery stirred her parents, Joshua and Mary Trueblood, with many other

Friends, to leave their native land and much that they held dear, to seek new homes beyond the Ohio river. These old friends have formed a prominent part in the years that are past of Blue River Monthly Meeting, and we have mourned to see link after link taken away, and now the youngest and last is severed, and she goes to make a reunited family, and to receive her reward for the many good works she performed here on earth.

T. H. E.

SPENCER.—At his home, near Springford, Ontario, Canada, Eighth month 23d, 1889, Adam Spencer, in the 78th year of his age; a minister for forty years among Friends of the Orthodox body, and clerk of Canada Yearly Meeting [Wilbur] at the time of his last illness.

TRUEBLOOD.—At their residence, near Salem, Washington county, Ind., on Fifth-day morning, 5th of Ninth month, 1889, after seven months of intense suffering from the effects of cancer in the breast, which she bore with remarkable patience and Christian fortitude, Clorenda, wife of Thomas H. Trueblood, in her 63d year, daughter of Elisha and Lydia Hobbs, and granddaughter of Mauger Coffin, the father of Priscilla Cadwalader. She was a lifelong and consistent member, and for a number of her latter years an elder as well as overseer of Blue River Monthly Meeting of Friends. A pure-spirited woman, not given to many words—believing example the loudest preaching. She loved to and did attend meetings when health permitted, preferring, if any difference, those in the middle of the week, though often with but the two or three, there to wait at the feet of the Master in the quiet. Her suffering was so great that she often expressed a desire to go home and be at rest. She leaves a husband and five children to mourn her loss, two having gone before her to the higher life.

REBECCA M. THOMAS.

Dear Rebecca Thomas! Thou hast gone to the realms above in peace and everlasting love. I miss thee much, but cannot mourn that thou hast exchanged a life of trial and care for a mansion of rest in the Heavenly Father's Kingdom!

From a long and intimate acquaintance I feel it right to pen a few remarks concerning our dear friend, trusting it may incite others to walk by the same rule, and mind the same thing that made her what she was, a pattern of meekness and love, and her company pleasant, both socially and in mingling with her in a religious capacity.

She was not reared a member of our Society, and said she never expected to be a Quaker; but after she was married to our esteemed friend, William John Thomas and the mother of several children, she became exercised for their spiritual as well as temporal welfare, and under this exercise felt constrained to join with the Society of Friends, and was concerned with her husband to train the precious ones committed to their charge in the nurture and admonition of the Lord, and had the consolation of seeing them religiously inclined, and in due time all settled near them to satisfaction, and members of the same meeting. At one time she said to a friend that she had been too fond of dress, but continuing to be faithful to the openings and light of truth on her mind, she at length gave up much in the cross, to come forth in the ministry, at first only with a few words, yet as she grew in her gift, she was, in the unity of Friends at a suitable time recommended by Sandy Spring Monthly Meeting, Maryland, to which she belonged, and a year or more before her death paid a religious visit to the families of the same meeting, to the comfort and satisfaction of friends, and the peace of her own mind, and though dead she yet speaketh by the

example of a pure and spotless life. May her dear children be comforted in the promise, "Blessed are the dead who die in the Lord; yea, saith the spirit, they rest from their labors and their works do follow them."

Fallston, Md., Ninth month, 1889.

R. P.

THE LIBRARY.

WE have received copies in pamphlet form of William Pollard's admirable paper "The Quaker Reformation." It forms, as some of our readers may perceive in looking it over, the major part of a chapter in W. P.'s little volume "Old Fashioned Quakerism," issued two years ago by Harris & Co., London, but it is now separately printed by Swan Sonnenschein & Co., London. (Copies of it are, or will be, on sale by Friends' Book Association, 15th and Race streets.) We find that a new introductory paragraph, and some paragraphs of conclusion have been added.

The points discussed in the pamphlet are of the deepest interest to every Friend, and the views which are presented will be generally acceptable, no doubt, to the greater part of those who are sincerely attached to the fundamental Friends' principles. William Pollard,—as well as a considerable number of others in England,—occupies ground around which, if not upon which, the whole of the real Society of Friends might readily gather. And we include in this not merely the membership of our own body, but many other Friends who, on the one hand do not insist upon uniformity of view on non-essentials, and on the other do not abandon "Old Fashioned Quakerism," and set up a virtual conformity to the world's usage in the matters of belief and practice.

Friends' Book Association have printed in a neat pamphlet of 29 pages, the address of our friend John J. Cornell, of New York, at West Chester, in Eighth month of last year, with the title, "A Concise Statement of the Views and Practices of the Society of Friends." This title describes very completely the character of the contents. The explanations given of Friends' views on minor points, and of their usages, are particularly lucid and valuable. It may be right to remark, however, that J. J. C. expressly disclaims speaking as for any one but himself,—he presents his statements as those of an individual Friend, entirely,—and on certain points of doctrine it may be that some would not agree with him in all particular. In our Society there is a liberty on all but fundamentals.

To the American who desires to obtain a knowledge of the German language, Dr. Jacob Mayer's little book, "German for Americans," (I. Kohler, 911 Arch St., Phila.), promises to give efficient aid. It is concise and practical, and peculiarly adapted to the wants of older students without instructors. The lists of idiomatic phrases and words similar in sound are especially noteworthy, and the practice of placing the pronunciation after each word, though open to grave objections for school work, will on the whole appeal to a large class of students outside the schools.

VISITS TO EASTON AND SARATOGA AND DUANESBURGH QUARTERLY MEETINGS.

We started on Second-day afternoon, the 26th of Eighth month, on the Harlem Railroad, stopping at Chatham, and taking there the evening train to Troy, where we arrived at half-past ten. Next morning we found two Friends waiting for the train to Granville, S. Whitson and S. M. Haviland. It appeared pleasant indeed to meet some congenial spirits bound for the same place. The ride to Granville is through an uneven country, with high hills and valleys. In a number of places they were getting hay at what seemed to us a late date. Granville is situated on quite level ground; the houses are all pretty, but generally moderate in size, all well painted, and every building has a slate roof,—in fact the whole place is supported from the numerous slate quarries around.

On coming in sight of the meeting-house we found it nicely painted, with green shutters; the inside is very neat, newly papered, painted, and carpeted, with nice seats, making us feel as if there was a great interest among the members. Indeed there are some there "that are like pillars in the Lord's house that will go no more out." John J. Cornell was very much exercised, and acceptably expounded the doctrine of Friends. On Fourth-day there were three meetings, a temperance gathering being held in the afternoon, and a youths' meeting in the evening. The meeting on Fifth-day was largely attended. Robert S. Haviland considers that the seed here sown has taken root on good ground, and we may expect an increase.

Reuben Dillingham carried us to a slate quarry near by; it was 100 feet deep, and the men at the bottom looked small, but could understand loud conversation from the top. It was very interesting seeing them hauling with an engine worked with cable wire, raising the slate from the pits, a long wooden arm carrying it on the bank. It is split while it is damp; a large piece splits up so true and thin, some being less than a quarter of an inch in thickness. Then there is a machine for cutting it straight, worked with a treadle and balance wheel. There is an enormous waste in its preparation, however, making whole hills of refuse slate, and there is some danger attending the work, an accident sometimes happening. On our way to meeting from Marcus Allen's we visited the mills for finishing it up in mantels. We watched them planing, sawing, and polishing the slabs. In another place they had a large vat of water, with coloring matter for marbleizing. Then comes varnish and a process of drying with heat. It is a marvel when completed. I brought home a specimen of red slate; it is rare; the only quarries known in the world in this color, are here. It is expensive, \$10 being charged for laying ten feet square, while others just as durable, of gray color, can be bought for less than half the money. On the hill-tops you can see the derricks raising the slate from the pits. The workmen are mostly Welsh and are numbered by the hundreds; we could see them go to and from their work in wagons,—loads of ten and twelve.

We left on Fifth-day afternoon for Philip Dorland's home, at Saratoga. It is a spacious, old-fashioned house. The neighborhood was once a large settlement of Friends and there were several meetings. The place is dear to us as the home of Andrew Dorland, a minister; the mantle has fallen on the son. We were kindly carried to Saratoga, a distance of six miles, by our friend Philip. The road lay some distance by Saratoga Lake, and on the high ground we could see Mount McGregor where ex-President Grant ended his life. We rode also through Judge Hilton's splendid park, comprising near 1,200 acres.

Next day we went to Schenectady, saw some very old houses, and the monument commemorative of the sad massacre of the early settlers by Indians. We arrived at Quaker Street in time for dinner. A goodly number of Friends from other Quarterly meetings were there, making them feel as if they were not forgotten. Francis J. Newlin a minister from Philadelphia, was in attendance. At the select meeting in the afternoon much counsel was given, "that ministers and elders keep in that life that they will be qualified to minister successfully in the Church of Christ."

The meetings that followed were all favored seasons. It was a week of mingling with kindred spirits not to be forgotten, particularly with those invalids whose sickness confined them at home.

CAROLINE WASHBURN.

NEWS OF FRIENDS.

A STATED meeting of the committee on temperance and intoxicating beverages was held on Seventh-day, the 21st, at Race street meeting-house. There were over fifty members present, representing most of the quarterly meetings, and while there was less work than usual reported from the different sub-committees, owing mainly to the separation of their members during the summer months, there were interesting and encouraging statements of united working in some meetings where monthly conferences had been held and well attended. Other occasions of interest had been participated in by the children. There were expressions of disappointment and regret in view of the defeat of the Constitutional Amendment in our State, but it was believed by many present that a hopeful feeling existed in the renewed strength and interest that this defeat may have awakened. The evil of intemperance is still in our midst, and a truer knowledge of its enormity, and a greater enlightenment in regard to the influences that tend to support it demand renewed energy on the part of all. Information was given of the death of our friend, Amos J. Peaslee, who during the early meetings of this committee was an earnest worker, but declining health had incapacitated him for labor. May his influence be with us, leading us to a higher and better work in the future.

As with one accord in one place the neighbors and friends of Sarah Hunt gathered at West Grove meeting-house on the afternoon of Ninth month 22d. A

few friends from a distance were warmly welcomed, and a very tender feeling pervaded the assembly, for she was one dearly beloved amongst them, and this was a home gathering to learn of her early days and Christian experience. A brief sketch of her life was listened to with great interest; letters from absent ones gave evidence of her wide-spread influence, recording incidents touching and instructive. Some of her own productions were feelingly presented, and the tribute in FRIENDS' INTELLIGENCER AND JOURNAL of Ninth month 7th, by S. M. H., was acceptably read. Those present felt it to be a profitable season.

L.

EDITORS INTELLIGENCER AND JOURNAL:

In the extract from the Journal of Elizabeth Drinker, in last issue of the INTELLIGENCER AND JOURNAL, mention is made of the attendance of two of her companions at the mid-week meeting held in the old meeting-house at the corner of Unity and Waln Sts., Frankford, when they found but two others there, and the four composed the meeting. It may be satisfactory and encouraging to many to be informed that the mid-week meeting is still kept up at that place. To accommodate those who are not so situated that they can attend in the day-time the hour has been changed to 7.30 in the evening of Fourth-day. These meetings are satisfactory, and when we consider how few Friends compose Frankford meeting they are better attended than many others where the membership is much larger.

It may be well to add that this old established meeting still holds its own, as a branch of Green St. Monthly Meeting, and that some members have been added to its number, by conviction. A large and flourishing First-day school has been conducted there for several years, with no apparent diminution of interest. Some of the present teachers were formerly pupils in the school.

R.

EDITORS INTELLIGENCER AND JOURNAL:

One of your members having desired me to record the following incident, I now send it. I think it was in 1826, when I was in my tenth year, that Elias Hicks visited the families of Green street meeting, and I remember a beautiful figure he used in regard to checking evil in children. He said, "We farmers know that when a bud appears on the soft wood of a tree we can easily rub it off between the thumb and fingers and the bark will close up and leave no mark at all. But if we let it grow till it comes to be a limb or a branch of the tree, it may be cut off but it will always leave a mark there. So with little deviations from the right in our children, if the parents will rub them off gently and tenderly, they will disappear and leave no mark, but if neglected these will form habits and give a turn to the character of the child in after life."

H. T. C.

As well might we expect vegetation to spring from the earth without the sunshine or the dew, as the Christian to unfold his graces and advance in his course without patient, persevering, ardent prayer.—*Abbott.*

For Friends' Intelligencer and Journal.

NATURAL GAS.

WESTWARD from the Caspian Sea stretches a salty waste. Near the shore stands the city of Bakoo and not far away lies the "Field of Fire" where from remote ages past natural gas wells have been burning.

To the early followers of Zoroaster—fire-worshippers—these "eternal fires" seemed fit representations of their divinity. Bakoo became a sacred city. Thousands of pilgrims yearly thronged the temples erected over these burning springs, doing severest penance in sight of the sacred flame.

To-day Mohammedanism has overspread the land of the fire-worshippers and only a few of the faithful still spend their days at Bakoo, worshipping in self-inflicted torture their deity of fire.

The age of mysticism has passed away. Asia, that cradle of religions, is no longer the controlling center of the world's thought. Westward, separated by continent and ocean, as well as by centuries of human thought and development, lies the modern "Field of Fire" and the occidental "fire-worshippers" of the present, representing the spirit of their utilitarian age, instead of bowing in blind and abject adoration before the potent element, bore into the earth to set the fuel free, pipe it, confine it, and light and extinguish it at will with a familiarity that would have horrified the ancient devotees of the sacred flame.

And yet, though these most unworthy disciples of Zoroaster claim no higher motive than the filling of their own pockets in their researches after the light- and heat-giving substance, it is quite possible that the world is benefited more by their labors than by the severest penance ever done. For the command "Let there be light," has a moral significance even when used in a physical sense, and that class of individuals who have "loved darkness rather than light, because their deeds were evil," have been put to greater straits with every new appliance for illuminating the highways and by-ways. Life and property are much safer now than when the poor man groped his way through the unpaved streets in utter darkness, and the rich man was preceded by a servant bearing a lantern.

Natural gas, however, is available only in certain localities, and it is only recently that it has been used for lighting in this country to any great extent, though the Chinese made use of it for that purpose several centuries ago.

The discovery and application of artificial gas at the beginning of the present century, though at first it met with that opposition which new ideas generally beget, gave a great impetus to the lighting of streets. In 1813 Westminster Bridge was illuminated, and by 1816, in spite of the fear of explosion which prevailed in the minds of many, and the difficulties arising from imperfect pipes and fixtures, gas lighting became quite common in London.

The recent discoveries in electricity, applying the principle of incandescence instead of that of combustion have still farther increased the desire for light, so that while electricity has become a powerful rival, the gas business still "holds its own" by reason of the greatly increased demand for illumination.

Leaving out electricity, which is entirely different from all other modes of lighting, there is not really so much difference in the various other illuminants as would at first appear. Whether you use a tallow candle, a kerosene lamp, or a gas burner, the principle is much the same. It is always gas that burns, whether it be generated at the point of combustion as in the first two methods, or whether it be formed in advance and stored up at a distance from the flame, as in the last.

Neither do natural and artificial gas differ very widely in their composition. Nature's great underground distilleries send forth a product very similar to that which the gas manufacturer obtains.

Coal gas is a mechanical mixture of various gases, some of which are light-giving, while others are simply diluents—carriers for the illuminants. One of the most important of these illuminating gases, occupying about forty per cent. of the whole volume, is the deadly marsh gas, or fire-damp, which, mixed with air, has caused so many fatal explosions in mines. This gas, together with others also found in the artificial product, is the natural gas which has recently caused so much excitement in several of the interior States.

So it was nothing new, after all, that Murdoch distilled from coal, in England, and Le Bon from wood, in France. Nature's secret process was so old before these men began their investigations that not even the wisest of our geologists can calculate with any degree of certainty how many millions of years it is since she first conceived the idea of manufacturing gas. But though her method is so old little improvement has been made upon it, and man is quite willing to accept the stored up material wherever he can find it, and to substitute it for the product of his own more expensive process.

So it is probable that the residents of the gas "field" will continue to search for and to utilize this very valuable substance, unless, as some of the prophets of evil are predicting, a general collapse of the earth's crust results from the too frequent tapping of the interior contents of the globe, or, what is more probable, the supply becomes exhausted and the vast amount of capital invested is literally "sunk" into the earth.

ANNA NICHOLS GOODNO.

For Friends' Intelligencer and Journal.

THE RECENT STORM AT CAPE MAY.

As seen at Cape May—this time-honored seaside resort—there was a grand view of the great storm that visited the eastern coast of our country the past week. For several days previous to its outbreak, the wind was north-east, bringing high tides; each incoming one added to the grandeur of the scene.

On First-day, the 8th, the evening tide was though unexcelled; the next afternoon, it looked as if all the mighty mass of waters of the Atlantic were rushing onward, impatient to reach the shore. The moon was at its full, consequently the tide rose higher. The waves rolled in as walls of water "lashed into fury," curled up their crested heads, scorning all man's vain efforts to restrain them, then broke in foam, some distance from the shore, to

gather up again another wave to dash against the sea wall that protects the board walk, sometimes overflowing it, the spray descending on those who had sought its protection to view the seething flood. There was a fascination in it, that interested all. The oft repeated exclamation was, How grand! How magnificent! It was long after night fall ere the beholders returned to their homes. Many of the guests of the "Windsor" remained on its broad piazzas, until a late hour, and retired with a prospect of another display in the morning; they were not disappointed. As the night advanced the storm increased, with rain and high wind which brought a higher tide. Again the seats of the piazzas were occupied, but there was a feeling of security, as the house is situated on a bluff above the waters, and there was no need of "going down to the sea in ships to see its wonders;" it was at our feet. Far away from the shore, at the bar, the waves would mount upwards, as great sea monsters, roll over in foam, followed by long trains, like geysers, that send their smoke upward, then form again in rapid succession, but never twice alike. To some, what was at first a fascination, became a dread; the continual roar and moan was terrifying to them; others felt that He who created the earth and the waters, had set bounds, as He holds the winds in His fists, and the ocean in the hollow of his hand, yet all sympathized with those more exposed to the battling elements. It was a lesson not soon to be forgotten, of the entire helplessness of man, who with all his boasted wisdom is but an—

"Atom, in immensity."

As we gazed on the storm, both in the evening and morning, we saw the exposed and poorly paid men of the life-saving stations, as they patrolled the beach on their rounds of duty, and the query arose, would any of the law-makers of our government change places with them? The harder the storm the more requisite for them to be on duty. Some of the cottages on the beach drive, and near the creek, were overflowed; the occupants left them for a time. The board walk in many places was broken, and drifted across the drive by the tide, but the place suffered little comparatively. Its railroad and telegraph service to Philadelphia, was not interrupted, trains went and came on time; but the one to Cape May Point over the meadows and low places was for a time submerged. The beach railroad in many places was covered with sand, and not in a condition for use.

The wind and rain continued some days, but the ocean was less boisterous, yet it was some time before it assumed its usual aspect.

M. A. S.

Cape May, N. J., Ninth month 15.

RITUALS leave small space for "waiting on God," which is the highest act of devotion. . . . Perhaps listening to God and waiting on God is the best and highest part of praying. Silence is golden.—*Christian Union*.

YE will come by the Light, to see through and over the winter storms, and the coldness, barrenness, and emptiness.—*George Fox*.

SWARTHMORE NOTES.

—The Ennomian Literary Society, has elected Roberts S. McConnell, '90, as president, and the Delphic has chosen James W. Ponder of the same class, to its corresponding office.

—The foot-ball players are very much pleased with the new field within the track on Whittierfield, and the daily practice games are now played there. The college foot-ball eleven will play the Pennsylvania State College team on Sixth-day next and Bucknell University on Seventh-day.

—The total enrollment of students is nearly 230, of whom about sixty are Freshmen. Considering that another class in the preparatory school was dropped this year, and that the examinations and requirements have been maintained very strictly, this is a good showing.

—Dr. Shell has decided to devote four days of each week at present to the foot-ball team and two days to track athletics.

—Dr. Trotter has obtained the cadaver of a full-grown gorilla for the biological department, and the students in the Senior and Junior classes who take the biological course will have an opportunity for studying this rare ape. It is said that this is the first time American college students have ever operated on a gorilla.

—A good free lecture course is being arranged for the winter.

—The grade of the work being done in all of the courses this year is higher than ever before, and is very complimentary to Swarthmore's rising standard of excellence.

—The address of President Magill, while abroad, will be: "Care of Drexel Harjes & Co., bankers, Paris, France." S.

OUR IMMORTALS AT FOURSORE: WHITTIER AND HOLMES.

LONG have they walked our dusty paths;

But by the notes which they have caught

From land and sea, and by their thought

Of Brotherhood in all our strife,

And by their rhythmic charm of life,

These singers rare have sung some cheering lay

At every footfall of their fourscore way.

Our Laureates of the Loving Heart

Their ministry have just begun;

No Autumn tint, or setting sun,

No faltering step, or failing speech!

But onward as the ages reach

Wider shall grow the Autocrat's fair land,

Richer the harp-notes from the good Friend's hand.

No realm may limit their warm minstrelsy;

Where wrongs abide, 'neath pine or palm,

Chains it shall smite, and passions calm;

In homely hut or hall of king,

The Chambered Nautilus shall sing

For aye its story of the sea;

While o'er the fighting of the free,

To help the day of doubt, and storm to save,

Brave Barbara's flag shall never cease to wave.

—Bishop John F. Hurst, (M. E.), in *Independent*.
Washington, D. C.

RIGHT TOIL IS REST.

SWEET is the pleasure

Itself cannot spoil!

Is not true leisure

One with true toil?

Thou that wouldst taste it,

Still do thy best;

Use it, ut waste it,—

Else 'tis no rest.

Wouldst behold beauty

Near thee? all round?

Only hath duty

Such a sight found.

Rest is not quitting

The busy career,

Rest is the fitting

Of self to its sphere.

'Tis the brook's motion,

Clear without strife,

Fleeing to ocean

After its life.

Deeper devotion

Nowhere hath knelt;

Fuller emotion

Heart never felt.

'Tis loving and serving

The highest and best!

'Tis onwards! unswerving—

And that is true rest.

—John Sullivan Dwight.

EXTRACTS FROM ELIZABETH DRINKER'S JOURNAL.

[A NOTICE of this newly-published book was given in last week's issue of the INTELLIGENCER AND JOURNAL. A few more extracts we have thought might be interesting, as showing habits and ways of life amongst us, a century ago. It might have been added in the notice that Henry Drinker was a partner in the firm of James & Drinker and that Abel James, the senior, was the son-in-law of that ancient worthy of Quakerism, Thomas Chalkley, having married his daughter Rebecca. At the time of this journal (the earlier part, at least), A. J. occupied the old Chalkley mansion at Frankford, to which he had built a considerable addition.—Eds.]

Sept. 25, [1779.] Sarah Carey and Rachel Watson from Bucks county, Sammy Trimble from Concord; John Willis, James Mott, and Elias Hicks from Long Island, came this morning to take up their abode during yearly meeting.

Sept. 26. Our lodgers breakfasted with us; ten dined, great numbers called. John Willis, who was most part of yesterday in bed ill of a fever, is bravely to-day. Our neighbor Franks, ye baker, died this morning of a fever, which at present prevails much in ye City and Country, and many are taken off.

Sept. 27. Went to meeting morning and afternoon. Thirty persons dined with us. John Willis ill last night again, and this evening he was taken ill at ye Pine street meeting, and went to bed at Elijah Brown's, where I expect he must stay all night.

Sept. 28. Went to meeting this afternoon. Six-

ten dined with us. John Willis stayed at home all day. He took ye Bark and missed ye Fitt. Dr. Cooper visits him.

Sept. 29. I stayed at home being unwell. Elias Hicks very poorly. Twelve dined with us. A large number came to visit ye Long Island Friends.

Sept. 30. Went twice to meeting. Ten or twelve dined with us, many at breakfast. A great number of people ill of a fever—many taken off. B. Woodcock went home this afternoon very unwell—scarcely a House but some one or more are indisposed.

October 1. Went to meeting this morning, six or eight at dinner, many more at breakfast. Elias Hicks taken very ill to-day. Dr. Cooper tends him; in bed all the latter part of the day.

Oct. 2. Stayed within all day. Elias Hicks still very poorly. John Willis, James Mott, and our Billy went this afternoon to Frankford. J. Mott came home very unwell—went to bed and took a sweat. Ye women's meeting finished to-day—men's not yet. Fine weather.

Oct. 3. First-day. E. Hicks very ill.

Oct. 4. Elias Hicks, who appears something better, left us this afternoon with an intent to go a few miles on his way.

Nov. 1. [1782.] Billy [the diarist's son, William Drinker,] came home about dinnertime, his face much bruised; he had been boxing with one of the Latin-School boys—an exercise that by no means suits him.

Nov. 4. Nancy, Billy, and Tommy James began to learn French; they are taught by one Bartholmew at 4 dollars each per month, and 6 dollars each for entrance money. They occupy our smallest front parlor, on Second, Fourth, and Sixth-day evenings, from 6 to half past 7 o'clock.

Dec. 3. I set off about ten o'clock for Frankford to ye marriage of J. T. and R. J. [John Thompson and Rebecca James, daughter of Abel.] On our coming near A. J.'s saw ye family moving towards the meeting-house, where we went without stopping before dinner. Had a silent meeting—between 12 and 1, ye ceremony performed. H. D. [her husband, Henry Drinker] read the certificate, company moved on to A. James's—weather cleared up, the sun shone. Dined at about 3 o'clock; an elegant tho' not large wedding—not more than 32 or 33 persons, besides ye family. Could not attempt to stay to tea, ye days so short—came away as soon as ye servants had dined—Nicholas Waln and myself first.

Dec. 11, [1794.] A delightful moderate morning, azure sky, favorable for my son's marriage, and to enable me, who have not been to meeting for a long time, to attend it. Hetty Smith, being too unwell to accompany her daughter, I went with my husband from our house to the Market Street meeting-house. Henry and Hannah were but just seated when we entered. The meeting was large, and agreed by every one that I heard speak of it, that it was a favored time. Nicholas Waln and Samuel Emlen were the only ministers who had anything to communicate. Henry and Hannah spoke very distinctly and in a proper key—were much commended for their con-

duct and behavior. Robt. Coe read the certificate. Henry and Hannah went to and from meeting in a carriage and the bridesmaids in another; the rest of the company walked. There were about 50 persons at the wedding. Our dear William came about 11 o'clock to meeting, being desirous of being a witness to his brother's marriage; the day was spent agreeably; nothing occurred to cause displeasure or uneasiness that I heard of, as sometimes does in a large company. A very plentiful and elegant dinner, well served, after three o'clock; supper at nine, tea omitted; indeed there was no time for it, the day being so short. The company broke up about 10. James and Phebe Pemberton, Wm. Lippincott and wife were overseers.

December 5, [1794.] While at dinner, Molly, [her daughter, who married S. Khowls] rang the bell, up stairs. She sent for me, being ill of something like a severe colic. She had been sitting in her brother's room over a little fire, reading for an hour or two, with her feet upon a cold hearth. I think I never saw a living face look paler; she was in great pain and cold sweat. I gave her a little geneva and water sweetened, and used friction; some time after a draught of catnip tea, which altogether had the desired effect—she is bravely this evening. I do not altogether approve of spirituous medicines in the colic, etc., unless some particular indication call for them; in most cases it should not be often repeated, though I have known Daffy's Elixir sometimes do good.

September 26, [1795.] A young man named Gilbert Watson died this morning at Abraham Carlisle's in our neighborhood—a relation of his wife's, of a bilious fever. The man who bled our son told him that he had bled this young man twenty-three times in a week, and we understood that the operation has been performed two or three times since.

September 9, [1798.] First-day. This forenoon I was let blood by Jacob Smith, who lives, when at home, in Chestnut street, opposite to Dr. Kuhn. He recommended him to me, and I think him an expert hand at ye business. He opened a vein that had never before been opened. My veins are small, and the largest lies over an artery, which makes it difficult for me to be bled, though I have been bled maybe, fifty times in my life, or near to it.

January 2, [1807.] John Haworth's weakly daughter is gone, after a long time of weakness. I think I heard John Hailer say that he had bled her 100 times in one year; twice a week is common for spasms. Few days have lately passed that we have not heard of the death of one or more of those we know. What is so common as the coming into and the going out of this world? the former sometimes the cause of the latter.

Sept. 9, [1794.] Peter Yarnall smoked a pipe with us on his way home from meeting for Sufferings. He informed us that David Bacon, John Parrish, Wm. Savery, and John Emlen were appointed a committee to go back among the Indians. Commissioners are also going, Timothy Pickering, etc. The Indians desired that some of their old friends, the Quakers, would attend the Treaty, and the President approved of it. They are to set off in a few days.

Dec. 20, [1794.] Sam'l Smith of B. County returned this afternoon from county, where he has been with others to examine a tract of land belonging to Js. Gibbons. Whether that or Langhorn park is to be ye place for the boarding school is not yet fixed. He, John Drinker, and H. D. went from our house to meeting on this business this evening. Sam'l Emlen and Dan'l Drinker took a pipe here. H. D. and S. S. came from committee; they inform that they have fixt on James Gibbons' tract in Chester county for the school. [This was Westtown.]

March 7, [1795.] Cloudy. Wind easterly. Sam'l Emlen and Peter Yarnall smoked a pipe here. After dinner S. E. and P. Y. came again, when we had a meeting or sitting together.

June 11, [1795.] Heavy rain this morning. Wind N. E. Continued raining most of the day. My husband is sitting by a comfortable fire, smoking his pipe.

Dec. 12, [1795.] Rather overcast, wind easterly. H. D. and James Smith left our door in J. S.'s carriage for North bank (the home of H. S. Drinker, her son, in Bucks county). . . . I am apprehensive they will have dull weather—should it turn out otherwise a little relaxation from business may be useful to H. D. I am not acquainted with the extent of my husband's great variety of engagements; but this I know, that he is perpetually, and almost ever employed. The affairs of Society, and the public and private concerns, I believe take up ten-twelfths of his time. If benevolence and beneficence will take a man to Heaven, and no doubt it goes a good way towards it, H. D. stands as good, indeed a better chance, than any I know of.

I stay much at home, and my business I mind,
Take note of ye weather, and how blows the wind,
The changes of Seasons, Sun, Moon, and Stars,
The setting of Venus, and rising of Mars.
Birds, Beasts, and Insects, and more I could mention,
That pleases my leisure, and draws my attention.
But respecting my neighbors, their egress and regress,
Their Coaches and Horses, their dress and their address,
What matches are making, who's plain and who's gay,
I leave to their Parents or Guardians to say:
For most of these things are out of my way.
But to those, where my love and my duty doth bind,
More than most other subjects engages my mind.

And I am not ashamed to own it.

Oct. 16, [1794.] Nancy [her daughter, who married John Skyryn] and self set off about 10 to go to Jacob Bekey's, a shoemaker at Milestown. The fineness of ye day induced us to take the walk. It is about a mile and a quarter from our house [a country place, which Henry Drinker owned at that time, called "Clearfield," near Germantown]. I stopped short of the intended route by one-eighth of a mile, and Nancy went on. The place I stopped at belongs to one John Shields, who does not live there. There was nobody but an old Dutch woman, named Nanny White; she was busy spinning tow—about three score and ten years old. I asked her if she was spinning to make cloth for her own wear.

"Oh no, I take it in at 1½d. a cut."

"How many cuts dost thou spin in a day?"

She was not willing to tell. "Can thee spin

twelve?" Oh no. "Six?" No. "Three then?" May be so. "Then thee earns 4½d. a day." Yes, sometimes. I had but a ninepenny piece in my pocket, which I gave her, and said, if she would accept of it, she might venture to take a day's rest, as that was two days' earnings. She was much pleased and gave me many thanks. Well, thought I, to use the words of an old author: *This is one of the commodities that comes of infelicity*; to be delighted with so trifling an acquisition.

Oct. 26. First-day. One of the most stormy days I ever knew; a trying day it has been. Nancy [who was very ill of a fever] much against taking medicine, and it was hard to urge it, but as her case was desperate, we thought it best to persist. She said her stomach and throat felt as if she had been eating alum. We were much at a loss what to do—the doctor had sent several sorts of medicine, that if one failed the other was to be tried. J. Skyryn came up with particular directions; ye storm so hard that the doctor did not come. He ordered, if no change took place for ye better, to apply a blister; said if what he had ordered did not succeed, he could do no more; if the pills did not answer she was to take Powders of Jalap; if they would not stay on her stomach, Senna was to be given in an infusion; if the sickness continued the Blister was to be applied. William was for the colomel pills which she had taken of before, J. S. for the powders. She would take neither, but agreed to take the Senna, of which she took 4 doses. The disagreeable sensation in the throat better. She felt cold, with pains about her. I gave her a teacup of Chicken broth instead of a dose of senna—find myself at a loss whether to continue or omit it.

Oct. 28. My poor child is to-day much better, tho' very yellow. She has taken nourishment several times to-day.

PINE STRAW PILLOWS.

THE American *Analyst* relates the following incident: "During a visit to the home of a most estimable lady living on Indian river, this editor was told of a discovery that had been made which may prove a boon to sufferers from lung or bronchial troubles. This lady having heard that there was peculiar virtue in a pillow made from pine straw, and having none of that material at hand, made one from fine, soft pine shavings, and had the pleasure of noting immediate benefit. Soon all the members of the household had pine shavings pillows, and it was noticed that all coughs, asthmatic or bronchial troubles abated at once after sleeping a few nights on these pillows. An invalid suffering with lung trouble derived much benefit from sleeping upon a mattress made from pine shavings. The material is cheap and makes a very pleasant and comfortable mattress, the odor of the pine permeating the entire room and absorbing or dispelling all unpleasant odors."

MEN must have nourishment; and even if it be mixed with gravel and dirt, it serves them better than the piled husks of speculation that have ceased to hold corn.—*Bartol.*

PITCH PINES ON THE DUNES AT CAPE HENLOPEN.

ALONG our Eastern Coast from Cape Cod south one finds an extremely variable species of pine. So far as our Atlantic slope is concerned we may well call it a protean cosmopolite. Variable as it is in its appearance, it is hardly less so in regard to the value of the lumber which it furnishes. To-day you will find it growing on a rich soil, to-morrow on a slaty ridge, then on a rugged mountain slope, and again on a sandy shore line where no other of our trees can maintain itself. Though it is not equally vigorous in all the situations named, still it manages to live and grow in spite of the poor soil about its roots and the inclement seasons which test the hardiness of its young shoots. This is the *Pinus rigida*, or, as we more familiarly know it, the *Pitch Pine*.

In appearance it is seldom a promising-looking tree; yet for all that it has been an important factor in our earlier and later national history, and it is likely to become still more valuable in the future. In the colonial days it furnished in great part the pitch and other naval stores for use in Massachusetts, and hence was at one time almost the main stay upon which the settlers there depended for obtaining the necessities of life other than that which the farms and ocean produced. Among the earliest legal enactments for the Cape Cod settlements were those which related to the care and protection of the trees of this species of pine. From it came often the keels, planking, and sometimes even the spars and timbers of the little vessels in which the brave New England fishermen met the perils of the North Atlantic Ocean. In our own State it was sometimes used for fuel, and oftener still in the production of the charcoal upon which our furnaces depended before days of coal. Hence, then, it has had no mean function, or small place in the history of our country. Yet it has never been admired like the elm, prized like the white pine, or landed as our oak.

The time never will come when we can dispense with the pitch pine. Though so useful generally, it has special uses which no other native (or possibly foreign tree) can meet.

As on Cape Cod, it grew in almost pure sand, so too it did and does here and there along the coast to the southward. On Nantucket a starveling forest (planted some years back) furnishes a poor fuel on ground which is otherwise useless. There are some indications which lead us to think that since the removal of these trees from portions of Cape Cod changes for the worse have taken place on the surface of the country there. One might fairly so conclude from Thoreau's observations. Land once covered with crops has become hopelessly sterile since the natural protection from drifting sand has been removed.

A recent visit to Cape Henlopen has brought out very clearly to the mind of the writer this fitness of the pitch pine to protect the lands adjacent to the beach from what might be termed an inundation of sand. That such destructive invasions, slow but certain in their advance, do occur, has long been well known concerning the lands bordering portions of

the Baltic Sea and the Bay of Biscay. We have not, however, recognized that, on so small a scale, it is taking place in our own land. At Truro, twenty years ago (and probably yet), one might have seen trees whose whole trunks were covered in by sand, leaving only the top projecting from the surface.

At Cape Henlopen the sand drift is more extensive, and hence more destructive, the dune there forming a hill so large that it is spoken of by the people as the sand mountain.

The situation at Henlopen is briefly this: from the mouth of Lewes creek it is about east to the extremity of Cape Henlopen, the shore line, however, having a curve to the southward, making this a rather open bay. From the western end of this line east to the line of the Breakwater are extensive meadows once often overlowed, but now so seldom submerged that near Lewes they are being built upon. It is said that there the land has been raised appreciably in recent times. Extending, however, from a point, say a mile and a half east of the town of Lewes to the Cape Henlopen light house (still further east), is the dune of which we write. In general terms, we may say that extending from the west (where it is forming a mere covering to the meadows), it increases in height as it goes eastward, and attains a maximum just before reaching the lighthouse. I can only approximate the greatest depth of the sand. It would probably not be far from the truth to say that it is about one hundred feet. The greatest width along a north and south line of this ridge-like dune is probably a half a mile, sloping toward the Breakwater on the north and toward Rehoboth on the south. There is a tradition that this mass of sand when first seen by the whites was near the mouth of Lewes creek, but that it has since been moving to the east and south. Upon this we have no opinion to offer.

Taking the facts as we find them to-day, on the shore south of the Breakwater the ground is flat, sandy, occasionally submerged in part and more or less covered with the usual shore plants of the region. More inland (to the south), a small grove appears, possibly started since the sand has been carried off by the winds from the north. Further south still, we begin the ascent of the northern slope of this dune, which is destitute of any shrub. The dunes of Provincetown are in strong contrast, for they have a luxuriant growth, often of beach plum, wild roses, and blueberry or huckleberry bushes. Along this northern slope one notices many dead stumps rising out of the sand. They are all that remain of the original forest of *Pinus rigida*, which the dune covered and killed and is now uncovering in its southward march. Climbing higher as we go toward the south we reach the backbone of this sand ridge or dune. Only here and there do we see any sign of a tree top. The whole forest is literally covered up by the mass of sand. Further south we go, and reach in a few minutes the southern face of the dune. Here, as shown in the illustration, the trees are still lying, though only (in some places) their tops project above the sand. Observe this illustration carefully and on the left you will see a shallow pond with an irregular shore line. To the right of this, in the

centre of the picture, may be seen the level ground, with trees as yet untouched by the advancing southern face of the dune. More to the right are the trees in process of being covered by sand. In time they will be wholly hidden under sand, then killed; and as they decay, by fall of their leaves and destruction of their smaller branches, will cease to arrest the force of the wind, and the sand will then be carried further south, uncovering these trees as those of the northern slope are now. In brief, the wind from the north carries the sand up that face on to the summit, and gravitation carries it down to bury the forest on the southern slope.

This march of the sand might well be regarded as resistless—slow, but certain as fate. It would be interesting to speculate on the ultimate results of this sandy invasion if unchecked. But the more practical point is, can it be checked? Probably it could, if, from the shore line to the north trees were planted which would break the force of the wind. These should be carried as far up on the dune as they would grow; then where they ceased to grow, smaller species of plants (of which several can be found), that would grow on the sand and anchor it, should be planted or sown. These, in time, might be followed by trees, until the summit was gained and the advance of the dune to the southward stopped.

But here enters the practical question. What trees could have any chance on such a mass of pure sand? If any, it would be the pitch pine. It is now growing in situations as sandy, at the foot of the dune. The only element is, would it find moisture enough in the slopes and summit to enable it to sustain itself? That is purely a question of trial.

The situation here is hardly worse than that which formerly was seen on the shores of the Bay of Biscay, and what the maritime pine did there the pitch pine might possibly do at Henlopen and elsewhere along the coast.—*Dr. J. T. Rothrock, in Forest Leaves.*

I SUPPOSE every day of earth, with its hundred thousand deaths and something more of births,—with its loves and hates, its triumphs and defeats, its pangs and blisses, has more of humanity in it than all the books that were ever written, put together. I believe the flowers growing at this moment send up more fragrance to heaven than was ever exhaled from all the essences ever distilled.—*Holmes.*

No man can learn, what he has not preparation for learning, however near to his eyes is the object. A chemist may tell his most precious secrets to a carpenter, and he shall never be the wiser,—the secrets he would not utter to a chemist for an estate.—*Emerson.*

NEWS AND OTHER GLEANINGS.

—Particular attention is invited to the Forestry Convention to be held in Horticultural Hall, Philadelphia, (South Broad St.), on the 15th, 16th, 17th, and 18th of next month. All interested in the work are cordially invited to attend. The meeting will be a joint one of the American Forestry Congress and the Pennsylvania Forestry As-

sociation, and a number of interesting papers are expected to be read.

—The tourist season in Switzerland is officially estimated to bring in an annual profit of £528,000 to the hotel-keepers alone. There are now 1,000 hotels in Switzerland, which make up 58,000 beds, and employ 16,000 persons as managers, servants, drivers, etc.

—The English and Italian Governments have signed a more stringent anti-slavery convention than has hitherto existed. It declares the slave traffic to be an act of piracy, and enables cruisers to deal more promptly with captured slavers. The Mediterranean is excluded from the operations of the treaty.

—A question upon which opinion was much divided at the International Botanic Congress in Paris was whether the grains of corn found in the Egyptian sarcophagi had any seminal virtue left. It appears that 'most of the so-called mummy corn, remarkable for streaks of tar on the surface, and sold to travelers in Egypt at the rate of about a dollar per twenty-five grains, is a gross imposture.

—We call attention to the advertisement which announces the excursion of Friends' Social Lyceum, (Philadelphia), to Mauch Chunk and the Switchback, on the 12th proximo.

—All the private papers of Abraham Lincoln and all documents referring to his private business affairs are in the custody of the First National Bank of Bloomington, Ill. The late David Davis, formerly a Justice of the Supreme Court of the United States and later a Senator and Acting Vice-President, was Mr. Lincoln's executor, and to him all the great President's private papers were given. Judge Davis took them all to his home in Bloomington and deposited them in the First National Bank's vault, he being a heavy stockholder in the bank. Though the work of the executor was long since completed and Judge Davis has gone to his long rest, the papers are still there.—*Ev. Telegraph.*

—Japanese papers received by the steamship *Gaelic*, which arrived in San Francisco last week, place the total number of persons drowned in the floods of August 20, in the city of Wakayama and in the districts of Minami-Muro, Higashi-Muro, Nishi-Muro, and Hidaka, at 10,000, and the number of persons receiving relief at 20,424. The River Kinokuni swelled from thirteen to eighteen feet above its normal level, and the embankment and the village of Iwahashi were washed away, and about forty-eight other hamlets were covered by the raging waters. On the morning of August 19 an enormous mass of earth fell from the mountain near the village of Tenno-kawa, and stopped the course of the river of the same name, which, being already swollen greatly, submerged the village and drowned nearly all the inhabitants. A number of the villagers belonging to Tsujide took refuge in their temple, which was on high ground, but when the landslide occurred about fifty persons were hurried alive.

—A Branch of the Young Men's Christian Association has been organized among the colored churches of Philadelphia. The preliminary meeting was held in Sixth month last at the house of William Still, and on the 9th of the present month the work was formally inaugurated by a meeting at the Association Hall, 15th and Chestnut streets. The new organization, besides its gospel labors and religious teaching, will have evening classes in shorthand, penmanship, business, arithmetic and book-keeping, and a course of lectures and plain talks to young men. The interest shown in this work by a number of ministers and others prominent in the white churches,—H. C. Mc-

Cook, H. L. Wayland, and others,—is creditable to them, as showing their kindly feeling toward the colored people.

CURRENT EVENTS.

FREDERICK DOUGLASS, Minister to Hayti, was at the Department of State on the 21st inst., and received his final instructions. He will sail on the 28th (to-day) for Port-au-Prince, to enter upon his duties.

THE elections for members of the Chamber of Deputies in France, passed off quietly on the 23d inst. The friends of a Republican form of government, (as now), have a good majority of those elected. In many districts no one had a majority of votes, and there will have to be a second election, which will further increase the Republican preponderance.

PRESIDENT HARRISON expected to return to Washington on the 27th instant, (Sixth-day of the present week), from Deer Park, to remain permanently at the Capital.

THE new directory of Johnstown, Pa., places the number of drowned at 3,500. This is considered a close estimate, it being impossible to obtain the exact figures.

THE late tomato crop has been partly destroyed by the rain, and canners, it is stated, will sustain heavy losses. The peach season has also been greatly shortened by the heavy rain and high winds, and the supply reduced.

A DESPATCH from Guthrie, Indian Territory, says that for several months the government has made no effort to prevent the sale of liquor in Guthrie, and as time went on the liquor smugglers became emboldened, and over a dozen groceries have been running in full blast for the last month. The granting of licenses was refused, yet to all appearances the government winked at its sale. On the 20th inst., however, a deputy United States Collector went into the city unexpectedly, and before night twenty-two men were under arrest, and will be sent to Wichita for trial.

SHANGHAI, September 21.—The Emperor and the members of his Council are understood to be debating a memorial demanding the expulsion of Americans from China. There is a strong agitation for the increase of the restrictions on American merchants and missionaries at treaty ports.

NOTICES.

* * A Children's Meeting under the care of the Friends' Temperance Committee of Bucks Quarterly Meeting, will be held in the meeting-house, at Dolington on First-day, Tenth month 6th, at 2.30 p. m.

All interested are cordially invited.

HANNAH K. FLOWERS, Clerk.

* * The Annual Meeting of "Friends' Home for Children," will be held at Seventeenth and Girard Avenue meeting-house, Third-day, Tenth month 3d, at 7.30 p. m.

All interested are cordially invited to attend.

* * Friends are invited to attend the religious meeting at the Home for Aged Colored Persons to-morrow afternoon, (Ninth month 29), at 5 o'clock.

* * A portion of the Philadelphia Quarterly Meeting's Committee to visit the smaller branches, will attend the First-day morning meeting to be held at Merion, Ninth month 29th, at 10.30 o'clock.

Trains leave Broad St. Station at 8.45 and 9.45 a. m., for Elm Station. Returning, leave Elm Station at 11.58 a. m., and 12.42 and 1.58 p. m.

* * A Temperance Meeting under the care of Concord Quarterly Meeting's Committee will be held at Friends' meeting-house, West Chester, on Seventh-day evening,

9th Month 2-th, 1889, at 7.45 o'clock. Friends, and others interested are cordially invited.

MARY McALLISTER, Clerk.

* * Haddonfield First-day School Union will be held at Camden on Seventh-day, the 29th of Ninth month, commencing at 10 a. m.

All interested are cordially invited.

EXCELSIOR.

BUILD thee more stately mansions, O my soul,
As the swift seasons roll!
Leave thy low-vaulted past!
Let each new temple, nobler than the last,
Shut thee from heaven with a dome more vast,
Till thou art at length free,
Leaving thine out-grown shell by life's unresting sea.

For Friends' Intelligencer and Journal.

ILLINOIS YEARLY MEETING, 1889.

On the 15th of Ninth month many of those interested in Illinois Yearly Meeting began to assemble at Clear Creek, its regular sittings being appointed to begin on the 16th. The Representative Committee having been desired by minute of last year to meet on the Sixth-day afternoon prior to the general meeting, for the consideration of certain leaflets submitted last year, fifteen members, just sufficient for a quorum, assembled at the time specified, and after interchange of sentiment, the subject was referred to a committee of five. On Seventh-day, at 10 a. m., the members of the Meeting of Ministers and Elders gathered, quite a goodly number being present. Six ministers of our own yearly meeting and one from Indiana were in attendance. The reading of the answers to the queries from the different Quarters called forth much more than the usual expression of thought and feeling. The hope was expressed that we might know what we came for; not to be fed with food from man's hands, but with living bread from God. The admonition was given, that while we are enjoying the social features of this mingling together we do not forget the higher objects for which we are assembled; so that when we return to our homes, we may feel that we have been made better for having been here, and that we "gather up the fragments that nothing be lost." Sometimes, by allowing our temporal affairs to assume undue prominence, we may neglect our spiritual concerns to our detriment. We think our presence and oversight indispensable to the little world of which we feel ourselves to be the centre, yet when called to leave this earth and all our friends, a few tears and regrets, a few kindly words for the departed, a short period of mourning, and the world moves on as it had done before. We are not missed; even our own little world, is, after a short time, unmindful of our removal from its midst. This should teach us our littleness, compared with the universe, and yet the soul that actuates this short-lived body, lives on in a glorious immortality, provided our life here has been

such as to secure it. A desire was expressed that ministers and elders might dwell in unity; and it was felt that it would be profitable if they would oftener mingle and counsel together, and have a care over the young and growing ministry, for its nurture and help, in a spirit of love for the instrument and desire for the honor of truth. A comparison was made between the recent discoveries by the excavation of buried cities in other lands, and our spiritual life. In the former, the traveler in search of historical truth descends step after step, till doors are reached opening into large and lighted rooms, on the walls of which is handwriting in unknown tongues, to decipher which requires deep knowledge; so the seeker after spiritual truth must go down the steps of humility, till he finds openings into the illuminated chambers of truth, under the guidance of whose light he becomes capable of reading the handwriting. In this condition of humility, the command will sometimes come: "Do not undertake to speak because thou art a minister, simply to please the people. And when thou dost speak, be brief; sit down when thou art through."

First-day morning, the 15th, dawned cooler and pleasanter after a light shower which laid the dust, making it much more comfortable for all; and at the usual hour, 10 o'clock, the people had mostly assembled in the pleasant grounds surrounding the meeting-house, and soon gathered in the latter into silence, broken by the expression that if we desire to be benefited by gathering together, we must do so in the name and power of the Most High. Infinite wisdom and love made Jesus the perfect pattern that he was to us. We should learn the attributes of God, which are Love, Mercy, and Justice. Each day we should put the query, "Father, what wouldst thou have me to do this day?" Where can we go for a more perfect knowledge of God, and of the work he would have us to do, than in our own hearts? Attention was called to prayer as depicted in the New Testament, not to be seen and heard of men, but to enter into the closet of our heart. Mothers' and fathers' hearts can often be closets of prayer, when engaged in the daily pursuits of life. We should strive to attain to the standard, not of Quaker righteousness, but of Christ's righteousness. One great hindrance to the spread of Christianity is the lack of a sense of individual responsibility. All have to stand upon their own merits, and not on the position of others in the Church. God never intended unhappiness, but that all, by obedience to his inspeaking voice, should be happy.

The afternoon meeting was opened with an ap-

peal to all to join in the true worship, followed by an exhortation from Scripture, "Praise ye the Lord in His sanctuary, praise Him in the firmament of His power." Revelation has not ceased. God is as willing now as at any former period to reveal himself to his seeking children. He will teach his people himself. The hope was expressed that we are followers of him who is God over all. The seed of life is in every heart. He wants it to grow. We must not shut our eyes and our hearts to the light, so it cannot grow.

"The Gospel has walked in majesty with us this afternoon," was the solemn expression of a dear, aged Friend near the close of the services; and it was felt to be indeed so, words having been poured forth "in the demonstration of the Spirit and with power," producing a solemnizing effect.

Second-day morning was ushered in beautiful and clear, shedding an inspiriting influence over all. The Representative Committee again assembling, took up the subject left in its care, the farther consideration of some leaflets on our Doctrines and Testimonies, and while not accepting them as presented, it was thought much good had resulted from examination of the matters therein, and they were recommended to further care.

At 10 o'clock the general meeting for business assembled, and after a short silence the desire was expressed that we might look within for that spiritual light that alone can give life to a yearly meeting, and though but few should dwell therein, its influence would be felt by all. Representatives from our quarterly meetings, (two in number), were all present but one. Epistles from all the yearly meetings being read, gave evidence of a growth in all parts of the heritage, and were thought to be more than usually excellent, and especially strengthening and helpful to our little isolated body, bringing to some the feeling that the crisis in our Society is past, and we may now look for a revival and a renewal of strength throughout our borders; for a young life is rising within us that will not allow the Society to go down, and forming for it the hope of the future. We may be weak in flesh but strong in God; and the stronger ones must reach down to the weaker ones and help them up, under the influence of love.

The epistles, it is said, all gave evidence of a true spirit pervading all the yearly meetings. The unity of sentiment and the love expressed in them, showed the similarity of the struggle for right, and while there was agitation on the Temperance question, a calming hand is over all and love prevails. A feeling of thankfulness was expressed that there is no question causing dissension among us; what we cannot understand we can leave in the hands of God, in the belief that if it is essential, all will some day be made plain. The time to abandon a wrong is when one is thoroughly convinced it is wrong; applying this thought to war, we should protest against it publicly.

Much earnest feeling, shown in vocal expression, was elicited by the reading of the queries and their answers. On the first it was said by some that they never lost anything by attending meeting, and

that the first indication of decline is the vacant seat; but why do people not want to go to meetings? When in the light they will want to go. We should try to get ourselves in right relation to the Father, whose canopy of love is over all. How far is the ministry accountable for the empty seats and the lack of interest? Many away from the influence of the Society find how much they love it, and only need some one to gather them into the fold. How often is heard the Macedonian cry, "Come over and help us."

On the second query it was remarked that we may detract by behavior as well as by word, by showing neglect or coldness when not deserved. On the third it was said that, as in every arch is a keystone that binds the structure, so in our Society love is the keystone. Christian love makes duty a pleasure, and often opens the way where simple duty fails. On corrupting literature, the question was asked how far are we accountable for the corrupt literature so often seen in our daily press? and perhaps if the people would demand a better paper they would get it, as editors and publishers desire to print a paper in accordance with the wishes of their patrons. We might perhaps have an influence over editors and publishers, if we could interview them personally and clearly and kindly give our views on the objectionable matter issued.

In considering the fourth query we were encouraged to work in favor of temperance in all things, as well as prohibition in alcoholics. In regard to the inquiries about lotteries, etc., it was urged that religious and all thinking societies should protest against the principle of getting something for nothing, as is so often done in a small way in lotteries. One dear Friend testified as to the beauty and efficacy of the precept, "pay as you go," the experience of a long life corroborating his testimony. The propriety of living not only in the bounds of our circumstances, but within the limits of truth, was well described; and the fulfillment of our engagements was not merely paying our debts and keeping our promises, but embraced higher duties. We are under obligation to attend meetings and perform other religious duties, and it may sometimes be necessary to economize in order to fill these engagements. And with all we should set our children a good example of temperance in eating as well as in drinking.

8th. Our vital testimony is based upon God, as Father of all, in all, and over all, and to violate it is to deny or disobey this command.

Much unity of sentiment was manifest all through the exercises on the queries. Our isolated members claimed our attention and sympathy, and they were entreated, where a sufficient number were living within accessible distance of one another, to endeavor to hold meetings in Christ's name, whose influence will be felt in the communities where they are held. A caution was extended to Friends contemplating removal to choose a locality where a meeting can be established. At the same time it was admitted that scattered Friends might be the means of the dissemination of our principles if individual faithfulness is maintained. A proposition to establish a Half

Year's Meeting in Nebraska introduced us into a feeling of near sympathy and unity with the Friends of the two localities and their concern which latter, after due deliberation, was granted.

In our public meeting, on Fourth day morning life sprang into power, by vocal utterances. There are two kinds of religion,—of the head and heart. That of the heart is of the new birth, opening up beautiful, wonderful things; that of the head is the result of mental research and is of a lower standard, but popular. God teaches the humble, not the lofty and proud. Religion is love, and should be used in the family as a ruler. It is of little avail to others, but great to ourselves, that we keep our record as clean as we can. Hearts were drawn to the little children and youth; also to manhood and womanhood, that they shall be alive to the value of noble lives, and realize their influence upon the little ones. Give them what truth their young minds can grasp, avoiding confusing and darkening words. Sin comes in homes, and hearts are burdened. Let mothers seek self-control amid noise and disturbances, check impatience long enough to turn the heart to God for help. Let fathers quiet the impulses of the heart, ask what is right, and govern voice and deed, so all who come under their influence may feel it. The speaker did not pass a day in which he did not see the wretchedness of a wrong life, yet he thought the world stronger, morally, more than ever, and thousands are doing what they can to overcome the wickedness of it. The Christian religion is the hope of the world. Its attributes commend it to all who love their country and mankind.

In the afternoon, the report of the Committee on Philanthropic Labor made an interesting report, showing that although in some of the departments not much actual work has been performed, yet in all there seems to be a realization of the need for labor, and an awakening to the sense of responsibility devolving on every one to do whatever was presented in truth's light. A memorial of our deceased friend, Thomas D. Tomlinson, was read on Fifth-day morning, calling forth many touching tributes to his worth from those with whom he had been wont to mingle, having been warmly instrumental in the establishment of Illinois Yearly Meeting, and missing but one of its gatherings since it was set up. Much earnest, thoughtful expression was given to the subject of the "Confirmation of birth-right members," parents being urged to extend more care in inculcating in the minds of their children a knowledge of our principles. Instances were cited showing the consequences of neglect in this particular.

As the time for closing approached, those present were drawn into a deep and tender unity of feeling, in which the voice of supplication was heard commending us all to the care of a beneficent Father. We were also tenderly admonished to remember in the hour of trouble and anxiety that "unto us a child is born, unto us a Son is given, and the government shall be upon his shoulders." The promises of the Father to his faithful children were truthfully and beautifully portrayed to us, tender farewells were uttered, as it seemed, almost in the language of inspiration

and prophecy; and the whole assembly were dipped, as it were, in a baptism of love, under the influence of which the meeting was solemnly concluded.

The First-day School Conference held two interesting sessions, in which the reports read showed an increasing interest throughout our borders. The outlook for the growth and advancement of our subordinate schools is encouraging, leading us to hope for better things in the future. The topics discussed were the use of the Bible as a Spiritual Educator in our First-day Schools, and what is suitable literature for the young? A paper on "What should be taught in Friends' First-day Schools?" was also read. The epistles from other conferences strengthened us, indicating, that, like ourselves, they have been blessed with a revival of interest.

On First-day evening, the Illinois Peace Society, as is its custom, held its session, manifesting an increase of the non-resisting sentiment among all peoples and a fuller recognition of the precepts of Jesus Christ. E. H. C.

Holder, III.

ELIAS HICKS'S VISIT TO PHILADELPHIA, 1779.

[In the extracts from Elizabeth Drinker's Journal, printed last week, were several allusions to the visit of Elias Hicks to Philadelphia, in 1779, during the Revolution. The account of this visit and the occasion for it, given in E. H.'s Journal is so interesting that we print it here.—EHS.]

A war, with all its cruel and destructive effects, having raged for several years between the British Colonies in North America and the mother country, Friends, as well as others, were exposed to many severe trials and sufferings; yet, in the colony of New York, Friends who stood faithful to their principles, and did not meddle in the controversy, had, after a short period at first, considerable favor allowed them. The yearly meeting was held steadily, during the war, on Long Island, where the king's party had the rule; yet Friends from the Main, where the American army ruled, had free passage through both armies to attend it, and any other meetings they were desirous of attending, except in a few instances. This was a favor which the parties would not grant to their best friends, who were of a war-like disposition; which shows what great advantages would redound to mankind were they all of this pacific spirit. I passed myself through the lines of both armies six times during the war, without molestation, both parties generally receiving me with openness and civility; and although I had to pass over a tract of country between the two armies, sometimes more than thirty miles in extent, and which was much frequented by robbers, a set, in general, of cruel, unprincipled banditti, issuing out from both parties, yet excepting once, I met with no interruption, even from them.

But although Friends in general experienced many favors and deliverances, yet those scenes of war and confusion occasioned many trials and provings in various ways to the faithful. One circumstance I am willing to mention, as it caused me considerable exercise and concern. There was a large

cellar under the new meeting-house belonging to Friends in New York, which was generally let as a store. When the king's troops entered the city, they took possession of it for the purpose of depositing their warlike stores; and ascertaining what Friends had the care of letting it, their commissary came forward and offered to pay the rent; and those Friends, for want of due consideration, accepted it. This caused great uneasiness to the concerned part of the Society, who apprehended it not consistent with our peaceable principles to receive payment for the depositing of military stores in our houses. The subject was brought before the yearly meeting in 1779, and engaged its careful attention; but those Friends who had been active in the reception of the money, and some few others, were not willing to acknowledge their proceedings to be inconsistent, nor to return the money to those from whom it was received; and in order to justify themselves therein, they referred to the conduct of Friends in Philadelphia in similar cases. Matters thus appearing very difficult and embarrassing, it was unitedly concluded to refer the final determination thereof to the yearly meeting of Pennsylvania; and several Friends were appointed to attend that meeting in relation thereto, among whom I was one of the number. We accordingly set out on the ninth day of the Ninth month, 1779, and I was accompanied from home by my beloved friend, John Willis, who was likewise on the appointment. We took a solemn leave of our families, they feeling much anxiety at parting with us, on account of the dangers we were exposed to, having to pass not only the lines of the two armies, but the deserted and almost uninhabited country that lay between them, in many places the grass being grown up in the streets, and many houses desolate and empty. Believing it, however, my duty to proceed in the service, my mind was so settled and trust fixed in the divine arm of power, that faith seemed to banish all fear, and cheerfulness and quiet resignation were, I believe, my constant companions during the journey. We got permission, with but little difficulty, to pass the outwards of the king's army at Kingsbridge, and proceeded to West Chester. We afterwards attended meetings at Harrison's Purchase, and Oblong, having the concurrence of our monthly meeting to take some meetings in our way, a concern leading thereto having for some time previously attended my mind. We passed from thence to Nine Partners, and attended their monthly meeting, and then turned our faces towards Philadelphia, being joined by several others of the committee. We attended New Marlborough, Hardwick, and Kingwood meetings on our journey, and arrived at Philadelphia on the Seventh-day of the week, and 25th of Ninth month, on which day we attended the yearly meeting of ministers and elders, which began at the eleventh hour. I also attended all the sittings of the yearly meeting until the Fourth-day of the next week, and was then so indisposed with a fever, which had been increasing on me for several days, that I was not able to attend after that time. I was therefore not present when the subject was discussed which came from our yearly meeting; but I was informed by my com-

panion that it was a very solemn opportunity, and the matter was resulted in advising that the money should be returned into the office from whence it was received, accompanied with our reasons for so doing: and this was accordingly done by the direction of our yearly meeting the next year.

The yearly meeting closed on the Second-day of the following week; and feeling my health a little restored, though still very weak, I left the city, and was taken by my kind friend, John Shoemaker, to his house. The next morning being rainy, and being still unwell, I rested here during the day, but my companion proceeded to attend the monthly meeting at the Falls. The next day I went to Eyberry meeting, after which I rode with our valuable friend, James Thornton, to John Watson's, at Middletown, where I was again joined by my companion.

"REASONS FOR TOTAL ABSTINENCE."¹

ABOUT ten years ago, or more, I first became a total abstainer because I was easily convinced that the use of alcohol was not a necessity, and a great deal turns upon that. I saw, for instance, that whole nations had not only lived without it, but had flourished without it. I believe that the human race had existed and had flourished a considerable time before it was discovered. I saw the remarkable fact that there were some twenty thousand prisoners in England, and that though many of them had made themselves mere funnels for drink; though they had been accustomed to drink from their childhood; though most of them had been brought to prison, either directly or indirectly, through drink; yet the very day that they entered the gates of a prison all drink was entirely taken from them, and yet there was not a single instance on record in which any one of them had suffered in consequence. On the contrary, men who have entered prisons sickly and blighted, after a few months left prison hale and strong and hearty; and women who had been put into prison perfectly horrible and hideous in their loathsomeness and degradation, after a short period of deprivation from the source of their ruin, left prison with the bloom of health and almost of beauty.

Then, again, I saw in the carefully prepared statistics of insurance societies that total abstinence, as an indisputable fact, contributes to longevity. Then I saw that so far from alcohol being a necessity for great feats of strength, that many of the greatest athletes in the world, from Samson downward, whose drink was only the crystal brook, had achieved without alcohol feats far more mighty than they could possibly have achieved with it; and as far as intellectual exertions are concerned, great writers, though they have not always said that water is best, have yet constantly drawn from temperance a far better inspiration than they could possibly have produced chemically from the fumes of wine. Then I found that a great number of our most eminent physicians had declared most positively that in hundreds and thousands of cases alcohol was the prolific source of disease, even those who took it in quantities con-

¹ Address by Archdeacon Frederick W. Farrar, in Chickering Hall, New York City, Tenth month 29, 1885.

ventionally deemed moderate; and, on the other hand, that other physicians who were opposed to total abstinence as a general rule still confessed that the young and the healthy, all who eat well, and all who sleep well, can do without it and are better without it.

Benjamin Franklin said, "Temperance puts wood on the fire, meal in the barrel, flour in the tub, money in the purse, contentment in the house, and clothes on the bairns."

Well, then, coming to these conclusions, believing that total abstinence would tend to simplicity of life, to health, to strength of body, to clearness of mind, to length of days, I then saw that for me, at any rate, it became a desirable thing to give up alcohol altogether; and I did so for these reasons, with perfect gladness, and without ever having suffered in consequence of the fact so much as even a single day. I might, perhaps, mention one other circumstance—it is this: Many have supposed that total abstainers have become so because they felt within them a terrible temptation to drunkenness. Now, I do not believe that one total abstainer in a hundred has adopted his practice for this particular reason; and yet it is surely a great thing that there is one temptation, at any rate, from which we can be absolutely and forever exempt; and I, for one, do not feel so entirely self-satisfied of security as to feel no pleasure in the thought that I am exempt from the temptation which the good Father Matthew said, in consequence of it he had seen the stars of heaven fall and the cedars of Lebanon hid low. These, however, are not the reasons why most of us have become total abstainers. We have looked into the field of history, and from the day when that disgraceful scene took place in the tent of the patriarch down to the records of yesterday, we see that drink has been to the world a curse intolerable in its extent and interminable in its malignity. Sir Henry Havelock pictures the difference between a siege where soldiers had no access to drink, and the siege of Lucknow, where they had. Turn to Sir John Kay's history of the Indian Mutiny and see how, on the very day after our troops had effected a lodgment at Delhi, England, in consequence of the universal drunkenness of the victorious army, was within an ace of absolutely losing her Indian empire. Turn, again, to Kinglake's "History of the Crimea" and see how he pauses in his history to point out the fact that British troops were brave as lions and gentle as Christians until, and only until, they became once more liable to the degradation that drink wrought amongst them. Turn, again, to Mr. Leekey's "History of European Morals," and all of you will see I am appealing not to books written in behalf of the temperance cause, but to literary works, and you will read that Leekey fixes upon the year 1724 as the most prolific in calamity to the English nation, because gin at that time had begun to be introduced to our people, and spread like an epidemic. Need I quote the authority of Milton in his magnificent lines:

Bacchus, that first from out the purple grape
Crushed the sweet poison of misused wine,
After the Tuscan mariners transformed

Skirting the Tyrrhene shore as the wind lusted
On Circe's island fell. Who knows not Circe,
The daughter of the sun, whose charmed cup,
Whoever tasted lost his upright shape,
And downward fell into a grovelling swine?

Need I give the testimony of one of the wisest judges, Sir Matthew Hale, who said that four crimes out of five even in his day were committed by men who had been drinking in taverns or in ale-houses? And coming down to this day, could I name any authors more refined, more fastidious, more eloquent, and less directly identified with the temperance cause than men like John Morley, John Ruskin, or Thomas Carlyle; and yet from their pages I could quote you words so burning and intense that, had they been used by any temperance reformer, they would have been put down at once as the best possible proof of intemperate language. I might quote from the able prelate, Archbishop of York, and the Bishop of London, both total abstainers, and almost every single judge who sits upon the bench, who have again and again borne witness, if we could get rid of drink we should almost totally get rid of crime, for drink is the same thing as crime.

We have said that history, experience, and science are for us, and shall be to us no less than the very voice of God.

I do not know any body in the world which is less susceptible to the sudden passion for social reform than the British House of Commons. Only twice, I think, in my life, have I seen anything like the manifestation of a thrill of emotion pass through that very impassible body; but on one of those occasions to which I allude I did see a manifestation of a thrill of emotion pass through all those assembled members, just as the summer breeze sweeps the corn, when Mr. Gladstone, standing at the table of the House of Commons, in his position of Prime Minister, made use of the remarkable words, that the evils wrought by drink were more deadly, because more continuous, than the three great historic scourges of war, famine, and pestilence combined. Those words made me shiver, and I do believe they made the very coldest member of Parliament present who heard them, shiver. They were not original; they were not spoken for the first time by Mr. Gladstone; they were spoken for the first time by a very eloquent and excellent man, a member of Parliament, Charles Buxton, who himself had been a brewer, and who, therefore, was able to give ample testimony to the truth of what he said. Still, Mr. Gladstone accepted them; he quoted and endorsed them with all the weight of his manifest authority, of his high position, and of his vast knowledge of mankind. He accepted and endorsed those words, and he has never with drawn them.

I would ask you only to consider what those words mean, if words mean anything at all. Those who are older among you have had experience of war, and know what it really means. You know its horrors, its agonies, and its crimes; you know of lives of youths prematurely cut short; you know of men who are beloved and dear to thousands, and who lay their life away under the chill moonlight upon the

crimson, turf; you know of its widowed homes and of its orphaned children; and we know something, too, recently, especially in Great tracts of Asia, of what famine means; we know how the spectre stalks among mankind. It alters the nature of the very hearts of men, and makes the eye of the mother pitiless to her own babe upon her breast. We know, from the record of this year, what pestilence is. We know it changes the inhabitants of cities into a mass of poltroons, who fly, panic-stricken, because of the dreadful plague. But here is a vice, perfectly preventable, stalking among us, which produces evils more deadly, because more continuous, than war, famine, and pestilence combined; and yet we are so cold, so neutral, selfish, immoral, and quiescent as to make no serious or united effort to grapple with that intolerable curse. Why, in ancient days, in times of war, a man received a civic crown if he saved the life of a citizen; and in times of famine, a man was regarded as a benefactor when he made two grains of corn grow where one had grown before; and in days of plague, we know of multitudes of men who stood between the living and the dead. If in times of war, blessed are the peacemakers; if in days of famine, it is a notable thing to feed the hungry; and if in time of plague, it is divine to heal the sick; then, surely, we must be in the final paralysis of national selfishness if we can tolerate the fact that this vice, producing evils so deadly and so preventable, is to stalk among us. Indeed, many of us have not courage, passion, or enthusiasm enough to grapple with it and to trample it under our feet.

SCRIPTURE LESSON No. 38.

TENTH MONTH 13TH, 1889.

THE ARK BROUGHT TO ZION.

GOLDEN TEXT:—"Ye ought to be quiet, and do nothing rash."—Acts 19: 36.

READ 2 Samuel 6: 1-12.

AFTER the capture of Jerusalem, David made his home in the "Castle of Zion," called also the City of David (2 Samuel 5: 7), and embraced within the walls of Jerusalem. Peace being established, the attention of the king is turned to the Ark of God, which, during the reign of Saul, had been entirely neglected, except on one occasion mentioned in 1 Samuel 14: 18. From the death of Eli it had been practically abandoned both by the rulers and the people, and, but for Abinadab, a Levite into whose house at Kirjath-Jearim it was taken after it was returned by the Philistines, it would have been lost to Israel. While in the custody of Abinadab his son Eleazer had been consecrated to take care of it.

Gathered together all the chosen men, etc. The elders and representative men of the nation. The account is more fully given in 1 Chronicles 13: 1-5, inclusive, which should be read in this connection. The number gathered on this occasion seems very large, but the object was an important one and touched the religious life of the whole people.

The Ark of Testimony, as it was frequently called, had been regarded as the sacred dwelling-place of the Divine presence, and in all their goings forth it

had been carried before the hosts as the symbol of the invisible Jehovah.

Baale of Judah, another name for Kirjath-Jearim, one of the landmarks of the northern boundary of Judah. It was to this place that the Ark had been taken by the Philistines, and kept by Abinadab for twenty years.

Uzzah put forth his hand, etc. This affords another instance where the displeasure of Jehovah was believed to have been shown in the sudden death of Uzzah. To understand this we must refer back to the very strict regulations which were to be observed in removing the Ark from one place to another (Numbers 7: 9), and which did not permit of its being carried in any other way than upon the shoulders of that family of the Levites to whom its transportation had been committed. We are not informed of the manner of Uzzah's death; it was sufficient for those for whom the account was written, to know of his sad fate as another warning of the danger that lies in the path of disobedience of the Divine law. Many centuries after, Jesus called the attention of the people to this very subject in the memorable discourse recorded in Luke 13: 1-5, inclusive.

And David was afraid, etc. The belief that this calamity befel Uzzah because of the manner of carrying the Ark, which made it necessary to put forth his hand to steady it, would bring a feeling of fear and dismay upon the great procession of notable men who formed its retinue, and they might be in doubt as to the will of Jehovah concerning its removal to the new seat of power.

It does not appear that David, in undertaking this expedition, sought counsel of Jehovah, as was the usual custom on such occasions, and this fact may have added to his uncertainty as to the course he had taken, and influenced him to leave the Ark with Obbedom (who was a Levite of the second degree) until he had time to consider what was to be done. Chapters 15 and 16 of 1 Chronicles give a full account of the arrangements made by David, and the great joy and rejoicing that the bringing of the Ark to Jerusalem occasioned.

The rashness that we have to consider seems to have resulted rather from thoughtlessness than from any other desire to be disobedient. Had David made the removal of the Ark to Jerusalem a subject upon which he sought Divine direction, he would have been led to search the records containing the rules and regulations which Moses left in regard to everything connected with its care and preservation; failing to do this, in the eager desire to accomplish his purpose, he brought upon himself condemnation for his rashness, and the untimely death of one set apart for its service, who, in trying to steady the motion, and prevent the Ark from falling to the ground, met his end. They looked upon the Ark as very sacred and no risk was too great that would secure it from accident. That his sudden death was the result of the Divine displeasure, as is recorded, must be understood as corresponding to the state of religious thought in that age.

We draw a lesson from the subject before us of

value to ourselves. We err when we rashly take up a matter of great importance, and fail to consider it from all its points. We cannot afford to waste time and opportunity in so careless a manner.

Our follies often lead to rash acts that bring sorrow and loss to our lives. One foolish indulgence that gives no lasting satisfaction or permanent good disturb and distract the mind and bring trouble, not only to ourselves, but to others associated with us. The exhortation, "In patience possess your spirit," if observed, will save us from many unhappy heart-throbs, and help us to take clearer and calmer views of life, its obligations and its responsibility.

NOTES ON THE LESSON.

The Ark, which was brought to Jerusalem with such great rejoicing, was the most sacred part of the furniture of the Tabernacle, or Tent of Meeting. While the Hebrews were encamped at the base of Mount Sinai, Moses received, as it is stated, Divine directions for the construction of such an edifice, which might be termed a moveable sanctuary,—a visible reminder that God was in their midst, and cared for them,—a place where he might be sought and his will concerning the people be made known. Ex. 25: 8.

Gifts of such things as were needed in constructing this Tabernacle were collected from all the people; and men among them who were skilled artisans were selected for the work, and when all was completed it was set up outside the camp. The Levites by their families were selected to have charge of taking it down and setting it up, and carts drawn by oxen were provided to convey the Tent and all that appertained thereto from place to place. But the Ark, in which were deposited the Tables of the Decalogue, the pot of Manna, and all the sacred treasures of the sanctuary, was not on any occasion to be conveyed in that manner. The family of Kohath was given the charge of its removal and it was to be borne on their shoulders. In that way it was taken across the Jordan when they entered the land of Canaan. When the people made an encampment, the Tabernacle or Tent of Meeting was set up and the Ark of Testimony put in its proper place, and "every one who sought the Lord went out to the Tent of Meeting which was without the camp." In all their journeyings it was carried before the people, and the perpetual fire, which was never allowed to go out, gave them the pillar of cloud by day and the pillar of flame by night, which guided their course of travel and was a constant reminder of Divine protection.

David, in his zeal to bring the Ark to Jerusalem, neglected to observe the regulations concerning its removal. It had been separated for a long period of time from the Tent of Meeting, which still remained at Shiloh, where it was set up after the conquest of Canaan under Joshua, having been taken from its sacred repository and carried into battle with the hope that it would insure victory to the Hebrews. We have seen in a former lesson how grievously they were mistaken, and now after remaining in obscurity so long that its very existence

was scarcely known to a large majority of the people, it becomes an absorbing thought with David to set it up in the royal city. The death of Uzzah in the midst of the rejoicings with which the removal was accompanied sent a thrill of terror throughout the great throng and David abandoned, for a time, his purpose. Eventually we find that by following the directions upon which its removal was conditioned it was brought to Jerusalem, and set up in the place prepared for its reception, where it remained until it was deposited in the great Temple erected by Solomon.

There are several lessons to be drawn from this account. The first is important as showing how very early in the history of the Hebrews it was found necessary to have some place set apart for communion with God. They could not carry forward the work they had undertaken, with Moses as their leader, and Aaron and his sons the recognized ministers to direct and uphold the worship of the invisible God, of whom no likeness or image was allowed to be made, without such a resort in time of need or when having a matter that called for higher knowledge and wiser judgment than they possessed. As a theocracy, the civil and the sacerdotal were blended and every case, whether it concerned their religion or their civil life, was taken to the Tent of Meeting. The Tabernacle thus was made the centre around which gathered all the moral and religious forces of the people so recently invested with national rights and responsibilities; and it thus became the type and figure of the Church of the Living God, for all the centuries that it has been established among men.

It is important also that we give heed to the lesson which is found in the sad termination of David's first effort to remove the Ark.

We often fail of accomplishing our highest and best purposes for want of a careful, thoughtful consideration of what we desire to do—and the right way of doing it. Zeal is a good thing when tempered with knowledge, but zeal without knowledge usually ends in failure or defeat. When we work for the great Master, he is best pleased when the work is well done; nor is he a hard task master, he knows what we are and what we can accomplish far better than we know ourselves, and if in the labor we perform, his peace follows our effort, we may safely repose confidence in him, and leave the results in his keeping.

The highest achievement of charity is to love our enemies, but to bear cheerfully with our neighbors' failings is scarcely an inferior grace. It is easy enough to love those who are agreeable and obliging,—what fly is not attracted by sugar and honey? But to love one who is cross, perverse, tiresome, is as unpleasant a process as chewing pills. Nevertheless, this is the real touchstone of brotherly love. The best way of practicing it is to put ourselves in the place of him who tries us, and to see how we would wish him to treat us if we had his defects. We must put ourselves in the place of buyer when we sell, and seller when we buy, if we want to deal fairly.—*Pan-cis De Sales.*

THE OLD TIMES AND THE NEW.

EVER since there has been kept a record of passing events, writers have chronicled from time to time reflections relative to the greater good that existed in the ages that are past. The ancient prophets failed not to refer to the "days of old," as periods of time when men were guided more directly by the will of the Almighty, than in their then degenerate days. And so it is now with masses of people, especially those whose years are advancing till they can be reckoned by scores. And this is natural—for age with its increasing physical weakness to look back with affection, if not with longing, to that period of life when its very fullness of vigor was in itself a joy. The discomforts resulting from a cruder civilization were not felt, and looking backward from a standpoint of ease, if not luxury, it is the feeling of strength and freshness and enjoyment that is wafted to us.

But old age can be reached without asperity, without complaint that the old times are better than the new, with cheerfulness and content. And when it is so reached we may be very sure that "spirit" has triumphed over "matter" and that the old life is well prepared for that change which will surely bring to its possessor a brightness that will become a "beautiful immortal." And why do not more realize this "green old age?" Because it seems to be so very easy for poor human nature to dwell longer on its sorrows, than to busy itself counting its joys. Were it not so, there would be multitudes to find in their own day and time the "many glorious things that are here noble and right." Yea, find—

"So many gentle thoughts and deeds

 Circling us around,
 That in the darkest spots of earth
 Some love is found."

Let it be the ambition of us all to attain to this condition, whether our days be few or many. Cultivate the mind so prejudice may not control it, and then we can look back with complacency on the past, cherishing all of good that it holds for us and welcome also the greater blessings that surely come to us now. A gifted woman says: "Prejudices are most difficult to eradicate from the heart whose soil has never been loosened or fertilized by education," but

in these times no one need plead ignorance as an excuse to cherish wrong, for on every side of our many-sided natures there is chance of enlightenment. In searching the records of the past, even in the most commonplace journal of passing events, we must note improvement not only in material things but in morality as well. And we are convinced that to-day the conception of spiritual things is nearer the truth than ever before. In the religious journals of all classes there is manifested a broader thought, a clearer insight of what God is and what man should be. It remains for us to apply the knowledge. Where "much is given, much will be required." And it is here, where we, so many of us, fail to advance our times. Given an inheritance of good from our days of old, what have we to add from the rich stores of present enlightenment that are ours? The query is easy to ask and it is only by individual faithfulness to every known duty that we will be enabled to place on our record that which will be called good in the days that are to follow.

DEATHS.

CHERINGTON.—At the residence of her nephew, in Roaring Creek township, Pa., Ninth month 15th, 1889, Rachel Cherington, aged 79 years and 5 months; a member of Roaring Creek Monthly Meeting of Friends.

WAY.—Eighth month 29th, 1889, Martha Way, wife of Robert Way, deceased, of Half Moon, Centre county, Pa., in the 75th year of her age; an elder of Centre Monthly Meeting.

WRIGHT.—At the home of her son-in-law, Thomas Westfall, in Pawnee county, Neb., on Ninth month 18th, 1889, of general prostration, Lucy A., wife of George W. Wright, and daughter of Thomas and Anna Wright, formerly of Adams county, Pa., aged 74 years, 9 months, and 26 days.

Modest and unassuming in manner, and making little outward profession, she possessed in a great degree that "meek and quiet spirit" that marks a true disciple of the gentle Nazarene. She was a most devoted wife and mother, and a self-sacrificing friend and neighbor. She moved with her family from Pennsylvania to Iowa in 1854, and was for many years a member and attender of Friends' meeting at West Liberty, Iowa. She leaves a husband, four sons, and three daughters, with a wide circle of relatives and friends to mourn her loss and cherish her memory.

A loving eye that on us beamed

With true and tender feeling,

Is closed forever from our view,

With sad and solemn sealing.

But Love will hope, and Faith will trust

That, though closed from our beholding,

Before her broadened vision now

Are fairer scenes unfolding."

 H.

A MAN IS HIS OWN BEST KINGDOM. But self-control, this truest and greatest monarchy, rarely comes by inheritance. Every one of us must conquer himself; and we may do so if we take conscience for our guide and general.—*Sir John Lubbock.*

NEWS OF FRIENDS.

THE MEETING AT WARRINGTON, YORK CO., PA.

The annual meeting of Friends at Warrington meeting-house, York Co., Pa., convened on First-day morning the 22nd inst., with a larger attendance than had been known for many years previous, it being carefully estimated that more than five hundred persons were in the house and fully as many present outside.

The ministering Friends who were drawn in the Father's love to visit this once prosperous meeting were Margaretta Walton, Martha S. Townsend, and Mordecai Price.

The good order observed was remarkable, and the earnest attention and manifested feeling, as the words of love and tender counsel were offered to all, but more especially to the young, gave evidence of tender seed of the Father's planting that only need the refreshing dews of faith and obedience to enable it to grow and flourish until the power should be felt that would tend to the re-establishment of this ancient meeting. Much interest has been manifested and much credit due the residents in the vicinity by restoring the old meeting house, covering it with a new slate roof, and otherwise improving it, adding very much to the comfort and utility as well as to the appearance, situated as it is in a beautiful grove of stately and noble trees.

May it long remain a shrine to which the Father may direct the willing feet of his ministering ones, bearing and breaking the bread of Truth and Life to a responsive and eager people, and thus realizing for themselves the truth of the cheering promise, "Blessed are they that come in the name of the Lord."

M. F. B.

Della, Pa.

IN THE OLD HOUSE AT MERION.

A large and interesting meeting was held at Merion on First-day morning the 29th ult. The day being very fine, quite a number besides the members of the Visiting Committee appointed to attend were present from the city, and as notice had been generally extended through the neighborhood, the house was nearly filled with an attentive audience, among whom were many not accustomed to our manner of worship.

Testimony was borne to the duty of the ministers of the Gospel to divide the Word rightly, giving each his portion in due season; to the need, recognized by the most ancient civilizations, for some form or manner of Divine Worship and the great blessing that has accrued to the human family from gathering as on the present occasion for this worship, at stated times; and each was exhorted to faithfulness in this "reasonable service." The patience and forbearance of our Heavenly Father were dwelt upon, and we were cautioned not to resist the motions of the Holy Spirit, being reminded of the danger to the peace and salvation of the soul to which those are exposed who, knowing the Divine will, turn away from its requirements, to follow the vain and transitory allurements of the world.

Close attention to the spoken word was given, and the feeling that it had been a time of refreshment was gratefully acknowledged, a brief supplica-

tion closing the exercises. It was remarked by one who has attended the meeting from his boyhood, that he had not seen so large an assembly gathered in that meeting-house on First-day morning for many years. Friends living in the vicinity have repaired and greatly improved this ancient meeting-house, the seats are nicely cushioned and the floor carpeted. One of those who was in the habit of going to that meeting in youth expressed a feeling of sadness that the old stove, set up on bricks, had been replaced by a modern coal stove and other changes greatly adding to the comfort and convenience of the house had taken away the old landmarks with which were associated all the memories of the earlier time.

We felt rejoiced that the improvements had been made, and accept it as an evidence of an awakening interest in the maintenance of public worship in this venerable and time-honored meeting-house.

R.

CHILDREN'S HOME IN NEBRASKA.

EDITORS INTELLIGENCER AND JOURNAL:

THREE of the wards of Friends' Home for Children, Philadelphia, having been placed with Dr. Armstrong in Nebraska, the managers requested George S. Truman to exercise some supervision on their behalf. A recent report from him is here appended, as giving an interesting account of an institution which if carried out and extended would be of incalculable service in removing young persons from evil associations and improper surroundings, and showing them a better way of living. Here is a field that might be entered upon if we were not so prone to look out for our own selfish gratification or the indulgence of those nearly related to us. And this remark applies not alone to those having an abundance of means,—the "little ones" as to wealth have duties to perform as well, and should not shirk them. Some forty or fifty years ago, a woman belonging to the Monthly Meeting of Friends of Philadelphia was much straightened to make a living, and yet she always insisted on giving 12½ cents to the meeting funds for the support of the poor, for, said she: "I may have to seek help myself, and whilst I am able wish to do what I can to aid others." Let us emulate this devoted Christian in contributing our "mite" for the good of our fellows.

The letter alluded to follows below.

T.

GEOXIA, NEB., Eighth Month 30, 1889.

Respected Friend, J. A. M. Passmore:

In accordance with thy request I have recently paid a visit to the Park Hill Home, the residence of your wards under my supervision viz., Joseph Fields, Sias Lum, and Charles Tyson, and was exceedingly gratified at the condition of things.

The boys have enjoyed good health during the past year; they appear to be, and I believe are contented and happy, and the surroundings are such as to leave no doubt in my mind as to their training for useful members of society. I do not know whether I have heretofore given an account of this institution, but as it is necessary to a clear understanding of the situation I will hazard a repetition.

The Park Hill Home may probably be called a family home for orphans and outcasts, and is conducted by Dr. Armstrong and wife, who possess the faculty of gaining the affections of the children as though united by ties of consanguinity, the only drawback being the Doctor's age and infirmities which make him anxious that some plan might be consummated by which his labors might be rendered permanent or placed beyond the risk of casualties.

With this object in view he offered the establishment to the Methodist Association of Women for a similar object, but they have taken no action thereon although nearly a year has elapsed, and now any others who are disposed can have the opportunity to take hold.

One difficulty in the way is that most persons connected with these homes for orphans and outcast children want to have the establishments immediately under their eyes, so that they can see the fruits of their labor; but to my view the broad West, with its cheap lands and freedom from many of the contaminating influences which abound in and near large cities is the place for successful solution of this problem of the elevation of this dependent portion of society to the position of useful citizens.

The plan which Dr. Armstrong is working on, and which he wishes to see extended, is to procure several sections of land in a good neighborhood, and on every 160 acres (or quarter section), to place a Home for the accommodation of not more than ten or twelve children,—these families to be under the care of their respective heads and to cultivate their own farm, but all under one general head or supervision. Thus the work being done by the children, a generous rivalry is stirred up to make the work on each farm equal to or exceed its neighbors.

But to return from my digression, the family of Dr. Armstrong consists of 7 boys from seven to fifteen years old. The oldest has been in the family for nine years; he now has entire charge of the farm, assisted by Charles Tyson, (who is chief plowman, and does his work well), and such labor of the younger boys as they are capable of, and as a result of their labors I may state that they harvested 40 acres of wheat, estimated at 600 bushels, about 1,000 bushels oats, 50 bushels rye, and have 60 acres in corn, second to none in the vicinity, and which I am satisfied will yield about 3,000 bushels. The stock consists of six horses, some of them advanced in years, three cows, and forty hogs, the latter being the most profitable method of late years by which the farmers can dispose of their produce.

I have thus given a brief synopsis of the working of this institution, which needs to be seen to be fully appreciated, and here is a grand opening for philanthropists, where the money invested will produce a greater return of blessings than any I know of.

Thy friend,

GEORGE S. TRUMAN.

We would willingly have others perfect, and yet we amend not our own faults. . . . And thus it appeareth how seldom we weigh our neighbor in the same balance with ourselves.—*Thomas à Kempis*.

THE GENEVA INTERNATIONAL CONGRESS.

GENEVA, SWITZERLAND,
Ninth month 14. }

EDITORS INTELLIGENCER AND JOURNAL:

The Fifth Triennial Congress of the International Federation for the Abolition of State Regulation of Vice, which has been in session in this beautiful city the past week, and which has been an occasion of great interest, closed its labors last evening. Delegates have been in attendance from Switzerland, France, Italy, Spain, Germany, Russia, Belgium, Holland, Norway, Sweden, England, Scotland, India, and America.

It was my privilege to be present at the first Congress, at which the International Federation was organized, and which was also held in Geneva, in 1877. It is most gratifying to note the progress of the movement in Europe in the twelve years since England abolished the odious regulation system, which then existed by the authority of the government of Great Britain, in sundry military districts; it is essentially abolished in Italy; has been in part abolished in Switzerland, Belgium, Holland, Sweden, and other countries, and shaken even in France and Germany.

I cannot undertake, in this necessarily brief note, to give a resumé of the doings of the Congress which has just closed. Suffice it to say that its voice has been unanimous in condemnation of State-sanctioned and legalized vice, alike on hygienic, economic, and moral grounds. Happily, in America we do not have government regulated and legalized vice, though in our large cities, especially, we have, alas, much tolerated vice.

The enforced absence from the Congress of Josephine E. Butler, on account of her own and her husband's illness, has been much regretted by all. She has been from the beginning the real leader of the important "New Abolitionist" movement, as she characterizes it, supported by a noble constituency of both women and men in the various countries. Among her most helpful workers in England are members of the Society of Friends, several of whom are now in attendance at this Congress. Among the messages addressed to the Congress by various bodies, religious and philanthropic, and cordially welcomed by it, was a minute of sympathy and encouragement from the New York Yearly Meeting of the Society of Friends, adopted in Fifth month last.

I leave for Paris to-day for a day or two more at the truly great International Exhibition; and thence to London again for two or three days; and thence to Liverpool, to sail for New York, by the Cunard steamer *Servia*, on the 21st inst.

Cordially,

AARON M. POWELL.

He that lives in sin, and expects happiness hereafter, is like him that soweth cockle, and thinks to fill his barn with wheat or barley.—*Selected*.

I THINK you will find it true, that, before any vice can fasten on a man, body, mind, or moral nature must be debilitated. The mosses and fungi gather on sickly trees, not thriving ones.—*O. W. Holmes*.

COMMUNICATIONS.

EDITORS INTELLIGENCER AND JOURNAL:

I AM one in connection with a few others that are scattered through this city, and Kansas City, Missouri, whose circumstances have been such that we feel we truthfully may be termed "Isolated Friends." As is too often the case, we, as well as others, can realize the blessing of a favor when we are deprived of it. We have often expressed the desire that we might have a Friends' meeting in Kansas City, and have met a few times for that purpose. At our last meeting one Friend observed that if Lydia H. Price could only feel it her duty to again visit Kansas City and meet with us a few times she thought it might be the means of our getting an established meeting, and I wish to express my regret that Friends, especially those who are traveling, sign only their initials instead of the name in full. Last fall I saw the communications of L. H. P. in the INTELLIGENCER AND JOURNAL and saw the writer was traveling west, and if I had known whom to address I would have tried to extend an invitation to the writer to visit us; but although I had the daily *Journal* in my hands the First-day morning, containing the notice that Lydia H. Price would be at meeting in Kansas City, (Missouri), in the afternoon of that day, I did not observe the notice until Third-day following, and what few Friends are here it takes sometime to get them all notice of a meeting. Yet, although scattered several miles apart, our street car arrangements are such that it is but little trouble to get together at any point in either city.

Kansas City, Kansas.

WM. B. SYLVER.

EDITORS INTELLIGENCER AND JOURNAL:

While looking over the volume of the INTELLIGENCER AND JOURNAL for 1885, I noticed the sermon of Sunderland P. Gardner, preached at the Yearly Meeting. I think it would be a good idea for the editors to republish from time to time one of the sermons of Elias Hicks, Edward Hicks, Edward Stabler, Thomas Wetherald, and other of the worthies of their day, so that they may not be lost, and the present and future generations deprived of their perusal. If all of those published about the time of the Separation could be republished, by distributing them through one or two volumes of the paper, they would be much prized, I am sure, by many of its readers.

Middleton, Del. Co., Pa.

J. S.

STRUGGLE, earnest, deadly struggle, is the universal, indispensable law of the soul's advancement. He who has never labored at the all but hopeless difficulty of self-conquest knows and cares naught about the mortal pangs of human weakness.—P. C. *Mozoomlar*.

EVIL springs up, and flowers, and bears no seed,
And feeds the green earth with its swift decay,
Leaving it richer for the growth of truth;
But good, once put in action or in thought,
Like a strong oak, doth from its boughs shed down
The ripe germs of a forest.

—Emerson.

For Friends' Intelligencer and Journal
AN AFTERNOON AT THE HOUSE OF
REFUGE.

"COME out to the Refuge this afternoon and talk to our girls," said my friend, J. V. W., at the close of morning meeting, one bright First-day, several weeks ago, adding, "I expect to be there at two and a-half o'clock." I hesitated, but only for a moment; I had accepted a similar invitation more than a year before, and remembered the grateful feeling of satisfaction that it had brought to my own life, to have the privilege of standing in the presence of so many young lives rescued from the haunts of evil, and brought under the watchful, loving care of earnest, self-sacrificing workers, for the uplifting of those who are snatched from shame and possible disgrace to which they have fallen because of neglect and want of proper parental training.

It was past the hour assigned when I reached the Refuge, and the girls were all seated in the assembling room quietly awaiting my arrival. And what a scene was presented! A hundred and more girls, ranging from woman's age to perhaps seven years, sat before me, neatly clad in well-fitting dresses, all made of the same material, with a neat white collar and its blue ribbon about the neck. It was the perfection of simple neatness, and the demeanor was an exemplification of what strict regulations, kindly enforced, will do for even the most refractory.

A sweet hymn, beautifully rendered, broke the stillness of the occasion. As I rose to speak a great throb of the mother-heart went pulsing after them in a tenderness that is born only of mother-love, and I felt to say, "You are here not because you are worse than others who are outside, but because it has been your misfortune to be destitute of the love and care which are the right of every child." And I had only encouragement for them, that now, when everything that is needed to make them comfortable and train them in ways of usefulness, and a true regard for the duties and responsibilities which life imposes were theirs, they might use the opportunities wisely, remembering that in a few years at most they will be called upon to take their places among the world's workers, and that they look forward to this with an earnest desire to do their part worthily, citing them to the divine witness in the soul of every one which will as it is obeyed give peace and joy to the life. I trust I left some impressions that will be lasting, and that the opportunity thus afforded me, was as grateful to some who listened as it was to my own spirit.

From the hall in which we were gathered the girls in perfect order repaired to the chapel, we following. After all were seated, the measured tread of the boys, who came in under drill, announced that they too were to share the exercises of the hour. These were quite simple and well adapted to the comprehension of the audience. There was singing before and after the service, prayer, and a benediction, all calculated to be helpful, from an evangelical standpoint, but with less theology than might be expected. At the close they all retired in the same orderly manner with which they entered, and I felt that such occasions must have an influence for good

in all the future of their lives. I could but thank my friend, who is one of the vice-presidents and deeply interested in the work, for the opportunity he had given me of being present and taking a part in the exercises of the occasion.

From a report which is the sixty-first annual statement of the Board of Managers, I learn that at the beginning of the present year there was a total of 807 children in the house, 169 of whom were girls. From the Superintendent's report the following is taken:

"Viciousness, stubbornness, indifference, and a lack of appreciation of everything of a refining and ennobling character, are the great obstacles which oppose us in our work; but with the Divine aid we are enabled to overcome them. Year after year we send forth from our Institution those who, but for its salutary assistance, would probably lead aimless and vicious lives, and prove a curse to society at large; but with new hopes born within them, and with characters and dispositions elevated and improved, they go forth to take part in the warfare of life, and many of them acquit themselves worthily in the conflict, and lead lives which reflect credit upon the place where correct principles were imbibed, and nobler and truer ideas of life inculcated. The visiting agent reports of the 257 boys under indenture, that 67 have done badly, 13 have done passably, 177 have done well. And of the 585 boys under care of parents, 102 have done badly, 68 have done passably, 415 have done well.

"It is the intention of the Board of Managers to enlarge and improve the methods of manual and mechanical training of the boys, and, in addition to the present industries, to instruct them in agricultural and horticultural pursuits, and in an elementary knowledge of the standard trades, such as printing, carpentering, wood-turning, blacksmithing, bricklaying, and plastering, and such others as will assure their entrance after their discharge into good employments and mechanical trades. The Managers believe such instruction will prove the best protection against a relapse into evil ways, and afford them remunerative wages.

"It is becoming an established obligation of the State and the community, that manual and mechanical teaching of the young, should form an essential feature of their education in the public and private schools, whose beneficial influences are immediate and permanent. The pupils of these schools enjoy the benefits and healthful care of good homes; how much greater the necessity of making a similar provision for the neglected and unfortunate children, whose homes are a misnomer and a reproach.

"The Managers greatly need, and again solicit their fellow-citizens to cooperate with them in their efforts to establish the new Institution on a more enlarged basis of usefulness, and to supplement the generous gifts above stated; as a private charity, it appeals to the benevolent and philanthropic, for the permanent benefits it confers upon a class of children who are saved by it from degradation, and whose feet are set upon the sure and safe pathways of life."

L. J. R.

SWARTHMORE NOTES.

—The class presidents for the first half of the new year are as follows: Senior, George Ellsler, of Baltimore; Junior, J. William Hutchinson, Jr., of New York; Sophomore, Bernard S. McIlvain, of Harford Co., Md.; Freshman, Charles H. Walton, of Trenton.

—Edgar Allen Brown, the editor-in-chief of the *Phoenix*, who has been in ill health for many months has been obliged to leave college for a month to recuperate.

—The young men who went with the Foot-ball team on its tour to other colleges returned to Swarthmore more than ever pleased with their lot. They say that they nowhere saw better facilities for teaching than here and above all the cleanliness and comfort of the Swarthmore dormitories is now to them a matter of congratulation, after having seen the accommodations at some other institutions.

—It is probable that each of the literary societies will arrange lecture courses this winter, and with the college course there will be no lack of entertainment.

—The Fall athletic sports will be held either on the 16th or the 23rd of this month.

—The present Junior class expects to publish a *Halcyon*, as its predecessors have done for some years.

—The number of students is being increased by new entries every week, and a number of former students who were unable to begin the term on time have returned. S.

SHALL WE FIND THEM AT THE PORTALS?

WILL they meet us, cheer and greet us,
Those we've loved who've gone before?
Shall we find them at the portals,
Find our beautiful immortals,
When we reach that radiant shore?

Hearts are broken for some token
That they live and love us yet!
And we ask, Can those who've left us,
Of love's look and tone bereft us,
Though in heaven, can they forget?

And we often, as days soften,
And comes out the evening star,
Looking westward, sit and wonder
Whether, when so far asunder
They still think how dear they are.

Past yon portals, our immortals—
Those who walk with Him in white—
Do they, 'mid their bliss, recall us?
Know they what events befall us?
Will our coming wake delight?

They will meet us, cheer and greet us,
Those we've loved, who've gone before;
We shall find them at the portals,
Find our beautiful immortals,
When we reach that radiant shore.

—Watchman.

TRAIN yourself to unselfishness in what the world pleases to call little things.—E. E. Hale.

THE EVENING BRINGS US HOME.

UPON the hills the wind is sharp and cold,
The sweet young grasses wither on the wold,
And we, O Lord, have wandered from thy fold ;
But evening brings us home.

Among the mists we stumbled, and the rocks
Where the brown lichen whitens, and the fox
Watches the straggler from the scattered flocks ;
But evening brings us home.

The sharp thorns prick us, and our tender feet
Are cut and bleeding, and the lambs repeat
Their pitiful complaints—oh ! rest is sweet
When evening brings us home.

We have been wounded by the hunter's darts,
Our eyes are very heavy and our hearts
Search for thy coming—when the light departs
At evening, bring us home.

The darkness gathers. Through the gloom no star
Rises to guide us. We have wandered far,
Without thy lamp we know not where we are—
At evening, bring us home.

The clouds are round us, and the snow-drifts thicken.
O thou dear Shepherd, leave us not to perish
In the waste night—our tardy footsteps quicken :
At evening, bring us home.

—Dr. John Shelton.

THE LITTLE HIGH CHAIR.

IN an attic deserted, stowed safely away,
A little high chair I discovered to-day,
In a dingy, dark corner, with cobwebs o'ergrown ;
But who was its owner, is something unknown.

A round or two broken, a break from the seat,
The back partly patched up, and nowhere complete ;
With the paint strangely tortured to patches quite
bare,

Make lone and pathetic the little high chair.

The child who sat in it, I venture to say,
Is a tottering old man if he's living to-day.
What fields he has conquered, what prospects
found fair,

No record or person is here to declare.

Yet, born with his youth, this one relic remains
From a far distant time, when life's contests and
pains

Stood far in abeyance, and naught could impair
The career that should start from the little high
chair.

Did the subject tied up there, so proud on his
throne,

Go out through the world a great power, or
unknown ?

Was the joy that youth promised fulfilled, or a
snare ?

No answer comes back from the little high chair.

The mother who cherished the child that it bore,
And all who once knew it have gone on before ;
But a history of some sort, forbidding or fair,
Begins every day from some little high chair.

—Jarl Benton, in *Once a Week*.

EDWARD H. MAGILL'S LETTERS: THE
LAKE REGION, SWARTHMORE.

My last letter was sent from Morland, the delightful old English home of our friend, Charles Thompson. I found him, as I fully expected from our previous correspondence, a broad-minded man, warmly interested in all that most deeply concerns our Religious Society. He feels the great importance of all *Friends* being willing to overlook minor differences, speculative and theoretical in their nature, and that cannot affect the *life and character*, and come together again as one body, upon the simple and tangible basis of the all-sufficiency of the immediate teachings of the Holy Spirit. It is needless to say that in this view we were wholly united. We visited the old meeting-house at Morland, which is now attended by none except our friend's immediate family, and occasionally a very few beside. From Morland after a brief and most enjoyable visit, when we would gladly have prolonged his time, permitted, we went on through the English Lake country. We had already spent the day with our friend, the day before reaching his home, in sailing upon the peasant lake of Ullswater; and now we turned toward the homes of Southey, Wordsworth, and Harriet Martineau. We first stopped at Keswick, where the home of Southey was pointed out to us, now occupied as a girls' boarding school. We also walked down in the evening along the "Derwent Water," but the weather was unfavorable for a sail upon the lake. The next morning we took a four-horse stage for a mountain drive of some sixteen miles through a very attractive scenery and over the best of English roads, to Ambleside, near the head of Lake Windermere. As we came down into the valley of Grasmere, the view was charming; the small fields of brigatages, green, of irregular shapes, divided by dark stone walls or hedges, with the comfortable looking little English rural homes, almost invariably adorned with flowers and substantially built of stone, and the cattle grazing in the rich pastures, formed a picture that we shall forever hereafter associate with the home of Wordsworth. The small yellow house where the poet lived before settling at Rydal Mount, was pointed out by our driver as we passed rapidly through the streets of the little village of Grasmere. Farther on we passed Rydal Water upon our right, and soon after our attention was directed over the high hills toward our left, where lay Rydal Mount, the later home of the poet.

As we drove through the town of Ambleside we regretted that we could not stop over another day and explore the pleasant walks and drives around it, and see the home of Harriet Martineau. Just below Ambleside, at Water Head, we took the little steamer and sailed some fifteen miles down Windermere Lake which was lined on either side by fine mountain scenery, and rendered more attractive by the many delightful villas upon its banks. We landed in an hour or more at Ulverstone, and here, by the kind arrangement of our friend Charles Thompson, I was cordially met by a young friend, named Robert Hay, who was all ready to accompany us to Swarthmore meeting-house and Swarthmore Hall. The quaint,

old-fashioned meeting house, with the inscription, "*Ex dona G. F. 1688*" cut over the door, and its entrance hall and adjoining room, "for the accommodation of traveling Friends," floored with flag-stones; the great traveling chest and the old arm-chair presented by George Fox; and the old black letter "Treacle Bible," also presented by him to the meeting; the two ebony bed posts of G. F., built into the entrance hall; all these were examined with much interest.

Swarthmore Hall, the old home of Judge Fell, which his widow forfeited by marrying George Fox,—according to the terms of the Judge's will,—is but a short distance away, both this and the meeting-house being not much over a mile from Ulverstone. Here we saw the great reception hall, flagged with stone, (like the entrance to the meeting-house), and now divided by a partition into a front passage leading to the circular stairway and a living-room for the family. Here we signed our names, and when we wrote that we were from Swarthmore College, the attendant immediately turned back to the place where four of our students had signed two years before. The door where George Fox used to address the people assembled in the orchard,—as the hall would not contain them,—was pointed out to us, and the little closet which he occupied as a study. The spacious chambers of the second floor, oak panelled to the ceiling, and curiously carved, were very interesting. We could but regret that this Hall has now passed entirely out of the hands of Friends; and it would certainly be a worthy object to raise a fund for its restoration and permanent preservation as a most interesting memento of the founder of our Religious Society. As we turned away from this place, so closely connected with the rise of Friends in the early day I could but feel a great anxiety that from the new Swarthmore in America an influence might yet go forth which would give a new impulse and a new life to our Religious Society. But if this is ever to be, it must be through the strong *personality* and the *deep religious convictions* of those most nearly concerned in its management. The powerful influence wielded by George Fox can be well appreciated when we consider the character of the man as depicted in these striking words of William Penn: "But above all he excelled in prayer. The inwardness and weight of his spirit, the reverence and solemnity of his address and behavior, and the fewness and fullness of his words, have often struck even strangers with admiration, as they used to reach others with consolation. The most awful, living, reverent frame I ever felt or beheld, I must say, was his, in prayer." If our Swarthmore ever should send out such young men or young women, can then our Society languish or decline?

From Ulverstone we took a very fast train to Liverpool, but being delayed at Carnforth by the non arrival of baggage sent on, we had to make the last 25 miles in the dark, which was the only night traveling we have done since our landing at Glasgow. At Liverpool, as the fast mail for America was to leave the next day, we took the opportunity to finish and mail letters to our friends at home. We

then came on to Chester, arriving just before night, but had time before dark to walk entirely around the older part of the city upon the walls. This is a favorite promenade, being a smooth, flagged walk with the wall or railing rising breast-high on either side; and affords many charming views of the country around, including the fresh, green meadows along the winding river Dee. In the evening we walked out to see the Arcades, or as they are technically called, the "Rows," which present a very attractive appearance to a stranger. We walked along one street in front of a row of shops and *on the roof* of a row below us, and back on the same street in front of the row over which we had passed. As it rained most of the time while we remained in Chester, we could appreciate the advantage of these sheltered arcades. Before leaving the city we visited the Cathedral, which dates from the 11th century, and which is remarkable for some fine groined arches, and for carved work of the most elaborate character. We were also shown under one of the houses the ruins of an ancient Roman bath. From Chester we came to Rugby, where we made a brief stop to visit the school once presided over by the great Dr. Arnold, who has always been my ideal of a teacher, the man who placed so much confidence in his boys that they used to say: "It is a shame to lie to Arnold, for he always believes what you say." To our great regret the school had not yet opened, and we could only see the outside of the house, and look over into the grounds and garden, but even for that we did not regret the delay. Our next stopping place was Warwick, built upon a rocky height in a comparatively level plain, and once surrounded by a strong wall, of which now only the massive and ancient east and west gateways remain. They are built of huge blocks of stone resting upon the native rock, and are most interesting relics of a rude and barbarous age when such defenses were a necessity. Many of the houses in the little town—and the farms for miles around it,—are the property of the present Earl of Warwick, who resides in the Castle, one of the most imposing of these strongholds now to be found in England. Upon visiting this we found it in an excellent state of preservation, although parts of it are more than 700 years old. It is gorgeously furnished, and surrounded by the most beautiful park and lawns that we have yet seen. I could give but a faint idea of the splendor of this palatial residence in a single letter. The rooms were filled with pictures by Van Dyck, Leonardo de Vinci, Rubens, Caracci, Raphael, and other distinguished artists; there were tables of lapis lazuli and bronze; enamelled ware displayed in ebony cases; specimens of armor of every age and nation,—but I cannot enumerate. A faint idea of the cost of such an establishment may be conveyed by the statement that one piece of the enamelled ware was pointed out as valued at £5,000 or \$25,000, and one of the tables was said to be valued at the same sum. We ascended the highest tower, called "Guy's Tower," from the first Earl of Warwick, (of whose great size and valiant deeds in arms the most incredible tales are handed down), and obtained a very fine view of the city and surrounding country,

so thickly dotted over with groups of fine elms and oaks and cedars as to present almost the appearance of a vast forest. Immediately below us the Avon flowed past the castle walls, and was visible here and there in its winding course through the green meadows, and between its rows of willows of lighter green, for many miles. It was a picture that pleased me more than any of the Van Dycks or Rubens within the castle's gorgeously decorated rooms. We were much interested in visiting the "Leicester Hospital," so-called, a comfortable home established for the most worthy of the old soldiers of the neighboring towns. Below the Church of St. Mary's we saw in the crypt and chapel the tombs of the Earls of Warwick and Leicester for many generations.

The following day we took a carriage and drove to Stratford-on-Avon, a distance of about nine miles. Of this memorable day, devoted to a visit to the native town of Shakespeare, so full of interest to all who speak the grand old English tongue, and of our subsequent visit to the ruins of Kenilworth Castle, I may speak in my next letter.

EDWARD H. MAGILL.

London, Ninth month 18.

For Friends' Intelligencer and Journal.

LETTERS FROM BERLIN.—III.

"WHAT do you think of doing to-day?" said the young man opposite me as we sat down to the breakfast table spread with blue and white dishes and carved oak platter of brown rolls.

"Of going to Dresden for a few days, if it suits you to go now." He was quite ready, he said; our bags were soon packed, chiefly with books, I think, for they were weighty for their size and I heard him say later the bother about traveling was that you could not take your slippers and things that were comfortable. After running up flight after flight of stairs to the dwelling of a friend on our street, for a pension address in Dresden, we were off on the train and rode down through a long stretch of level country,—barren moors with patches of purple heather; forests of young pine trees; bogs where the peat had been cut and lay piled in long rows; swamps bright with wild flowers; wide meadows where the blue-aproned peasant women were raking hay; fields of potatoes, and beets from which the sugar is made, and golden lupin (*Lupinus luteus*) the seeds of which come later into the market and form a staple article of food. There were no fences, and the little flocks of geese and sheep were herded; no scattered houses, for the peasants who till the field all live in the little red-roofed villages which appeared every now and then nestling among the trees. Then came the hill country with vineyards and gardens and villas and orchards of cherry and plum and pear trees on the slopes; and then Dresden, built on both banks of the Elbe; and then the Carlander House, a quaint old inn where the steps that went up spirally in the centre of the building were worn into hollows, but led up to pleasant rooms where the sun shone in through the lace-curtained windows, where the outlook was down into a narrow street curving about like a snake, and upon steep roofs, red-tiled,

and rippled with rows of queer little windows. There was the usual sofa with a wide flounce of cotton lace frilled upon its back, the oval table found *always* in front of the sofa, the writing desk, the stand with two tall candles mounted in brass candlesticks, and on the wall a colored copy of Listard's "Chocolate Girl," so prim and so pretty. The bed, covered with the most slippery of linen, the comfortable tied into a case of the same material, suggested the possibility of dreams of the glacial period and toboggan sliding through the night; but no such evil chance befell.

What delicious coffee and hard rolls they gave us for breakfast the next morning, served on pretty plates, the little pats of fresh butter with sprigs of parsley lying beside them. We went out afterwards into the rain to walk about for an hour, until the picture gallery opened. It is no wonder that Americans go to Dresden and stay for years and write home that they are so happy. Its surroundings are beautiful; and standing on the bridge that connects the old town and the new, you can see spread out before you Saxon Switzerland, with its rocks and hills and waterfalls, only a few miles away. There is such an atmosphere of rest about its streets, such simplicity of life, no great rush and roar and hurry; and we missed pleasantly the gay dragoons and hussars at every turn, and the Prussian spread eagle always keeping an eye upon you. There is so much there to see and learn; but with it all a realization of "standing amid the eternal ways," which removes all feeling of nervous hurry of trying to do it all at once.

Window after window was filled with photographs,—not of the imperial family, singly and collectively, in every manner of grouping and every posture consistent with regal dignity,—but with serene browed Madonnas, with saints and Magdalens, with Cupids and hermits and cavaliers. And then the windows filled with copies of these same old paintings on china—so beautiful! Such a wealth of color! I forgot everything else until recalled by the voice of my young friend,—"you are getting wet. Nobody could hold an umbrella over you, when you dodge about so." Who would mind being rained on when there was such an opportunity to look on a treasure trove like that. I keep all my fine china and Bohemian glass and antique carved chests in the shop windows where I can enjoy them without care. The way to the picture gallery led past a large market place, Alt Market, where were queer old women, sitting on stools placed on little heaps of straw to keep their feet dry, selling fruit and vegetables and flowers from baskets or stands or little carts drawn by stout dogs, each vender covered by a huge umbrella, stationary like an artist's, but four or five times larger. It was a scene never to be forgotten; the old weather-beaten faces, the black patched umbrellas, the curious jumble of things under them to be sold, the crowd of people who came to buy.

The gallery opens at 9 a. m., and closes at 3 p. m., and is free to the public four days in the week. What a joy it was and is and will be, so long as one's memory lasts. One walks about it at first in a kind of solemn reverence, and wonder, and calm delight, and with a deep sense of thanksgiving that one is

alive and has been permitted to come and no longer only read of and imagine, but see these beautiful creations of Raphael and Murillo, Carlo Dolci and Correggio, Battoni, and a host of others. This wonder grows, this thankfulness deepens, when one comes to the room set apart for the Sistine Madonna, where people go in quietly, where men take off their hats to contemplate this masterpiece about which Lübke and Kugler and many more have written so well. Yet the American woman can be seen there, sailing into the middle of the apartment with a spread-eagle wave of the hand saying, "Ah, this is what I have waited for! just look at her!" and after a three minutes' stare, sails out again; or the young American girl who says to her younger brother, "Gene, what is number ninety-three? Look in the book and see." "Gene" looks in the catalogue and tells her. She takes the book herself, tells him it is one of the most celebrated pictures in the world, glances up at it, and flutters out again. There is such a joy in recognition, in seeing the original paintings when the composition and figures have been long familiar. Here were Dow's candle-light scenes that I read of in *Harper's Monthly* when I was a child; here were Ruysdael's and Claude's landscapes; here were scenes from the lives of so many old mythological heroes; here were the old Bible stories portrayed, all the calendar of Saints, each with his own proper symbol; and it was intensely interesting to compare the different conceptions which the different artists had of the same scene or character, and interesting, too, to see ocular evidence that Van Dyke was Rubens' pupil and Ferdinand Bol, Rembrandt's, and others where points of resemblance were marked. How disappointing it was to me that of the whole number, and they are many and renowned, who have painted Paul,—some with robes gracefully disposed, some with hermit's garb, a grim skull beside his book and sword, some with upturned face, some with bowed head,—only one seems to have realized what manner of man he was, only one who has caught any of the lights and shadows of emotion that must have played over the face of him who lived in such deep valleys and on such high plains of feeling; who knew from the very depths of a sorrowful heart, when he wrote the 13th chapter of Corinthians, how narrow and imperfect are human sympathies, how hard it is to learn the lesson of real love and toleration; but who, spite of all imperfections and "thorns," and the "pricks" and oppressions, held true to his high faith saying, "In everything give thanks, for this is the will of God concerning you," and was persuaded that nothing could separate him from the love of God. (Romans 8: 38, 39.)

Sometimes it was with a feeling of real exhilaration that one turned away from the contemplation of Holy Families, or smooth-faced saints, or reclining Venuses, to come into the presence of some of Nogari's or Koninek's or Rembrandt's old, lined, weather-beaten faces,—men who had sailed round the Cape Horns of life, who had been tempest-tossed and shipwrecked, starved and frozen, who had been taught by rebuffs, by defeat, by exasperation, and misery, and who had grown rich in experience, in strength of soul.

My companion and I parted company when we entered the gallery door, each going our separate ways with our separate catalogues; but meeting sometimes in the course of the hours to exchange a few words about something of special interest. Perhaps it was about a renowned St. Sebastian, his body stuck full of arrows, his face as placid and emotionless as a full moon, the building close by no taller than his head; or Wouverman's white horse always moving under April skies; or the multitude of St. Jeromes, his lion now the most prominent figure, now only the waving tail visible in the dim distance; or the luxurious pile of silken cushions Angelica Kauffmann gave Ariadne to sleep upon. The sailing far away surely did not look very diligently for her, else they would have revealed her; or Jan Weenix's beautiful hare. When men love animals well enough to devote their lives to painting them, I wonder how they can endure to hang them up by one foot, the light of life quenched in the luminous eyes of deer and hares, or to represent birds in dead heaps on tables or floors.

The closing hour came before we were aware, so lightly the time sped away in that world of beauty and color and interest. After a dinner at the old inn, where beefsteak and potatoes or cutlets and mushrooms were perfect in quality and cooking and cost a mark and twenty-five pennings, we read catalogues and compared notes by the light of three tall candles for some hours more. For with the same quiet devotion that he gave to the catching of newts in Swarthmore springs, early on winter mornings, or worked over preserved cray-fish in the biological laboratory on holiday afternoons during his college days there, did this young man plunge into the observations and study of what was now before him.

The skies were leaky during our days in Dresden, and we could not go down the river and out on the fine stretch of moors and walk under the beautiful trees of which our friends had told us. Nor could we go to Meissen either, a short distance away, and full of interest with its old castles and pottery; and so we came back, the one to go next day for a tramp in the Hartz mountains, the other to start to-morrow for a trip to the "Back of the North Wind."

Berlin, Ninth month 8th, 1889.

O. R.

ETERNAL life. This is the great proof of immortality, the fact that it is written in human nature; written there so plain that the rudest nations have not failed to find it, to know it; written just as much as form is written on the circle, and extension on matters in general. It comes to our consciousness as naturally as the notions of time and space. We feel it as a desire; we feel it as a fact. What is thus in man is writ there of God, love at last; the nature of God is warrant that what is promised in man's nature shall be fulfilled in his development. Human nature is human destiny; God's nature, universal Providence. The mind tells us of truth which will prevail; conscience, of justice sure to conquer; the heart gives us the prophecy of infinite love certain to triumph. —*Theodore Parker.*

REMNANTS OF THE JEWISH DISPERSION. The fate of the lost ten tribes of Israel after their deportation to Assyria is one of the most vexing and perplexing enigmas of human history. That a great dispersion took place at a very early age is evident from the fact that remnants of this peculiar people are found in various parts of the globe in such a state and condition as to place the advent to their present homes centuries before the Christian era. The most noteworthy of these colonies are the so-called Black Jews of Abyssinia—the Falashas. They are about 200,000 in number and live in separate villages among the Christians of Abyssinia, occupying over against these a subordinate and often servile position. Ethnologically they are Semites like the Abyssinians themselves, and they, too, are coffee colored, according to the descriptions by the missionaries. The most reasonable explanation that can be given of their social inferiority is that they constitute that part of the Abyssinian nation which refused to accept the Christian religion. They claim that their ancestors came from Jerusalem when Menelik, the son of King Solomon by the Queen of Sheba, returned from Jerusalem and introduced the Jewish faith in Abyssinia. Abyssinian traditions of rather a reliable character speak of the Falashas as early as the fourth century. They have the Old Testament in the Ethiopic translation, but significantly enough for their advent into Africa, have not been to the slightest degree influenced by the factors that controlled post-exilic Judaism. The system of sacrifice is not largely developed, nor is their expectation of a Messiah strongly pronounced. Their superstitions are virtually the same as those of the Abyssinian Christians. Like the latter they speak the Amharic dialect, a modern representative of the old Ethiopic. They possess some few literary works, among them some prayers and liturgical formulas which have been translated by Halévy.

Christian missionary efforts among this strange people have been rather more successful than among the degenerated Christians of Abyssinia. The London Missionary Society has sent out several men, the pioneers among them being Stern and Flad. The former died several years ago; the latter is still living in Würtemberg, and recently received word from Abyssinia that the 800 Falasha Christians there with whom he has been in correspondence since he and the other Christian workers were expelled from the country by the late King John, have remained firm in their faith amid all the anarchy and wars that have in recent years almost destroyed the Abyssinian nation. This is the first news received from them for about six years. The Falasha Christians are in the charge of a talented convert, Argawi, who has several assistants.

Another of these strange old colonies of Jews is found near the city of Bombay, in India; and concerning them, too, recent and near data have been made accessible. Their number is between ten and twelve thousand, and they have many, many centuries lived in complete isolation from their brethren, the separation probably antedating the Christian era. They call themselves "Ben Israel," or Sons of Israel,

the post-exilic name Jew being a term of reproach among them. They still practice circumcision, as indeed the Falashas also do, in accordance with the Mosaic ritual. Until recently they did not possess the written Old Testament, oral tradition having taken its place. As a result their worship of Jehovah is strongly mixed with superstitions of all kinds, and even with idolatry and witchcraft. More than four centuries ago they had received from the Jews of Arabia the liturgy of the Sephardim congregations of Europe, and this they yet use in the hovels they call synagogues. Socially they occupy a low stage. In Bombay most of them are artisans, particularly stone-cutters and carpenters. Outside of the city they engage in agriculture, many of them growing and manufacturing oil. Their complexion is lighter than that of the Hindus, and their features show a decided Semitic or Jewish type. In clothing they imitate both the Mohanmedans and the Hindus. They will not eat with people adhering to another religion but drink out of the cups of the members of any caste. Usually they have two names, one from the Old Testament and another of Hindu origin.

There are other old remnants of the great Jewish Dispersion in the Orient, especially in Persia and China; but reliable information concerning them is difficult to secure. So much, however, is sure, that they present an interest deeper than that of mere curiosity; their presence may, when all the data are on hand, solve one of the most interesting, but also most unique and difficult questions of history.—*The Independent*.

THE DUNKERS OF EPHRATA.

SOME fifteen miles from Lancaster by turnpike and twenty by rail lies the little village of Ephrata. It is a very secluded, sleepy-looking little place, in spite of the railroad that runs through it, shut in by surrounding hills and by a low line of mountains dignified by the name of Ephrata Ridge. The houses of the town straggle along a broad road which crosses the railroad near the station, dips away until it sweeps around in a curve over a bridge, past an old mill in front of a broad built red brick house, and so away into the country. The houses, generally brick-built, in many cases of 1 fashioned, are very comfortable and home like.

Here one meets the Dunker *per se* in every by-road and lane—men with long beards and flowing hair parted in the middle. At the farm houses are pleasant, matronly faces, stamped with humility and gentleness, while an air of almost saintly simplicity is given by the clear-starched cap, the handkerchief crossed on the breast, the white apron, and the plain gray or drab stuff of the dresses.

The style of living of these good people, their manners and customs, are of the most primitive type. Their aim is to imitate the early Christians in their habits of life as well as in their religious tenets. There is absolutely no distinction of caste among them.

They settled at first near Philadelphia, in a spot which has since been called Germantown, from the various German religious refugees who settled there

in the early part of the last century. The sect is now chiefly confined to central and western Pennsylvania, but has spread to other States, principally those of the Northwest, though there are churches established in western Maryland, West Virginia, and North Carolina. Their dress is of the simplest description, quaint and old-fashioned in its cut; they offer no resistance to injuries; they observe no conformity with the world and its manners and customs; they refuse to take oaths in courts of law; in these and many other ways resembling the Society of Friends.

Some of their religious ceremonies are exceedingly curious. They celebrate the Lord's Supper after the manner of the primitive Christians. The feast begins about the time of candle-lighting. The men are seated upon one side of the meeting-house, the women upon the other. The first ceremony is that of the washing of feet, each sex performing this duty for its own. Those who are to engage in the ordinance presently enter the meeting, carrying tubs of lukewarm water, and each member on the front benches removes his or her shoes and stockings. A man on the men's side and a woman on the women's then wash the feet one by one, taking the right hand of each individual, as they finish the washing, and giving the kiss of peace. After the one who performs the washing follows another, with a long towel girded around the waist, who wipes the feet just washed, at the same time giving the right hand and the kiss of peace. As one benchful has the ceremony performed, it gives place to another. While this ceremony is being conducted the minister or teachers make a brief speech or read appropriate portions of Scripture relating to the subject.

The next ceremony is the supper itself. Each third bench is so arranged that the back can be turned upon a pivot at each end, so as to form the top of a long table. This is covered with a white cloth, and presently brothers and sisters enter bearing large plates or bowls of soup, which are placed upon the tables. Three or four people help themselves out of the same dish. After this the communion is administered, and the whole ceremony is concluded by the singing of hymns and preaching. This the brethren hold is the only true method of administering the ordinance of the Last Supper, and also hold that it is similar to that ceremony as celebrated in the earliest Christian Church.

Another peculiar ordinance among them is that of anointing the sick with oil, in accordance with the text in James, v. : 14. The sick one calls upon the elders of the meeting, and at a settled time the ceremony is performed. It consists of pouring oil upon the head of the sick person, of laying hands upon them, and praying over them.

The ordinance of baptism is administered in running water and by threefold immersion, the officiating minister then laying his hands upon the recipient, who still kneels in the water, and praying over him or her.

The ministers or teachers, who receive no stipend whatever, are elected by the votes of the members of the church, he who receives the largest number of

votes being pronounced elected. These elections are summoned by the elders of the church, who preside over them and receive the votes of the people, either *viva voce*, in whispers, or by closed ballots. If no candidate has a majority, or if there are a greater number of blank votes cast than for any one candidate, the election is pronounced void.

Such is a brief and condensed account of these people, and of their religious customs and ordinance. They are called Dunkers, or Tunkers, from the German *tunken*, which may be interpreted to dip, or probably "to sop" is a better equivalent word. They assume for themselves the name Brethren on account of the text, Matthew, xxiii. : 8, "One is your Master, even Christ, and all ye are brethren." They also sometimes call themselves "God's Peculiar People." —Howard Pyle, in *Harper's Magazine*.

NEWS AND OTHER GLEANINGS.

—The death of Eliza Cook, the poetess, occurred on the 25th of last month, at Wimbledon, England, where she had lived in seclusion for many years.

—"The largest fig orchard in the United States," says the *Los Angeles Champion*, "is about to be set in Pomona Valley, between Pomona and Ontario. The orchard will consist of 11,000 white Adriatic fig trees, and 5,000 Smyrna fig trees, planted eighty to the acre, on 200 acres."

—Thirty-five thousand Spauliards last year emigrated to South America, and ten thousand to Algeria. The Basque Provinces, the Asturias and Galicia, are furnishing thousands of sober and able-bodied workers for the Argentine Republic. The Spanish Government tries in vain to dissuade the people from leaving their homes. They prefer free land and high wages in the New World rather than low wages and crushing taxation in the Old.

—A new step in the line of progress has been taken by the Smithsonian Institution. With a view of adding to the National Museum by exchanges and getting accurate information as to the manner of carrying on foreign museums, their mode of exhibiting specimens, etc., Prof. O. T. Mason has been sent on a tour of the more important museums of Europe. Scarcely a man of greater experience and a more careful observer could have been sent. His report is looked for with great interest.

—Spain is proposing to celebrate the fourth centenary of the discovery of America by offering a prize of £1,200 for the best history of that event. The history may be in Spanish, Portuguese, English, German, French, or Italian. £600 will be given to the author of that history adjudged to be second in merit.

—Many reports have been published relative to the great benefits derived by means of the use of oil to prevent heavy seas from breaking on board vessels. By far the greater number of these reports have been received from merchant vessels, very many of which have undoubtedly been saved, with all on board, by the use of a few gallons of oil in the manner recommended by the United States hydrographic office. But, says *Science*, reports from the United States naval vessels show that even aboard men-of-war the use of oil is regarded as of the greatest value. —*Christian Register*.

—The elections in Brazil are reported to have given a decided majority to the party of progress, who are in sympathy with the ideas of Dom Pedro as to Slavery and other matters. This indicates a great change of feeling in the country, as for many years past the imperial policy of eman-

icipation has been carried forward in spite of a majority of representatives of the planting interest in the Imperial Parliament. Indeed the liberation of the Brazilian slaves may be said to have been the work of one man, who at least finds the nation on his side, after living more obloquy than usually falls to a monarch. The friend of Whittier, the disciple of Coleridge, represents a higher type of civilization than do his people in general; but his patience and his faithfulness to duty are coming to bear the legitimate fruit. When he dies he will lie down in an honored grave, to which an emancipated race will make pilgrimage.—*The American.*

CURRENT EVENTS.

The Congress of the American States,—this country and the principal nations of South America,—began its sessions at Washington on the 2d instant. There are 31 delegates, of whom 10 represent this country. The subjects to be considered relate to commercial intercourse, arbitration, etc.

PRESIDENT HARRISON and his family returned to Washington from Deer Park, on the 27th ultimo.

It was announced, on the 27th ult., that in a few days Secretary Proctor will send a board of army officers, in company with a committee of the Indian Rights Association, to conclude the purchase of the tract of land in North Carolina upon which Geronimo and his Indians, now in Alabama, will be placed.

FOREST fires have been reported from many parts of California. In Santa Cruz, San Mateo, Sonoma, and Marin counties the loss has been very heavy, as valuable timber is destroyed and many suburban villas are burned.

The faculty of the College department of the University of Pennsylvania, at a recent meeting, (Ninth month 20), voted 19 to 2, in favor of admitting students "without distinction of sex," to the several courses in that Department. The question now goes to the Board of Trustees for a decision. The Board, when the subject was up some years ago were opposed to co-education, but their present views are thought to be more favorable to it. (The movement now on foot does not relate to the Medical department, it being under a separate faculty.)

Association of Friends to Promote the Education of the Colored People of the South.

EXECUTIVE COMMITTEE—Edward H. Magill, Swarthmore, Pa.; Sarah H. Peirce, Philadelphia; George L. Maris, West Chester, Pa.; Mary Ann Fulton, Wilmington, Del.; Amos Hillborn, Philadelphia; Alfred Paschall Doylestown, Pa.; Estelle Hall, Swarthmore, Pa.; Clement M. Biddle, 815 Arch street, Phila.

WORK OF THE ASSOCIATION.

The work of the Association is chiefly to raise funds. These are sent to the support of two schools for colored youth in South Carolina,—the Schofield Normal and Industrial School, at Arkin, and the Mt. Pleasant School, near Charleston, in charge of Abby D. Munro.

It is estimated that the potato crop of the United States, this year, will be 243 millions of bushels. This exceeds last year's crop by 17 millions bushels, and is the largest ever raised.

THE deaths in this city, last week, numbered 312, being 65 less than for the preceding week, and 12 less than in the corresponding week of last year. There were 15 by typhoid fever.

NOTICES.

* * A Children's Meeting under the care of the Friends' Temperance Committee of Bucks Quarterly Meeting, will be held in the meeting-house, at Dohington on First-day, Tenth month 6th, at 2.30 p. m.

All interested are cordially invited.

HANNAH K. FLOWERS, Clerk.

* * Meetings and First-day Schools in Philadelphia:—The evening meeting at Green street meeting-house will be resumed to-morrow evening at 7.30 o'clock. The evening meeting at Race street is suspended till otherwise decided.

The First-day Schools at Green street, West Philadelphia, and Girard Avenue will be resumed to-morrow morning, before meeting. The First-day School and the Conference at Race street will be resumed, after meeting. It is hoped that the young people will be encouraged to attend, and that the older ones also will not withhold from participating.

The First-day School at Friends' Mission, Beach street and Fairmount Avenue, will also be resumed at 3 p. m. Additional teachers are much needed: cannot some of our young people be induced to aid?

* * Concord First-day School Union will be held at Newtown, Delaware county, on Seventh-day, Tenth month 19, at 10 a. m. All interested are invited to meet with us.

E. J. DURNALL,
MARY YARNALL, } Clerks.

PUBLISHERS' NOTICES.

* * We particularly ask that when money is forwarded to renew subscriptions, care be taken to give us the name of the person to whom the paper is now being sent. Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a new subscription, please say so, and this will also to help avoid mistakes.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. Sold only in cans. ROYAL BAKING POWDER Co., 106 Wall-st., N. Y.

JARVIS-CONKLIN MORTGAGE TRUST COMPANY,

Capital Paid In, . . . \$1,500,000.

Six per cent. Guaranteed Mortgages on Farm and City properties.

Six per cent. Debenture Bonds interest payable half yearly. Five per cent. Saving bonds in small or large amounts running six, twelve, eighteen, or twenty-four months.

These Bonds are issued under the supervision of the Bank examiners of the state of New York, with whom we have deposited 1-10th of our Capital in Government Bonds.

We issue installment Saving Bonds, secured by real estate security, running 10, 15, and 20 year. Send for pamphlet.

PRAYER.

MORE things are wrought by prayer
Than this world dreams of. Wherefore let thy voice
Rise like a fountain for me night and day.
For what are men better than sheep or goats,
That nourish a blind life within the brain,
If, knowing God, they lift not hands of prayer,
Both for themselves and those who call them friends?
For so the whole round world is every way
Bound by gold chains about the feet of God.

—Tennyson.

THE CHRISTIAN DAY OF REST.

THE response of the Great Teacher to those who accused him of breaking the Sabbath places the question of the observance of the Day of Rest upon its true ground. "The Sabbath was made for man, and not man for the Sabbath." No stronger testimony can be borne to its value as an institution necessary to the well-being of the race, and essential to its best development. That a weekly day of rest has been observed from the most early times as a natural law is conceded by all civilized nations, and lies at the very beginning of the history of the most ancient peoples. In the biblical account it comes in with the division of time into weeks, and its observance as a day of rest is based upon the consideration that the Divine Being rested from the work of creation on the Seventh-day. As simply a day of cessation from labor the motive was scarcely strong enough to insure its observance in the remote ages when might made right and the strong were the oppressors of the weak. In no other way could it be maintained as an institution in which all, whether bond or free, had equal interest, but by surrounding it with the sacredness of a divine dispensation which must be observed under penalty for disobedience, and as such was made a command of the Decalogue and called the Sabbath, which means rest,—cessation from labor. This gave the Seventh day a peculiar sanctity, and it is on record that a man who was found gathering sticks to make a fire on the Sabbath, was arrested, convicted of the crime, and stoned to death. This penalty was inflicted while the Hebrews were encamped in the wilderness and before they had reached the land of promise. We must not judge too harshly in this and many other cases where equally strong measures were used to enforce obedience to the laws and regulations upon which the permanency of their existence as a separate nation mainly depended. They were but recently emancipated from a bondage in which the only concern of their task-masters had

been to subjugate them by cruel oppression, and the influence of such a course was to debase and degrade the people. This emphasizes the need for stringent laws and the most rigid adherence to their requirements as laid down in the law which they accepted as inscribed by God's own hand upon the tablets of stone. It was indeed the only resort that remained for Moses, of whom they often wearied and wished themselves back in their Egyptian degradation.

The significance of the Sabbath as a day of rest from physical labor was gradually lost in the sacredness that attached to it as an ordinance of the church, and the most onerous restrictions were laid upon the people by the exactions that entered into every ramifications of social and domestic life. The old prophets were not wanting in reproof of this abuse, and we find repeatedly that the voice was raised in condemnation of the new moons and the Sabbath observances, while justice and uprightness were far from them.

So when Jesus came forth as a Teacher anointed of God to bear the glad tidings of the Gospel to his nation, he placed the Sabbath again on the original ground; he justified acts of necessity and of mercy, and made the doing of good on that day obligatory upon all who would be his disciples. Upon this same ground the Society of Friends stands, accepting it as a dispensation calculated to increase the comfort and happiness of the human family, but in no sense any holier than the six days in which man is called to labor for his bodily sustenance. It has been the great aim of the leaders of religious thought among our people to encourage the use of the day of rest as affording an opportunity by its freedom from worldly cares for attendance upon public worship and the cultivation of the gifts and graces of the spiritual life, yet the day may not become by such use more holy than other days. Meetings are held also in the middle of the week, at which Friends are encouraged to present themselves, believing that the Divine blessing is dispensed as freely then as on the Sabbath. We all know that the true rest, the Sabbath of the soul, of which the outward Sabbath is a type, is only realized when we rest from all care and worry that disturbs our peace and leads away from the source and centre of all good; and while the day of rest is a great boon to the human family, it must not be taken out of its right place in the economy of human life, even though it be given to the strictest devotion and worship the most sacred and imposing. The Christian world can add nothing to the glory of our Heavenly Father by all its oblations, all its worship. "To obey" his law written on the tablet of

every heart, "is better than sacrifice, and to hearken to his voice than all the observances with which the wisdom of man has hedged about the approach to the holy of holies, where his mercy-seat is found, and where a perfect love that casteth out all fear, brings the soul into communion with the Divine Intelligence." L. J. R.

LETTER OF ELIAS HICKS TO DR. NATHAN SHOEMAKER.

[THE original (manuscript) of the following letter from Elias Hicks to Dr. Nathan Shoemaker, of Philadelphia, was presented recently to one of the editors of the INTELLIGENCER AND JOURNAL with a view to its publication. It is already in print, being included, as many of our readers are doubtless aware, in the collection of Elias Hicks's letters published by Isaac T. Hopper in 1834, and since reproduced (1861) by T. Ellwood Chapman, and perhaps by others.—EDS. INTELLIGENCER AND JOURNAL.]

JERICHO, Third Month 31st, 1823.

Dear Friend:

Thy acceptable letter of First month last came duly to hand, but my religious engagements, and other necessary concerns, have prevented my giving it that attention that its contents seem to demand. Thou queries after my views of the suffering of Jesus Christ, the Son of God, and what was the object of the shedding of his blood on the cross, and what benefits resulted to mankind by the shedding of this blood, etc. I shall answer in a very simple way, as I consider the whole subject to be a very simple one, as all truth is simple when we free ourselves from the improper bias of tradition and education, which rests as a burdensome stone on the minds of most of the children of men, and which very much mars the unity and harmony of society.

1st. By what means did Jesus suffer? The answer is plain, by the hands of wicked men, and because his works were righteous and theirs were wicked. Query. Did God send him into the world purposely to suffer death by the hands of wicked men? By no means; but to live a righteous and godly life, (which was the design and end of God's creating man in the beginning), and thereby be a perfect example to such of mankind as should come to the knowledge of him and of his perfect life. For, if it was the purpose and will of God that he should die by the hands of wicked men, then the Jews, by crucifying him, would have done God's will, and of course would all have stood justified in his sight, which could not be. But it was permitted so to be, as it had been with many of the prophets and wise and good men that were before him, who suffered death by the hands of wicked men for righteousness' sake, as examples to those that came after, that they should account nothing too dear to give up for the truth's sake, not even their own lives.

But the shedding of his blood by the wicked scribes, pharisees, and people of Israel, had a particular effect on the Jewish nation, as by this, (the topstone and worst of all their crimes), was filled up the measure of their iniquities, and which put an end to that dispensation, together with its law and covenant. That as John's baptism summed up in one all

the previous water baptisms of that dispensation, and put an end to them, which he sealed with his blood, so this sacrifice of the body of Jesus Christ, summed up in one all the outward atoning sacrifices of the shadowy dispensation, and put an end to them all, thereby abolishing the Law, having previously fulfilled all its righteousness, and, as saith the apostle, "He blotted out the hand-writing of ordinances, nailing them to the cross;" having put an end to the law that commanded them; with all its annexed legal sins, and abolished all its legal penalties, so that all the Israelites that believed on him, after he exclaimed on the cross, "It is finished," might abstain from all the rituals of their law, such as circumcision, water baptisms, outward sacrifices, Seventh-day sabbaths, and all their other holy days, etc., and be blameless; and the legal sins that any were guilty of, were now remitted and done away by the abolishment of the law that commanded them, for, "where there is no law there is no transgression." But those that did not believe on him, many of them were destroyed by the sword, and the rest were scattered abroad in the earth. But, I do not consider that the crucifixion of the outward body of flesh and blood of Jesus on the cross, was an atonement for any sins but the legal sins of the Jews; for as their law was outward, so their legal sins and their penalties were outward, and these could be atoned for by an outward sacrifice; and this last outward sacrifice was a full type of the inward sacrifice that every sinner must make in giving up that sinful life of his own will, and by which he bath from time to time crucified the innocent life of God in his own soul; and which Paul calls "the old man with his deeds," or "the man of sin and son of perdition," who hath taken God's seat in the heart, and there exalteth itself above all that is called God, or is worshiped, sitting as Judge and Supreme. Now all this life, power, and will of man, must be slain and die on the cross spiritually, as Jesus died on the cross outwardly, and this is the true atonement, which that outward atonement was a clear and full type of. This the apostle Paul sets forth in a plain manner, Romans vi. 3, 4: "Know ye not that so many of us as were baptized into Jesus Christ, were baptized into his death? Therefore we are buried with him by baptism into death, that, like as Christ was raised up from the dead" outwardly, "by the glory of the Father, even so we," having by the spiritual baptism witnessed a death to sin, shall know a being raised up spiritually, and so "walk in newness of life."

But the primitive Christian church having soon after the apostles' days, turned away from their true and only sufficient guide, the Spirit of Truth, that Jesus commanded his disciples to wait for, and not attempt to do any thing until they received it, but assured them that when they had received it, it would be a complete and sufficient rule, *without the addition of any other thing, as it would lead them and guide them into all truth.* And to its sufficiency, John, the beloved apostle, bore this noble and exalted testimony, in full accordance with his Divine Master, in this emphatic language to his fellow believers: "Ye have an unction from the Holy One, and need not that

any man teach you, but as the same anointing teacheth you, which is truth, and is no lie." But the believers, by too much looking to their old traditions, soon lost sight of, or neglected fully to attend, as they ought to have done, to this inward guide, and turned their attention outward to the letter which *always killeth those who lean upon it as a rule.* Hence, the successors of those meek and self-denying followers of the example and commands of Jesus, apostatized from the simplicity of the gospel, by which the unity was broken, and they soon became divided into sects and parties, and persecuted each other; and invented and promulgated inconsistent and unsound doctrines, such as original sin, certifying that all Adam's offspring are condemned to eternal punishment for one mis-step of our first parents; for they do not appear to have been guilty of but one failure, and that, it appears, they made satisfaction for at the time of their first arraignment by their benevolent Creator, manifesting sorrow and repentance: which seems to be fairly implied by the sequel of the interview between them; for it is said he clothed them with coats of skins, to hide their nakedness, which is an emblem of durable clothing, and as their nakedness was not an outward one, but a nakedness of soul, not being able to conceal their sin from the All-penetrating Eye of Divine Justice, so when he had brought them, through conviction, to see their error and to repent of it, he was reconciled to them, and clothed them again with his Holy Spirit.

And inasmuch as those idle promulgators [of the doctrine] of original sin, believe they are made sinners without their consent or knowledge, which, according to the nature and reason of things, every rational mind must see is impossible; so likewise they are idle and ignorant enough to believe they are made righteous without their consent or knowledge, by the righteousness of one who lived on earth near two thousand years before they had an existence, and this by the cruel act of wicked men slaying an innocent and righteous one; and these are bold and daring enough to lay this cruel and unboly act to the charge of Divine Justice, as having purposely ordained it to be so. But what an outrage it is against every righteous law of God and man, as the Scriptures abundantly testify. See Exodus xxiii. 7 "Keep thee far from a false matter, and the innocent and righteous slay thou not, for I will not justify the wicked." Deut. xxvii. 25, "Cursed be he that taketh reward to slay an innocent person;" and much more might be produced to show the wickedness and absurdity of the doctrine, that would accuse the perfectly just, all-wise, and merciful Jehovah of so barbarous and cruel an act as that of slaying his innocent and righteous Son to atone for the sins and iniquities of the ungodly.

Surely is it possible, that any rational being that has any right sense of justice or mercy, would be willing to accept forgiveness of his sins on such terms! Would he not rather go forward and offer himself wholly up to suffer all the penalties due to his crimes, rather than the innocent should suffer? Nay, was he so hardy as to acknowledge a willing-

ness to be saved through such a sacrifice, would not it prove that he stood in direct opposition to every principle of justice and equity, of mercy and love, and show himself to be a poor selfish creature, unworthy of notice?

Having given this sketch of my views on the subject of thy question, how far thou may consider them correct, I must leave to thy judgment and consideration; and may now recommend thee to shake off all traditional views that thou hast imbibed from external evidence, and turn thy mind to the light within, as thy only true teacher: wait patiently for its instruction, and it will teach thee more than men or book can do; and I feel thee to a clearer sight and sense of what thou deservest to know, than I have words clearly to convey it to thee in. That this may be thy experience, is my sincere desire; and with love to thyself and family, I conclude, thy affectionate friend.

ELLAS HICKS.

For Friends' Intelligencer and Journal.

RISING DURING PRAYER.

IN THE INTELLIGENCER AND JOURNAL I note, page 604, a brief synopsis of Haddonfield Quarterly Meeting, in which allusion is made to some remarks on the custom of rising to the feet in time of supplication, as adopted by the Society at a very early period, instead of the one of bowing or kneeling down. However, G. T. H. does not fully give the points presented, which were, the unbecoming appearance of part of an assembly rising and a part sitting still, as a condition referred to our First query, being a manifestation of a want of unity in action at what should be a solemn service.

We should consider principles in reflecting upon matters of importance to the Society. The regulation of the meetings of the Society, both in setting up and in their ordering belongs to the Society and not to individuals. It would not do for A to say "I will go to meeting on Fourth day" and B to say "I will on Fifth-day," C on Third day, and D on Sixth-day, but by the proper body the day and hour is settled and all yield their individual preference to it, and thus there is a manifestation of unity; but if for reasons which may present, the proper body decides on a change from one day to another, or from one hour to a different time, all change in agreement with the voice of the proper meeting. Here unity and fellow-feeling are manifest, to the strengthening of each other. For when we are members of any association whatever, in matters of the association and for which it is organized we sink our individual character. It is no longer A or B, but a member of the Society. Hence, the speaker at Haddonfield Quarterly Meeting gave no indication of his own preference, but as the Society of Friends had adopted a usage which for some two hundred years has been practiced, (and it may be further said some complaints and disagreements had followed its discontinuation), it should be observed until in the regular order it be changed. If any are dissatisfied with it or think they see a better way in the interest of unity, it would be better to open the matter to the proper meeting, and if there united with, it could go to a

superior one, and finally to the body at large. Therein the fellowship of brotherhood would be manifested instead of the self-will of individuality. There is a right way of doing right things, and it promotes the comfort of all concerned.

In the apostasy of John Perrot, (in George Fox's time, about 1660), a disposition of individualism was prominently manifested, and led him away from the meekness of Christian feeling so far that he became a fierce persecutor of the friends of that which he at one time professed.

Supplication to the Divine Power on behalf of others requires the greatest certainty of religious duty, and if those for whom petition is made do not feelingly enter into the request, they cannot be supposed to be edified by it. Some of the most severe animadversions by our Blessed Master were in condemnation of formal prayers, and he pressingly advised his followers to silent spiritual aspirations to their Heavenly Parent. It is noted by Wm. Penn that G. Fox seldom entered into public prayer, which W. P. considered an evidence that those whose spirits dwell the nearest to the Divine Presence approach him with the most awe. Frequently engaging in public supplication, is (to the writer) a mark of want of a right settlement upon the sure foundation which God has given to his church, and instead of gathering into solemnity of feeling tends to dissipate that which may have been felt.

Yet, no doubt, when entered into from a sense of duty to the great Head of the militant church and of the awful responsibility attending, it is one of the means by which the life is brought to light, to the building up of the soul in that faith in which we draw nigh unto the Divine Good, and is thus a blessing to the people. To this end great indeed is the necessity that the instrument be clean-handed. The words then will be few, filled with power to melt down every obstruction, and to raise every thought heavenward, and reaching the witness whose testimony none can gainsay.

On this important subject see Exodus, 20: 7; Ezekiel, 20: 8; and an essay in the Journal of John Comly, pp. 618 to 623.

R. HATTON.

For Friends' Intelligencer and Journal.

THE MORE SURE WORD OF PROPHECY.

WHEN Jesus stood on the Mount of Transfiguration with his chosen companions, there appeared unto them Moses and Elias talking with him. Peter, in his suggestive haste, desired to build three tabernacles,—one to each, for he wot not what to say,—Moses, the representative of the Levitical law, Elias "who was for to come," John the Baptist, whose dispensation was to end with the Mosaic, disappeared, and Christ only remained. He whose spiritual law, that obeyed in the heart, makes the comers thereunto perfect; he, the founder of that one saving baptism of the Holy Spirit and fire, stood before them and a voice from Heaven proclaimed "This is my beloved Son: hear ye him." When thine ear shall hear a voice saying, "This is the way, walk thou in it," if we "hear and obey, our souls shall live."

Our Lord exhorted Peter when he should be converted to strengthen his brethren.

Conversion, even after so long a companionship with the Messiah, seems not then to have been effected, so slow were the Israelites to receive the spiritual dispensation, but subsequently Simon proved his faithfulness to his Master's injunction. In a loving, tender, weighty epistle he reminds them of the exceeding great and precious promises, and exhorts to give all diligence to add to their faith, virtue, knowledge, temperance, patience, gentleness, brotherly kindness, and charity; for if those abounded there would neither be barrenness nor unfruitfulness in the knowledge of our Lord Jesus Christ.

Ye, he thought it meet as long as he was in the body to stir them up, and he wanted to do his part to enable them after his decease to have the good things in remembrance; for he knew they had not followed cunningly devised fables, but living substantial truths, when they made known the power and coming of the Lord, but they "were eye witnesses of his majesty." For he received from God the Father honor and glory, when there came such a voice to him from the excellent glory, "This is my beloved Son in whom I am well pleased: hear ye him."

Peter testified they heard this voice when they were with Him, and then adds, "We have also a more sure word of prophecy whereunto ye do well that ye take heed, as unto a light that shineth in a dark place, until the day dawn, and the day star arise in your hearts." A more sure word than that of the Almighty himself speaking audibly to the ear of man! Yes more sure, for it extends to all. Christ says, "the words that I speak unto you, they are spirit, and they are life:" and, lo, I am with you always, even unto the end of the world." The Inspeaking Voice of Immanuel in the soul is a more sure word than one heard by the natural ear, inasmuch as it is heard by the spiritual one. The Voice on the Mount was audible to few—this is universal. It is the same as the grace that brings salvation, and hath appeared to all men. It calls, "Look unto me and be ye saved all the ends of the earth." Its cry is, "all flesh is grass, that withereth, and the flower fadeth, but the word of our God shall stand for ever." This is the inspeaking word of Truth in the souls of the children of men, unto which we do well to take heed until the day dawn. If we do faithfully, the Sun of Righteousness will throw His glorious rays upon us to illumine our pathway. This is the Word that was in the beginning with God and was God. He who is the Life and Light of man will lead and guide us into all Truth. He will enable us to make straight steps to our feet, never leave or forsake us in mutability, and will prepare us to join that innumerable company John saw around the throne, who had come out of great tribulation, and had their robes washed and made white in the blood of the Lamb."

To talk well is good, but to live well is much better.—Thomas Chalkley.

SCRIPTURE LESSON No. 39.

TENTH MONTH 20TH, 1889.

DAVID'S THANKSGIVING.

GOLDEN TEXT:—In everything give thanks.—1 Thes. 5: 18.

READ 2 Samuel 7: 18-29.

AFTER setting up the Ark in the Tabernacle prepared for its reception, and the offering of burnt sacrifices and peace-offerings, and the appointing of Levites to minister before the Ark (1st Chron. 16: 1-4), David turned his attention to the improvements already in progress within the walls of the city. Hiram, the King of Tyre, had sent cedar wood and workmen, who built him a costly palace suited to his high station.

As he sat in this house and called to mind all that he had been favored by Jehovah to accomplish for his nation, "he became so sensible of God's goodness toward him upon the daily success of whatever he took in hand, that he began to make it a matter of conscience to live in a palace of cedar himself that was as stately and beautiful as art and ornament could make it, and at the same time to lodge the Ark in a tabernacle, so that he resolved to erect and dedicate a temple to God's honor and worship, and according to the prediction of Moses." (Josephus). It was while this subject was on his mind that Nathan, the prophet, is first mentioned, and we are led to infer that when Samuel was gathered to his fathers, Israel was not left without the voice of a prophet and spiritual guide, although nothing is written in reference thereto. That Nathan was a true servant of God, and endued with prophetic insight, is shown in the events of David's life, which gave him prominence in the history of that king's reign.

The first part of the chapter which contains our lesson should be read in connection with it, that we may understand more fully the circumstances which led David to offer the prayer of thanksgiving. He seems to have been so overwhelmed with the revelation of the Divine purpose toward him and his family, that he gave himself up to emotions of joy and gladness.

Sit before the Lord. This was probably in the Tabernacle before the Ark, which was believed to be a dwelling-place of the Divine glory; or he may have had a chamber in his own house consecrated to communion with God. The lesson is of great importance, as showing the advantage of retiring apart from the busy throng into the quiet, where we may commune with our Heavenly Father, and worship in spirit and in truth. Such intercourse prepares the individual for the faithful performance of duty, and strengthens every good and worthy purpose.

Whom I, etc. The thought seems uppermost in the mind of David of the low condition from which he had been called to be the head of Israel, and he is humbled before God, who has so exalted him.

Thou hast spoken of thy servant's house, of his posterity. To have sons to inherit whatever wealth or distinction he may have acquired, was accounted by the Israelite a great favor. We may recall the sad reflection of the then childless Abraham, when pouring out his soul before God, he exclaimed: "What wilt thou give me, seeing I go childless?"

With thy blessing let the house, etc. This is the highest and noblest petition, and one that every parent may and should offer. There are many things that people who live only to gratify the desires of the physical and intellectual life account blessings which do not come within the range of Divine blessing,—rather leading away from the higher and more enduring good. To be blessed with the blessing of God,—to feel that his Holy Spirit is round about us, and, with the tenderness of Divine love, encircles our lives, is to enjoy the fullness of blessing.

The sacred obligation that we should feel to render gratitude and praise to the Dispenser of our gifts—even before we enjoy them—is one which we are too apt to overlook. In our trials we run to our Heavenly Father for succor, but when favors are showered upon us, we receive them as a matter of course; too often being unmindful of the source whence they come. Let us try to cultivate a spirit of reverent thankfulness in all the varied relations of life, for it helps to draw us closer to the Divine Father.

A really thankful heart will find a motive for gratitude in everything, and the happiness that ever springs from the habitual presence of grateful feeling toward God is indeed of priceless value.

Let us give thanks unto the Lord, not only for the bounties which proceed more immediately from His hand—blessings so common that they seem to belong to us by right, and for which we seldom pause to return thanks,—but for the benefits which are conveyed to us by others, for they are alike from Him. Mary Howitt, in writing to a dear aged friend, says: "I think both of us have to give thanks and to bless the good Providence of God, for having given us birth of parents whose lives were simple and pure,—sound health, a love of nature, and simplicity of taste were our birthright."

Remembering that the same Lord sends the trials and sorrows of life, as well as the blessings, will help us in whatsoever state it may please infinite wisdom and goodness to place us—therewith to be content—and to retain a spirit of thanksgiving.

NOTES ON THE LESSON.

There appears little more to say upon this lesson than has already been given. We are brought to the point which David reached when he exclaimed: "And what can David say more unto thee? for thou, Lord God, knowest thy servant." It is as true to-day as when these words were uttered, that God, whom the blessed Jesus taught us to call Our Father, knows us better than we know ourselves, yet this does not release us from the obligation to acknowledge him in all our ways; nor should we fail to ask his help in all our undertakings. By thus asking the channel of communion is kept open and unobstructed, and we can say with the ancient patriarch, "I know that my Redeemer liveth." This knowledge increases our obligation, and the true worshiper has no need to be reminded of the injunction contained in our golden text: "In everything give thanks." In its fulfillment we are not required publicly to ex-

press our gratitude and thanksgiving on all occasions. This had become so common among the Hebrews that it had degenerated into lip service; "They honor me with their lips when their hearts are far from me," was the Divine rebuke through the mouth of the prophet. It was in condemnation of this practice that Jesus cited those who were with him to the hypocrites, as he designated the men who love "to stand and pray in the synagogues and in the corners of the streets that they may be seen of men." The true disciple in the quiet of all that is outward and full of wordiness, enters into the closet of the soul, and in that quiet which is only to be gained through closing every avenue to the outward, pours out the overflowings of thanksgiving and prayer to the Father who seeth in secret, and rewardeth openly, or, as the revised version renders it, "shall recompense thee." And this in no sense was intended to condemn prayer in meetings for worship or in family gatherings, as the heart may be stirred to petition for such Divine help as the gathering may be in need of, or to return thanks for special favors divinely bestowed, yet Friends have endeavored to remember the injunction of Jesus, in the offering of vocal prayer and thanksgiving, and this is in full accord with the ancient testimony given forth nearly one thousand years before his coming, "Be not rash with thy mouth, and let not thy heart be hasty to utter any thing before God, for God is in heaven, and thou upon earth, therefore let thy words be few."

THE TENDENCY TO MULTIPLY FORMS.

[We have more than once said that the tendency of formal worship was to increase and emphasize its forms—that when simplicity was once departed from, and formality entered upon, then the logical forces of the movement carried it forward to the most elaborate rituals. Here is an article from the *Christian Union*, addressed to "church" people, in which our readers may be interested to find the same idea elaborated and enforced.—EDS.]

That in all our churches, liturgical and non-liturgical, there is something of a ritualistic tendency will hardly be questioned by any one who is observant of the signs of the times. Within the last year three or four books of service have been published for use in non-liturgical churches. Though these services have not come into any general use, something shorter and simpler has been adopted by a number of such churches. We believe that last year a movement was made, though we think without any great results, for the framing of a simple liturgical service for use in the Methodist Church. There has been quite a pronounced movement for the revival of a liturgy in the Reformed Dutch Church. In the Episcopal Church the tendency toward a fuller and more elaborate ritual is very marked, both in England and America. And even among those in that Church who are most strenuously opposed to everything that looks like a Romanizing tendency, many are in favor of what is termed an "enrichment" of the liturgy.

That in this almost universal movement there is an outreaching after a better, fuller, and richer worship in our churches, an outreaching to be welcomed

and encouraged,¹ we do not doubt. Nevertheless, it is a movement which is not without its serious dangers, against which ministers and churches have need to be on their guard. History does not indicate that the church which has put the greatest stress on worship has been the church which has rendered the greatest Christian service to the community. In the Roman Catholic communion, not the priests with their masses, but the preaching friars, unordained and unauthorized to administer the sacraments, have been the chief source of spiritual life in the Roman Catholic communities. Whatever Episcopal dignitaries may have thought in the 18th century concerning the "consecrated cobblers" whom Sidney Smith peppered with ridicule, we can now look back and see that what preserved England from the rationalism of Bolingbroke and Hume was not the worshipping cathedrals, where liturgies were rich and sermons were poor, but the public preaching in the high ways, on the commons, and in the lanes, where the service of instruction was preëminent and the service of worship was slight. To-day the Episcopal Church, in its revival services aimed to reach the masses with the Gospel, abandons its elaborate liturgy and contents itself with a few short and simple collects. Nor do we think it is denominational prejudice which leads us to say that the moral life of the American people, on the whole, owes vastly more to the work which has been done by the non-liturgical churches than to the liturgical. . . .

If we turn back from church history to the Bible, that also points in the same direction. The Jewish Church was not a missionary organization; it made no attempt to convert; it had no spirit of aggressive love; it lived in an attitude of self-defense and self-protection; it was preëminently a worshipping and a liturgical organization. And yet, even in Old Testament times, it is easy to see, from the perusal of the sacred books, that the moral life of the nation was far more nurtured by prophets whose itinerant ministry was unaccompanied by any order of public service than by the priesthood who were the administrators of an elaborate liturgical worship. With the coming of Christ the function of the church was changed. It ceased to be a self-protecting and a self-defending institution. The characteristic of the Jewish Church was worship; the characteristic of the Christian church is work. Christ's first call of his disciples was not to public worship nor to divine sacraments, but to active service: "Follow me, and I will make you fishers of men." In his first sermon, in which he set forth the principles of his kingdom, he made no hint of sacraments, and no suggestion of rules for public worship, but he laid stress on Christian work, bidding his followers be like the salt that had not lost its savor, and like lights set for the illumination of the household. When, after a year's association with them, he sent the twelve forth on their first mission, it was not to administer sacraments which had not yet been established, nor to conduct public worship—concerning which he was entirely

[¹ The soundness of this view we question, of course. And is it not answered in the sentences immediately following?—EDS. INTELLIGENCER AND JOURNAL.]

silent—but to heal the sick, give sight to the blind, preach glad tidings to the poor, cast the evil spirits out of those that were possessed; in other words, to engage in philanthropic labors for their fellow-men. And his last message to them, just before he left them forever, after his resurrection, though it included a command to baptize—a command so far enigmatical that it has been differently interpreted by different branches of the Christian Church—laid chief stress upon the duty of preaching and teaching. In this consists the great commission.

As the churches in our cities, towns, and villages come together after the period of measurable rest, it will be well for them to reconsider the fundamental question, For what are they organized? Are they miniature Jewish temples, to follow the pattern set for them in Leviticus? or are they imitators of Jesus of Nazareth, to follow the example set for them in the Sermon on the Mount? Are they primarily organizations for the conduct of public worship, incidentally to do such work and furnish such instruction as is consistent therewith? or are they primarily organizations to preach the glad tidings of God's love to those that know nothing of it, and to teach the law of human brotherhood, "Thou shalt love thy neighbor as thyself," combining therewith so much and only so much of public worship as makes them more efficient for Christian and philanthropic activity? We do not undertake to say—indeed, we do not think it possible to say—in what proportions these two elements should be intermingled; but we are certain that the Christian Church should give the first place to work for man. That public worship of God is most acceptable to Him which best fits in with, and prepares for, the best and highest service for God's children.

THE RIGHT USE OF THE SCRIPTURES.

THE *Sunday School Times* has an excellent article in reply to a correspondent, in reference to the spirit in which Scripture is to be interpreted. "We must consider," it says, "the standpoint and habits of thought in those persons by whom and for whom the Bible was originally written." The writer addresses the declaration by Paul to the Corinthians, "If a woman is not veiled, let her also be shorn," and says: "We are not justified in claiming that the letter of Paul's declaration is binding upon all Christian women, even though its spirit is. The same principle of interpretation applies to many a Bible mention of the use of wine and oil. Oil was the principal medicine used in the days of the Bible writers, and it was freely used as a cosmetic. Wine was then generally used in that region as a refreshing, stimulating drink, and naturally it finds frequent mention in the Bible accordingly. We have certainly no more right to say that these words make wine-drinking right or desirable for us at the present time than to say that they make face oiling right and desirable for us.

"And when we consider further the teaching of the Apostle, 'I will neither eat flesh or drink wine, nor anything whereby my brother stumbleth or is offended or is made weak,' it seems to us eminently in accord with the spirit of the New Testament that

we use the fruit of the vine in such form that no harm can by any possibility come to any through it, and that no one shall be debarred from taking of the cup lest he kindle anew his thirst for alcohol."

SARAH HOOPES.

1798, 1st MO. 21.—1887, 10th MO. 10.

THE dear, departed sister, friend,

A mother too, was she,
Not only in the age attained,
But in her industry.

How she endeared herself to us
By precepts clear and wise,
By acts of kindness, words of love,
And truest, friendly ties.

The "Light" which guided her so well,
She strove to teach alway,
Nor would she e'er deny the ill,
If she had gone astray.

Her human frailties not ignored,
She strove to live in love.
True to herself, true to her friends,
True to her God above.

With purpose strong, with mind so clear,
With memory unimpaired,
With high resolve to do His will—
What would she not have dared?

And yet so modest in her ways,
Tho' elegant in mien,
As child before her, I can think,
No fault was ever seen.

The dear, departed sister, friend,—
To follow as she led,
Would take us to His banqueting,
There by Him to be fed.

West Chester, Ninth month, 1889.

WITHOUT conscious religious development, it seems to me that no strength or greatness is admirably human; and with it, no smallness of opportunity, no littleness of gift, is contemptible or low. I reverence great powers, given or not; but I reverence much more the faithful use of powers, either large or little.

Without religion the greatest man is a failure. With it, the smallest is a triumph. He adds to his character; he enjoys his strength; he delights while he rejoices, growing to more vigorous manliness; and when the fragrant petals of the spirit burst asunder and crowd off this outer husk of the body, and bloom into glorious humanity, what a strong and flame-like flower shall blossom there for everlasting life! . . . There are two things which make up the obvious part of life,—to do, to suffer. Behind both as cause, and before each as result, is one thing greater,—to *be*. Religion is true being, normal life in yourself in nature, in men, and in God.—*Theodore Parker*.

SURE stands the promise, ever to the meek
A heritage is given;

Nor lose they Earth who single-hearted seek
The righteousness of Heaven.

LYDIA H. HALL.

 PHILADELPHIA, TENTH MONTH 12, 1859.

It is possible, we think, that some of our readers may not have observed the statement last week, in the letter of our correspondent giving the proceedings of Illinois Yearly Meeting, that that body approved the proposition of establishing a Half-Yearly Meeting in Nebraska. The concern to do so had been presented by Nebraska Friends, and after due consideration it was united with. This is an interesting step forward. It has been thought by many who are acquainted with the situation of our members in Nebraska and Kansas that a quarterly or similar meeting should be organized among them, and it seems upon reflection, one assembling twice a year was considered best. It will be, of course, a constituent of Illinois Yearly Meeting. We hope this may foreshadow the establishment of an earnest and living organization in the Far West, which will help rebuild the waste places of our Society.

THROUGH the kindness of Friends in attendance upon the sessions of Indiana Yearly Meeting we have been favored with copies of the daily journals of Richmond giving very full details of the proceedings. Time does not permit an abstract of these for this week's issue. The meeting was very satisfactorily held, beginning on Second-day, the 30th ult., and closing on the afternoon of Fifth-day. Among those in attendance were John J. Cornell, Isaac Hicks, and Abel Mills.

WHILE we have no direct authority from the Friend who desired us to insert the paragraph two weeks ago, (in reference to education at Swarthmore), we think it best to say, to avoid disappointment, that quite a number of letters have been received, applying for the benefit of the proffer, and that it is very probable that no further applications could be serviceable.

THERE seems to have been an understanding that the Philanthropic Union of Friends was to meet in Baltimore, this month, at the close of the Yearly Meeting. We are advised, however, that arrangements to that effect have not been made, and that therefore the Conference will *not* occur at that time.

A CORRESPONDENT remarks a typographical error, causing "bad Latin," in President Magill's last letter. The inscription on the old meeting-house at Swarthmore (England) we presume is "*ex dono*"—not *ex dona*, as printed.

 MARRIAGES.

BIDDLE—CONARD.—Tenth month 3d, 1859, at the residence of the bride's parents, according to Friends' order, Robert Biddle, Jr., son of Clement M. and Lydia C. Biddle, of Lansdowne, Pa., and Helen Clayton, daughter of Samuel and Mary B. Conard, of Sharon Hill, Del. Co., Pa., all members of Darby Monthly Meeting.

 DEATHS.

ABBOTT.—In Burlington, N. J., on the morning of Tenth month 4th, 1859, Susan S., widow of Howard Abbott, in her 87th year, a member of Burlington Monthly Meeting.

BUZBY.—In Philadelphia, Tenth month 2d, 1859, Benjamin V. Buzby, in his 83d year.

ENGLE.—Tenth month 3d, Jervis S., son of Joseph and Emily M. Engle, aged 33 years. Burial from the residence of his brother, Tylee B. Engle, Burlington county, N. J.

HOAG.—At her residence, Quaker street, Schenectady county, N. Y., on Second-day, the 9th of Ninth month, 1859, Mary C. Hoag, aged 77 years. An esteemed member of Duaneburg Monthly Meeting of Friends.

HOLLINGSWORTH.—On Ninth month 25th, 1859, Nathan Hollingsworth, in his 45th year. A member of Deer Creek Monthly Meeting, Md.

I feel that more than a mere notice of the death of Nathaniel Hollingsworth is due to his memory. A young man that has led a pure life from childhood, should be held up as an example. He not only could *do* no wrong act, but think no evil,—innocent, cheerful, and happy, with a pleasant word for all. A true Friend, he took a great interest in meetings—never absent from choice, active in the business meetings, where his judgment was good and his remarks seasoned with wisdom, no lightness or frivolity, a rare character, filled with genuine kindness. The meeting and community have sustained a great loss, but the home-circle a greater one, two uncles and an aunt, all frail, leaning on and looking to him and his devoted sister as caretakers. This home of Phillip and William Warner, was headquarters for Friends attending Deer Creek meetings. Nottingham Quarterly Meeting is held there once a year and their house then would be filled with guests, and it was the delight of this young man to receive and wait on them, enjoying especially the society of elderly, concerned Friends, whose conversation was consistent and weighty.

Mill Green, Ninth month 29th, 1859.

D. H.

IDDINGS.—Suddenly, of an affection of the heart, whilst on a visit to his son-in-law, Edward Roots, Bellwood, Pa., Ninth month 20th, 1859, Henry Iddings, of Unionville, Centre county, Pa., in the 66th year of his age. A kind and esteemed member and elder of Centre Monthly Meeting. Being the third elder we have parted with by death in our monthly meeting in a little over one month. "On whom are their mantles to fall?"

W. P. F.

LEWIS.—Tenth month 1st, 1859, at his residence, Newtown Square, Delaware county, Pa., Caleb Y. Lewis, in his 91st year.

SEARING.—At her home, Poplar Ridge, Cayuga county, N. Y., on the 4th of Tenth month, 1859, Sarah D. Searing, in the 87th year of her age; a member of Scipio Monthly Meeting.

TUDOR.—At her home, in Bendersville, Adams county, Pa., on the morning of the 15th of Ninth month, 1859, Martha A. Tudor, aged 59 years and 1 month; only daughter of Isaac and Mary Tudor, both deceased. For many years a member of Menallen Monthly Meeting.

A patient sufferer rests.

VALE.—At her home, near Sunny Side, Adams county, Pa., very suddenly, on the evening of Ninth month 24th, 1889, Sarah E. Vale, aged 66 years, 10 months, and 23 days; a member of Menallen Monthly Meeting.

WAY.—At her residence, near Stormstown, Centre County, Pa., Eighth mo. 29th, 1889, Martha Way, wife of the late Robert Way, in the 76th year of her age; an elder of Centre Monthly Meeting.

The death of our dear mother has left a void that never can be filled. She was afflicted with rheumatism for many years and for the last few could not walk. But she bore her sufferings with such Christian patience that we never heard her murmur or complain; peace was her motto through life, it was stamped upon her countenance.

There was one place where we were always welcome, one place where we were met with a smile—in our mother's room. At one time she asked us if we heard the angels sing, remarking she did, and prayed to be released. May we, her children and grandchildren, so live that when death comes we may behold again our mother's smiling face!

PATIENCE J. NEEDLES.

In the removal of this dear Friend a home replete with love and tenderness has been deeply shadowed, while a large circle of relatives and friends sorrow at the departure of one whose life has been so full of usefulness and goodness.

Suffering humanity everywhere claimed her sympathy, but in the city of her adoption were the active interests of her beneficence most felt.

For years organized associations for the relief and elevation of the less favored children of the All-Father found in her a constant and tireless worker, while her benefactions were bestowed with an influence soft and sweet as the dew of Hermon, her left hand not knowing what her right hand did. In the home circle her genial, hopeful, cheerful spirit brought sunshine, and as wife, mother, sister, friend, her devotion cannot be forgotten.

Her last illness was attended with much suffering, but patience and resignation were vouchsafed her, and though the ties to earth were strong, she was enabled to yield all to the keeping of Him that doeth all things well. She had served the Father by serving his children, and in one of the many mansions we feel the gentle purified spirit is resting in sweet accord with the Love and Joy and Peace which maketh heaven. H.

THE SOUTHERN COLORED SCHOOLS.

Born the schools for colored children, in South Carolina, in which Friends are particularly interested, begin their work this month. That at Mt. Pleasant was expected to open about the 1st. It will be, of course, in the new and pleasant school building which was finished and occupied last winter. Abby D. Munro, the principal, who was very ill (of pneumonia) in the spring, and who went North to recover her health during the summer, has improved, and taken charge again. She will have as an assistant Mary A. Nichols, a very competent and experienced (white) teacher, whose help will serve to relieve a part of the excessive burden which has been borne by Abby Munro. It is intended to reorganize the Industrial Department, which, during the time that the school had no building of its own, and was obliged to use the church, was necessarily discontinued.

The school at Aiken expects to reopen on the 14th instant. Martha Schofield, who spent part of

her vacation in the mountains of North Carolina, returned some weeks ago to Aiken. She will be assisted again by Elizabeth F. Criley as principal teacher, and by Samuel J. Entrikin as teacher in charge of the industries. The proposed new industrial building, for which funds (something over \$5000) have been furnished by interested friends of the institution, will be begun as soon as possible. Preliminary plans for it have been drawn by Addison Hutton, architect, of this city. It will be of brick, two stories high, with an attic, and will be used for work-room and library on the first-floor, and for boys' sleeping rooms on the second. Its erection will permit the removal of the old frame structure (the original school-house erected by the Government), which is now quite past its usefulness, and is a menace, from danger of fire, to the adjoining valuable buildings.

A measure of help will have to be given these two schools, this year, as heretofore. The contributions of friends interested in the work will be the only reliance, aside from the income derived from the small endowment fund of the Aiken School, and the contribution to it looked for from the Slater Fund,—heretofore \$500. The Philadelphia Association to aid the schools has a small balance, some \$200, left over, after closing the schools in the spring. It is to be hoped that all those interested in this worthy work will lay aside for it a share of the means which they have to dispose of. The sum required is comparatively small, and the burden cannot be great on any individual giver.

THE LIBRARY.

We have received the Minutes of the proceedings of Genesee Yearly Meeting, held in Sixth month, making a pamphlet of 75 pages. It includes a summary of the proceedings, with the reports of the standing committees on Indians, Temperance, and Capital Punishment. An appendix contains the epistles received from other yearly meetings, and the proceedings of the First-day School Association. We are much obliged to the clerks for the copy of their Minutes, and would mention that we shall be glad to have, always, copies of the Minutes of the several yearly meetings, as soon as may be convenient after they are in print. They often contain matters of interest which had not been fully reported at the time of the sitting.

Friends' Book Association, 15th and Race streets, (Philadelphia), has printed for John J. Cornell a small pamphlet with the title, "Why Am I a Friend? or Reasons for the Doctrines, Testimonies, and Customs of Friends." It was submitted to the Representative Committee of Genesee Yearly Meeting, at Farmington, New York, Sixth month 10th, and was approved by the committee. The statement of views follows the same order as that in the pamphlet by the same author, noticed in our columns two weeks ago. In opening the subject, he says: "The basal, distinguishing principle, which has been kept prominent before the world by our branch of the Society of Friends, is that called *Immediate Revolution*, or the

immediate conveyance to each man through his spiritual nature, by the Divine Spirit, or the Christ of God, such a knowledge of the laws of God as relate to man's duty towards Him, towards his fellow-men, and towards himself, as will by obedience to them preserve man from the commission of sin, and lead him into, or give him possession of, true spiritual happiness, both in the present and future life."

A PERMANENT COURT OF INTERNATIONAL ARBITRATION.

EDITORS INTELLIGENCER AND JOURNAL:

WHILE in Paris, recently, I met by appointment, at his request, at my hotel, the editor of the London *Contemporary Review*, Professor P. W. Bunting, who specially desired the interview for a conference concerning a united movement on the part of the friends of peace in Great Britain and America, to secure the establishment of a Permanent Court of Arbitration, to which in the future all the more important differences which may arise between the two countries may be referred for equitable and amicable adjustment. He holds influential relations with many leading men and women in Great Britain, in public and in private life, and is exceptionally well informed concerning the drift and tendency of public opinion in relation to international arbitration, among other questions of public interest. He assures me that the feeling in favor of international arbitration, and of maintaining peaceful relations with America, was never so strong as now; that there is a purpose to organize and concentrate this feeling with a view to securing early action on the part of the British Government in the direction of the establishment of a Permanent Court of International Arbitration. A special appeal in its behalf is to be made to the various religious bodies. He is very desirous that the counterpart of this effort, particularly in religious circles, may be made on this side of the Atlantic, as a support and an encouragement to our Government, to cooperate in the creation of the proposed peaceful tribunal.

I do not need to suggest to members of the Society of Friends reasons why it is desirable to have, as soon as may be, a permanent Court of International Arbitration established for the two countries. The movement, I am sure, would have the united support of all our yearly meetings. I write this letter rather to apprise Friends of the increasing interest in the subject in Great Britain, as explained to me by Professor Bunting, and to suggest that our several Representative Committees, or Committees on Arbitration, in the different yearly meetings, in such way as may seem best, do all in their power to encourage the President of the United States, and the Fifty-first Congress, soon to convene, to provide for the early establishment of the proposed Court of Arbitration, and also to induce all good citizens, and especially members of other religious bodies, to cooperate to that beneficent end.

AARON M. POWELL.

New York, Tenth month 5.

TOLSTOI AND THE EARLY REFORMERS.

EDITORS INTELLIGENCER AND JOURNAL:

IN the issue of the *Révue des deux Mondes*, (Paris) for Ninth month 15, 1888, which has but recently come under my notice, I have read with much interest an article upon "Russian Religion, The Reformers, Tolstói," etc. The article is not only interesting as possibly indicating where and to whom Tolstói may be indebted for his religious belief, but of especial interest to the readers of the INTELLIGENCER AND JOURNAL as it shows how much similarity there is between, not only Tolstói and those early reformers, but between them and our own religious sect.

It would seem that as early as 1555 there existed in the southeast of Russia, almost on the confines of Asia, a sect or sects, who claimed a spiritual religion resembling somewhat that of Friends, and from whom, subsequently, may have sprung two more numerous religious bodies, called respectively, the *Doukhobortsy*, or *Athlètes de l'Esprit*, and the *Molokany*, or *Milk Drinkers*.¹ Each of these professed a *spiritual Christianity*, and it was from these, and subsequent similar sects, that the writer of the paper alluded to in the *Révue* claims that Tolstói received his religious impressions. It may be interesting to learn what was their belief. A few translations, taken almost at random, will serve to illustrate, as follows. They broke away from all church ceremony. "We are all priests," they said, "we have no need of other priests or pontiff, or of any other master than Christ." "The temple of God is the heart of the Christian and not an edifice made by human hands." They suppressed the sacraments, or took them only in an allegorical sense. Baptism with water, they said, is without virtue; that which makes a Christian is not the material water, but the *living* water, the divine word. The true communion with the body and blood of Christ is the reading and meditation upon his word. The divine Spirit speaks to each man and this inward word (*parole intérieure*), is the Christ eternal. They rejected nearly all the dogmas of the Church, or gave them symbolic interpretation. They rejected the Trinity, and the incarnation; they condemned all war, and to a certain extent, all political government. Christ was to them a man of virtue, and Jesus the Son of God, in the sense that we are all sons of God.

It was in these sects, the *Doukhobortsy* and *Molokanes*, that Tolstói has based a great part of his religion.² Like these early reformers, he makes much of the Sermon on the Mount. "Man has but to put that in practice," he declares,—"the pith of the New Testament, as the Decalogue is of the Old." Matthew Arnold says of Tolstói, (*Fortnightly Review*, 1886) . . . "His works in religion, as well as those in imaginative literature are more than sufficient to signalize him as one of the most marked, interesting, and sympathy-inspiring men of our time." (It would be as well, however, in choosing his works, to omit his imaginative literature, and select only his religious ones.)

¹ A singular name given to them because they used liberally milk during days when milk was prohibited by the church.

² "My Religion," "My Confession," "What to Do."

As early as 1817 or 1818, Friends in England became curious to learn more of these co-religionists on the shores of the Azof, and opened correspondence with them.¹

There are many other interesting points of resemblance between these Russian sects, Tolsooi, and Friends, which it would be instructive to point out, while there are others again where they differ very materially. Did time permit, it would be a pleasure to give more or all of this interesting paper, but the writer of this brief article must leave it, with the assurance that the time given to it, by those curious in those matters, will be both profitable and interesting.

T. E. Z.

Germantown, Tenth month 5th.

A VISIT TO A "CIRCULAR MEETING."

EDITORS INTELLIGENCER AND JOURNAL:

It was on Seventh-day morning, the 28th of Ninth month, that we started to attend a Circular Meeting at Greenwich, Cumberland county, N. J. The morning was cool and the road in good condition, which made traveling an enjoyment, and the fulfillment of our appointment a pleasure, as our religious duties should always be. The woods were just beginning to take on the hues of autumn, and our national flower (the golden rod) made the waysides oftentimes resplendent with a wealth of glory. The first ten miles of our journey was past comfortable-looking farm houses, and farms whose broad and fertile acres gave evidence of the thrift and enterprise of their occupants, although the corn (where it was not cut up) was badly beaten and broken down by the late north-east storm that did such damage along our coast. We then entered upon a barren tract, a mile or two in extent, where much of the soil seemed to be a pure white beach sand, in some places destitute of vegetation, except a mossy like plant, a few inches high that no doubt would have thrown a botanical student into ecstasies. Passing this district whereon we saw no indication of human life with the exception of a solitary log cabin, in a few miles we came to a settlement where all labor seemed to be suspended, the stores in the village were closed and every thing wore a holiday aspect. This was Shiloh, a prosperous settlement of the Seventh-day Baptists.

A few miles further and we were again in the turmoil of life, potato-digging and tomato picking were in full blast, there being two canning factories near by, one of them the week previous reported putting up fifty eight thousand cans in a single day, and would have done better if the tomatoes had been on hand.

Thirty miles of travel and a tired team brought us to the hospitable home of our kind friends Mark R. and Mary B. Dare, where in full view of the broad waters of Delaware Bay, and the Light-house beyond we passed a peaceful night. This is the land where the peach flourishes in the greatest luxuriance; but the present season has witnessed almost a total failure of the crop, our host having gathered from an orchard of eight acres only four baskets of fruit. He has also about three acres in asparagus which he

raises for the New York market. Being asked for directions as to its culture, he replied that at one time he felt qualified to give full directions for its successful cultivation, but that at present his conclusion was that he knew but very little about it.

In due season we started for meeting, passing on our way beneath the huge nest of a fish hawk on the top of a blasted oak. These birds being harmless, their nests are never destroyed and they continue to occupy the same nest year after year. Owing to the heavy and continuous rains many of the cornfields in this section were so wet that it was impossible to cultivate them, and as a consequence they present a tangled mass of weeds with a few hills of corn interspersed.

The meeting proved a very satisfactory one, at least to the visitors, all of the committee (nine in number) being present. One of the speakers likened our visit to that of parents visiting their absent children in order to learn from observation how they were faring, and if encouragement or sympathy were needed, to extend the same. Testimony was borne to the all-sufficiency of the Inward Light as an ever-present guide in all matters pertaining to our highest welfare. The First-day School held at the close of the meeting was small, but there was evidence that lack of members was no proof of lack of interest on the part of those who were devoting themselves to the service.

After being kindly entertained by neighboring friends, we started on our return, passing through a settlement of colored people, many of whom were living in dilapidated houses on very poor land, and the appearance of the people indicated that they were in harmony with their surroundings. We soon reached better land, where the people were busily employed about their daily avocations, and although it was First-day afternoon we saw load after load of tomatoes on the way to the cannery, which was in full blast. These Seventh-day people formerly hauled their tomatoes to Bridgeton, but the City Council forbid their entering the city on First-day, so in self-defense they were obliged to start a factory of their own. In the town all the stores and shops were open, and in many places the wash was still upon the line. Darkness soon overtook us but we reached our homes in due season, and found that it was still the evening of First-day.

Mullica Hill, N. J.

A. E.

It is surprising how practical duty enriches the fancy and the heart, and action clears and deepens the affections. Indeed, no one can have a true idea of right until he does it; any genuine reverence for it till he has done it often and with cost; any peace ineffable in it till he does it always and with alacrity. Does any one complain that the best affections are transient visitors with him? Oh, let him not go forth on any strained wing of thought in distant quest of them; but rather stay at home and let his house in the true order of conscience, and of their own accord the divinest guests will enter.—*Jas. Martineau.*

NEWS OF FRIENDS.

MEMBERS IN GENESEE YEARLY MEETING.

At the last session of Genesee Yearly Meeting, in Sixth month, statistical reports were presented from the several quarterly and half-yearly meetings, excepting Scipio Quarter. These are tabulated and printed in the volume of Minutes, recently sent out, and they show the following state of facts. The number of members in the yearly meeting, Scipio omitted, is 1,395, of whom 410 are non-resident, and 166 are minors. The members are distributed as follows: Farmington Quarterly Meeting, 539; Canada Half-Yearly Meeting, 388; Pelham Half-Yearly Meeting, 468. The number of First-day schools is 9,—in Farmington Quarter 2, Canada 2, Pelham 5. The additions to membership were: by birthright 2, [there must be some error in this: is it possible the records have been accurately kept?—Eds.] by request 33, by certificate 2; total 37. The losses have been: by death 26, by resignation 6, by removal 4; total 36. In connection with the subject of membership a report was made from a committee of the Yearly Meeting and approved, as follows:

"Most of the Committee to whom was referred the subject of the proper disposition of the names of those standing on our Record books as members of our Society, but whose place of residence is unknown, met, and took the subject into careful consideration and are united in recommending that our subordinate meetings be directed to make a careful and systematic effort, to learn whether such members are living or otherwise, if living, where they reside, and whether they have united with any other religious society, and whether they live within the jurisdiction of any Monthly or Executive Meeting of any other Yearly Meeting.

"We are not prepared to advise that the name of any person be erased from our Records, simply because the residence of such person is unknown.

"If Monthly or Executive Meetings are satisfied that any such person is deceased, has united with any other religious Society, or desires to be released from membership with us; in such events the Discipline points out the course to pursue and no instructions are required.

"In case no tidings of such persons can be found after diligent search and inquiry, we recommend that the Monthly or Executive Meetings report to the ensuing Yearly Meeting to be held in Yarmouth in Sixth month, 1889, a list of the names of such persons, for further instructions from it, in relation thereto."

—Salem (N. J.) Quarterly Meeting, at its setting in Sixth month last, appointed a committee of thirty-three members to appoint and attend circular meetings within the limits of that Quarter. The committee has made nine appointments, as follows:

Pedricktown, Ninth month 15, 3 p. m.

Greenwich, Cumberland Co., Ninth mo. 29, 10 a. m.

Upper Greenwich, Tenth month 13, 10 a. m.

Seaville, Tenth month 20, 11 a. m.

Pedricktown, Eleventh month 10, 3 p. m.

Bridgeport, Eleventh month 24, 3 p. m.

Alloway's Creek, Twelfth month 15, 2.30 p. m.

Woodstown, First month 19, 1890, 10.30 a. m.

Salem, Second month 9, 10 a. m.

All the appointments are for First-day. Two of them, it will be noticed, are already past. Sub-committees were set apart to attend each one, and an interesting note on the visit to the one at Greenwich, on the 29th ult., will be found elsewhere in this issue.

—The last of the four circular meetings appointed by Chesterfield Monthly Meeting of Friends, was held at East Branch, N. J., on the afternoon of Ninth month 15, at 3 o'clock. Owing to the heavy rain storm the attendance was not so large as usual. The company of Lydia H. Price, Ezra Fell, and Alvin Haines was very acceptable. An effort is to be made to assist Friends in that neighborhood in the establishment of a First-day School, and it is to be hoped with success. M.

—In sending a notice of the circular meeting at Cape May (elsewhere printed) our friend J. B. L. remarks: "This is, perhaps, the oldest meeting-house in our Quarter, supposed to have been built about the year 1702. It is composed of cedar logs, lined on the inside with boards, and fronting on what is called 'the shore road,' and I think about a half mile from Ocean View Station. There are but very few members in the neighborhood, but Friends have left a sweet savor there, the meetings being mostly well attended, and a cordial welcome extended to those who feel drawn to visit them."

SWARTHMORE NOTES.

—The Junior class having been granted the privilege of publishing a *Hulceon* as previous classes have done, has elected the following persons as members of the staff: Eliza G. Hampton, Cosmelia J. Brown, Eliza G. Holmes, Esther Haviland, Emily Atkinson, William C. Sproul, J. Lawrence Dudley, Louis P. Clark, Chester P. Martindale, and J. W. Hutchinson. The staff will organize this week and the volume will appear in Fourth month next.

—The Sophomores will receive the Freshmen in the college parlors on Seventh-day evening and thus signalize the end of any inter-class strife.

—Several members of the class of '89 are pursuing higher courses. Alexander G. Cummins, Jr., is a student in the General Theological Seminary of the Protestant Episcopal Church, New York City; Ellis M. Harvey is studying medicine in Philadelphia; Howard A. Dill is at the Boston Institute of Technology; J. Carroll Hayes is a senior at Harvard, and Julia Hicks is taking advanced science at Cornell University.

—A beautiful etching, finely framed, has been given by a friend of the college, for Professor Appleton's class-room. It is a classical representation of Chaucer's "Canterbury Tales."

—The gorilla in the biological laboratory is being dissected for purposes of investigation. Dr. Trotter and T. Montgomery Lightfoot, '88, who is taking a course for his second degree, are doing the work.

—William L. Dudley, '88, is now Professor of

Mathematics in the Woodbridge School, New York City.

—It is probable that a triangular debate between members of the Somerville, Eanomian, and Delphe Literary Societies will be arranged for this winter.

S.

COMMUNICATIONS.

EDITORS INTELLIGENCER AND JOURNAL:

It would be a great source of gratification to many dear elderly Friends whose age and infirmities confine them at home, as well as many others whose duties are such they cannot leave, if some of the ministering Friends who have it in prospect to attend the approaching Yearly Meeting to be held in Baltimore, before leaving their homes, would arrange to visit some of our smaller meetings, whose members are hungering and thirsting as it were for crumbs from the Master's table. It is well to attend the larger gatherings; but is there not something due those who are patiently waiting at home, and can no longer mingle with their friends on such occasions?

Many of the readers of the INTELLIGENCER AND JOURNAL who, like the writer of these lines, are used to small meetings, can readily appreciate the feeling that arises for the company and visits of some dear messengers from other vineyards.

Va.

R. W. M.

EDITORS INTELLIGENCER AND JOURNAL:

THE writer, in company with forty-six of the relatives and friends of Levi Price, was permitted to celebrate with him at his home a short distance from Gunpowder meeting-house, on First-day, Ninth month 22d, 1889, his 92d birth day, and share with him, as stated in the introductory which preceded the registering of the names of those assembled, the good things provided for the occasion. There was a pleasant interchange of thought and feeling, and many kind wishes for our dear, aged friend, that his remaining years may be peaceful and the last scene of his life crowned with the Christian's hope.

Levi Price is a direct descendant of Mordecai Price, who was the first settler in this section of the county, in 1723.

There were gathered many representatives from every Friends' family residing in the neighborhood, showing the esteem in which our aged friend is held. All ages were represented, from 20 months to nearly 90 years. Seven sat down to one table whose ages averaged nearly 80 years. Seldom do we witness such a spectacle, of a person having arrived at such a ripe age, with faculties unimpaired. The day was beautiful and bright, increasing the enjoyment of the occasion.

It might be further added that our friend welcomed the INTELLIGENCER AND JOURNAL as a weekly visitor, and can relate accurately weeks after to his friends who enjoy an occasional visit to him, matters that have impressed him when perusing its columns,—showing the possession of a most retentive memory.

OCCASIONAL.

Gunpowder, Md., Ninth month 26.

A SLUMBER SONG.

SLEEP sweetly in this quiet room,
O thou who e'er thou art,
And let no mournful yesterdays
Disturb thy peaceful heart.

Nor let to-morrows scare thy rest
With dreams of coming ill;
Thy Maker is thy changeless friend,
His love surrounds thee still.

Forget thyself and all the world,
Put out each glaring light;

The stars are watching overhead,
Sleep sweetly then,—Good Night!

—Selected.

EARLY AUTUMN.

THE world puts on its robes of glory now
The very flowers are tinged with deeper dyes,
The waves are bluer, and the angels pitch
Their shining tents along the sunset skies.

The distant hills are crowded with purple mist,
The days are mellow and the long calm nights
To wondering eyes, like weird magicians show
The shifting splendors of the northern lights.

The generous earth spreads out her fruitful store,
And all the fields are decked with ripened sheaves;
While in the woods at Autumn's rustling step,
The maples blush through all their trembling leaves.

—Albert Lighton.

THE STORMY PETREL.

A THOUSAND miles from land are we,
Tossing about on the stormy sea—
From billow to bounding billow east,
Like fleecy snow on the stormy blast.
The sails are scatter'd abroad like weeds,
The strong masts shake like quivering reeds;
The mighty cables and iron chains,
The hull, which all earthly strength disdains,—
They strain and they crack, and hearts like stone
Their natural, hard, proud strength disown.

Up and down!—up and down!
From the base of the wave to the billow's crown.
And amidst the flashing and foamy foam
The stormy petrel finds a home,—
A home, if such a place may be
For her who lives on the wide, wide sea,
On the craggy ice, in the frozen air,
And only seeketh her rocky lair
To warm her young and teach them to spring
At once o'er the waves on their stormy wing!

O'er the deep!—o'er the deep!
Where the whale and the shark and the swordfish sleep,—
Outflying the blast and the driving rain,
The petrel telleth her tale—in vain;
For the warmer curseth the warning bird
Which bringeth him news of the storm unheard!
Ah! thus does the prophet of good or ill
Meet hate from the creatures he serveth still;
Yet he ne'er falters,—so, petrel, spring
Once more o'er the waves on thy stormy wing!

—Barry Cornwall.

Do not allow thyself liberty, according to the liberty of another.—Richard Shackleton.

SUCCESSION OF FOREST GROWTHS.

THE following is from an address delivered by Robert Douglas before the Association of American Nurserymen at the meeting in Chicago in Sixth month last:

It is the prevailing and almost universal belief that when native forests are destroyed they will be replaced by other kinds, for the simple reason that the soil has been impoverished of the constituents required for the growth of that particular tree or trees. This I believe to be one of the fallacies handed down from past ages, taken for granted, and never questioned. Nowhere does the English oak grow better than where it grew when William the Conqueror found it at the time he invaded Britain. Where do you find white pines growing better than in New England, where this tree has grown from time immemorial? Where can you find young redwoods growing more thriftily than among their giant ancestors, nearly or quite as old as the Christian era?

The question why the original growth is not reproduced can best be answered by some illustrations. When a pine forest is burned over both trees and seeds are destroyed, and as the burned trees cannot sprout from the stump, like oaks and many other trees, the land is left in a condition well suited for the germination of tree-seeds, but there are no seeds to germinate. It is an open field for pioneers to enter, and the seeds which arrive there first have the right of possession. The aspen poplar (*Populus tremuloides*) has the advantage over all other trees. It is a native of all our northern forests, from the Atlantic to the Pacific. Even fires cannot eradicate it, as it grows in moist as well as dry places, and sprouts from any part of the root. It is a short-lived tree, consequently it seeds when quite young and seeds abundantly; the seeds are light, almost infinitesimal, and are carried on wings of down. Its seeds ripen in spring, and are carried to great distances at the very time when the ground is in the best condition for them. Even on the dry mountain sides in Colorado the snows are just melting and the ground is moist where they fall.

To grow this tree from seed would require the greatest skill of the nurseryman; but the burnt land is its paradise. Wherever you see it on high, dry land, you may rest assured that a fire has been there. On land-slides you will not find its seeds germinating, although they have been deposited there as abundantly as on the burned land.

Next to the aspen and poplars comes the canoe birch, and further north the yellow birch, and some other trees as have provision for scattering their seeds. I have seen acorns and nuts germinating in clusters on burned lands in a few instances. They had evidently been buried there by animals and had escaped the fires. I have seen the red cherry (*Prunus Pennsylvanica*) coming up in great quantities where they might never have germinated had not the fires destroyed the débris which covered the seed too deeply.

A careful examination around the margin of a burned forest will show the trees of surrounding

kinds working in again. Thus by the time the short-lived aspens (and they are very short-lived on high land) have made a covering on the burned land, the surrounding kind will be found re-established in the new forest, the seeds of the conifers, carried in by the winds, the berries by the birds, the nuts and acorns by the squirrels, the mixture varying more or less from the kinds which grew there before the fire.

It is wonderful how far the seeds of berries are carried by birds. The waxwings and cedar-birds carry seeds of our Tartarean honeysuckles, purple barberries, and many other kinds four miles distant, where we see them spring up on the lake shore, where these birds fly in flocks to feed on the Juniper berries. It seems to be the same everywhere.

While this alteration is going on in the east, and may have been going on for thousands of years, the Rocky Mountain district is not so fortunate. When a forest is burned down in that dry region, it is doubtful if coniferous trees will ever grow again, except in some localities specially favored. I have seen localities where short-lived trees were dying out and no others taking their places. Such spots will hereafter take their places above the timber-line, which seems to me to be a line governed by circumstances more than by altitude or quality of soil.

There are a few exceptions where pines will succeed pines in a burned-down forest. *Pinus Murrayana* grows up near the timber-line in the Rocky Mountains. This tree has persistent cones, which adhere to the tree for many years. I have counted the cones of sixteen years on one of these trees, and examined burned forests of this species, where many of the cones had apparently been bedded in the earth as the trees fell. The heat had opened the cones and the seedlings were growing up in myriads; but not a conifer of any other kind could be seen as far as the fire had reached.

In the Michigan Peninsula, northern Wisconsin, and Minnesota, *P. Banksiana*, a comparatively worthless tree, is replacing the valuable red pine (*P. resinosa*), and in the Sierras *P. Murrayana* and *P. tuberculata* are replacing the more valuable species by the same process.

In this case, also, the worthless trees are the short-lived, so we see that Nature is doing all that she can to remedy the evil. Man only is reckless, and especially the American man. The Mexican will cut large limbs off his trees for fuel, but will spare the tree. Even the poor Indian, when at the starvation point, stripping the bark from the yellow pine (*P. Ponderosa*), for the mucilaginous matter being formed into sap-wood, will never take a strip wider than one-third the circumference of the tree, so that its growth may not be injured.

We often read that oaks are springing up in destroyed forests where oaks had never grown before. The writers are no doubt sincere, but they are careless. The only pine-forests where oaks are not intermixed are either in land so sandy that oaks cannot be made to grow on them at all, or so far north that they are beyond their northern limit. In the Green Mountains and in the New England forests, in the

pine forests in Pennsylvania, in the Adirondacks, in Wisconsin, and Michigan—except in sand—I have found oaks mixed with the pines and spruces. In north western Minnesota and in northern Dakota the oaks are near their northern limit, but even there the burr oak drags on a bare existence among the pines and spruces. In the Black Hills, in Dakota, poor, forlorn, scrubby burr oaks are scattered through the hills among the yellow pines. In Colorado we find them as shrubs among the pines and Douglas spruces. In New Mexico we find them scattered among the Piñons. In Arizona they grow like hazel bushes among the yellow pines. On the Sierra Nevada the oak region crosses the pine region, and scattering oaks reach far up into the mountains. Yet oaks will not flourish between the one hundredth meridian and the eastern base of the Sierras, owing to the aridity of the climate. I recently found oaks scattered among the redwoods on both sides of the Coast Range Mountains.

Darwin has truly said: "The oaks are driving the pines to the sands." Wherever the oak is established—and we have seen that it is already established wherever it can endure the soil and climate—there it will remain and keep on advancing. The oak produces comparatively few seeds. Where it produces a hundred, the ash and maple will yield a thousand, the elm ten thousand, and many other trees a hundred thousand. The acorn has no provision for protection and transportation like many tree-seeds. Many kinds are furnished with wings to float them on the water and carry them in the air. Nearly every tree-seed, excepting the acorn, has a case to protect it while growing, either opening and casting the seeds off to a distance when ripe or falling with them to protect them till they begin to germinate. Even the equally large seeds of other kinds are protected in some way. The hickory-nut has a hard shell, which shell itself is protected by a strong covering until ripe. The black walnut has both a hard shell and a fleshy covering. The acorn is the only seed I can think of which is left by Nature to take care of itself. It matures without protection, falls heavily and helplessly to the ground, to be eaten and trodden on by animals, yet the few which escape and those which are trodden under are well able to compete in the race for life. While the elm and maple seeds are drying up on the surface, the hickories and the walnuts waiting to be cracked, the acorn is at work with its coat off. It drives its tap-root into the earth in spite of grass and brush and litter. No matter if it is shaded by the forest trees so that the sun cannot penetrate, it will manage to make a short stem and a few leaves the first season, enough to keep life in the root, which will drill in deeper and deeper. When age or accident removes the tree which has overshadowed it, then it will assert itself. Fires may run over the land, destroying almost everything else, the oak will be killed to the ground, but it will throw up a new shoot the next spring, the root will keep enlarging, and when the opportunity arrives it will make a vigorous growth in proportion to the strength of the root, and throw out strong side roots, and after that care no more for its tap-root,

which has been its only support, than the frog cares for the tail of the toadpole, after it has got into its own legs.

There is no mystery about the succession of forest growths, nothing in Nature is more plain and simple. We cannot but admire her wisdom, economy, and justice, compensating in an other direction for any disadvantage a species may have to labor under. Every kind of tree has an interesting history in itself. Seeds with a hard shell, or with a pulpy or resinous covering, which retards their germination, are often saved from becoming extinct by those means.

The red cedar (*Juniperus Virginiana*) reaches from Florida to and beyond Cape Cod; it is among the hills of Tennessee, through the Middle States and New England. It is scattered through the Western States and Territories, at long distance apart, creeping up the Platte River, in Nebraska. I found only three in the Black Hills, in Dakota, in an extended search for the different trees which grow there. Found only one in a long ramble in the hills at Las Vegas, New Mexico.) Yet this tree has crept across the continent, and is found here and there in a north-westerly direction between the Platte and the Pacific Coast. It is owing to the resinous coating which protects its seeds that this tree is found to-day scattered over that immense region.—*Garden and Forest.*

HETTY OGLE, THE HEROIC TELEGRAPHER OF JOHNSTOWN.

EVERY one knows of the noble and tragic death of Hetty Ogle, but few have watched the consistent and well-ordered course of her life.

Hetty Earl was born in the beautiful mountain village of Somerset, Pennsylvania, and there she grew to be a cheerful, hopeful, happy, pleasant-faced young woman.

Her father was for many years Recorder of the Courts there. He died a poor man. There were few educational advantages in Somerset, and though Hetty had a strong, well-balanced mind, it had little school training. After her father's death she married Charles Ogle, a younger member of the family so distinguished in Pennsylvania affairs. He was one of the first to enlist as a soldier in the Civil War, and was killed in the Wilderness at the battle of Gaines' Mill. His body was never recovered. Mrs. Ogle was left with three little children to support, and she went to work calmly and bravely to do it. The telegraph office in Somerset was in a room also occupied as a store, and where the rough men of the town congregated to gossip and quarrel; but she undertook to learn that business and she did it thoroughly, never getting a disrespectful word from any one, the hardest part of the task being that she left her babies at home to take care of each other as best they could. She soon became wonderfully proficient, and was given an office of her own in Somerset. From that she gained the confidence of the telegraph company so entirely that at the time of her death she had charge of three telegraph lines in Johnstown. Her two boys grew to be fine fellows, shaped by her strong will and good example. Her daughter was

always frail in health, and was only kept alive by the tender care of her mother. Their home was the most perfectly ordered that can be imagined. It was seldom invaded by a servant, but was kept exquisitely neat by the skillful and deft hands of the mistress. Everything that came upon her table was of the daintiest, and she shared what she had with rich and poor. Her friends always said that Hetty's coffee-pot was inexhaustible. She taught scores of boys and girls telegraphy for nothing, and helped them to find situations. At the time of her death two young girls were gratuitously sharing her home, and earning good wages in telegraph offices from the benefit of her instruction. They died with their benefactress. She even found time to do beautiful fancy-work with her wonderfully quick fingers. She was one of the sort of whom people say, "How does she find time to accomplish all that she does?"

She was a member of the Christian Church. Her religion was certainly most practical. She embodied the Golden Rule.

She had at one time to endure a terrible surgical operation. After it was over and she was just regaining consciousness, she saw her son, to whom she had taught telegraphy, standing by her side. He saw her fingers move, although she could not speak, and he understood that she was telegraphing on the bed-spread, "It is over; I am safe," to a distant and anxious friend. She was entirely unselfish during every conscious moment of her useful life. While this illness was progressing, the telegraph company, to whom she was so faithful a servant, sent a man, at their own expense, to take her place in their offices. All the mill whistles in the region were hushed by a positive order from the owners while she was in a critical condition, and bulletins were regularly issued to the anxious town, where she commanded general love and respect.

The company which she served had just repaired and put in perfect order the house which she occupied, and the world never looked brighter or fairer to Hetty Ogle than upon the morning of the day that she gave up her life in the effort to save her fellow-creatures.

Not a trace of her drowned, burned, maimed, scattered body has been discovered by agonized searchers, but we, who believe in the reward of the faithful servant, are confident that Hetty Ogle has heard from the Master, "Well done; enter thou into the joy of thy Lord."—*Mary Black Clayton, in Harper's Bazar.*

THE CACTUS.

WHAT the camel is among animals that is the cactus among plants—the most confirmed and specialized of desert-hunting organisms. It has been wholly developed in, by, and for the desert. I don't mean merely to say that cactuses resemble camels because they are clumsy, ungainly, awkward, and paradoxical; that would be a point of view almost as far beneath the dignity of science (which in spite of occasional lapses into the sin of levity I endeavor as a rule piously to uphold) as the old and fallacious reason, "because there is a B in both." But cactuses,

like camels, take in their water supply whenever they can get it, and never waste any of it on the way by needless evaporation. As they form the perfect central type of desert vegetation, and are also familiar plants to every one, they may be taken as a good illustrative example of the effect that desert conditions inevitably produce upon vegetable evolution. Quaint, shapeless, succulent, jointed, the cactuses look at first sight as if they were all leaves, and had no stem or trunk worth mentioning. Of course, therefore, the exact opposite is really the case; for as a late lamented poet has assured us in mournful numbers things (generally speaking) are not what they seem. The true truth about the cactuses runs just the other way; they are all stem and no leaves, what look like leaves being really joints of the trunk or branches, and the foliage being all dwarfed and stunted into the prickly hairs that dot and encumber the surface. All plants of very arid soils—for example our common English stonecrops—tend to be thick, jointed, and succulent; the distinction between stem and leaves tends to disappear; and the whole weed, accustomed at times to long drought, acquires the habit of drinking in water greedily at its rootlets after every rain, and storing it away for future use in its thick, sponge-like, and water-tight tissues. To prevent undue evaporation, the surface also is covered with a thick, shiny skin—a sort of vegetable mackintosh, which effectually checks all unnecessary transpiration. Of this desert type, then, the cactus is the furthest possible term. It has no flat leaves with expanded blades, to wither and die in the scorching desert air; but in their stead the thick and jointed stems do the same work,—absorb carbon from the carbonic acid of the air, and store up water in the driest of seasons. Then, to repel the attacks of herbivores, who would gladly get at the juicy morsel if they could, the foliage has been turned into sharp, defensive spines and prickles. The cactus is tenacious of life to a wonderful degree; and for reproduction it trusts not merely to its brilliant flowers, fertilized for the most part by desert moths or butterflies, and to its juicy fruits, of which the common prickly pear is a familiar instance, but it has the special property of springing afresh from any stray bit or fragment of the stem that happens to fall upon the dry ground anywhere.—*Cornhill Magazine.*

THE NOBLE NATURE.

It is not growing like a tree
In bulk, doth make man better be;
Or standing long an oak, three hundred year,
To fall a log at last, dry, bald, and sere;
A lily of a day
Is fairer far in May,
Although it fall and die that night,—
It was the plant and flower of Light,
In small proportions we just beauties see;
And in short measures life may perfect be.

—Ben Jonson.

DOMESTIC life presents many opportunities for the exercise of virtue, as well as the more exalted stations of honor and ambition.—*John Barclay.*

MISDIRECTED SYMPATHY.

EVERY gardener knows that in order to cultivate to the utmost a precious plant he must not only nourish but prune it. Left to run riot in a luxuriant soil its beauty and richness will often be sacrificed to its too abundant foliage. The same thing is true of some of the most valuable qualities of human character. Few attributes are so conducive to happiness and welfare as sympathy. The power of transferring the joy or the woe of another to one's own breast, and feeling with and for him, is the source of untold good and gladness. Out of this springs private and public beneficence, systems of education, schemes of philanthropy, pitying thoughts, loving words, kindly deeds. The same warmth and life-giving power that the sun exerts over the physical world sympathy extends over the heart and happiness of man.

This truth is, happily, becoming more fully impressed upon the community as the years roll on and give it the emphasis of experience. Naturally, also, many persons think that there cannot be too much of what is so good a thing in itself as sympathy. The duty of its cultivation is clear; but it is not yet so clear that a wise cultivation includes pruning as well as nourishing. So long as it is abundant it is not expected to be discriminative, and thus sometimes, running to seed, unchecked, it develops into rank injustice. Some of the pity lavished upon criminals is of this nature. The guilty deed, with its direful results; the suffering of innocent victims, and the future safety of the community, are all forgotten in the compassion excited for the one who is only called upon to pay the just penalty of his own misdeeds. The London *Spectator* says: "So appreciative has the public become of whining that if a parricide nowadays repeated the grim French joke and prayed his judges to be 'merciful to an orphan' thousands would repeat his prayer in a petition to the Home Secretary for his free pardon, and not see in the least that they were making themselves ridiculous. 'Ridiculous,' they would say, 'why the man is an orphan and to orphan the great heart of the community instinctively goes out.'"

Pain is always pitiable, and that which springs from guilt is the most pitiable of all; but when the pity interferes to avert the natural penalty of wrongdoing, it oversteps its proper limits, and encourages vice and crime. Not only in the clamor for undeserved pardon is this done. Often in enabling the lazy, the improvident, and the spendthrift to avoid the results of their conduct, we actually teach them fresh lessons of idleness and extravagance, whereas the just and natural suffering would have been a strong influence in the opposite direction. Nature is kinder than we know in her penalties. Through pain, she teaches the child to avoid the fire that would consume him; through pain, she teaches the man to avoid the vices which would ruin him. To counteract these wholesome lessons by our continual interference is, in reality, no true kindness, but a self-indulgent cruelty. Were sympathy pruned of its redundant branches and its vital sap directed into proper channels, its fruit would contribute far more effectively than it now does for the healing of the

nations, and the law of kindness would be much better fulfilled.

No one need fear that a wise discrimination in this respect will ever crush out real sympathy. There is enough sorrow in the world that needs consolation, enough poverty that needs relief, enough burdens that need lifting, enough pain that needs banishing, to inspire all the sympathy of human nature, and to demand its most practical results. What is needed is not less sympathy, but more intelligence; not a stoical indifference, but a keen perception of the causes of human misery, and a wise judgment in dealing with them. We need something of the intelligent mother's love infused into all our relations of life. She knows that if her child is preserved from all possible discomfort and shielded from every natural effect of his actions that might be unpleasant to him, he will grow up weak and ignorant, and suffer far more eventually than if she now accustoms him to restraint and teaches him self-control. Thus, though she pities and loves him, she sometimes denies his requests, and does not always interfere to save him from pain. Indeed, it is *because* she loves him with a wise and unselfish love that she allows him often to experience the natural consequences of his actions. Were she simply selfish and unintelligent in her love she would indulge him in every fancied whim and relieve him from every fancied discomfort, thus preparing the way for a future in which anything like a noble and valuable manhood would be well nigh impossible.

To distinguish between the pain which should be instantly soothed, and, if possible, dispelled, and that which has a mission of good to work out, is a task which, so far, has been mainly left for the professed philanthropist or the reformer; but when we consider the effects of an ill regulated sympathy in spreading greater misery than it alleviates, and in promoting immediate pleasures, at the expense of character and permanent welfare, we must conclude that such a winning process is a duty obligatory upon everyone who values the well-being of society. —*Phila. Ledger.*

THE GIANT MADRONA, OR ARBUTUS-TREE OF CALIFORNIA.

THE genus really belongs to the Old World. Asia has its species, and Mexico claims one or two representatives, but the pride of the family and delight of arboriculturists is the strong, healthy, and handsome child of the west coast. It is often eighty to one hundred feet high, three feet in diameter, and a famous specimen in Marin county has a measured girth of twenty-three feet at the branching point of the tremendous stem, with many of the branches three feet through. The foliage is light and airy, the leaves oblong, pale beneath, bright green above. The bloom is in dense racemes of cream-white flowers; the fruit, a dry, orange-colored berry, rough and uninteresting. But the charm of the madrona, outside of its general appearance, is in its bark—no, it is not a bark, it is a skin, delicate in texture, smooth, and as soft to the touch as the shoulders of an infant. In the strong sunlight of the summer these trees

glisten with the rich color of polished cinnamon, and in the moist shadow of the springtime they are velvety in combination colors of old-gold and sage green. There is a human pose to the trunk. Seen through the tangle of the thicket, it looks like the brown, lithe body of an Indian, and in the moonlight the graceful upsway of its branches is like the careless lifting of a dusky maiden's arms. Every feature of the madrona is feminine. They grow in groves or neighborhoods, and seldom stand in isolation, courtesy to the winds, mock at the dignified evergreens and oaks, and with every favorable breeze and opportunity flirt desperately with the mountain lilacs that toss high their purple plumes on the head waters of Los Gatos creek.—*F. M. Somers, in Harper's Magazine.*

JOHN POUNDS.

In Hoare's "Life of John Pounds," the Portsmouth cobbler, the harbinger of ragged schools, something is added to what we before knew of this first benefactor of little street Arabs. When only twelve years old, his fall into the Portsmouth drydock left him hardly any hope of a living but at the cobbler's bench. By and by he became interested in recovering a deformed nephew without surgical operation, by straightening his feet and preventing their overlapping one another. He accomplished this by making shoes fitted to his feet, which allowed wedges to be driven in of different thicknesses, according as the wretched feet yielded to the pressure. Through all the boy's suffering his uncle cheered him on to perfect success.

To make a man of him indeed, Pounds kept school for him; but finding they were marching to poor music without books, maps, or slates, he took in another vagabond from the street; then the lessons went on very well with discarded spelling books and pieces of slate. The gift of a hot potato drew in other recruits, especially as daily bread was given, and sometimes better clothing, or a picnic in the country. So the little shop was kept overflowing full with boys and girls whom this lame, poor, ignorant man saved from ruin and fitted for usefulness—until in the Christmas of 1838. A merchant had invited him to receive an outfit of clothing for all his flock. Pounds had often prayed that he might be taken away when he could be of no more use, and suddenly as the bird from the bough, just as he was to receive Mr. Carter's gift in his hall, he fell speechless, leaving his little charges in inconsolable grief, having saved nearly five hundred from almost certain ruin, and raised them up in turn to be benefactors to the world.—*Canada Paper.*

NEWS AND OTHER GLEANINGS.

—The exhibition of American Art Industry,—Pottery, Stained Glass, etc.,—to be held under the patronage of the Pennsylvania School of Industrial Art, opened on the 8th inst. and will continue until Eleventh month 18. The place of exhibit is Memorial Hall, in Fairmount Park. Numerous entries have been made, many of them of value and importance, and a large measure of public attention should be given the exhibition.

—"There are four products of California," says a Pacific coast journal, "which will shortly command the market of this country and will seek outlets abroad. These are raisins, prunes, figs, and olive oil.

—It is rumored that the British Government has seized the opportunity of the death of the Prince of Monaco to reopen the question of the suppression of the gambling establishment in the principality. The present Prince has expressed himself as willing to suppress the gambling at Monte Carlo if he can be assured of an annual income of 2,000,000 francs, and if the Great Powers will guarantee the neutrality of his principality.

—George Bancroft, the historian, celebrated his eighty-ninth birthday at his home in Newport, Rhode Island on the 3rd of this month. Letters and telegrams of congratulations were received from many parts of the country and a large number of persons called to pay their respects. He is in good health and he looked forward to this anniversary with much pleasure.

—"We ask," say the negro clergymen of the Protestant Episcopal Church, in a memorial to the General Convention, "what is the position of the colored men in the church? Is it in accordance with the doctrines taught by the church that when men have once been admitted into the sacred ministry of the church a new restriction should be made in the spiritual and religious rights of the colored man, which would not be made in those of a white man? We ask the General Convention to give us an emphatic, unequivocal answer to this earnest and almost despairing inquiry."

—The next meeting of the American Forestry Congress will be held in Horticultural Hall in this city, beginning with the evening of Tenth month 15th, and closing on the 18th. The chief question to engage the attention of the Congress will no doubt be means for obtaining legislation from the general and State governments for the adequate protection and maintenance of forests. The Congress also hopes to have the cooperation of the American Academy of Sciences and of the American Association in its demand for suitable legislation. Papers will be read at the meeting on "Government Forest Reserve," "Forestral Schools," etc. Mr. B. E. Fernow, the present Chief of the Forestry Division of the Department of Agriculture, will present a paper on "Forests and Irrigation."—*The American.*

—The Normal School at West Chester, (Pa.), is now erecting a new gymnasium building, which will be, with the single exception of Harvard, the largest in the country, while its arrangement and equipment will be so complete as to make it probably the finest in connection with any school or college. It will have a full supply of Dr. Sargent's or similar apparatus; with swimming pool, etc. The dimensions of the building are 104 by 64 feet, with an annex 36 by 29 feet. The cost of the building will be about \$24,000.

—Last week, when Frederick Douglass was on board the U. S. ship, at New York, ready to sail for Hayti, as U. S. Minister, he was called upon by Lieutenant Edward Lloyd, of Maryland, whose great-grandfather owned Douglass and his mother when they were slaves.

CURRENT EVENTS.

THE Congress of delegates from the principal countries of America, (except Canada), assembled at Washington on the 2d instant, and elected Jas. G. Blaine, U. S. Secretary of State, permanent presiding officer. An adjournment was then made until the 15th of next month, and the interval is to be occupied with a tour through the country. There are about twenty-five delegates from Mexico, Cen-

tral America, and South America, with ten from this country. The business of the Congress will principally be to consider what measures might be adopted to create closer commercial relations between the different countries represented in it.

On the 2d instant, the steamer *Corona* exploded her boiler on the Mississippi river, nearly opposite Port Hudson, causing the loss of the steamer and about forty lives.

The vote was taken in Connecticut, on the 7th inst., upon the adoption of the Prohibitory Constitutional Amendment. The result is heavily in the negative; the precise figures are not known at this writing.

The usual annual conference of those interested in the work for the Indians was held at Lake Mohonk, last week, adjourning on the 4th instant. Dr. Lyman Abbott reported the resolutions, which were adopted. One of them approves the general plan outlined by Commissioner Morgan, for comprehensive and compulsory education by the Government in harmonious concurrence with the work of the churches and philanthropic societies. Another asserts that as the high character of those engaged in the work of Indian education and the permanence of the tenure of office are essential to substantial progress, this Conference emphasizes the necessity of separating absolutely the appointments to such offices from the mutations of parties.

GREAT scarcity of food and water is reported in the Northwest Territory, along the American boundary line. Stock is already suffering in consequence. Owing to the unusually dry season, the amount of hay put up was small, and immense stretches of prairie have lately been burned over. The outlook is so discouraging that some ranches offer to give their cattle away, knowing that death from starvation is almost certain.

The supplementary elections in France for members of the Chamber of Deputies, (completing the election begun on the 22d ult.), took place on First-day last. The result is that the Chamber, which will continue four years, unless sooner dissolved, contains 365 Republicans and 211 Opposition members. The former desire to maintain popular government, substantially as at present; the Opposition include Royalists, Bonapartists, and followers of General Boulanger. It is generally conceded that the Republic is much strengthened by the elections.

NOTICES.

. Abington First-day School Union will be held at Norristown, on Seventh-day, Tenth month 19, at 10 o'clock. Interested Friends are invited to attend.

J. Q. ATKINSON, } Clerks.
ANNA MOORE, }

. A Conference on the subject of Temperance, under the care of Concord Quarterly Meeting's Committee, will be held in the Court-House at Media, Delaware county, on First-day, Tenth month 20th, 1889, at 3 o'clock p. m.

Friends and others interested are cordially invited.
MARY McALLISTER, Clerk.

. The Circular Committee of Salem Quarterly Meeting have appointed a meeting to be held at Cape May meeting-house, on First-day, Tenth month 20th, 1889, at 11 a. m.

Friends desiring to attend the meeting will take cars on First-day morning, from Market street wharf at 7.30, for Ocean View, the nearest station to the meeting-house. Returning they can reach the city at 7.10 in the evening.
J. H. L.

. The regular meeting of Young Friends' Association will be held in the Parlor, 15th and Race streets, on

Second-day evening, Tenth month 11th. All persons interested are invited to be present.

. Circular meeting at Upper Greenwich, N. J., First-day, Tenth month 13, (to-morrow), at 10 a. m.

. The Western First-day School Union will be held at Doe Run meeting-house, Chester county, Pa., on Seventh-day, Tenth month 20, at 10 o'clock a. m. All interested in the work are invited to be present.

EDWARD A. PENNOCK, } Clerks.
LYDIA B. WALTON, }

. A Temperance Conference, under the care of Halldonfield's Quarterly Meeting's Temperance Committee, will be held in Friends' meeting-house Westfield, on First-day, Tenth month 20, 1889, at 3 p. m.

A cordial invitation is extended to all.

WM. C. COLES, Clerk.

. A portion of the Visiting Committee of the Yearly Meeting expect to attend the meeting at Newtown Square, Delaware Co., on First-day morning, the 13th inst.

. Circular meeting at Centre meeting-house, Delaware, Tenth month 13, at 2.30 p. m.

. A portion of the Philadelphia Quarterly Meeting's Committee to visit the smaller branches will attend the First-day morning meeting to be held at Radnor, Tenth month 13th, at 10 o'clock.

Tram leaves Broad St. Station at 8.45 a. m. for Radnor Station. Returning, leave Radnor Station at 12.33 and 2.33 p. m.

Carriages will be provided to convey Friends to and from the meeting-house.

CHAS. E. THOMAS, Clerk of Committee.

. Concord First-day School Union will be held at Newtown, Delaware county, on 8-venth-day, Tenth month 19, at 10 a. m. All interested are invited to meet with us.

Train will leave Broad street station at 7.09 a. m. No train later will reach Media, to get Friends to Newtown in time for the opening of the meeting.

E. J. DURNALL, } Clerks.
MARY YARNALL, }

This powder never varies—A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. Sold only in cans. ROYAL BAKING POWDER CO., 106 WALL-ST., N. Y.

INTELLIGENCER.
Vol. XLVI. No. 42. }

PHILADELPHIA, TENTH MONTH 19, 1889.

{ JOURNAL.
Vol. XVII. No. 573.

"HE KNOWS."

Through all my daily cares there is
One thought that comfort brings whenever it
comes;

"Tis this, "God knows." He knows
Each struggle that my hard heart makes to twine
My will to his. Often when night time comes
My heart is full of tears, because the good
That seemed, at morn, so easy to be done,
Has proved so hard; then, remembering
That a kind Father is my Judge, I say
"He knows!" and so I lay me down with trust
That his good hand will give me needed strength
To better do his work in coming days.

—Selected.

For Friends' Intelligencer and Journal.

INDIANA YEARLY MEETING, 1889.

This was held at Richmond, Indiana. Friends assembled in the meeting-house on North A street, on First-day morning, Ninth month 29. There was a large number present, many not being members, and all seemed interested and edified by the testimonies that were borne.

We were favored with the company of several ministers and other Friends from distant yearly meetings, whose messages of Gospel love were very acceptable.

The first speaker began with the words: "What shall I do to be saved?" He inquired, What do we mean, what do we desire when we ask this question? Do we mean simply a preservation, a pardon from committed sin, to be known only after death? While he had no controversy with those who differed from him, the truth as it had appeared to him, was entirely satisfying for the wants of his soul. He thought our desire to the Lord should be, to be saved from the commission of sin; and if saved from the commission then it follows that we will be saved from the consequences. We are individually responsible and accountable for our own sins. If sin be the transgression of the law, then it follows that to be saved from it, requires only simple obedience to the law. Then, *obedience is the means of salvation.* "But how shall I know the law?" This is the vital principle to which we as a people feel called upon to bear testimony,—revelation, by the divine presence, and through the Christ, through the Son of God,—through the Word of God, here, and now, that Christ is the Savior of men. Not simply Jesus of Nazareth, alone, but the spirit that dwelt in him in its fullness. He felt that some of the young people were querying as to where heaven is. Heaven is where God reigns. It is of far

more importance for us to enter heaven now than it will be hereafter. Unless we make the most of life, every day, we miss that which it was intended we should enjoy.

Another Friend alluded to the "many mansions," which he applied very beautifully to the different sects; that even with our diversity of views there was still room for us all in the Father's house, because in it there are many mansions.

Others handed forth tender messages of comfort and consolation, and the multitude was fed, and many expressed the feeling that it was good to have been there.

On Second-day the meetings for business began, and it was thought that love and unity marked our gatherings and that we were unusually blessed. Never before has so much life and interest been manifested by the younger members. There was evidence of growth, and the pulse of the meeting would not indicate that the Society was "dying out," or that its field of usefulness was circumscribed. There was a deep interest in the living questions of the day, and a desire that we might be found about "our Father's business."

On Second-day evening the first session of the First-day School Annual Association was held. By consent of the yearly meeting, Fourth-day afternoon was occupied by the second session of the same, and the large attendance and interest manifested gave cheering assurance of the growing importance of this branch of our work. A third session was held on Fifth-day evening. There were many points of interest discussed, but two are thought to be worthy of mention.

If we wish to reach the child we must meet it on its own plane of intelligence and lead it up to something higher. In insisting upon a child's attendance of meeting we should not demand blind obedience, but give an intelligent reason why he should sacrifice his own inclinations and do that which parental love requires as productive of his own best welfare.

In measuring our success we should not be governed by whether we have added members to our schools or meetings, but trust our Father for results. It may be that many seeds planted in the hearts of children not in membership with us, will (under His blessing) bear fruit in other fields, some forty, some sixty, and some an hundred fold.

A deep exercise covered the meeting on Second-day afternoon that Friends should be more diligent in placing their literature before the world. Many bore testimony to the fact that there was much inquiry as to what are our views and principles. One

Friend spoke of the good that could be done if the writings, etc., of Friends were more largely circulated. She said: "The women of the land are coming forth, and where in all the universe have they had the training that we have enjoyed in the Society of Friends? I do hope that our light will shine, and that our sisters will feel and know that they are a power in the land. The world is nearer ready for the truth as held by the Society of Friends than it ever was before."

Earnest counsel was handed forth that in this day of many business failures we should be more than ever careful to be saving, wherever we can, that our debts may be honorably paid, and that we live up to the standard we have set for ourselves for uprightness.

Two dear brothers visited the women's meeting. The young people were encouraged to leave all hindering things and seek for that which enables them to follow in that course of life which will make them useful and able to fill with honor every station in life. They were exhorted to look higher than to the customs of this life, to seek for the treasures that are imperishable, for an enlargement of the intellect, to develop all the God-given powers that they have for good, that they may have their minds stored with useful fruits that will make their society eminently pleasant and agreeable; to strive for those treasures that will make them truly good, truly useful, true help-meets to all those with whom they associate. Much comfort and consolation was handed forth to the different conditions of mind that were present to our edification. It was felt to be a blessed season. We were encouraged to take the Master's yoke upon us, for it will be found to be easy, and his burden light.

The great Reaper has been among us and has removed many dear ones in the past year. Their precious memories have brought a solemnizing influence over us, and we have remembered their faithfulness, their hospitality, their loving kindness, and the consistency of their lives, and have desired that we might be enabled to walk as faithfully in the performance of the duties assigned to us.

A Youth's Meeting was held on Fourth-day evening which was felt to be a highly favored season.

Perhaps there will be no more fitting words in which to close these notes than in the following legacy of love from one of the dear Friends from another yearly meeting: "When the angel appeared to Mary, the mother of Jesus, and revealed to her great and important truths, she treasured them up in her heart. So I would call upon you to treasure up the truths you have heard. Preserve them as the 'words of the Lord.' How many waste their substance in riotous living! Treasure up the secrets the Father has committed to you, and you will know a growth in the ever blessed truth. You will rejoice then ever more, and in all things you will give thanks."

R.

To the notes furnished us above, we add some details furnished by the reports in the Richmond *Daily Palladium*. Among the speakers on First-day were

John J. Cornell, Maria Synnosvedt (of Cincinnati), Isaac C. Martindale, Rachel Matthews, Abel Mills, Isaac Hicks, Phoebe Griffith, and Matilda Underwood. The afternoon meeting on that day was held at 3 p. m. At the close of the morning session William Parry announced the death of Elihu Durfee, of Hoopston, Illinois.

In the business meeting, Second-day, all the representatives were present but one. Two daily sessions were agreed upon, at 10 a. m. and 2 p. m. In the afternoon, it being the time appointed for the funeral (at his home) of Elihu Durfee, it was thought fit to spend a few minutes in silent meditation out of respect to his memory, and brief testimonies to his worth were borne by a number of those present. Davis Furnas was rechosen clerk (men's meeting), and George R. Thorpe, assistant clerk. The epistles from the other six yearly meetings being all read, satisfaction was expressed therewith, and a committee appointed to draft the epistle of this meeting to the others. The memorial of Ann Packer, from Miami Quarterly Meeting, was read. Cincinnati Monthly Meeting reported that the Deeds for the meeting property had been properly recorded. The statistical report of the Yearly Meeting was presented. It showed as follows: Membership Miami Q. M., 565, a decrease of 8; Whitewater Q. M., 1,203, a decrease of 16; total 1,768. Aaron G. Gano regretted to see the decrease in numbers, and urged the members to greater efforts. W. C. Starr and Jesse Wilson spoke in the same line. John L. Thomas thought that much of the apparent decrease in numbers could be accounted for in the fact that many of the members living at a distance from the places of worship joined other religious societies.

At the meeting of the First-day School Association, on Second-day evening, Anna M. Starr acted as clerk. Reports were read from the following schools: Miami, Fall Creek, North A street, Richmond; Milford, Rush Creek, Duck Creek, Maple Grove, New Vienna, and Westfield. These showed a gratifying increase in attendance and in the length of the school year, most of them now being sustained during the entire year. A committee was appointed to draft a memorial to the general conference expressing the appreciation of this association of the lesson helps prepared by that body.

The queries and their answers were considered (in men's meeting) on Third-day. One school only, under the care of Friends, is maintained. The trustees of the benevolent fund reported an income balance of \$496.21, which was directed to be divided equally between the two quarterly meetings. Both of the quarterly meetings sent in reports of the names and post-office addresses of the members for the new directory, which was contemplated at the meeting last year. These lists were referred to a committee to compile, arrange, and complete the lists, and have 3,000 copies printed.

At the session of the First-day School Association, Fourth-day afternoon, the following officers were appointed for the ensuing year: Clerk, Benjamin Rogers; Assistant Clerk, Bertha Hallowell; Treasurer, Nixon Gano; and an executive Committee

of 22 persons. The increased attendance at the meeting excited general remark. Many of the members were favorably impressed with the idea of having the meeting in the afternoon instead of in the evening, as heretofore.

Fifth-day morning, (men's meeting), the minutes of the Representative Committee were read. Memorials of Mary Evans, of Cincinnati Monthly Meeting, Fanny Taylor, of Green Plain Monthly Meeting, and of Sarah A. E. Hutton, were read and directed to be printed. The representative committee reported that the sub-committee appointed to examine the pamphlet, "Why I am a Friend," by John J. Cornell, had not completed its work and was continued until next year. The committee on Indian affairs reported very little active work done except correspondence with the central committee and aiding it in securing favorable legislation in the interest of the Indians. They reported a visit of the central committee to President Harrison and the Secretary of the Interior. They found them much interested in the efforts of the Friends in behalf of the Indians. Fifty dollars were appropriated for this work.

The Philanthropic committee made its report, and appointments for the service for another year were made by both men's and women's meeting. It reported the following sub-committees at work: Temperance, corrupt literature, prisons and asylums, compulsory education and arbitration. Of these only two had a special report. The committee on corrupt literature reported that they had printed and circulated, a pamphlet, "A Warning, to our Girls," which was written by one of its members. They also reported the circulation of a petition against the sale of cigars, cigarettes, and tobacco to minors, on which was obtained 3,000 signatures. This was sent to a member of the last Legislature, and there is reason to believe that it had an influence in bringing about the present law on this subject. The prison and asylum committee reported that they had visited the Ohio penitentiary at Columbus, the State prison for women and the girls' reform school at Indianapolis, and the orphans' homes in Wayne, Henry, and Madison counties, Indiana. They reported the institutions in a much better condition than at their last visit, but there is still a great lack of reading matter in the orphans' homes.

The financial statement of the yearly meeting showed a balance of \$159.94, and \$350 was ordered to be raised. The custodian of the records, Benjamin Strattan, reported that two new books (Nos. 33 and 34) had been procured and placed in the safe, No. 33 being a record of the proceedings of Whitewater Monthly Meeting, and No. 34 a burial record. He also reported the books in good condition. Whitewater Quarterly Meeting reported seven First-day schools within its limits, with 35 teachers and 215 pupils. Miami Quarterly Meeting reported two schools, one of which is sustained through the entire year. The First-day School Association was ordered to report to the Yearly Meeting next year.

The meeting closed on Fifth day afternoon.

"Bear ye one another's burdens and so fulfill the law of Christ."—Paul.

OLD YEARLY MEETING ADVICES.

Some Advices given forth from time to time by the yearly meetings for New Jersey and Pennsylvania, held alternately at Burlington and Philadelphia.

1685. This meeting doth unanimously agree, and give as their judgment, that it is not consistent with the honor of Truth, for any that makes professions thereof, to sell Rum or other Strong Liquors to the Indians, because they use them not to moderation, but to excess and drunkenness.

1686. The above advice repeated.

1687. We give forth this our sense, that the practice of selling Rum, or other Strong Liquors to the Indians, directly or indirectly, or exchanging Rum or other Strong Liquors for any goods or merchandise with them, considering the abuse they make of it, is a thing contrary to the mind of the Lord, and great grief and burden to his people, and a great reflection and dishonor to the Truth, so far as any professing it are concerned, and for the more effectually preventing this evil practice as aforesaid, we advise that this our Testimony may be entered in every Monthly Meeting Book, and every Friend belonging to the said meeting to subscribe the same.

1719. Advised, that such be dealt with as sell, barter, or exchange, directly or indirectly, to the Indians, Rum, Brandy, or other Strong Liquors. It being contrary to the care . . . Friends have always had since the settlement of the Countries, that they might not contribute to the abuse and hurt those poor people receive by drinking thereof, being generally incapable of using moderation therein; and to avoid giving them occasion of discontent, it is desired that Friends do not buy or sell Indian Slaves.

1722. When way was made for our worthy Friends, the Proprietors and owners of lands in these Provinces to make their first settlements, it pleased the Almighty God by his over-ruling Providence to influence the Native Indians, so as to make them very helpful and serviceable to those early settlers, before they could raise stocks or provisions to sustain themselves and families. And it being soon observed that those People when they got Rum or other Strong Liquors, set no bounds to themselves, but were apt to be abusive, and sometimes destroyed one another, there came a Religious care and concern upon Friends both in their meetings and Legislature, to prevent those abuses. Nevertheless some people preferring their filthy lure before the common good, continued in this evil practice, so that our Yearly Meeting held in Philadelphia in the year 1687 testified "that the practice of selling Rum, or other Strong Liquors to the Indians, directly or indirectly, or exchanging the same for any goods or merchandise with them (considering the abuse they make of it) is a thing displeasing to the Lord, a dishonor to Truth, and a grief to all good people." And although the Testimony hath been since renewed by several yearly meetings, it is yet too notorious, that the same hath not been duly observed by some persons, and therefore it is become the weighty concern of this Meeting, earnestly to recommend the said Testimony to the strict observance of all Friends, and where any

under our profession shall act contrary thereto, let them be speedily dealt with, and censured for such their evil practice.

1759. The empires and kingdoms of the earth are subject to his Almighty Power; He is the God of the spirits of all flesh, and deals with his people agreeable to that Wisdom, the depth whereof is to us unsearchable: We in these Provinces may say, "He hath, as a gracious and tender Parent, dealt bountifully with us, even from the days of our fathers. It was he who strengthened them to labor through the difficulties attending the improvements of a wilderness, and made way for them in the hearts of the natives, so that by them they were comforted in times of want and distress. It was by the gracious influence of his Holy Spirit that they were disposed to work righteousness and walk uprightly one towards another, and towards the natives, and in life and conversation to manifest the excellency of the principles and doctrines of the Christian religion, and thereby they retained their esteem and friendship. Whilst they were laboring for the necessaries of life, many of them were fervently engaged to promote piety and virtue in the earth and educate their children in the fear of the Lord.

1761. It being observed by the last Epistle from the Meeting for Sufferings in London, that they express their approbation of the proceedings of those Friends here, who have been concerned in using their endeavors for the establishment of peace with the Indians by pacific measures, and warmly recommend that a Christian regard and notice may be extended towards these People, for cultivating a good understanding with them, and the confirmation of peace on the principles of justice and equity.

Several suitable observations were now made thereupon, to excite Friends individually to a religious concern and care in this matter; more especially, as of late some good effects of a remarkable visitation of Divine Grace has appeared among some of those People.

1763. On due consideration of the request from the Western Quarter, it is the solid sense and judgment of this Meeting, that Friends should not purchase nor remove to settle such lands as have not been fairly and openly first purchased from the Indians by those persons, who are, or may be fully authorized by the Government to make such purchases, and that Monthly Meetings should be careful to excite their members to the strict observance of this advice, and where any remove so contrary to the advice of their brethren that they should not give certificate to such persons, but use their endeavors to persuade them to avoid the danger to which they expose themselves, and to convince them of the inconsistency of their conduct with our Christian Profession.

EVERY year of a Christian's existence should find him better able to define the line between being in the world and being of the world. He ought to have a more definite apprehension of duty; a sharper discrimination of the principles of conduct; a more vivid realization of the constant presence of Christ. —Selected.

A FURTHER DISCUSSION OF RELIGIOUS BODIES.

[We copy what follows from the *British Friend* (Glasgow) for Tenth month. It is a further article in a series which has been appearing in that periodical, one of which we copied in the *INTELLIGENCER AND JOURNAL* of Eighth month 31, last. In that the writer described his friend "Weston" as born a Friend, and still much in sympathy with the Society, but who, being at a distance from Friends, had gone with his wife to the church. It might be well for the reader of the present article to recur to the introductory paragraphs of the former one, in order to understand fully the attitude of the speakers in this conversation.—Eds.]

"WELL, my friend," said Weston, as we took our seats at the tea table, "what is it to be this evening? Are we to discuss Politics, or Philanthropy, or Socialism, or abstract religious Truth? Or shall we once again take up your favorite topic of Quakerism, and consider further its possibilities and duties?"

"Our conversations," said I, "have hitherto been so thoroughly Quakerly in their character, that we have not gone in for pre-arrangement, but have tried to consider whatever happened to arise, and to say the word in season respecting it. It is not a methodical or philosophical way perhaps, but it is unconventional and easy, and we have enjoyed in our free unpretending style some pleasant and useful discussion. As to the subjects thou names—Politics, Philanthropy, Socialism, religious Truth—perhaps Quakerism,—which might to some seem the least comprehensive,—will be found to cover them all. But don't let me press my favorite themes unduly. The world is very wide, and grave and deeply interesting questions demanding consideration are to be found in abundance."

"I dare say," said Weston, "that whatever we take up will be sure to be discussed from 'a Quaker point of view.' And I don't know that a fairer standpoint can be found. Then, if we get on to Quaker politics and methods, I shall be equally pleased. You know that although an outsider, I always enjoy discussing with you points that bear on the welfare of what I can call, with Forster, 'the church of my fathers.' And yet I sometimes wonder,—as I note your activity in the cause in many ways,—whether you don't occasionally long for a wider arena, where your efforts might lead to greater results. Look, for instance, at the opportunities and the comprehensiveness of the Church of England! Compared with a little Society numbering less than twenty thousand, is there not something far grander, far more energizing, in the idea of a National Church, whose history goes back many centuries, and which has still such a mighty influence over millions of people?"

"There is something grand indeed," I said "in the thought of a really Christian nation;—I mean a nation that is Christian in the sense of being united in the desire and effort to live its national and international life in obedience to the Divine law, and to have Christ as its Lawgiver and King. It was, I expect, the hope of doing something towards realizing this grand ideal, that stimulated our Quaker statesman, William Penn, in his efforts to carry out in

detail that great Christian enterprise with which his name is identified. But thou knows as well as I do, that a 'National Church' as the phrase is ordinarily used, is by no means synonymous with a 'Christian Nation.' I think we shall probably also agree that the legislative establishment of the one has in many respects proved a mighty hindrance to the growth and development of the other."

"That sounds severe," said Weston, "though I know that a strong case can be made out in that direction. Still, isn't it an instance in which Sir Roger De Coverley's famous formula may come in, that 'much may be said on both sides?' I suppose the late Bishop of Ripon had ground for his public assertion, 'that many Non-conformists freely acknowledge that the Church of England has been the great bulwark of civil and religious liberty?'"

"I think thou art poking fun at me," said I, "to try and rouse my Quaker spirit. I cannot believe that the blandishments of thy friends the parsons have been really undermining thy inborn hatred of priestcraft, or that they have succeeded in throwing dust into thy eyes on the question of Church and State!"

"No," said Weston, "I think I am pretty safe there. My friend and neighbor, the clergyman of our parish, does not hesitate to say that I am on the other hand, making more and more of a Quaker of him every year of his life. I have told you how broad and liberal he is; how firmly he holds the fundamental principle of Quakerism—the direct manifestation of God's loving Spirit in and to every man,—as the great central truth of Christianity. I dare say I have also told you how zealously and prominently he preaches this truth, and how careful he is to point out the privileges and responsibilities that belong to it; and how he loves to associate this Divine Light and influence with the person of the risen and living Christ. I should like you to hear some of his addresses. You might shut your eyes and think you were listening to a cultured Friend of the old school, before the popular theology that likes to call itself 'Evangelical,' had got such a hold of the Friends. Ritual and ceremonial he has but little belief in, though he of course keeps them up in conformity with the Church custom. I think he holds your idea that they present a sort of Picture-book view of religion that may be helpful to the unspiritual. At the same time I know he has his misgivings whether the tendency of this Picture-book method is not to confirm people in their unspirituality, rather than to act as a stepping-stone to something higher. As regards my clerical friend's views about a State Church, he has an interesting dream that the outcome of all the discussion on the subject will not be Dis-establishment, but that the funds and machinery of the State Church will be utilized for the benefit of the nation in some way which, while truly Christian in its spirit, shall be unconnected with theological teaching and special religious service. In a word, that the clergy of the different parishes of England, under the new *regime* that he dreams of, should not be the appointed preachers of doctrinal truth, or the representatives of a church, but that they shall de-

vote themselves, in the name and through the power of God, to the service of man. He would abolish all theological subscription, and set up, in place of the Church, a great national association for doing good,—for dealing with those many moral, intellectual, and social questions on which all are agreed, and which seem to need a local organizer and guardian in every district. The work of religious teaching and co-operation in higher spiritual service would then be left to the various religious communities, including the free and untrammelled Anglican Church: and my friend believes that the work would be far more effectually and healthily done. As regards the scheme itself, I call it a dream, it appears to me so impracticable and improbable. And yet I regard it as an interesting contribution towards the solution of a most perplexing problem. I hope my friend will some day elaborate the idea in detail, and publish it for consideration and criticism."

"I hope he will," said I. "I dare say he will be prepared for some rough handling of his scheme, and for some hard words as to the tendency of the proposal. The idea is not altogether new, though it contains, to me, some novel proposals. When we see the plan in print,—worked out in detail,—we shall have to discuss it. But now about thy quotation from the late Bishop of Ripon. Let us hear it again, please."

"I won't vouch for the exact words," said Weston, "but it is something like this: 'There are many Non-conformists who freely acknowledge that the Church of England has been the great bulwark of civil and religious liberty!'"

"I think," said I, "that if the well-known American humorist, Artemus Ward, had made the assertion, he would have appended it to his words used respecting another statement, 'This is rote sarkastikal!' It seems almost cruel to glorify an Institution in this style, for supposed service in a direction in which it has so grossly neglected its duty and misused its opportunities. I suppose the statement must have been made long years ago, when the subject had not been so thoroughly searched into as is now the case. If there are any Non-conformists living who still cherish such a delusion, one would like to hear them acknowledge it in public, and watch the result. At all events there are plenty of eminent Churchmen who bear a different testimony. What does the celebrated Dr. Arnold say on this point? I have his words here, and they are worth noting by all who are in danger of being carried away by the prestige of a great and venerable institution. He says:—

'The Church of England clergy have been politically a party in the country from Elizabeth's time downwards, and a party opposed to the cause of progress and improvement.'

"Again he says:—

'It will not do for the Church party to identify themselves with the nation, which they are not, nor with civil and religious liberty, which they have done their best to hinder.'

"Did Dr. Arnold say that?" said Weston. "I know he was a bold, outspoken man of strong convictions,—like you, my friend,—but I had forgotten

that he had expressed himself so decidedly on the shortcomings of the National Church. He was certainly a firm believer in the theology of a legislative alliance between Church and State."

"Well, I should say," I replied, "that he believed — not 'in the alliance—but in the absolute identity of Church and State. To his mind the true church of the nation meant the whole nation in its religious capacity, and concerned about its religious duty. In other words, I apprehend he believed that a nation which professed to be Christian should shape all its actions at home and abroad on Christian principle. I think we shall agree with him there; but the thought is based on the supposed existence of an ideal nation, which is at present nowhere to be found, and towards the development of which this great and wealthy State Church, with its millions of nominal members, has not helped us."

"I am afraid this is sadly true," said Weston, after a long pause; "and although I have not looked into the subject as you have, I agree with you that the sooner the Episcopal Church of England lays aside all claim to predominance, and loyally takes its place among the brotherhood of Churches, the sooner it will be able effectually to help in the realization of its great ideal. I can say so much without necessarily committing myself to all your sweeping conclusions about Church and State."

"I think," said I, "that in your privileged locality, and under the mild and charitable rule of thy clerical neighbor, you see the working of the State Church system under very exceptional circumstances. If all were like thy friend, the Liberation Society might disband, and we might—after the fashion of English people—tolerate even an inconsistent arrangement, if it could be seen that it was working smoothly and doing a great and beneficent work. But can we give such a verdict on the past history of our Church establishment?"

"Well, I admit," said Weston, "that there has been, and probably is, a deal of human nature, and not a little of the worldly spirit, in the State Church, if that is what you mean."

"Ah, but it is not only that," said I. "Human nature and human infirmities we are bound to be patient with, since we are all so subject to them. But it seems to me that the tendency of the system has been demonstrated,—through all those centuries to which thou appealed,—to be antagonistic to freedom, and to be unhelpful to the growth of spirituality, and of loyalty to conscience. I have only quoted one Churchman to support my case, but it is not from lack of such witnesses. Just note what Lord Macaulay—who was a Churchman, though with Quaker blood in him—has to say on the point to which we first referred. He says:

"The Church of England was for more than a hundred and fifty years the servile handmaid of Monarchy, the steady enemy of public liberty. The divine right of kings and the duty of passively obeying all their commands, were her favorite tenets. She held those doctrines firmly through times of oppression, persecution, and licentiousness; while law was trampled down; while judgment was perverted; while the people were eaten as though

they were bread. Once, and but once—for a moment, and but for a moment—when her own dignity and property were touched, she forgot to practice the submission she had taught."

"Another celebrated writer, also a Churchman, says:

"Anglicanism was from the beginning at once the most servile and most efficient agent of Tyranny. No other Church so uniformly betrayed and trampled on the liberties of her country. In all those fiery trials through which English liberty has passed since the Reformation, she invariably cast her influence into the scale of Tyranny."

"But, my friend," said Weston, "all that is centuries ago! Why revive these ancient grievances? Let the dead past bury its dead."

"By all means," said I; "but we must not ignore the teachings and warnings of the dead past. Especially," I added, slyly, "when it tells us of the doings of a Church whose history goes back so many centuries, and which is said to have been the great bulwark of our liberties!"

"Now, don't be unmerciful, Clio! For, I can assure you, I am in a very teachable mood. I freely admit that the history of the past, even as regards the Church of England, is a very dark and deplorable story. But is this not true of other national institutions? Our Courts of Justice and our Parliaments for instance, have in past days perpetrated or connived at many very shameful things; and yet we hold them to be invaluable institutions. I suppose I may call them, at all events, 'the bulwarks of our liberties,' without incurring the risk of your pleasant sarcasm!"

"Certainly," I said, "they can fairly be called bulwarks; but in order to make them so, they had to be reformed almost from top to bottom; and this we shall have to do with the State Church. The need of some great reform in that direction will, I think, be made still more apparent, if we recall the doings of more recent times. Thou speaks of these shortcomings as being 'centuries ago!' I wish they were only to be found centuries ago. As an indication of the continued adverse influence of the State Church in more recent periods, let us just recall the story of the last hundred years or so. During that time, I believe it may be said, that the State clergy have hardly ever as a body been on the side of true progress and freedom and peace. In the war against our American Colonies at the end of last century,—in the struggles against the Slave Trade and Slavery,—in the protracted efforts to ameliorate our Criminal Code,—in the great movement for Parliamentary Reform,—in the Free Trade movement,—in the Peace movement,—the vast majority of the bishops and clergy have been on the wrong side, and have used their great influence to frustrate and hinder true progress."

"Of course, you make an exception under the head of National Education," said Weston. "There surely the Church has mightily helped the cause of progress."

"Well, even there," said I, "the facts will be found to tell against the public spirit of the Clergy. Lord Russell says that the Clergy were generally op-

posed to the education of the poor; but, finding that the efforts of Dissenters were succeeding in this direction, they set up a Church society, which they still jealously work in the interests of their own sect. Altogether, the history of the State Church is a most humiliating story; and it is evident that for the enlightenment and guidance of the people in dealing with this institution, we need the continued efforts of the Society for the Liberation of Religion from State patronage and control."

CLIO.

INDIVIDUAL ACTION.

In this quiet hour, in which we may free ourselves from all sense of hurry and pressure, and consciously bring into the presence of the Most High our deepest needs and our highest hopes, I would direct your thought to a very practical, and also a very personal theme. When, less than a month ago, you said farewell to those nearest and dearest to you and turned you faces Swarthmore-ward, doubtless the thought that was uppermost in your minds, was what you should *get*, what you should add to your possessions, within these walls. You came as miners, seeking treasures. A part of you had learned already the resources of these mines, many were strangers; but all came hoping and believing that the year spent here would send you home richer and greater than when you came. Before you lay the locked treasures of language; the marvels of science; the laws of mathematics; the riches of literature—all this wealth of opportunity only waiting to be appropriated. And this was the thought, too, in the minds of father and mother when they came to the great sacrifice of separation, and perhaps to the added sacrifice of personal comfort and ease, when they chose a year of stinted expenditures for themselves it may be, that your wants might be fully met. This thought, of what you should *get*, was by right the first thought in your minds, and in the minds of your parents.

But there is another thought which I would most earnestly press home to you to-day—the thought of what you are to *give* in this closely associated life of our little community. In the sheltered life of home, where father and mother are like protecting walls, and sheltering wings to their precious children, the individual life is merged in the life of the household; but college life is of necessity different. Closely as we are associated, in private room, in class-room, in dining-hall or parlor, there can be no merging of the individual life here; each member of our community stands out, as do the trees of a forest, with an individuality all his own. To many of you this is a very great change. At home, father and mother were largely responsible for the tone of your life; at college you yourself strike the key-note of your own life, to be a note of harmony or discord in our associated life. A new responsibility is upon you. I would not oppress you with this thought; but I would awaken you to it, and I purposely address myself to each individual student. Whatever may be the outcome to yourself, of this year at Swarthmore, the thought which I would press home upon you in this hour is

¹Read to the students at Swarthmore College, Tenth month 6th, by Elizabeth Powell Bond.

this—that your presence in this community will inevitably impress itself for good or ill upon one, or few, or many of those who come into relations with you. To-day, at the outset of the year, I would awaken you to a realization of this fact that when the year comes to its close you will have unconsciously done a work that, like an accusing angel, will pursue you and rise up against you all the rest of your lives; or, like an angel of comfort, will go with you winning for you perpetual benediction. For human souls are very sensitive; are like the sensitive plate of the photographer, taking and holding in greater or lesser degree the standards and motives of those about them. It comes to this: if you are careless and indifferent in your work, it is not your own work only that suffers, it becomes a weak place in our associate life, in the wall about our Jerusalem. Your faulty work wrongs your neighbor. Have you no fine sense of honor to direct your conduct? Do you allow yourself to call black white? Does your standard of honor satisfy itself with secret, undiscovered misdeemeanor? Do you live a double life, with a fair exterior that covers but does not conceal an unsound soul? Then, alas! you become a plague-spot among us, lowering the standard of other souls, depreciating the sense of honor of those who find themselves, accidentally it may be, placed near you. Believe me, young people, it is a very grievous thing, if at the close of the year, you have left upon other souls the impress of your own unfaithfulness, or dishonor, or impurity of soul. This is the new responsibility that is upon you.

But, if it is a grievous thing to lower the standards of others, to weaken their hold upon right and virtue, think now, of the glorious thing it is to become the inspiration of others; to be strength to the weak; to be sight to those who having eyes, see not; to lead the way upward toward all great, good things! If responsibility is upon you, so is a blessed privilege yours. A few men and women among us have been set apart to direct your work; to be anchors to your lives here; to be a controlling power among you; to check, if need be, what Longfellow calls the "sublime audacity of youth;" to give you such light as you will accept from our longer and more varied experience. Special privileges are ours it is true, from age and position; but you, young people, are our peers in the privilege of establishing among us the highest standards of faithfulness and honor and purity. One girl may minister to another girl, as the mature woman could not; one young man may be to another youth in some extremity what the mature man could not be. This, then, is the blessed privilege of each student so to live his own life that when the year closes he has left the impress of himself upon his companions, in the noblest standards of thought and conduct.

"Greater love hath no man than this, that he lay down his life for his friend." This supreme sacrifice is not often demanded at our hands. But the supreme privilege is always ours—to *live our life for our friend*. What gratitude do we feel to him, who from hour to hour, calls out from us in response to his own greatness of soul all that is best and sweetest in our

OWN. Earthly possessions may be few and scant, but no poverty can shadow life thus enriched. May a realization of this blessed truth come to each one of you, from the least unto the greatest, now at the outset of the year, that its close may be bright with the happiest achievements.

SELF-GOVERNMENT.

WHEN Solomon uttered his wise truism, "He that ruleth his spirit is better than he that taketh a city," he struck the key-note of instruction that was presumably sadly needed then, though perhaps but little comprehended. Years of enlightenment have since passed, yet it is still, and will ever be, an instruction of which we should take fast hold and make it so permeate the atmosphere of our homes, our schools, our business, and our pleasure that it cannot but become a constituent part of character. And never can we let go till we have so nearly reached the end of time here that we are inwardly conscious of the fulfillment of the promise given in Revelation to him that overcometh, "I will make him a pillar in the temple of my God."

How these promises "to him that overcometh" ring out bold and clear, and give courage to all who read them with intent to profit by them! To how many self-governed men and women in the past have they been as beacon lights leading them on to the conquest of all that within themselves which was opposed to the spirit of God! And shall we not so use them for our advancement now? Our need is yet very great. Every day's proceedings in both public and private life reveal the weaknesses of humanity in the line of self-government. Individually, he who controls not himself and keeps not every faculty he possesses under the regulation of true wisdom—and this is a gift to be earnestly sought of God—loses not only the respect of others but eventually his own, and life becomes a burden and a care. Untold have been the martyrdoms suffered because of this weakness in our dearest friends, or those linked to us by ties of kindred, and atonements beyond measure have been offered both by love and friendship to save dear ones from the direful effects of the lack of self-government in some one or another form.

Collectively, it is still the same. When in an assemblage of people for some common good, this want of control over one's actions or utterances permits the jarring notes of discord to fall as fire brands, how sad the result! For this just causes have been lost, reforms retarded, and all because a few people have not reformed or self-governed themselves; the saddest part of all being it might have been otherwise. We are very sure there would be great gain in this regard if there was greater care bestowed to train the children in a knowledge of, and reverence for, these ancient axioms, that leave no doubt as to their meaning; that it is the selfish spirit in man that is to be subdued. This instruction is developed all along the lines, from Solomon to the sublime teachings of Jesus and the evangelists, that unless a man governs or controls himself he will lose that which to him is of most worth—his own soul. Shall we not then diligently teach this from the very beginning, in terse and comprehensive language at first, then in the more figurative and practical words of the New Testament, till all can endorse as his own rule of practice these words of a modern evangelist: "Let him that would move the world move first himself. He that would do good to men begins with what tools God gives him, and gets more as the world gets on. It asks neither wealth nor fame, to live out a noble life. Make thy light thy life; thy thought, action; others will come round. Thou askest a place to stand on hereafter and move the world. Take it where thou standest, and begin now. So the work shall go forward. Reform thy little self, and thou hast begun to reform the world. . . . The first duty that God demands of men is that they be faithful, each man to his own nature, and each woman to hers, to respect it, to discipline it to its proper manner, and to use it in well-proportioned life. If I fail in that, I fail in everything besides. Gain what else I may, the gain is of small consequence; I have lost my own soul."

A FRIEND in Iowa, in a private letter to one of the editors, says of Illinois Yearly Meeting: "The meeting, upon the whole, was as large, or larger, as to members, than for the past two or three years. Among those present were Isaiah Lightner, of Genoa, and Moses and Margaret Brinton, of Lincoln, whose attendance added interest to the meeting, inasmuch as Isaiah was there specially to ask for the establishment of a Half-Yearly Meeting in Nebraska, to be held alternately at Lincoln and Genoa; at the former in Second month and the latter in Eighth month. The Yearly Meeting granted the request, and appointed a large committee to attend the opening, at Lincoln, in Second month."

"WHERE the Spirit of the Lord is, there is liberty."—Paul.

MARRIAGES.

BALLINGER-MOON.—Tenth month 10th, 1889, under the care of Alexandria Monthly Meeting, Virginia, David Walton Ballinger son of John and Rebecca Ballinger, and Jessie F. Moon, daughter of the late Henry B. and Martha D. Moon, all of Fairfax county, Virginia.

DUVALL-HULL.—Ninth month 21st, 1889, Charles L. DuVall to Mary Ella Hull, daughter of James C. and Caroline E. Hull, all of Brooklyn, N. Y.

WORRELL-OGDEN.—Ninth month 26th, 1889, at the residence of the bride's parents, Ogden Station, Pa., Mary L., daughter of John C. and Emily H. T. Ogden, to George P. Worrell.

DEATHS.

CHANDLEE.—At the residence of her nephew, 2221 Wallace street, Philadelphia, on the evening of Tenth month 9th, 1889, Hannah R. Chandlee, wife of the late George Chandlee, aged 92 years; a member of the Monthly Meeting of Friends of Philadelphia.

In former years she frequently spoke in our religious meetings. Her prominent virtue was her benevolence and her consideration for the necessities of the poor, having been for many years a welcome visitor among them. The patience with which she bore her long illness was remarkable.

COCK. De-parted this life at his home at Great Neck, L. I., on seventh-day, the 21th of Eighth month, 1889, after a very short illness, George Embree Cock.

He was an earnest and consistent member of the Society of Friends. His loss is deeply felt, not only by the immediate members of his family, but by a large circle of friends.

A friend sends an additional notice, from which we extract as follows:

"In reflecting upon the loss our neighborhood has just sustained, in being called upon to part with our valued friend and neighbor, George Embree Cock, these words of a familiar author came to our mind: 'I remember two or three men who were greater than what they seemed; for they had such a sense of this earth as a broad stepping-stone to Heaven that they could not settle on it for place, or strive.' He was most quiet and unostentatious; domestic in his tastes and habits; strong in principle, and devoted, with an unrenmitting attention and industry, through a long course of years, to the varied duties of his calling. Those traits that were known best in the privacy of domestic life made him a strength and a comfort there, and won the affection and respect of all who knew him in his sacred retirement. Every day his loss will be more and more deeply felt by those who knew him best. May the example our friend has set before us be a blessing to us all, and help us in our daily walk and conversation to be as unselfish, considerate, and consistently kind as he was."

DURFEE.—At his home on the 28th of Ninth month, 1889, Elihu Durfee, in his 84th year, an approved minister of Richland Monthly Meeting, Hoopston, Ill.

His sickness was pronounced to be "water on the brain." For five months he had been thus afflicted, unable the most of this time to attend our meetings. He leaves a tender, faithful companion, 81 years of age, with whom he had lived for nearly 52 years. Although so many months have passed by since he mingled frequently with his friends, it is with difficulty that they realize he has passed from our midst forever. It has been the privilege of the writer for many years to have his almost daily association in either social or religious converse; and in this indeed it seemed like being in the company of one whose presence was a refresh-

ing stimulant to the mind and renewed efforts toward a higher life.

RUSSELL.—At the residence of her son-in-law, T. E. Wood Grist, in Unionville, Centre county, Pa., on the morning of Tenth month 12th, 1889, after a lingering illness, Amanda M. wife of Abel N. Russell, formerly of Adams county, Pa., in her 76th year.

SCOTT.—At Waterford, Loudoun county, Va., on the 14th inst., Jacob Scott, aged nearly 85 years. He was a birthright member of Fairfax Monthly Meeting of Friends, has always resided here, and was a regular attendant of the meeting.

SMITH.—At Woodberry, N. J., Tenth month 5th, 1889, Mary L., wife of Thomas Parry Smith, aged 51 years. Interment at Horsham, Pa., from the residence of Dr. Jarvis S. Smith.

WHARTON.—Tenth month 8th, 1889, Ernest C., only son of Ernest C. and Julia Wharton, aged 11 years and 26 days. Interment at Fair Hill, Philadelphia.

ELIHU DURFEE.

Elihu Durfee was born in Palmyra, N. J., the 27th of Third month, 1806; he was 83 years and 6 months old when death opened the door into the eternal world.

Friends' meeting-house being small the Universalist church was kindly offered and well filled with citizens of all denominations, on the 30th of Ninth month, during the time for the funeral services, which were held in accordance with the usages of our Society. A number of relatives and acquaintances from a distance were also present, and tributes of affection and ministry were offered by Edward Cole and others.

One has thus passed out of this life who had rendered large and valued service to the Society and the truths it represents, both through personal influence and a ministry unusually strong in character and broad in its sympathy and charity. Genial in disposition, interested in whatever affected the happiness of his fellow-man, he planted the seeds of good-will and right thought in many who never sat under his ministry.

Coming, I think, in the year 1869, as a visiting minister from Genesee Yearly Meeting to Indiana Yearly Meeting, his presence and power were closely felt in what was thought to be a critical time in its history, and for good in an unusual degree; wise in judgment and language, conciliating in manner, he enabled the new life then recently aroused in that meeting to move forward with renewed hopefulness in aggressive Christian action, under a spirit of love and peace, without calling out any unpleasant antagonism upon the part of the more conservative members. This impulse to more influential action in the affairs of the nation and its people is yet felt whenever his presence and labors were known among us. Soon after this visit of Gospel love, he removed with his wife and daughter to Cincinnati, Ohio, where he was an active and valued member of the local meeting until his removal in 1876 or '78 to Chicago. Here, as elsewhere, he was beloved as a minister and a friend, and it was with regret that we saw him leave in 1878 for his new home in Hoopston, Illinois, where he resided until his death. As a member of Illinois Yearly Meeting he added materially in developing its life and guiding its work during the years of his active service within its limits. For several years his health has been failing, and some months since softening of the brain took place, preventing him from recognizing friends or using language understood by us, yet in his attendance at our meeting I was told it was not uncommon for him to rise and speak for several minutes with clearness, force, and general acceptance.

Chicago, Ill., Tenth month 7.

SCRIPTURE LESSON No. 40.

TENTH MONTH 27TH, 1889.

SIN, FORGIVENESS, AND PEACE.

GOLDEN TEXT:—I said, I will confess my transgressions unto the Lord; and thou forgavest the iniquity of my sin.—Psalm 32 : 5.

READ Psalm 32 : 1-11.

THOUGH David is cited as "a man after God's own heart," he was often led astray through his strong emotional nature, and the enjoyment he found in the pleasures and excitements of earthly things, which, when kept under proper restraint and in subordination to the higher life, were intended for our good.

We find him at the very zenith of his power, surrounded as were the monarchs of the east with a retinue of favorites, who gave themselves unreservedly, or were chosen without the liberty of refusal, to minister to his desires or serve his ambition. With all this throng about him, he entertains a passion which even the low state of public morals at that time counted a crime, and Nathan is sent to reprove the king. No language can be more touching and appropriate than the parable the prophet uses to bring him to realize the great wrong he has committed, and it is not until Nathan, in the freedom that his sacred office guarantees, exclaims, "Thou art the man," that David becomes conscious he is the transgressor against whom his own indignation is raised. (2 Samuel 12.) The Psalm that forms the basis of our lesson is a rehearsal of the penitence, confession, and prayer for forgiveness for the great wrong he had committed.

Blessed is he whose sin is forgiven. This condition is only attained when we become sensible of our sin and make confession. The blessing realized through obedience to the Divine Will, is the privilege of him to whom no iniquity is imputed,—who needeth no repentance.

When I kept silence, etc. This is evidence that the wrong he had committed was disturbing David's conscience. He was as one in torture; peace had departed, and left him a prey to fear and gloomy forebodings.

I said I will confess, etc. This is the only resource for the transgressor; as long as he cherishes the spirit that led to the wrong act, so long must the fear of Divine rebuke disturb his mind, and add to his unhappiness. Instances are not wanting in our own time, of men, in secret, committing grievous sins, which have so preyed upon their minds that they have been obliged to give themselves up, to undergo the punishment the law inflicts, and have found peace in so doing. Thus the Divine monitor in every breast reproves for sin, and well is it for all who have yielded to "the sin that so easily besets," to submit, as did David, to the reproofs of instruction.

One of the religious principles of the Society of Friends is that no human being is born sinful. While God has freely placed before us all the needed knowledge to preserve us in this state of innocency and purity, he yet leaves us free to choose, whether we will obey or disobey the revelations made by the Inner Light to our spiritual natures, for we sin when we act contrary to the intimations of the Divine

Spirit, and fall short of the fulfillment of duties that we know we ought to perform. "If we confess our sins, God is faithful and just to forgive us our sins." By again choosing to be obedient to the revelations of God's will, which God in his love does not withdraw from us even while disobedient, the only difference being its effect upon us, making us unhappy when disobedient, and happy when obedient—by sincere repentance, manifested by forsaking the wrong, and striving to walk in the right, we will know of that inward peace and satisfaction by which we are fully assured that Divine forgiveness follows such method of atonement.

NOTES ON THE LESSON.

The Psalm that forms the subject of our study, also the 51st Psalm were written by David after the commission of his great sin against Uriah, one of the faithful commanders in the army of Israel. They show that before Nathan, the prophet, under the liberty which his prophetic office gave him, had charged David with the double crime of which he was guilty, the consciousness of his great iniquity had so disturbed his peace that he was prepared to make confession of the sin and ask the forgiveness of God, whose laws he had violated,—laws for which the penalty was death.

The enormity of his crime appears all the greater from the fact that it was his duty as the king, not only to yield obedience to the laws under which the theocracy was established, but to see that the whole nation lived in obedience thereto, and herein the great heinousness of his guilt was manifested. While the kings and rulers of other nations were, by the absoluteness of their power, free to possess themselves of every desire of the heart with no regard to what wrong a subject might suffer in the gratification of the desire, it was not so with the monarchs of Israel. Their form of government, though recognizing the "divine right" of kings, gave certain rights to the subject, and preserved inviolate the family relation. The laws that now hold society together and protect the weak and those who have no power in themselves, have their origin in the code upon which the nationality of Israel was established and the rights of its subjects guaranteed.

These psalms of David's, written under circumstances so humiliating and heart-searching, have never been surpassed for pathos and deep contrition; they have been the medium for countless other repentant sinners to express the anguish of soul their iniquity has cost them. "Against thee, thee only have I sinned, and done this evil in thy sight," is still the confession that has to be made by those who yield to the allurements of sin, before the peace and restoring mercy of the Heavenly Father can be realized. We may all join with the royal penitent when he petitions, "Create in me a clean heart, O God, and renew a right spirit within me. Cast me not away from thy presence, and take not thy Holy Spirit from me. Restore unto me the joy of thy salvation, and uphold me with thy free spirit. Then will I teach transgressors thy ways; and sinners shall be converted unto thee."

For Friends' Intelligencer and Journal.

A VISIT IN NORTHERN NEW JERSEY.

FIRST DAY morning the 6th inst. was wet and inauspicious, and as the hours wore on we were in doubt whether our friend, who had kindly offered to take us to Orange meeting, would not think it too stormy to venture out; but in due time the carriage was at the door and a drive of half an hour, which, under fairer skies would have been charming, brought us to the building in which the meeting is held. It is centrally located on the main business thoroughfare of Orange, and the meeting convenes at 11 a. m. We had attended it several years before, when the membership was larger; now, it is so small as to make its future very uncertain.

We arrived in good time; one and another coming in, increased the number to fourteen, equally divided as to sex, which has often been noted as scarcely ever the case in other than Friends' meetings. The room is small and is furnished with chairs and a platform for ministry and the officers of the meeting.

A sweet feeling of reverent quiet covered the little company, under which the ministry of "the word" was handed forth in obedience to manifested duty. The message claimed the earnest attention of the audience, who usually sit the hour in silence, except when the Visiting Committee from New York or a Friend traveling in the ministry passes that way. It was cause for thankfulness that way had been made for us to mingle with this little band of Our Father's children, who so gratefully appreciate these visits of ministers and others interested in their welfare. The meeting is easy of access, street railway cars passing the door at frequent intervals. Orange is a place of growing importance, and being only a short distance from Bloomfield or from Mont Clair, where Friends reside, there appears no reason why a flourishing meeting might not be maintained there. One strong element to add to its interest would be a First-day School, if only one or two earnest workers in that department of Christian labor would settle among them. Other denominations are more active than ourselves in entering new fields of Christian endeavor, and it is often done through the Sunday School. Here at Glen Ridge, where we are sojourning, the Congregationalists are building a nice edifice on the main street. They began their effort by holding meetings in the waiting-room of the railroad station which is only a short distance from the location they have selected. On Seventh-day evening after the last train has passed, the seats are arranged for the First-day morning, and the organ, which occupies a recess, is uncovered and placed in position, and as no travel is allowed on First-day the church has entire possession. The same zeal and earnestness on our part would in many places where "the two or three" of our profession reside, gather these into little centres of religious union, that might be made a blessing not only to the few but to the neighborhood where they might be located.

Glen Ridge is properly a suburb of Mont Clair, but is rapidly improving; pleasant cottages are going up right in the edge of the woods, the chestnuts

dropping into some of the yards. The roads are undergoing the process of grading, and it has not long to wait until the place will have an individuality of its own. Its station is less than a mile from Mont Clair and about the same distance from Bloomfield.

The cottages are occupied mostly by the families of men who are in business in New York. Trains are numerous, accommodating the early as well as the later passengers, the time about an hour from the centre of business in the city to the station here. The locality is high, and cannot be other than extremely healthy. Grocers' and butchers' wagons are daily at the doors to take orders, which are filled with promptness. It is fast becoming a favorite place of residence for families with young children, who prefer the freedom of a suburban home.

On Fifth-day, the 10th, we take the train for Hoboken, crossing to Barclay street ferry, New York, on our way to attend Brooklyn mid-week meeting. We take the cars over the Brooklyn bridge, and at the terminus enter a street railway car, which brings us very near the meeting-house. The early morning was rainy, but the skies cleared and we had a delightful day. We went early and had a little time to look into the school-rooms, which occupy the basement of the meeting-house. The school is large, more pupils offering than can be accommodated. It has three departments, primary, intermediate, and academic, and is under the supervision of a board of trustees, eighteen in number and of both sexes. Attendance of meeting is voluntary on the part of the pupils; five only were present on this occasion. It would have been very pleasant to look into the bright face of every child on the premises, and there was ample seating room for all. We in Philadelphia are accustomed to having all the children with us when we meet in the middle of the week, and we regard the hour thus spent as so important in the training of the scholars that it is made one of the conditions of entering pupils in the schools.

As the meeting settled into reverent quiet the query of the prophet, "Is it well with the child?" came livingly before my mind, and pressed for utterance. The relation of the church to its children was presented. As in the family the chief concern of the parents is for the welfare of the children, so in the church, if the children were cared for, and lovingly, tenderly watched over, there was hopeful promise of a succession of standard-bearers,—if they were not so cared for there was little to look forward to in the future. If it is well with the children it will be well with the church. The exercise was close and searching, but watchfulness to hand forth only that which was blessed and broken for the occasion, brought the reward of peace, and the comforting assurance that it met the witness for truth in the hearts of many.

This meeting, like the most of our mid-week gatherings, had only a few men in attendance; the pressure of business during the hours of the morning, makes it next to impossible for a large proportion of our members who are thus engaged to give the time to this service; only those who are beyond the age of active occupation and the few who have control

of their own time, can be relied upon to keep up the meeting, and in a measure the same is true of our women. It was very satisfactory and encouraging to see so many of the latter present on this occasion. It only needed the children to make the audience complete. The cordial welcome extended us at the close was very grateful and the kindness manifested will be held in remembrance.

A little mission of sympathy and good-will (in which we were joined by a Brooklyn Friend), to a young couple belonging to our own meeting (Green street, Phila.), lately come to Brooklyn to reside, and whom we wished to bring to the notice of the Friends here, was satisfactorily accomplished, then back to dine and have a restful interchange of thought and feeling with our companion whose hospitality and kindness on a former visit were still fresh in memory.

We returned to New York by the ferry; the day proved very fine, only a little hazy, which interfered somewhat with the view we had hoped to enjoy of the colossal figure of "Liberty enlightening the world," which forms a very prominent attraction of New York harbor.

The shadows of early twilight were gathering as the train left us at Glen Ridge Station. A walk of ten minutes, with a gradual rise all the way, brought us to the loved ones who were watching for our return.

Tenth month 14.

FIRST-DAY SCHOOLS.

MEETING OF BUCKS UNION.

The First-day School Union of Bucks county met at Wrightstown meeting-house, Ninth month 28. The attendance was good. "Does Christianity justify the taking of human life under any circumstances?" was answered by an essay from Langhorne. The writer claimed that in the precepts and life of the founder of Christianity we could not find a justification for the taking of human life; quotations were given showing in every instance how Christ rebuked the desire in his disciples to avenge a wrong by a wrong. Expression was general as to the law of capital punishment being a barbarous, useless, and cruel law.

Solebury school contributed a biographical sketch of Samuel M. Janney. "Does music tend to increase religious devotion to the Supreme Being?" was answered by Makefield school. The writer had no controversy with those who employed this form in their worship. She did not hold the views of many of our ancestors who classed music as one of the evils of the day; she acknowledged its effect on our emotional nature, but said that music apart from words never awakened devotional feelings in her. Samuel Swain thought that whatever takes hold of our emotional nature inspires devotion; that our different natures and early education lead us to seek different means—to some it may be silence, to others harmony.

A question referred to Doylestown school, "Do the duties of the teacher to the members of a class extend beyond the school session?" was answered in a well written essay. The writer said there are

few teachers so gifted as to give a lesson without preparation. This alone requires much time and effort, perhaps all that she may have at her disposal. But if she has time to establish sympathetic and social relations which shall extend beyond the class work she may gain a hold upon those under her charge which will make her teaching more effective and her influence broader.

The question, "In what way can the Meeting and First-day School best help each other?" was answered by Joseph Flowers. We all admit that the individual in the quiet of his home may worship God and receive assurance of Divine favor. He assumed it was the office of the church to teach mankind to live good, true, and pure lives rather than to torment themselves with theological doubts and difficulties, and in this the First-day School can do excellent service for the Meeting. The Meeting should foster the school in order that our children may be thrown in the way of good. The object is the same in both; the one but leads to the other. He urged that members of the First-day School attend the meetings, and be careful to adhere to Friends' principles.

Adjourned to meet at Solebury the fourth Seventh-day in Fourth month, 1890.

SWARTHMORE NOTES.

—The first regular college lecture will be delivered in the hall on Sixth-day evening, Eleventh month 15th, by Samuel Phelps Leland, whose lecture, arranged for a day in Fourth month last, was cut out by reason of a change in the time of holding the spring holidays. His subject will be "Factors of Life."

—Acting President Appleton is very much interested in the movement among friends of the classics to excavate the site of the ancient Greek city of Delphi, which has been offered to Americans for purposes of investigation. He is now in correspondence with W. C. Lawton, of Cambridge, one of the projectors of the plan, and hopes to secure him for a lecture at Swarthmore upon the subject. Swarthmore College has already made a contribution toward the fund.

—The students were well pleased over the football game at Haverford College on Fourth-day of last week when the Sophomores of Swarthmore defeated the same class of Haverford in a close game. Dickinson and Swarthmore play here on Seventh-day.

—Morris L. Clothier, '90, on Fourth-day last delivered to President Isaac Sharpless, of Haverford College, the parchment representing the honorary degree conferred upon him at the last Swarthmore commencement.

—Dr. W. C. Day is making some original investigations on Alaskan coal for the U. S. government. Dr. Day does a great deal of special work for the United States Geological Survey.

—Professor Smith's First-day afternoon meetings for the study of Friends' principles are meeting with a great deal of success.

S.

ORTHODOX FRIENDS.

DAVID B. UPEGRAFF strongly opposes the suggested General Conference of the Orthodox Yearly Meetings, to have "ultimate authority and appeal," etc. In his quarterly journal, the *Expositor*, he says: "To us the whole scheme is unspiritual in its conception, revolutionary and anti Quaker in its doctrine, and utterly visionary as to any practical utility whatever. Dr. Nicholson is quite mistaken as to the popularity of this new move among the rank and file of the Church on a sober second thought. It is true it offers a temptation to a few ambitious and secularizing leaders, but the true revival agencies of the Church are not the ones that are pushing it, or asking for anything of the sort. The plea of its necessity as a conservator of the revival work, is fallacious in the extreme. The yearly meetings are abundantly capable of doing all that needs to be done in caring for their own children, if they really want to do it; and if they do not, how vain and futile would be the fulminations of a Quaker House of Bishops! Dr. N. says, 'It has not been worked up.' We predict that it will have to be 'worked up' before it will go 'up.' The Dr. admits that 'our editors' and 'most influential ministers' are many of them opposed to it, and where he finds its success is not so easily seen. If Ohio Yearly Meeting had acted on the proposition this year, it would have been defeated ten to one, but it was postponed a year for consideration."

—The remarks of the *Expositor* will be better understood by the explanation that D. B. U. strongly approves the observance of the "ordinances," baptism, and the sacrament, and that while in Ohio Yearly Meeting he and his friends have held their footing on a basis of tolerating this, the other Orthodox yearly meetings have generally condemned it. (Iowa has declared that any of its members holding official position who "shall be baptized with water or partake of the outward communion of bread and wine, or teach the observance thereof," shall forfeit their positions, and the meeting to which they belong shall release them therefrom.) In a general council of the yearly meetings, therefore, the observance of the ordinances would no doubt be condemned.

—We printed some time ago an extract from the *Transcript*, of Portland, Maine, commenting upon the lapse from original Quakerism shown in New England Yearly Meeting, with some comments thereon by the *Christian Union*. It is now said by a writer in D. B. Upegraff's *Expositor* that during the sitting of New England Yearly Meeting at Portland, John G. Whittier "was the guest of his friend the senior editor of the *Transcript*." The *Expositor* therefore says that in the article the editor "reflected the complaints and murmurings of his guest."

—In distinguishing the two classes of Orthodox meetings, *The Friend*, (Philad'a), designates the Wilburites as "Conservative," and the evangelical and revivalist body as "Progressive." Some classification is very much to be desired, for convenience' sake, but the concession of the name "Progressive" to those to whom the *Friend* grants it might be questioned. Progress is desirable, but a return to circum-

stances out of which we have once been lifted seems to be retrogression.

SOWING AND REAPING.

Sow with a generous hand;
Pause not for toil or pain;
Weary not through the heat of summer,
Weary not through the cold spring rain;
But wait till the autumn comes
For the sheaves of golden grain.

Scatter the seed, and fear not,
A table will be spread;
What matter if you are too weary
To eat your hard-earned bread?
Sow, while the earth is broken,
For the hungry must be fed.

Sow—while the seeds are lying
In the warm earth's bosom deep,
And your warm tears fall upon it,—
They stir in their quiet sleep;
And the green blades rise the quicker,
Perchance, for the tears you weep.

Then sow;—for the hours are fleeting,
And the seed must fall to-day;
And care not what hands shall reap it,
Or if you shall have passed away
Before the waving corn field
Shall gladden the sunny day.

Sow, and look onward, upward,
Where the starry light appears,—
Where, in spite of the coward's doubting,
Or your own heart's trembling fears,
You shall reap in joy the harvest
You have sown to-day in tears.

—Adelaide Procter.

LETTERS.

Seen a little thing a letter,
Yet so much it may contain;
Written thoughts and mute expressions,
Full of pleasure, fraught with pain.

When our hearts are sad at parting,
Comes a gleam of comfort bright
In the mutual promise given:
"We will not forget to write."

Plans and doings of the absent,
Scams of news we like to hear,
All remind us, e'en though distant,
Kind remembrance keeps us near.

Yet sometimes a single letter
Turns the sunshine into shade;
Chills our efforts, clouds our prospects,
Blights our hopes and makes them fade.

Messengers of joy or sorrow,
Life or death, success, despair,
Bearers of affection's wishes,
Greeting kind or loving prayer.

Prayer or greeting, were we present,
Would be felt but half unsaid
We can write, because our letters—
Not our faces—will be read.

Who has not some treasured letters,
Fragments chosen of others' lives;

Relics, some of friends departed,
 Friends, whose memory still survives?
 Touched by neither time nor distance,
 Will their words unspoken last;
 Voiceless whispers of the present,
 Silent echoes of the past!

—Chambers's Journal.

EDWARD H. MAGILL'S LETTERS: DAYS
 IN ENGLAND.

ROUEN, FRANCE, Ninth mo. 22.

EDITORS INTELLIGENCER AND JOURNAL:

I CLOSED my last letter with some account of our visit to Warwick, its Cathedral and crypts, its fine old Castle, and other objects of interest. Next day we took a carriage, and were driven about eight miles to Stratford-on-Avon. The first object that arrested our attention as we drove into this pleasant town was a monument in the public square, with a fountain at its base, and a clock tower at its summit, upon one side of which we read:

"The gift of an American Citizen, George W. Childs, of Philadelphia, to the town of Shakespeare, in the Jubilee year of Queen Victoria."

The other sides bore inscriptions from Shakespeare's works. We drove to the house where the poet was born, but could only see its exterior, as, although attempts have been made recently to get the rule changed which excludes visitors from it on the first day of the week, we found the care taker inexorable, assuring us that there was no means of getting an exception made in favor of any one. We drove to Ann Hathaway's cottage, a little more than a mile away, and the old path, where the bard in his earlier years used to walk through the green fields to meet his Ann, was pointed out to us. The long low thatched cottage is familiar to all, by engravings, and is a picturesque object. The present occupant, an aged woman descended from the Hathaway family, took great pride in showing us the old open fireplace, the quaint old furniture, the old stone floors, the curiously-constructed stairway, and the picture of the "courting scene," hanging in the very room, and by the very window represented in the picture. At the church we were shown the place where Shakespeare and his wayward wife, after much sorrow and separation during life, are lying side by side. We saw also the foundation of the house where the poet died, and I picked and ate a ripe mulberry from the tree growing on the spot where the Shakespeare mulberry tree stood until cut down by the same vandal hands that razed to the ground the house where the poet died.

On our return to Warwick we drove by a longer route along one of the most delightful of roads, with a bridle path for equestrians on one side, and a broad foot path on the other. The broad space in the middle was well paved and kept in perfect order, and much of the way the road was shaded with giant elms, whose branches interlaced above us. At one point we dismounted, and while our carriage went around we walked through the fine park of the Lucy family, where Shakespeare was arrested for deer stalking, and tried before Sir Thomas in the great

Hall. This park is still well stocked with deer, which seemed remarkably tame, and we passed quite near a number of herds, amounting to several hundred deer in all; and the great red deer with their high branching antlers, and the little graceful fawns skipping over the grass under the shadow of the great elms and limes and cedars, formed a very pleasing picture. We looked with much interest at the hall as we passed, closely connected as it is with a very interesting episode in the poet's early life. This day, wholly given to reminiscences of the great master of the English tongue, is one that we shall all long remember. Of all writers, for some reason to me inexplicable, Shakespeare has always seemed the most unreal; shall I say the most mythical; the least like an actual man, who has lived and loved and died, like his fellow men. But now that we have spent a day amid the scenes so closely associated with his name, and in the town where the name of Shakespeare is in all mouths, and appears before you at every turn, this unreality has all vanished, and I can see him as a boy at play in the streets and lanes, or going to and from the grammar-school—now 400 years old—or hastening across the green fields in the early twilight to the rustic home of Ann Hathaway, or going through with his trial for deer stealing in the old hall before Sir Thomas Lucy.

The next day we left Warwick, again taking carriage to drive some five or six miles to visit the ruins of Kenilworth Castle. This is a great contrast to the Warwick Castle, being wholly in ruins, and many of the most interesting portions actually destroyed beyond the reach of the antiquarian. Such destruction would not now be possible, as the greatest pains is taken by the antiquarian societies to preserve intact all ruins that have an historical interest. The best preserved of the present walls are those of that part of the castle once occupied by the Earl of Leicester. The outline of the great banquetting hall, with most of its walls, can still be seen, and also a portion of the presence chamber. The great ruined walls are in many places heavily draped with ivy, and they present many striking pictures made now very familiar to the public through the exertions of artists and photographers. From some of the higher points on the walls we obtained charming views of pleasant English Scenery. On our drive back to Leamington, where we were to take train, we passed through the fine grounds of Lord Leigh, and close by his palatial residence, called Stoneleigh Abbey, near which several trees, planted by persons of note, were pointed out. One of these, a small tree carefully enclosed by an iron fence, was planted by President Grant, on the occasion of his visit to England. From Leamington we came rapidly by rail to London, where we spent three days, during which we could only visit, all too hurriedly, some places of the greatest interest. Among these were the Tower, Westminster Abbey, St. Paul's Cathedral, South Kensington Museum, the British Museum, and Christ's Hospital for the Education of boys of limited means. Any one of these would require a separate letter for even a meager description. I will mention one or two things which we especially recall as connected with each. In the

Tower, the most impressive room to me was that in the Beauchamp Tower, used as a prison for 400 years the walls of which are covered with most touching inscriptions by those who had lost all hope of ever emerging from their cells, except to the block of the executioner. In Westminster Abbey, the Poets' Corner, and the tombs of the long lines of kings, queens, and nobles, left perhaps the deepest impression. In the Poets' Corner is the bust of our own Longfellow,—the only representative of our country that has been admitted there. In St. Paul's Cathedral, in the Crypt, we saw the tombs of Benjamin West, Sir Joshua Reynolds, and Sir Christopher Wren,—the first our own countryman, born on what are now the Swarthmore grounds, and afterward President of the Royal Society of Art in England. Sir Joshua was his great predecessor, the first President of the same society, and Wren was the world renowned architect of the Cathedral beneath which his remains now rest. The monument over this last tomb closes with these striking words: "*Lector si monumentum requiras, circumspice*"—"Reader, if thou seekest a monument, look around thee.") I must mention also in this Crypt the massive monument of Wellington, and not far remote from it, the immense funeral car made of the iron of the guns which he had captured in the war, and in which the remains of "The Iron Duke" were conveyed in state to his final resting place. To a Friend, the constant occurrence of statues and monuments of great warriors, and tattered battle flags, displayed in churches and cathedrals, dedicated to the service of Him who was called the Prince of Peace, seems incongruous in the extreme. In all the vast collections in the Kensington Museum nothing interested us more than the seven great original cartoons of Raphael from which the Tapestries were made,—now in the picture galleries at Florence. In the British Museum, so crowded with objects of the greatest interest to the scholar, the antiquarian, and to all who visit that wonderful collection, nothing perhaps is more striking than the grand collection of statuary from the Parthenon at Athens,—not casts or models, but the actual images themselves, bought at great expense, and presented to the Museum by Lord Elgin, and known as the Elgin Marbles. In the Christ's Hospital what could be of greater interest to an educator of the young than the 730 boys, in their quaint short clothes; yellow stockings and long blue coats, actively playing ball in the yard; and then, at the sound of the bugle, mustered into ranks and then marched into their great old dining hall for their mid-day meal. We were admitted to the gallery, and it was a most interesting sight. Sixteen matrons headed the sixteen tables, and carved and served out the food and they and monitors walked up and down between the long rows, and corrected those who put their arms upon the table, or their cups at their left side, and occasionally aided a younger boy in the mystery of the proper holding of his knife and fork. These boys are admitted from 10 to 12 and remain until they are 16, and the best scholars, who attain to the distinction of "Greeks," are kept until 19, and trained for Oxford or Cambridge. It is a grand old

foundation, and a most excellent school, and positions are sought for their sons by those even in the higher ranks of life, but by the terms of the foundation none are eligible whose parent's income amounts to more than 300 pounds a year. The benefits of this fine school have been confined to boys and young men; but there is now a branch of it, in another place, where between one and two hundred young girls are enjoying the same privileges.

The time that we had set apart for sight-seeing and travel having now expired we left London yesterday morning, and came to this pleasant old French city, on the banks of the Seine last evening, by way of New Haven and Dieppe. The crossing of the Channel occupied about 4½ hours, during a portion of which time we were out of sight of land, and the water was, as so frequently, rather rough, and our little steamer pitched and rolled more than our great one had done at any time on her passage over the Atlantic. Here we have taken pleasant rooms at the Hotel de Rouen, and shall remain one month, going on to Paris just in time to see the Exposition a few days before its close. The spoken language and the literature of the country being our objective point, we shall at once employ a teacher for several hours each day, and enter upon the pleasant duties of a student's life. The prospect of such study, under so favorable auspices, is most delightful. I may possibly have further matters of interest to communicate to the readers of the INTELLIGENCER AND JOURNAL before the close of our year abroad.

EDWARD H. MAGILL.

NUMBER OF THE INDIANS.

ARE the Indians, as some say, diminishing year by year? And will the time speedily come when the whole land will be as free of them as Massachusetts is to-day?

Two years ago the writer made this answer to similar inquiries: "It is pleasant for their friends and the friends of humanity, to discover by actual count that they are *not* diminishing."

True, like certain Danish and Celtic clans that once migrated from place to place on British soil, and then vanished from history, many Indian tribes have disappeared; others, like Anglo-American households, have diminished till but few scattered names remain to mark the strange ways of a strange people.

Cochise, the Apache chief, shortly before his death, said: "The Whites began a war with me years ago. I have slain ten for every Indian killed, but my people grow less and less; I want peace." A few such warlike tribes, as above intimated, have been altogether or nearly exterminated, but other large tribes have increased; some greatly and some but little.

With few exceptions, the Indians of the United States have been gathered upon portions of the public lands. These portions, called Indian Reservations, dot the United States maps with their little squares—uniformly representing lands which the surrounding white men desire to possess. Energetic pushers want to cross them with railroads, pasture sheep and cattle thereon, prospect for gold and silver

within them, and ever regard it as a great hardship to be kept outside. Many white people who live neighbors to the Indians regard the land of those Indians with a very different feeling from that they would have if white men owned it.

Each reservation has an agent, a white man, appointed by the President. This agent is virtually a king of a small kingdom. He has white employees, such as the farmer, teacher, blacksmith, and doctor; they constitute his counselors of state. Sometimes he adds to his governing force three Indian judges and ten or twelve Indian policemen.

Thus we see that with so many white men among them it is easier than formerly for us to number the Indians. Not many years ago, the counting was done by Army officers and other Government officials; they simply estimated the number of tribes and individuals: it was when the nations were more nomadic than at present; when tribes were ever changing their habitations; when they had to move great distances to supply their wants; when the buffalo, a thousand and more in a herd, roamed over our vast prairies.

Writers for papers or magazines of that time guessed at the population or referred to the incomplete estimates. In our time a correct census has been taken and the results put down. From a careful study of these reports it is evident that now, the Indians, as a whole, like the Negroes of the South, are increasing.

Thirty years ago there were several causes which carried off the Indians; among these were contagious diseases which unintentionally the white people brought among them. Sad indeed were the ravages of the small-pox and the measles.

That dreadful Whitman massacre, not far from Walla Walla, where a band of missionaries were savagely murdered, doubtless resulted from the simultaneous incoming of Missions and measles. The measles was then a new disease. The Indians imputed it to evil spirits in Dr. Whitman's camp. The medicine men did not know what to prescribe. The sudden cold bath after the heat of a sweat-house was followed by death. Herbs and extracts hitherto efficacious in sickness gave no relief. So, like white people under yellow fever and cholera, being unable to stay the hand of the destroyer, multitudes of the race miserably perished. Who, under such harrowing distress, wonders at their superstitious folly and horrid resentment?

But now Indians have more knowledge. There are good reservation doctors or army surgeons near at hand. Contagion and epidemic are met at the threshold and frustrated. There is no more sweeping of men, women and children, from these causes, into untimely graves.

Another desolating scourge has ceased. There are no longer Indian wars. Those fierce tribal conflicts, merciless and long continuing, have at last passed away. Once the Chippewa was taught to hate the Dakota, and the Dakota to return the feeling with interest. The Nez Perce detested the Snake, and the Snake gave the hunters of the Nez Perce no rest. Thus, like France and England in olden times,

each nation had its hereditary enemy. Tribes combined to fight other tribes and often fought to extermination.

People who hold to the "vanishing" theory declare that Indians do not thrive on the white man's food; and great losses are claimed from this fruitful source. The contrary is nearer the truth. As soon as they catch the white man's regularity of supply, of preparation and eating, taking as we do two or three meals every day, they are healthier than when they went days without food, and then like gourmands gorged themselves; healthier than when they seized upon animals that had died, and to satisfy the cravings of false appetites consumed the poisonous flesh.

Making a careful computation from the latest reports, which embrace all the States and Territories except Alaska, we count 262,620. The accompanying table shows us how they are distributed:

Arizona	21,163	New York	5,007
California	11,409	North Carolina	3,100
Dakota	31,409	Oregon	5,055
Idaho	4,276	Texas	387
Indian Ter.	83,234	Utah	2,699
Iowa	354	Washington Ter.	10,996
Kansas	976	Wisconsin	7,838
Michigan	9,577	Wyoming Ter.	1,855
Minnesota	5,257	Florida (Seminoles)	892
Montana	14,775	Maine (Old Town	
Nebraska	3,602	Indians)	410
New Mexico	30,003	Nevada	8,316
Total			262,620

—O. O. Howard, in *Wide Awake*.

Go to Nature, and observe the method by which she performs her stupendous feats. How noiseless are her Titan powers, how tranquil her mighty operations! With what easy, silent pull, gravitation swings the tidal wave, and whirls the giant sun on its appointed path! What ear ever heard a blow of those magic axes that frame the cedar's lofty columns, or caught any noise, however faint, of those suction-pumps that fill the cloud reservoirs with the distilled waters of the sea? Every drop of rain that falls from the sky brings bottled up with it electricity enough to rive an oak in twain, and every sunbeam that gently gilds an emerald grass-blade works in it a chemical change that the most powerful reagents known to science cannot effect. Yes, Nature, let us go to thee for instruction, and learn how in quietness and confidence we may best find strength, how in silence we may best perfect the most glorious tasks, and by tranquil toil easily pass by the columns whose noise and dust delude men only for the hour!—*J. T. Bixby*.

LET there be variety. Because I speak well of the violet for its humility I see no reason why I should quarrel with the aster for loving to make a show. Herein, too, plants are like men. An indisposition towards publicity is amiable in those to whom it is natural; but I am not clear that bashfulness is the only commendable quality. Let plants and men alike carry themselves according to their birthright.

—Bradford Torrey.

For Friends' Intelligencer and Journal.

THE GINGKO TREE OF CHINA.

THE rarity with which this tree bears fruit in this country makes its history unusually interesting, inasmuch as only the male or staminate tree is generally met with in cultivation. A single specimen was introduced into England in 1754, under the name of *Gingko biloba*, from which the greater part of those now known are believed to have been raised by cuttings. The specific name indicates the shape of the leaves, they being two-lobed, in appearance not unlike the tail of a fish; indeed the tree is popularly known as the fish-tail tree.

The first specimen brought to America (now having grown to considerable dimensions) was planted in the grounds of William Hamilton, which now form part of the Woodlands cemetery, on the banks of the Schuylkill, in West Philadelphia. The original tree introduced into England, as well as the one introduced into America, were staminate trees; but a few years since some seeds were brought from China to the United States which produced pistillate as well as staminate plants. The pistillate is, however, very rarely met with, and when a specimen planted years ago in the grounds of Charles J. Wister, in Germantown, recently perfected fruit, it was regarded by botanists as an event of unusual interest. A writer, describing the fruit, says it is about the size of a large cherry, and is of a greenish-yellow color when ripe; like the cherry, it has a fleshy pulp with a single stone or seed in the interior. To most persons its odor is very disagreeable, but the fruit plays a very important part in Chinese gastronomic art. The grand dinners of the Chinese usually last all day, and every help to digestion is needed in order that the guests may experience the fullest enjoyment. The fruit of the Gingko is the chief element in promoting this desirable result. They are first slightly roasted and then placed in small plates by the side of the guests, who every now and then take one between courses, as an American would a pickled olive.

This tree has also been known by the name of *Salisburia adiantifolia*, so named in honor of the distinguished botanist, R. A. Salisbury; the leaves in structure being not unlike those of some species of ferns, particularly the Maiden hair fern, gives the specific name an admirable adaptation. The most recent classification of Bentham and Hooker adopts the name of *Gingko*, which Linnæus first gave to the plant. Only one species is known, and that in its native country is very rarely found growing wild. It is closely allied to the Taxus or Yew tree, of Europe, and the *Torreya* of our own country, all belonging to the Coniferæ, which also includes the species of Pine, Cedar, Spruce, Larch, Juniper, Fir, and Cypress, as well as the gigantic Sequoias of the Yosemite Valley in California. I. C. M.

THE love of Christ is like the blue sky, into which you may see clearly, but the real vastness of which you cannot measure. It is like the sea, into whose bosom you can look a little way, but the depths are unfathomable.—*McCheyne*.

RECOLLECTIONS OF MARIA MITCHELL.

Nothing was more characteristic of her than the way in which she accepted the position and the salary offered her, without ever thinking to inquire whether the salary was the same as that given to the other professors. It was the chance to work that she wanted, the chance for influence in one of the first colleges for women. The money she was to receive was a minor consideration, and quite as characteristic was her indignation when, after being there for a considerable time, her attention was at last called to the fact that she, a mature woman, with a European fame, was receiving a salary less than that paid to some of the professors who were young men, almost entirely without experience, and quite destitute of reputation. The indignant protest, which then called for an equal salary, was not a personal affair. She flamed out in behalf of all women, and of abstract justice, with a glow which forced an immediate increase in salary. The excuse for this injustice must be found first in the fact, that at the time when Vassar College was established, women had not proved what they can do in professional lines, and, second, in the very conservative influences which guided the policy of the institution. In her religious belief Maria Mitchell was attached to one of the so-called most liberal sects. The children of the old Quaker families of Nantucket generally went over to the Unitarians if they departed from the strict faith of their fathers, so that in this matter also she was almost if not quite alone at Vassar. But she was appointed on the ground of her reputation as an astronomer, and fortunate was it for the college that the question of her religious belief was not raised till after her appointment.

The absolute truth which, as I have said, was the key-note of her character, could not fail to make her teaching thorough, for a love of truth is one and the same, whether in the intellectual or the moral sphere. But, as with all true teachers, it was the force of her personal character that acted most upon the young women with whom she came in contact. No one of them but was lifted and strengthened by her strength, sincerity, and single-heartedness. It was difficult for her to use diplomacy in never so small a degree, and what skill in it she did gain was the outcome of long years of experience, and she never employed it without a mental protest. She gave the New England stamp to whatever work she touched, and the lines of influence she has left on many characters are as indelible as those on the rock surfaces of New England's granite hills.—*Anna C. Brackett, in The Century.*

THE OBJECT OF LIFE.

THE object of life is not a knowledge of the truth, but development of character. Truth is instrumental to the development of character; so, often, are errors. We acquire wisdom by our mistakes as well as by our successes. Wisdom is better than learning; and the wisest man is not the man who has made no mistakes and fallen into no errors. The theological problem is not to have correct ideas about God, but to come into personal acquaintance and fa-

miliar fellowship with him; and we come into this acquaintance by seeking. The world learned more of the true character of God, drew nearer to him, as the result of the long debates between the Arians and the Athanasians, than it would or could have done if it had been given direct from heaven a perfect creed about God, to be accepted without questioning. We learn by our questioning. Questioning is plowing; and the soil must be furrowed before the seed can be sown. Character has been developed more by studying the heavens than by the knowledge which that study has produced. Every teacher recognizes this. If not, she would not require her scholars to work out their problems for themselves, but would let them look in the key for the answers. It is not at all important that the child should know how much money the farmer made who sold twenty-five barrels of apples at \$3 a barrel, and eighteen barrels of apples at \$4 a barrel; but it is important that he should possess the kind of thinking machine that can find out. In the physical realm the mill exists for the grist that it grinds; but in the intellectual realm the grist exists for the mill that grinds it. The prize consists in working out the problem. It is exercise that makes muscle, and it is exercise that makes faculty. Whether Harvard or Yale win the boat race is not so important as that both Harvard and Yale should have the muscle that can win a boat race. It is not very important that we know whether there is a future probation or not; but it is very important that we have the spiritual sympathy that shall prevent our being indifferent to the spiritual future of our fellow men.

In brief: nothing is infallible; neither church, Bible, nor the individual conscience. That is not a misfortune; it is a blessing. If we had an infallible teacher we should all be lazy. We might have more but we should be less. We should possess information but not wisdom; we should have correct creeds but no faith; we should possess right opinions but not character. Indiscriminate charity impoverishes the soul, whether it be loaves and fishes or truths that are given. The wise father makes his children answer their own questions if they can; and often requires them to wait for the answer till they can. He lets them err and learn by their errors. This is God's method of dealing with his children.

"If thou seekest her as treasure, and searchest for her as for hid treasure, then shalt thou understand the fear of the Lord and find knowledge of God."—*Christian Union*.

NEWS AND OTHER GLEANINGS.

—At a meeting of the Agricultural Society of Lancaster county, (Pa.), on the 5th instant, the farmers present gave reports of the year's crops. The yield of corn was good, and potatoes, though there was some rot, had done fairly. Fruit was generally a failure, though a few of those who spoke had apples. The wheat crop was considered good. The average for the county would be from 20 to 22 bushels per acre. Johnson Miller, of Warwick, gave some returns of threshing. In Warwick township, 332 acres yielded 6-683 bushels, or an average of 20 73-100 bushels to the acre. Oats averaged 32 bushels to the acre. In Ephrata township, 262 acres yielded 5,000 bushels, or 20 19-100 bushels to the

acre. Oats averaged 27 bushels to the acre. In East Donegal, 273 acres yielded 6,718 bushels, or an average of 24 41-100 bushels per acre. Oats averaged 35 bushels.

—The Pennsylvania State Convention of the Woman's Christian Temperance Union held its sessions at Association Hall, (Philadelphia), on the 9th, 10th, and 11th insts. New officers were elected, favorable to the "Third Party." Prohibitory movement: President, Mary H. Jones, Philadelphia; Vice-President, Cynthia S. Holcomb, Bucks; Corresponding Secretary, Mrs. H. H. Forrest; Recording Secretary, Olive Pond Amies; Treasurer, Mrs. W. H. Woods. A resolution offered on Sixth-day, to add to the constitution a declaration that the organization was "non-partisan" and "non-sectarian," was laid on the table by a vote of 254 to 58. Frances E. Willard, in an address on Sixth-day evening, said it was desired (by the majority), to be in a position to act with any party that declared in favor of Prohibition.

—The land recently purchased for the purpose of enlarging the burying ground of the Wrightstown Friends' meeting-house, is now being enclosed with a fence of hollow iron posts and galvanized wire. This fence will extend around the outside of the lot, on both the turnpike and Penn's Park roads.—*Newtown (Bucks Co., Pa.), Enterprise*.

—Some time ago, when the death of John Knowles, sexton of Wrightstown Friends' Meeting, was announced, it was stated that he had buried over 1,200 persons. Recently the correct data has been received. John was born in 1801, and was 88 years, 5 months, and 10 days old at the time of his death. He had served as sexton 41 years, 10 months, and 2 days, and had interred 1,417 bodies. The present meeting-house was erected in 1787, is 70x40 feet, and cost \$2,106.—*Newtown Enterprise*.

—A good many people apparently have not discovered that it is easier to do their work well than it is to make excuses.—*Somerville Journal*.

—The superintendent of the U. S. Life-Saving Service, S. I. Kimball, has sent a letter to the keepers of the life-saving stations at Lewes, Cape Henlopen, and Rehoboth Beach, (all in Delaware), complimenting them for the courage and good discipline shown by themselves and their crews in the great storm of last month. "Upon that occasion," he says, "notwithstanding an unusually high tide that flooded the beach so as to seriously embarrass your efforts, you combined your crews and gave efficient aid to no less than twenty-two vessels, taking off by boat thirty-nine persons, and by line apparatus 155, a total of 194 persons, not a life being lost from any vessel that came within the scope of your action." Accompanying the letter is an order raising the pay of these keepers to the highest rate in the service, \$800 a year, and the superintendent says that: "It is a matter of deep regret that no means exist for recompensing in a similar manner the brave surfmen who constituted your crews on that occasion. As they already receive the maximum salary allowed by law this cannot be done, although the successful results are in equal measure due to their resolute bravery and faithful endurance."

—A Catholic priest, John A. de Ruyter, has arrived in Wilmington, Del., to organize a mission of his church among the colored people. He is a member of a community, "Josephites," devoted entirely to colored missions. The community was founded by Bishop Vaughn of Manchester, England. There are now seventeen priests of this order in this country, and they are said to have had wonderful success.

—In China, the inhabitants are counted every year in a curious way. The oldest master of every ten houses has to

count the families, and has to make a list, which is sent to the imperial tax house. Last year the whole number, it is said, amounted to 379,383,500 inhabitants.

—An Anti-Alcohol Congress has been held in Paris, at which a resolution was carried to the effect that inebriates should be treated as mad, and that prison hospitals should be created for them. A declaration was received from Dr. B. W. Richardson, written in the name of four hundred and three physicians and surgeons, affirming that alcohol being a poison, it could not, even as a drug, be recommended as a medicament, save perhaps, in a few exceptional cases.

CURRENT EVENTS.

THE majority in favor of the Prohibitory clause in the State Constitution, in North Dakota, is 1,100. The Republican majority on Governor is 12,600, and on Congressmen 15,000.

THE Czar of Russia has been visiting the Emperor of Germany, having arrived at Berlin on the 11th instant. Much interest attached to the visit, because the two rulers are generally believed to be pursuing antagonistic policies, Russia inclining to unite with France against the "Triple Alliance" of Germany, Austria, and Italy. There appears to have been very little in the behavior of the Czar to dispel this impression.

THE Mexican Government has under consideration, and probably will grant a "concession" to Henry C. Ferguson and William H. Ellis, two colored men from Texas, who propose to colonize lands in the States of Oaxaca, Guerrero, Vera Cruz, Michoacan, and San Luis Potosi, with negroes from Texas and other American States. They assert that 20,000 negroes from Texas alone will move to Mexico and raise cotton on these lands, and that many thousands of industrious blacks, skilled in the cultivation of cotton, will follow them from States east of the Mississippi river.

It is officially announced that the delegates to the Pan-American Congress, who are now traveling through the North, will also visit some of the principal Southern cities.

THE State Board of Agriculture of Ohio, in its crop report for Tenth month, dispels the fears of a short wheat crop. The threshing shows this year's harvest to be about 37,000,000 bushels.

NOTICES.

* * A Temperance Conference, under care of Western Quarterly Meeting, will be held on First-day afternoon, Tenth month 20, at Doe Run meeting-house. Hour for convening 2 o'clock. All are cordially invited.

ELMA M. PRESTON, Sec.

* * Quarterly Meetings in Tenth Month will occur as follows:

- 22. Western, Londongrove, Pa.
- 21. Caln, Sadsbury, Pa.
- 23. Westbury, Flushing, L. I.
- 25. Baltimore Yearly Meeting, at Park Ave. Meeting-house
- 28. Concord Quarter, Darby, Pa.
- 30. Purchase, Chappaqua, N. Y.

* * The annual meeting of the Association for the promotion of First-day schools within the limits of Philadelphia Yearly Meeting will be held at Race street meeting-house, on Seventh-day, Eleventh month 24, 1889, at 10 a. m.

LEWIS V. SMEDLEY, } Clerks.
CLARA B. MILLER, }

* * The following Circular Meetings have been appointed for Tenth month:

- 20. Chestnut Ridge, Pa.
- 20. Roaring Creek, Pa., 2 p. m.

* * Nine Partners Half-Year Meeting. This will convene at Nine Partners, for Business, on Second-day, the 14th of Eleventh month, at 11 a. m. Meeting for Ministers and Elders on Seventh-day before, at 3 o'clock p. m. Public Meeting on First-day at 11 o'clock.

JUSTUS C. HAVILAND, Clerk.

* * Concord First-day School Union will be held at Newtown, Delaware county, on Seventh-day, Tenth month 19, at 10 a. m. All interested are invited to meet with us.

Train will leave Broad street station at 7.09 a. m. No train later will reach Media, to get Friends to Newtown in time for the opening of the meeting.

E. J. DURRALL, } Clerks.
MARY YARNALL, }

* * Abington First-day School Union will be held at Norristown, on Seventh-day, Tenth month 19, at 10 o'clock. Interested Friends are invited to attend.

J. Q. ATKINSON, } Clerks.
ANNA MOORE, }

* * A Conference on the subject of Temperance, under the care of Concord Quarterly Meeting's Committee, will be held in the Court-house at Media, Delaware county, on First-day, Tenth month 20th, 1889, at 3 o'clock p. m.

Friends and others interested are cordially invited.

MARY MCALLISTER, Clerk.

* * The Circular Committee of Salem Quarterly Meeting have appointed a meeting to be held at Cape May meeting-house, on First-day, Tenth month 20th, 1889, at 11 a. m.

Friends desiring to attend the meeting will take cars on First-day morning, from Market street wharf at 7.30, for Ocean View, the nearest station to the meeting-house. Returning they can reach the city at 7.10 in the evening.

J. B. L.

* * The Western First-day School Union will be held at Doe Run meeting-house, Chester county, Pa., on Seventh-day, Tenth month 26, at 10 o'clock a. m. All interested in the work are invited to be present.

EDWARD A. PENNOCK, } Clerks.
LYDIA B. WALTON, }

* * A Temperance Conference, under the care of Had-donfield's Quarterly Meeting's Temperance Committee, will be held in Friends' meeting-house Westfield, on First-day, Tenth month 20, 1889, at 3 p. m.

A cordial invitation is extended to all.

WM. C. COLES, Clerk.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. Sold only in cans. ROYAL BAKING POWDER Co., 106 Wall-st., N. Y.

JARVIS-CONKLIN MORTGAGE TRUST COMPANY,

Capital Paid In, . . . \$1,500,000.

Six per cent. Guaranteed Mortgages on Farm and City properties.

Six per cent. Debenture Bonds interest payable half yearly.

Five per cent. Saving bonds in small or large amounts running six, twelve, eighteen, or twenty-four months.

These Bonds are issued under the supervision of the Bank examiners of the state of New York, with whom we have deposited 1-10th of our Capital in Government Bonds.

We issue installment Saving Bonds, secured by real estate security, running 10, 15, and 20 year. Send for pamphlet.

LOVE'S SACRIFICE.

SCORN not the love which sweet surrender makes
Of all its hopes, its trusts, and questionings;
Smile not at faith which, e'en though sull'ring sings,
And bears its burden with such strength as takes
The martyr to his doom; and yet awakes
At each next call of love, as if on wings,
To smooth the path, to wrestle with the stings
Of battling cares, while heart and spirit aches.
Ah, say not love in vain, who have not known
The life which lives but in another's life;
Nor cast aside a rose that is full blown
Because the bud was sweeter before strife—
Of mind and storm had marred its beauty rare,
But left its heart, true, firm beyond compare.

—Marion A. Thayer Farley, in *Christian Union*.

From William Follard's "Quaker Reformation."

THE REAL PRESENCE OF CHRIST.

GEORGE FOX was a man of wonderful natural endowments; and though with no more scholastic instruction than the middle classes of his day enjoyed, yet he had a mind of no ordinary power, cultivated too in a particular direction in a very remarkable manner. The knowledge of God, not as a mere intellectual speculation, but as the true solvent of that mystery—human life—the true restorative that would harmonize and guide and give spiritual power—was the great object of his longing search from youth to manhood; and in this search his almost constant companion was the Bible.

But though the volume of inspiration was most precious to him, he could not be satisfied, or rest with it alone. He loved it because it revealed the Divine Helper,—the Christ of God;—to whom he longed most intensely to come, that he might have Life, and might know both Truth and Duty. For this end he agonized for months in solitude,—he read, he prayed,—he made earnest inquiries of men who were thought to have Christian experience: but still no light came. As Spurgeon says, "Fox was driven at last into the wilderness of self-despair, and made to see the dark chambers of imagery of his own natural heart." And then, in God's own time, the revelation came. Fox's own record of this momentous crisis in his life is deeply touching and instructive. He says, "When all my hopes in men were gone, so that I had nothing outwardly to help me, nor could I tell what to do, then, oh! then, I heard a voice which said, 'There is one, even Christ Jesus, that can speak to thy condition;' and when I heard it, my heart did leap for joy. Then the Lord let me see why there was none else that could speak to my condition, viz., that I

might give Him all the glory; that Christ might have the preeminence, who enlightens and gives grace, and faith and power."

The Divine Comforter who thus revealed himself spoke to a willing and longing heart; and from that time forth—though his discipline was by no means over—George Fox grew to have an apostolic faith in the real presence of Christ.

This young man of nineteen became shortly so filled with his new life that he says he could have wept day and night with tears of joy; and he was soon called to proclaim his great discovery to others. Thus, with the heavenly anointing manifestly resting upon him, he entered upon his mission as a religious reformer; commissioned to bring back to the church a long-lost and forgotten truth. "I was commanded," he says, "to turn people to that inward light, spirit, and grace, by which all might know their salvation, and their way to God; even that Divine Spirit which would lead them into all truth."

With persuasive eloquence Fox now began to call men from "forms and shadows," to the life, light, and power of Christ in their own hearts. Numerous converts speedily united with him in the great reforming work, many of them as devoted as Fox; and it is important to note that their primary ground of union—(as officially stated by London Yearly Meeting)—was, "agreement of sentiment in regard to Christ's inward teaching."

George Fox formulates still more definitely the nature of his mission in the following words: "By the power and spirit of God I was to bring people off from all their own ways, to Christ, the new and living way; and from the churches which had been gathered in the wisdom of man to the Church of God of which Christ is the head. And off from the world's teachers, made by men, to learn of Christ, of whom the Father said, 'This is my beloved Son. Hear him.' And off from the world's worship, to know the spirit of truth in the heart, and to be led thereby. And I was to bring people off from Jewish ceremonies, and from men's inventions, and worldly doctrines; and from their rudiments and creeds,—with their schools and colleges for making men ministers of Christ. And from all their images, and crosses, and sprinkling of infants; and all their vain traditions, which they had gotten up since the Apostles' days, which the Lord's power was against. And against all who preached, and not freely, as being such as had not received freely."

It would, however, be a mistake to suppose, from this statement, that the Quaker Reformation was a mere protesting movement, or a system of negatives.

On the contrary, it began, as already pointed out, with reviving a great fundamental but forgotten truth,—that of the real presence of Christ by his spirit. This the Friends have happily kept in the forefront of those grand "Advices," which are periodically read in their meetings. It is the same truth so well expressed by William Penn, when he said,— "The Light of Christ within us, as God's gift for man's salvation, is the great Fundamental of our Religion."

We are, therefore, justified in saying that George Fox's proclamation of the Primitive Faith was based on the assertion of a *supreme and positive* truth, and not on mere negations.

He found the religious world divided between High Church professors, who based their faith largely on church traditions—and the Puritan and "Evangelical" parties, who believed in the exclusive authority of Scripture. All these were making the death of Christ the central truth of Christianity, to the displacement of a broader and more scriptural view. They were in fact almost entirely ignoring a truth which Fox felt to be the *main factor* in the relations of man to God. Fox had discovered—had had revealed to him—that it is the indwelling Spirit, the Living Christ, and not the Church, nor the Bible only (or even primarily), which is the real restorer and guide of life. He had reached out to a living person who is divine, and he could rest no longer on a book, or a creed.

Stephen Crisp—another of the founders of the Society—refers to the same discovery when he says, "There are two kinds of faith. The one says, 'I believe, because good men have told me, and because I find it in my catechism and prayer book.' The other says, 'I believe, because God hath visited me by his love, and given me a personal assurance that he is my deliverer.'"

Charles Kingsley proclaims the antiquity of this great Quaker principle in the following words. He says: "The doctrine of Christ in every man, as the indwelling Word of God—the Light who lights every one who comes into the world—is no peculiar tenet of the Quakers—but one which runs through the whole of the Old and New Testament, and without which they would both be unintelligible: just as the same doctrine runs through the whole history of the early church for the first two centuries, and is the only explanation of them."

The historian Bancroft says: "The mind of George Fox arrived at the conclusion that truth is to be found by listening to the voice of God in the soul. This principle contained a moral revolution. It established absolute freedom of mind (under the rule of Christ)—treading idolatry and superstition under foot, and entering the strongest protest against every form of hierarchy." It is in this sense that we may say in the words of the poet, of that bright dawn of spiritual truth and liberty of which we are speaking, that

"Freedom reared in that august sunrise

Her beautiful bold brow:

When rites and forms before her burning eyes

Melted like snow."

But when we speak of this great doctrine of Primitive

Christianity and of Quakerism as fundamental truth, it is not to be understood that it is the only truth of importance. On examination it will be found—when held in its true sense—really to include or to lead on to all the great facts referred to in the Apostles' Creed: for, as promised by Christ, it leads into all truth. Our knowledge of God is progressive. Truth comes to us by degrees: largely according to faith and faithfulness. This was what George Fox meant when he said he was called "to bring people to Christ, and to leave them there." He knew that when a man had come in faith to this living Christ, he would seek more and more to learn of Christ, and to obey Christ, and to promote the cause of Christ that he would honor and love the Bible, which testified of Christ; that he would rejoice exceedingly and increasingly in the assurance he had, through God's manifestation and sacrifice in Christ; that he would feel the need and privilege of prayer and of waiting on this gracious Lord for fuller enlightenment in the truth, and for guidance and help in all the concerns of life.

It was George Fox's faith in this principle of Christian growth and development, that explains the well known story about William Penn and his sword. The incident may be briefly recalled to memory, somewhat thus: William Penn, in the early days of his changed life, though full of zeal for the Gospel as he then knew it, had not yet seen all the bearings of the great truth which he had embraced. He had thrown himself heart and soul into the work of the Lord. He was preaching and writing continually, and was full of Christian activity. But he still wore his sword, after the fashion of the gentlemen of those times; and possibly thought little about it. The appearance of the young Christian soldier girl with a carnal weapon scandalized some of his elder Friends, who remonstrated with him about it. Penn, in his perplexity, sought counsel from his friend and leader, George Fox; and told him he had not seen the inconsistency of the thing, and did not wish to take any step out of mere imitation. Fox's advice was simple and courageous. He said, "As regards thy sword, wear it as long as thou feels easy with it." He had faith in the meekness and gentleness of Christ, and in the power of the Master to imbue his young disciple with his own spirit; and he knew it was wise to leave growth and development in the hands of Him who is patient and all-wise; who alone sees the capabilities of his servants, and the right time for leading them forward.

And so we find this great fundamental truth of a living and present Savior underlying all that the early Friends taught. It was this that gave the unique character to their meetings for worship. It shaped and guided their ministry. It was at the root of all their testimonies, and their service for the truth. It was to them the power and reality of the Gospel. It was "God's gift for man's salvation." And the reason is not far to seek. It meant to them the one foundation, on which prophets and apostles and Primitive Christians had built: *Jesus Christ*.

In view of this mighty fact they might well ask, "What need is there of a human priest, or a profes-

sional pastor, at the head of the congregation, when the Great High Priest—the Minister of ministers—is himself really present? What need is there of a symbolical washing by outward water when the real cleansing is applied direct to the soul by the Divine-Baptizer himself? What need is there of a formal ceremonial with outward bread and wine, when the soul is invited to the real table of the Lord, to partake of the veritable Bread of Life?"

A SHORT HISTORY OF TRENTON FIRST-DAY SCHOOL.¹

Trenton First-day School was developed from an organization of some of the members of Trenton meeting called "A social meeting of Friends for reading and improvement." According to the recorded minutes, their first meeting was held First month 26, 1868. The meetings were held weekly, at the meeting-house, on First-day afternoons, and appear to have been interesting and instructive. At the meeting held Fourth month 11, 1869, they appointed representatives to the "Quarterly Conference of Friends," held at Darby, Pa., and at their next meeting one of the representatives reported that they attended the "Conference for the promotion of First-day Schools," held at Darby, Pa. This is the first mention of First-day Schools found in the minutes of their meeting, but no doubt the subject had, prior to this time, frequently claimed their attention.

At a meeting held Tenth month 17, 1869, the proposition of having a First-day School for the benefit of the children was discussed, and left for future consideration. At the next meeting, Tenth month 24, the subject was again taken up, and meeting with much favor, it was decided to appoint a committee to organize a school to meet in the afternoon, previous to the reading meeting.

A part of the membership of Trenton meeting did not look with favor on this decision. Some of the older ones, while not making active opposition, were indifferent, and gave it no encouragement, fearing the effect would be to lessen the responsibility and influence of parents with their children,—and that it would encourage formalism and a trust in literal observances and usages inconsistent with a people professing to be spiritually minded. On the other hand it was asserted that the children were being influenced by the Sabbath-schools under the management of the different churches, and if Friends wished to mould the character of their children and retain them within the Society, they would have to organize schools of their own.

The committee organized the school by appointing Phebe A. Furman, Superintendent and Teacher; and Anna M. North, Librarian and Treasurer, and the school was opened Tenth month 31, 1869, with six children in attendance; and at the close of the term when the superintendent resigned, there were about twenty names on the roll. The first report to the First-day School Association was made by Phebe A. Furman, as follows: "From Tenth month 31, 1869, to First month 9, 1870, officers and teachers, 2; chil-

dren, 4 males, 13 females; of whom 3 are members, 14 not members. Average attendance 9. Library, 57 volumes."

On opening the school the following year, John H. Hillman was appointed superintendent and Anna M. North teacher and treasurer, she having the chief management of the school, assisted by Phebe H. Tomlinson, Catharine E. Crozier, Kate Hannum, and others. In the autumn of 1873, Isaac Stephens was appointed superintendent, and Wm. Walton, clerk. They served two years, when the school was reorganized. Wm. Walton was appointed superintendent, Seth Ely, clerk, A. M. North, treasurer, and Samuel C. Panott, librarian. Teachers were also appointed for the several classes, and a regular order of exercises adopted, which with some alterations and additions is in use at present.

At this time the adult members formed themselves into a Bible class, to read the Scriptures and to express their views thereon; sometimes varying the exercise by reading from other books and publications. It was understood by the members of the class that all comments and expression of opinions, should not be given with the object of disproving the views of others, nor with the idea of establishing their own, but for the purpose of general information on the subjects brought before them, with the object of a better understanding of the practical duties of life. Although it seemed doubtful whether this plan could be carried out among a number of earnest men and women, each with decided convictions, yet time has proved it possible; for now, after the experience of nearly fifteen years, we can truly say, by agreeing to disagree, with charity and forbearance becoming members of a Society claiming the name of Friends, there has grown up in our souls a bond of sympathy and a respect for each other's opinions that is by far a better inheritance than the selfish rule of dogmatic assertion.

A teachers' meeting was organized the next year, which met monthly to discuss the lessons taught, the best manner of teaching, to receive suggestions from the teachers and others in regard to any change that might appear to be advantageous to the school, or increase the interest of the members. These meetings are yet held under the name of the monthly meeting of the First-day School. The first recorded minutes of these meetings are dated Tenth month 19th, 1876, but as this is recorded as a meeting held according to adjournment, there must have been one meeting, at least, before this date.

Wm. Walton served as superintendent and Seth Ely as clerk from their appointment in 1875 until 1880, when William being desirous to be released, Seth Ely was appointed superintendent, and Mary P. South, clerk. After two years the superintendent resigned, and W. Maxwell was appointed Ninth month 25, 1882, and M. P. South, clerk. Both of them are ably and conscientiously discharging their duties in their respective stations at this date.

Such is the brief history of the Trenton First-day School. Commencing with six children in 1869, at present it numbers on its roll, children and adults 159. This condition has not been reached without much

¹ Read at Burlington Quarterly First-day School Union, held at Mansfield, Ninth month 11, 1889.

effort and some sacrifice on the part of our members, and none deserve more honor than the teachers who have devoted their time and labor to the work.

But this short sketch would be incomplete, and lacking vital importance if concluded without referring to the objections raised by our conservative members at the beginning, and considering whether their fears have been realized, and to what extent. Has the responsibility of parents been decreased? On the contrary, it has been greatly increased; for, in the effort to teach and mould the character of the children, parents are continually adding to their own knowledge, and thereby getting a better comprehension of what their responsibilities are. Has there been an increase of formalism and literal observances? Or has it caused a decrease in our spiritual discernment? The experience of our members answers these questions in the negative. We cannot do otherwise than make use of the written word to illustrate the sentiments and precepts we wish to inculcate, but if this is done in a rational manner it leaves no room in the mind for mere formality or outward observances.

In like manner our spiritual discernment is enlarged also; for, to be spiritually-minded in the proper sense of the term is to be able to discern the good and the evil, to reject the formalities and to accept things in their meaning and essence; the essentials that go to the building up of character and right conduct in life.

And while we are aware that possibly our school may decline, or in the changes that the future may bring, become a thing of the past, yet we will have the satisfaction of knowing that many, though they may associate with us no more, have by our precepts been better prepared to do their share in the battle of life. We will also realize that the benefit has not been to them only, for, in our effort to give we have also received, and in this we have our reward.

Trenton, Eighth month 20, 1889.

For Friends' Intelligencer and Journal.

THE BURIAL GROUND AT BLUE RIVER, INDIANA.

THE information derived from the INTELLIGENCER AND JOURNAL, about Friends' meetings, present and past, and events connected with them, has been a source of interest to me. This interest prompts me to send the following:

Two weeks ago, myself and family, with some other Friends of Highlands Creek meeting, attended at Blue River what is known here as memorial meeting, and is held annually. It is an all-day meeting, that is, the meeting is called for ten o'clock, and holds an hour or more, when there is a recess, and a "basket dinner" is partaken of in the beautiful maple grove that surrounds the house. After this refreshment and social mingling with friends and relatives for an hour or two, the meeting again convenes, and testimony is often borne to the memory of some of the departed ones that have been laid in the burial ground here. These meetings are largely attended by Friends, the descendants of Friends and others that have buried their dead here. It has been

a burial-place ever since Friends settled here, or for upwards of eighty years, therefore the meeting seems to have a sacred interest to the people.

In the interval between morning and afternoon meetings I visited this burial ground of so many of our ancestors, and much was brought to my remembrance. I paused before the grave of that pure, good woman, Priscilla Cadwalader, remembering how her light shone and reflected on those around her, and how her ministering voice ever called on her hearers to be obedient to that spark of life in the soul. My steps led me from her grave, though my thoughts not from her, until I stood before where was entombed the body of James Trueblood; in his life a pillar in Blue River Monthly Meeting. With my hand on the stone that marks his and his wife's resting place, I reflected what he had been when in this life. Reared to young manhood on the eastern shore of North Carolina, amid human servitude, he in his 19th year had papers of freedom made out for five slaves (left to him as an inheritance), and sent them to the free North. A few years later he and his young wife came, leaving much that they held dear, to dwell where the blight and cruelty of slavery was not known, and ever after in a long life refusing to vote for a slave owner or an advocate of slavery, using no article produced by slave labor, and acting as far as truth would allow in helping the fugitive slaves across the country to their freedom. But wherever my face is turned, names meet my gaze of persons who while living were adorned with wisdom, and whose mantles of righteousness I believe shone on the brow of the living. Mary D. Trueblood is buried here. In her time she was a zealous Friend in support of the precious truths held by the Society, and a constant attendant of meetings. The sweet voice of poetry and the gifted gospel ministry have sounded her praise, and tenderly called her "sainted mother." The name of William Lewelling must yet be fresh in the minds of Friends of Indiana and Illinois Yearly Meetings, and his grave is perhaps visited more than any other here. Friends and others alike hold his memory dear. As I pass from among these graves, I cannot help but feel that Blue River and Highlands Creek Meetings have been greatly blessed in the past, and the future is hopeful and bright.

E. H. TRUEBLOOD.

Highlands Creek, Indiana, Tenth month 18.

As the traveler in foreign lands, journeying along thoroughfares new to him, is sure that the way is prepared before him, that cities and villages inhabited lie along his route, though he has never seen them and knows not even their names, that he will come to way stations where his wants will be met in whole or in part; so we, journeying through this unexplored year to which we have come, know that infinite knowledge and wisdom and love have been before us, that He to whom the future is as the past has marked out our way, and will bring us by paths which we know not, but with which He is perfectly familiar, to places of rest and refreshment along the journey till we come to its end.

SCRIPTURE LESSON No. 41.

ELEVENTH MONTH 3, 1889.

DAVID'S REBELLIOUS SON.

GOLDEN TEXT:—Honor thy father and thy mother; that thy days may be long upon the land which the Lord thy God giveth thee.—Ex. 20: 12.

READ 2 Sam. 15: 1-12.

We have in the instance before us an illustration of the saying of Jesus, "A man's foes shall be they of his own household." But, in David's case, he was only reaping the reward of his own transgressions. Though he had sought and found Divine forgiveness, and had written of the peace and joy it had brought to his life, and of his confidence in God who had dealt so kindly with him, yet he could not undo the wrong nor escape the consequences of his own example which his sons were not slow in following without that spirit of piety and devotion which was so conspicuous in the character of David, and made him willing to confess his sin and seek to be reconciled to God against whom he had sinned. His favorite son, Absalom, the only one whose mother was the daughter of a king, had incurred his displeasure, and been banished from the nation; but David's heart yearned for his return, and he was permitted to come back to Israel, yet not to royal favor until some time after. Then began that conspiracy which led to the open rebellion of Absalom, and the flight of David and his tried and trusted followers from the city of Jerusalem.

Absalom prepared him chariots, etc. The use of chariots and costly equipages, indulged in by other nations of the east, was forbidden the kings and nobles of Israel. Saul had, indeed, transgressed the law, but David had been firm in its observance. Absalom, while in exile, had been accustomed to such displays, and thought by introducing their usage in Jerusalem, to win over to himself those of the people that were fond of display.

Absalom rose up early, etc. It had been the custom of the king to be early at the gate of judgment, or if not there in person, to have trusty judges who might attend to all cases brought by the people for their settlement. As David became enfeebled by age, it is probable that the custom had not been strictly observed; and Absalom, taking advantage of the omission, hoped in this way to show his interest in the welfare of the people, and his desire to secure justice between man and man.

After forty years, etc. This is generally regarded as four years, a period of time that Absalom had been in secret conspiracy against his father. It has not been altered in the revised version, but must be regarded as uncertain.

Stole the hearts of Israel, etc. This unnatural son, so beloved by his father, used every means in his power to win the allegiance of the people to himself, and the success of his undertaking is a sad evidence of the uncertainty that surrounds the path of him who holds the reins of power.

The conspiracy was strong. The people were completely won over to the cause of the rebellious son, whose promises and praises were too flattering to be rejected. Even some of David's most trusted adherents were ready to espouse his cause, and leave the

master who had raised them to dignity and honor. The situation might be compared to Saul and David, with this difference; David never forgot that Saul was the Lord's anointed, and was always loyal and ready to do him reverence.

Rebellion, insubordination, strife, and war, all follow in the train of disobedience and an unwillingness to yield to authority. The seeds are usually planted in the household, where children are not restrained in their desires, and the will kept in subjection by parental watchfulness. Many a rebellious son who has brought upon himself disgrace and ruin, has charged his father with failure in his early training. A weak yielding to some whim or caprice that at the time seems a small matter, becomes in the end the fruitful source of evil, and that which was of little account grows to great proportions. In the spiritual life rebelling against the Divine will as certainly brings unrest to the mind, and they who yield to temptation to resist that will, place themselves among the rebellious children of the Heavenly Father. Know ye not that Christ is in you except ye be reprobate? was the testimony of an apostle (2 Cor. 13: 6.) To be reprobate is to disregard authority; in this connection it is to turn away from the voice of Christ, the sanctifying principle—the Holy Spirit—which is heard in the stillness and quiet of every soul, and is the preserving power to which Jesus calls, and to which he yielded obedience, as he declared, I do always the things that are pleasing to him [the Father.] (John 8: 29.)

NOTES ON THE LESSON.

Absalom was the third son of David and the only one whose mother was of royal birth, she being the daughter of the king of Geshur, a Syrian district adjoining Israel on the northeast.

David had a love for Absalom above all his other children, though he had little, except his personal appearance and insinuating manners to entitle him to favor. It is written of him, "In all Israel there was none to be so much praised as Absalom for his beauty; from the sole of his foot even to the crown of his head there was no blemish in him," yet he was vain and ambitious, and destitute of respect or reverence for his father who was weak and indulgent towards his faults.

Absalom became very popular with the people and was looked upon as the successor of David in the government of the Nation. The artifice by which he gained his influence was most heartless; under the plausible inference that he was acting for his father in standing at the gate and giving his personal attention to cases of difficulty between parties having grievances to settle, the common people were easily won over to his cause and when his plans were fully matured, it was not difficult to raise the standard of revolt. The story of his duplicity and the means resorted to by him to gain over to his side so many of the trusted leaders and counsellors of the king, forms one of the saddest chapters in Hebrew history, and shows Absalom to have been destitute of every feeling of filial affection. And its effect upon David was

most remarkable; he appears to have had the least suspicion of the treachery of his darling son, and when the intelligence reached him, he was so overwhelmed that his only thought was to give up the city of Jerusalem to the insurgents and retire to a place of safety.

The valor and courage that had been so frequently displayed on occasions of peril to himself or to the nation had forsaken him, and we can readily understand how utterly he felt himself deserted and without hope, and what a task it was for his faithful adherents who rallied to his support to arouse him to action. Even in the last extremity the concern of the unhappy father was more for the safety of his rebellious son than for the preservation of the integrity of the kingdom.

No words of condemnation are too strong for the son who lifts up his hand against his father to do him harm; under the heat and excitement of passion and strong drink such a crime may be and we are painfully conscious has often been perpetrated; with Absalom it was a deep-laid plot, that took months, perhaps years of deceit and flattery to accomplish. The fear that Solomon the son of Bathsheba might supplant him in the affections of his father, and be chosen his successor to the throne, was probably one of the motives for his revolt, but no view that we can possibly take of the situation can lessen the enormity of the crime or apologize for the bold and unscrupulous treason of Absalom. "Honor thy father and mother," stands first in the laws that govern moral and social action; it is recognized by all civilized peoples, and is the bulwark of the family relation; the child who fails to recognize and conform to so wholesome and important a rule of social order, is unworthy the respect and confidence of the community in which he lives.

JOHN ROBINSON'S ADDRESS.

[THE *New England Magazine* for Tenth month, (edited by Edward Everett Hale and Edwin D. Mead), prints the essential parts of the farewell address of John Robinson to the Pilgrims, as they were leaving Holland for America in 1620, and with it a poem by Oliver Wendell Holmes. "Intellectually John Robinson was the father of the Pilgrim Fathers," the *Magazine* says. The address and the poem, (except its closing stanzas), follow. It is interesting to see how this Puritan preacher declared the truth which the Friends have always held,—that "revelation has not ceased." —EDS. INTELLIGENCER AND JOURNAL.]

FROM EDWARD WINSLOW'S NARRATIVE.

"In the next place, for the wholesome counsell Mr. Robinson gave that part of the Church whereof he was Pastor, at their departure from him to begin the great work of Plantation in *New England*, amongst other wholesome Instructions and Exhortation, hee used these expressions, or to the same purpose: We are now ere long to part asunder, and the Lord knoweth whether ever he should live to see our faces again; but whether the Lord had appointed it or not, he charged us before God and his blessed Angels, to follow him no further than he followed Christ. And if God should reveal anything to us by any other instrument of his, to be ready to receive it, as

ever we were to receive any truth by his Ministry: For he was very confident the Lord had more truth and light yet to break forth out of his holy Word. He took occasion also miserably to bewaile the state and condition of the Reformed churches, who were come to a period in Religion, and would goe no further than the instruments of their Reformation; as for example, the *Lutherans* they could not be drawne to goe beyond what *Luther* saw, for whatever part of God's will he had further imparted and revealed to *Calvin*, they will rather die than embrace it. And so also, saith he, you see the *Calvinists*, they stick where he left them: A misery much to be lamented; For though they were precious shining lights in their times: yet God had not revealed his whole will to them: And were they now living, saith he, they would be as ready and willing to embrace further light, as that they had received. Here also he put us in mind of our Church-Covenant (at least that part of it) whereby we promise and covenant with God and one with another, to receive whatsoever light or truth shall be made known to us from his written Word; but withall exhorted us to take heed what we received for truth, and well to examine and compare, and weight it with other Scriptures of truth, before we received it; For, saith he, It is not possible the Christian world should come so lately out of such thick anti-Christian darkness, and that full perfection of knowledge should break forth at once."

POEM BY DR. HOLMES.

BEFORE the Speedwell's anchor swung,
Ere yet the Mayflower's sail was spread,
While round his feet the Pilgrims clung,
The pastor spake, and thus he said:—

"Men, brethren, sisters, children dear!
God calls you hence from over sea;
Ye may not build by Haerlem Meer,
Nor yet along the Zuyder-Zee.

"Ye go to bear the saving word
To tribes unnam'd and sheres untrod;
Heed well the lessons ye have heard
From those old teachers taught of God.

"Yet think not unto them was lent
All light for all the coming days,
And Heaven's eternal wisdom spent
In making straight the ancient ways:

"The living fountain overflows
For every flock, for every lamb,
Nor heeds, though angry creeds oppose
With Luther's dike or Calvin's dam."

He spake: with lingering, long embrace,
With tears of love and partings fond,
They floated down the creeping Maas,
Along the isle of Ysselmond.

They pass'd the frowning towers of Briel,
The 'Hook of Holland's' shelf of sand,
And grated soon with lifting keel
The sullen shores of Fittingland.

No home for these!—too well they knew
The mitred king behind the throne;—
The sails were set, the pennons flew,
And westward ho! for worlds unknown.

OMNISCIENT, OMNIPRESENT GOD.

In Him we live and move and have our being. The heaven is his throne and the earth is his footstool. He is all and in all. God is spirit, says Christ. I am spirit, I say to myself. Whereabouts in me is the spirit? It is equally in every part of the organism. I am omnipresent in myself. And as my spirit is omnipresent in myself, conscious of everything that touches me at every part, dominant in every part, a will that masters every part, an intelligence that receives at every part, so we may think of God as omnipresent in the universe, his will not more in some central star than here, his eyes not more in some central orb than here, his presence the universal presence. All that we call force is but the will and work of God working out his own purposes; all that we call law is but the way in which he does it; what we call the uniformity of law is but the habit of God in the universe that is in his body. What drew that apple from the bough to the ground? The law of gravitation? Law does nothing. The force that resides in the Infinite and Eternal Will, in the presence of which we are all standing. What holds the rolling world in its orb, and takes it on its course? The law of gravitation? Law does nothing. The one great Infinite Force,—that is, the one great Infinite Spirit that pervades the universe as the human spirit pervades the human body.

If we could but rise to this conception, we should find it full of perpetual freshness of inspiration. If God pervades the universe as the spirit of man pervades the body, if there is no central orb where he sits enthroned—for the heaven of heavens cannot contain him, and the earth is but his footstool, and all the universe is his dwelling-place—then there never will be a time, through all eternity, when I shall be nearer Almighty God than I am at this moment. I may see him more clearly, I may recognize him more fully, but I shall not stand in his more immediate presence. When the thunder rolls among the hills and the lightning is flashing, this is no blind force. And I will rejoice in the reverberating thunder, and glory in the flashing lightning; for if the time has come, and he would call me home, the bolt that brings death is God calling, and will be welcome, for it comes from him. And when we pick the flower from the sod, and it looks up and breathes its fragrance in our nostrils, I will say, Thou blessed lily, thou art doubly blessed because thy beauty is the beauty of him. Thou art in him, and thy fragrance is the fragrance of his love; and the dew that kisses thee is the kiss upon his children, and every ray of sunlight and every phenomenon of nature and every blade of grass and every song of bird are the forth-putting of his will, his love, his power, in the presence of whom we do always stand. And so, with a deeper faith and one more inspiring, we shall say, We believe in God the Father Almighty, Maker of heaven and earth. Science and philosophy have done nothing to separate us from him. They have done much to bring us nearer to him in whom we live and move and have our being.—*Selected.*

EXTRACTS FROM A SERMON OF DEAN

STANLEY.

MAY I close these words by an illustration thrown from the lips of a rough, sea-faring man, one of the few survivors of a great wreck which took place some years ago, when a crowded steamship foundered in the stormy waters of the Bay of Biscay? As soon as those who had escaped from the sinking vessel found themselves in a small boat on the raging sea, they discovered that their chief danger came not from the massive sweep of the waters, but from the angry, breaking waves which descended upon them from time to time, and against which every eye and ear had to watch, with unabated attention. As the shades of evening drew on, the survivor who told me the story, said that his heart sank at the thought that in the darkness of the night it would be impossible to see those insidious breakers, and that sooner or later, the boat would be engulfed by them. But with the darkness, there came a corresponding safety. Every one of those dangerous waves as it rolled towards them, was created with phosphoric light which showed its coming afar off and enabled the seamen to guard against it as carefully as if it had been full daylight. The spirits of the little company revived, and though from time to time the cowards or the desperados among them were for turning back, or driving an oar through the frail boat's side, the consocations guided them through the night, and they did at last, in the early dawn, catch a view of the distant vessel by which they were saved.

That crest of phosphoric light on the top of those breaking billows was as the light of Divine Grace, the compensating force of Providence in the darkness of this mortal night, and on the waves of this troublesome world. The perplexity, the danger, the grief, often brings with it its own remedy. On each bursting wave of disappointment and vexation, there is a crown of heavenly light which reveals the peril and shows the way and guides us through the roaring storm. Out of doubt comes faith, out of grief comes hope; and "to the upright there ariseth up light in the darkness." With each new temptation comes a way to escape; with each new difficulty comes some new explanation. As life advances it does indeed seem as a vessel going to pieces, as though we were on the broken fragments of a ship, or in a solitary skiff on the waste of water; but so long as our existence lasts, we must not give up the duty of cheerfulness and hope.

He who has guided us through the day, may guide us through the night also. The pillar of darkness often turn into a pillar of fire. Let us hold on, though the land be miles away; let us hold on till the morning break. That speck on the distant horizon may be the vessel for which we must shape our course. Forward, not backward, must we steer; forward and forward, till the speck becomes a mast, and the mast becomes a friendly ship. Have patience and perseverance; believe that there is still a future before us; and we shall at last reach the haven where we should be.

THE VALUE OF EXAMPLE.

It is scarcely possible for any of us, in the present conditions of society, to realize the full force and power of example. The tendency of the civilization of our age is to break away from the restraints of usage and tradition,—to mark out our own line of thought and action irrespective of what the influence may be upon other lives that touch and assimilate with our lives. The things our fathers did are not the things that commend themselves to our notice, their method of expressing thought is esteemed quaint and antiquated, and we are in danger of overlooking the sterling good of their example in our endeavors to get away from the peculiarities that come so prominently before our imagination.

And this is not to be condemned in so far as it is kept within the limitations of truth; that for which there is no longer a foundation to stand upon has need to be swept away by the advancing tide of knowledge based upon experience. But in this process there is danger of losing our hold upon things of permanent value that exist for all time, we may place ourselves in line with those of whom the Great Teacher spoke when he said "the fathers stoned the prophets." In our zeal for the new, the attractive, we may turn from the solid, steady ways that wisdom and prudence point to as the path of true progress, in which prophet and apostle are calling us to enter and find peace and safety, and we turn a deaf ear to the message they bring us; having cut loose from our moorings we want to find for ourselves the unexplored country,—the Eldorado of our aspirations. This is especially true in respect to the religious thought of our age; we criticize, condemn, and cast from us that which in all particulars does not conform to the letter of present methods, and thus deprive ourselves of the lessons of hope and trust and patient endurance which like golden threads shine out from the debris of the past.

We fail to profit by the example which confidence in the goodness, mercy, and forgiveness of our Heavenly Father affords, because in the social and civil life of these worthies there were wrongs and deviations which our present civilization condemn.

Let us have faith in the eternity of goodness, and wherever we find it, believe in it and make it our own. The good is of God, and must be enduring;

evil is earthly and belongs to the perishable. If we desire the triumph of the good, we must let our own lives show forth this desire by being examples to those about us of the value of goodness, and suffer no grain of truth which may add to the solid weight of the accumulation remain ungathered.

A NUMBER of interesting topics relating to our Society in Philadelphia have presented themselves for this week's issue of the paper, and are treated elsewhere. We have formed the conclusion that it would be both serviceable and interesting to give more attention in detail to Philadelphia matters, and we propose to undertake to do this during the coming year. This will not be at the expense of any other locality, nor will it lessen the degree of attention given to the usual and well approved subjects which go to make up the paper; it will be rather in the nature of a special department, and may increase the amount of our reading matter. We commend the new feature to the kind appreciation of our Philadelphia friends, among whom we should have, we think, a largely increased circle of readers.

SOME of our correspondents address their communications to 15th and Race streets. In cases, (such as have occurred several times within a few weeks), where notices for publication are enclosed, and there is no time to spare, this involves the risk of missing the issue of the paper which it was desired to catch, as the letters have to be remailed from 15th and Race to 921 Arch, the office of the paper. As the address of the editors is plainly printed, every week, we hardly understand why such an error should be made.

MARRIAGES.

MENDENHALL—PASSMORE—TAYLOR—PASSMORE.—Tenth month 15th, 1889, at the home of the brides' parents, Rising Sun, Md., by Friends' ceremony, Mary E. Passmore to Newlin Mendenhall, Media, Delaware county, and Phebe E. Passmore to William S. Taylor, M. D. of Malvern, Chester county, the brides being daughters of Samuel W. and Eline Passmore.

DEATHS.

ALBERTSON.—At Yonkers, N. Y., Tenth month 11th, 1889, Sarah Pim, widow of J. Morton Albertson, of Norristown, Pa., in her 59th year.

BROWN.—In Philadelphia, Tenth month 16th, 1889, of consumption, Edgar Allen Brown, of Mount Pleasant, Ohio, in the 19th year of his age. This young Friend was a student in the Senior class of Swarthmore College, at which place for three years he most faithfully pursued his studies under physical difficulties that would have deterred a less courageous spirit. He entered upon his fourth year in the hope of completing his course and to graduate with his class, to which he was most warmly attached. But this was not to be, and the Angel of Death found him ready peacefully to enter the new life in the hereafter, for which his pure life here was a beautiful preparation.

DEAVES.—At Haverford, Pa., suddenly, Tenth month 18th, 1889, Lewis Deaves, in his 58th year.

HATTEN.—At his residence, Germantown, Philadelphia, on the 18th of Tenth month, 1889, Owen Hatten, aged 69 years; a member of Green street Monthly Meeting.

JEANES.—At her residence, in Philadelphia, on the 19th of Tenth month, 1889, Mary Jeanes, in the 86th year of her age; a member of Green street Monthly Meeting.

MACINTOSH.—In Philadelphia, on Seventh-day morning, Tenth month 12th, 1889, Mary Ann, widow of John MacIntosh.

PIKE.—In West Philadelphia, Sixth-day, 18th of Tenth month, 1889, Henry Pike, in his 95th year; an elder of the Monthly Meeting of Friends of Philadelphia held at Spruce street, formerly of Byberry.

PRIESTMAN.—At his residence, Ontario, Canada, Ninth month 25th, 1889, Joseph Priestman, aged 79 years and 9 months; a member of Pelham Monthly Meeting of Friends.

ROGERS.—At Woodstown, N. J., Tenth month 16th, 1889, Samuel Rogers, aged 82 years.

SHINN.—Near Columbus, N. J., Ninth month 23d, 1889, Shreve Shinn, Sr., in his 74th year; a member of Mt. Holly Monthly Meeting, N. J.

STAPLER.—In Wilmington, Del., Tenth month 13th, 1889, William W. Stapler, in his 18th year.

WAY.—At the residence of her son-in-law, E. G. Broomell, Christiana, Pa., Tenth month 1th, 1889, Mary Way, in the 89th year of her age.

For Friends' Intelligencer and Journal.

GROWTH OF FRIENDS' SCHOOLS IN PHILADELPHIA.

THE concern of the Yearly Meeting in regard to education, claimed the attention, in 1823, of committees of the Monthly Meeting of Philadelphia, but reports from them do not appear on the minutes. In the Sixth and Twelfth months, 1834, the establishment of a library and reading-room was decided upon, and William Wayne, James Mott, Caleb Clothier, Richard Price, Joseph Parrish, Thomas Parker, Samuel Hitchinson, T. Ellwood Chapman, Dillwyn Parrish, William Eyre, Edward Hopper, Benjamin J. Leedom, James Willis, George Truman, Charles Longstreth, and Jacob T. Williams were appointed to receive donations and make necessary arrangements. In Second month, 1835, they reported that a suitable room was needed, and they "therefore turned their attention towards ascertaining if a sufficiency of funds could be obtained to erect a building for that object and also a room to accommodate a school and a fire-proof," etc., and they "believed all the needed funds could be raised."

In the Seventh month, on the recommendation of a committee, it was decided to open two schools in the building being erected, and the latter part of Tenth month, 1835, they were started, with Ann Eliza Cook and Ann Poultnev as teachers, at \$150 per year salary for each. Tuition was \$3 and \$1 per quarter of 12 weeks. The first committee in charge were James Mott, James Martin, Richard Price, Susan Parrish, Sarah H. Palmer, and Lucretia Mott.

In Ninth month, 1836, the first report showed the total receipts of both schools had been \$226.38; expenses, \$290.54; deficit, \$60.16. The number of pupils attending ranged from 13 to 39. [As the schools were late in opening, the teachers had only been paid \$125 each.]

The second year showed receipts, \$383.89; expenses, \$527.38; deficit, \$143.49. The salaries were \$165 each.

The third year the receipts were \$541.09 and there was a balance on the profit side of \$80.62. The salaries were \$180 each. The pupils numbered fifty to sixty.

Thus much for the earlier history of these schools. At the monthly meeting last month (Ninth month 1889), the financial report for last year of the seven schools in charge of the Monthly Meeting, including Girard Avenue and West Philadelphia, was as follows:

Receipts from Tuition,	\$24,777.44
" " Free School Fund,	3-9.10
" " Miscellaneous Sources,	81.26
Total,	\$25,259.80
Expenditures, salaries, books, care of property, etc.,	23,033.53
Balance,	\$2,226.37

The total number of pupils was 806, of whom 137 were members of the Society of Friends, and fifty-eight had one parent a member. The total value of free and half-rate tuition furnished was \$7,784.57, of which \$2,887.50 was at Girard Avenue.

The foregoing details apply only to the Monthly Meeting schools. Friends' Central schools were opened Ninth month 1st, 1854, with Benjamin Hallowell and Mary H. Middleton as principal teachers. The pupils numbered 116 boys and 124 girls. At the end of the year Benjamin Hallowell resigned, and the second year the schools had averages of fifty-three boys and ninety girls. The boys' school, a few years later, was discontinued as a high grade school, but in Ninth month, 1855, it was again started under Aaron B. Ivins as principal, and had fifty-six pupils, thirty-one of whom were children of Friends or professors. The average number of the girls, under Lydia Gillingham, was sixty-six, of whom fifty-six were children of Friends or professors. From this time, these schools progressed rapidly, especially after the removal to 15th and Race streets, which took place two years later.

The report for the Central School made in Ninth month, 1889, shows an attendance of 222 boys, and 380 girls, total 602. Of these 134 were members, and sixty had one parent a member.

In the answer to the query last spring, it was stated that sixty-four regular and seventeen special teachers were employed, forty-nine of the former and five of the latter being members, and seven of the former and two of the latter in profession with us.

It may be stated in addition to the above information, that in 1863, before the adoption of the free tuition idea in any of the schools, a committee on Education of five Friends was appointed to encourage Friends to send their children to our schools, and authorized to expend whatever was needed in tuition. This authority was afterwards extended to include those having one parent a member, where there seemed an interest in our principles. The first eight years of its existence the committee spent from the monthly meeting treasury, \$4,265.20, and in the following eighteen years, \$1,901.37.

J. M. T. Jr.

NEWS OF FRIENDS.

VISITS TO PHILADELPHIA MEETINGS.

LEVI L. BENSON, an approved minister of our Society, a member of Ohio Yearly Meeting has been visiting with acceptance in Philadelphia. He was accompanied by his two daughters. On First-day, the 13th, he was at Race street meeting in the morning, and spoke with much earnestness; in the afternoon he met with those who attend at Fair Hill, and in the evening he attended Girard Avenue meeting. In the afternoon, (at Fair Hill), his message opened with the words of Isaiah: "We have a strong city; salvation will God appoint for walls and bulwarks. Open ye the gates that the righteous nation which keepeth the truth may enter in." His discourse was edifying and earnest. He believed in a living Christ. Even the wicked hear the knockings of the Spirit. The encouraging promise comes to the believer, "Be of good cheer, I will strengthen thy heart." Every one who is willing will realize that the Lord does indeed strengthen him and help him to "open the gates" that he may enter in and rest in peace.

At Girard Avenue, in the evening, L. L. Benson spoke to a large assembly, the majority of whom were in the younger walks of life. The question of Nicodemus, and the answer of Jesus thereto, were the opening words of his discourse. Jesus said unto him, "Verily, verily, I say unto thee, except a man be born again, he cannot see the kingdom of God." Nicodemus queried, "How can this be?" Jesus answered, "Verily, verily, I say unto thee, except a man be born of *water* and of the *spirit*, he cannot enter into the kingdom of God." The difference between the two answers, the Friend compared to a person standing on an elevation, outside a city, and looking over the city, but between this view and the entrance to the city was a vast wilderness, where many go astray. Those were they who believed in doctrines but had not come into the spiritual life, and so had not entered into the gates of the city. By many the water alluded to is the essential to the new birth, and many believed that baptism by water was meant. But as he understood it, Jesus was speaking of the water of life, the same water that he alluded to when he said to the woman of Samaria, "whosoever drinketh of the water that I shall give him, shall never thirst, but the water that I shall give him shall be in him a well of water springing up into everlasting life."

L. L. B. also attended the several monthly meetings of Philadelphia as they came in course, last week, having acceptable gospel service in each. The writer of these notes was present at the Monthly Meeting at Green street, which was well attended, and a very satisfactory occasion. In the meeting for worship Levi L. Benson opened with the words of the Apostle: "There remaineth a rest to the people of God." This rest, he said, was not to be waited for until we enter into another state of existence: here, and now, the willing, faithful, and obedient are permitted to enjoy this state of peace and rest. The word of encouragement was handed forth to some in the audience who were just entering into service; they were exhorted to be of good courage, and they would find the Father near to strengthen and help

them in the performance of the work entrusted to their care. He spoke of the early age at which some hear the Divine call,—for himself, as far back as when he was not more than five years old, he was sensible of the visitations of the Father's love, and as he endeavored to walk in its light he had known as a child the preservation from much that ensnares and leads away from the right path; the pathos and earnestness of his appeals, and the strong testimony he bore to the unflinching goodness of our Heavenly Father, the tenderness of his exhortation to all present to seek now and at once to enter into the rest that is to be enjoyed by the children of God, touched the spring of feeling in many hearts, and it was felt to be a privilege to be partakers in this feast of love.

In the meeting for business (Green St.), a minute issued by Plainfield Monthly Meeting, Ohio, endorsed by Stillwater Quarterly Meeting, was presented by our friend and reader. It liberated him for service as way opens in Philadelphia and other parts of our Yearly Meeting, and to attend the approaching Yearly Meeting to be held in Baltimore, Md., also to appoint meetings as truth may direct. Much unity with his presence and service amongst us was expressed.

—At Green street Monthly Meeting a nominating committee was appointed, as usual at this time, to bring in the names of suitable Friends to have oversight of Girard Avenue Meeting; this led to the revival of a concern which had been previously expressed in women's meeting in regard to the continuance of that meeting under the care of a committee. It was felt that the time had come when it should be made a meeting of record. It is now the largest First-day morning meeting of Friends in the city and its position is an anomaly in the Society. Being largely made up of the young and those having growing families, increases the responsibility of the Monthly meetings that take no steps to give it the place in the Society that its size and the conditions of its development clearly indicate in the estimation of many who attend the meeting.

—A friend at Norristown sends us some account of the First-day School Union; we had already some notes concerning it in type. Her letter adds: "At our First-day morning meeting (20th) we were favored with the presence and valuable discourses of our friends Ellison Newport and Alvin T. Haines; the former also appearing in supplication near the close of the meeting. The occasion was one of deep, spiritual baptism, before which all types and shadows disappear, and fill the soul with a renewed yearning for that eternal substance which fadeth not away."

—At the Monthly Meetings held last week at Green street and Race street, (Philadelphia), it was concluded to hold one evening meeting on First-day, to alternate a month at a time at each meeting-house, Race street, Green street, and Girard avenue.

"God blesses still the generous thought,
And still the fitting word He speaks,
And Truth at his requiring taught
He quickens into deeds."

*FIRST-DAY SCHOOLS.
ABINGTON AND CONCORD UNIONS.*

The semi-annual meeting of Abington Union was held in the meeting-house at Norristown on Seventh-day last, the 19th inst. The attendance was large. Reports were received from all the schools in the quarterly meeting, (including Byberry and Richland, not enrolled as members of the Union), except Stroudsburg. These showed a satisfactory condition.

The exercises were opened in the forenoon by a Bible reading by Ellen L. Thomas, of Norristown, and at the opening of the afternoon session, Abby B. Potts, of Norristown, made an address of welcome. Interesting exercises were given by members of the different schools, with essays, etc. An essay by Mary R. Livezey, of the Plymouth School, related to the Lesson Leaves, with their suitability and sufficiency for instruction in the schools. The essayist thought favorably of them. Samuel Swain did not think those drawn from the Old Testament were profitable. This drew out some discussion. Several who spoke expressed their high estimation of the Lessons.

Lunch was bountifully provided by Norristown Friends, and the number to enjoy it was probably as large as on any previous occasion in the experience of the Union. The next meeting, (on the third Seventh-day of Fourth month), will be held at Abington. The Visiting Committee appointed visits to several of the schools, including Gwynedd, on the 3d proximo.

The semi-annual meeting of Concord First-day School Union was held at Newtown Friends' meeting-house, Delaware county, on Seventh-day, the 19th instant. It was largely attended and full of interest, both old and young participating. The one subject that most stirred the meeting was that of interesting the members of our First-day Schools in our Religious Society and its principles in such a way as to lead them to desire membership with us. Some valuable essays were read, and much encouragement given to teachers to persevere without too much looking for results. Appeals were also made to the parents to give their hearty cooperation, as in the home, after all, depended the success of both meetings and schools. If respect and love for these were nurtured in the home, their influence would be far greater. The value of object teaching was well presented, and the Union closed under a feeling of deep thankfulness for such an occasion.

For Friends' Intelligencer and Journal.

NOTES BY THE WAY.

JOHN G. WHITTIER of Massachusetts and Robert Purvis of this city are the two men yet left among us of the sixty or more who signed in the year 1833 the Declaration of Sentiments of the National Anti-Slavery Society, at its formation. Fifty-six years ago did these active Anti-Slavery men there enroll their names; they lived to see the fulfillment of their hopes; and what an experience has been theirs.

I called yesterday on Robert Purvis and found him, as usual, full of animation and anecdote, although now in his 80th year. He is a light, a very light colored man, who inherited from his father,

and perhaps his brother, sufficient means to enable him to live without manual labor, and he appears to have been judicious in the management of his property. He has told me that after one of the Anti-Slavery riots, when he expected his own house—down town—to be attacked, and perhaps his own life to be forfeited, he decided to leave Philadelphia and go to live in the country, where he would find work for his children and could train them to habits of industry.

* * *

One of the chief sorrows of the colored people here now, is the great difficulty that they experience in finding any place to work in the higher grades of labor. Almost every thing seems closed against them. This great city opens to them its public schools; the Manual Training School offers them its advantages; but they seem to find themselves where women were placed half a century ago,—almost excluded from the higher walks of industry. Robert Purvis was telling me, however, of his having made a successful effort to place a young colored man who had graduated very high in the Training School. He obtained for him a place in a great establishment for making dental instruments.

* * *

There may be some obstacles in the way of our colored people getting into trade,—buying and selling,—but one of their greatest, I suspect, is the fact of their not accumulating capital. A notable instance of a successful business man is our acquaintance, William Still. When I was a young woman, living with my father, Thomas Earle, we occupied a house on Fifth street near Arch, in the immediate neighborhood of the Anti-Slavery Office conducted by J. Miller McKim, Secretary of the Pennsylvania Anti-Slavery Society. Employed in the little office was a young colored man, a "likely fellow," who had been reared on a New Jersey farm, by his parents, who were fugitive slaves. It occurred to this young man, William, some time after he came to this city, that it would be profitable to deal in second-hand stoves. He who can buy when stoves are not wanted, and sell when they are, had an opening for a good deal of profit. He also began to deal in coal, and is now a successful man, owning considerable property. He is an elder in the Presbyterian church, and has been appointed a delegate to one or more of their church assemblies, his "alternate" on one occasion, being Samuel C. Perkins, a prominent lawyer. Industry, economy, and thrift have characterized, it would seem, William's career in life. I recall a little anecdote he told me once of himself, as to how he became a teetotaler. He was quite young, and doing farm-work in New Jersey, where it was the custom to send out spirits to the farm hands. He partook of some, and found himself unable to work in the afternoon, and thus lost a portion of the day. That the drink should so overcome him as to make him unable to do a full day's work was a thing that convinced him of its evil character.

* * *

I called recently on the editor of one of our chief Philadelphia dailies, to speak about the race riots in

the South,—or the disturbances in which the colored people are concerned. He is not unfriendly to the colored man, but when he has gone South, I am told, he has seen things "through a champagne glass," which I interpret to mean that his entertainers made things pleasant for him. He said to me, in speaking of race riots, that in Mississippi a black man was about to be arrested for larceny, and the blacks gathered and refused to give him up, arming themselves in their church to prevent his being arrested. I told him the anecdote so forcibly related by our friend, Martha Schofield, at the time of our late yearly meeting. She seemed to feel that her remaining at Aiken was of use as a protection to the colored people, and told the anecdote, which I remember, thus: The sheriff was in charge of two colored women whom he was taking away to prison, and as they stood on the railway platform he cried out: "Five minutes to give away that baby!" for the woman could not take the infant with her. And what had she done? A white woman had stolen a blanket belonging to one of the colored women; the two women and their husbands had gone to the white woman's house to recover it, unsuccessfully. Then the whites, knowing that the white woman was in danger of being arrested for larceny, had "taken the whip-hand" of the ignorant colored people and had them arrested for "riot." It was a case, it seemed, of clear oppression, and Martha hoped to have it investigated.

Is it not probable that some such thing was at the bottom of the Mississippi case, and that when the blacks "armed themselves in their church" it was simply to protect themselves from injustice?

P. E. GIBBONS.

Philadelphia, Tenth month 7.

ANNUAL MEETING OF THE LIBRARY ASSOCIATION.

THE fifty-fourth annual meeting of the Library Association of Friends (Philadelphia), was held in the library room, Race street above 15th, on Sixth-day evening, the 18th inst. The annual report of the managers was read, showing the increase in the use of the library by Friends, and the additions to the volumes on its shelves. The financial statement was satisfactory; a small balance remains in the treasury. An election for officers and the committee of management followed. No change was made in either, except the filling of two vacancies in the board of managers occasioned by the removal from the city of S. Raymond Roberts and Jeannie H. Roberts. Catharine A. Kennedy and Comly S. Lobb were appointed in their places. Professor Arthur Beardsley, of Swarthmore College, then delivered a most interesting lecture on "Friends in Science and Industry." The lecturer confined himself to early Friends, not including any who were born in the present century. The lecture was replete with information concerning the part that members of our Society have taken in the advancement of scientific research and the industries it has developed, which have done so much to increase the comfort and conveniences of our age. The short sketches of life and character with which the professor favored us showed these men to have

been earnest, simple-hearted Friends, true to the highest and best impulses of humanity. We hope to have the privilege of presenting the lecture to our readers in the near future. There was a good attendance at the meeting, but the hall would have accommodated many more. R.

SWARTHMORE NOTES.

—The course in English Literature at Swarthmore under the charge of Professor Appleton, assisted by Professor Smith, is one of the most complete to be found in any college. It extends through four years, and covers the history of the language and literature from the Anglo-Saxon period to the present time, with critical reading of representative works for the different periods. Indeed the reading of the actual text four great classics, rather than reading what has been said about them, is a peculiar feature of the course. It is felt that in this way only can a student form an intelligent judgment of a great author and weigh the value of criticism.

—Professor Arthur Beardsley, the head of the Engineering Department, lectured before an appreciative audience in Philadelphia on Sixth-day evening last on "The Work of Friends in Science." Those who heard the lecture speak very highly of it.

—Edgar Allen Brown, '90, of Mt. Pleasant, Ohio, died on Fourth-day last in Philadelphia. He was editor-in-chief of the *Phoenix*, and editor of the *Halcyon*, '90, but his course had been much hindered by the ravages of the dread consumption which fastened itself upon him at an early age. He was universally respected in college and a large number of students viewed his remains before they were taken West.

—The Fall Sports were held in "Whittierfield" on Fourth-day last with very satisfactory results. The Senior Class secured 74 points toward the *Phoenix* cup; the Juniors 10; the Sophomores 13, and the Freshmen 11.

—Some changes are contemplated by which the large assembly room will be kept open for students of all the classes who desire to study in the quiet there at any time. S.

THE FORESTRY MEETING.

THE sessions of the Pennsylvania Forestry Association and of the National Forestry Congress were held jointly at Horticultural Hall, in this city, last week. The attendance was good. On the evening of the 15th, Carl Schurz, of New York, delivered an interesting address, and on the evening of the 17th, Prof. J. T. Rothrock gave a very instructive illustrated lecture, on "The Forest Regions of North America." The intervening sessions were occupied with the reading of papers, discussions, etc. On the afternoon of the 18th, a number of those who had been attending proceeded to Fairmount Park. Near Memorial Hall seven seedling oaks, grown from acorns taken from the Bartram Garden by Eli K. Price, were planted. They represented seven different specimens. The first, in memory of Andrew F. Michaux, was planted by B. E. Fernow, of the Forestry Bureau at Washington; the second, in memory of Franklin

B. Hough, by H. G. Joly, of Quebec, Canada; the third, in memory of John Bartram, by C. C. Binney; the fourth, in memory of Alexander Von Humboldt, by Dr. J. P. Lundy; the fifth, in memory of Joshua Francis Fisher, by J. Rodman Paul; the sixth, in honor of Governor Beaver, by B. G. Northrop, and the seventh, in honor of John B. Peaslee, of Cincinnati, by Warren Higley, of New York.

Officers of the Congress for the ensuing year were elected as follows: President, Governor James A. Beaver; First Vice-President, H. G. Joly, of Quebec, Canada; Corresponding Secretary, C. C. Binney, of Philadelphia; Recording Secretary, N. H. Eggleston, of Washington, Treasurer, Dr. H. M. Fisher, of Philadelphia.

A PRAYER OF AFFECTION.

BLESSINGS, O Father, shower!
 Father of mercies! round his precious head!
 On his lone walks and on his thoughtful hour
 And the pure visions of his midnight bed,
 Blessings be shed!
 Father! I pray Thee not
 For earthly treasure to that most beloved,
 Fame, fortune, power;—oh! be his spirit proved
 By these or by their absence, at thy will!
 But let thy peace be wedded to his lot,
 Guarding his inner life from touch of ill,
 With its dove pinion still!
 Let such a sense of Thee,
 Thy watching presence, Thy sustaining love,
 His bosom guest indelibly be,
 That whereso'er he move,
 A heavenly light serene
 Upon his heart and mien
 May it undimmed! a gladness rest his own,
 Unspeaking and to the world unknown!
 Such as from childhood's morning land of dreams,
 Remembered faintly, gleams,
 Faintly remembered and too swiftly flown!
 So let him walk with Thee,
 Made by Thy Spirit free;
 And when thou calls't him from his mortal place,
 To his last hour be still that sweetness given,
 That joyful trust! and brightly let him part,
 With lamp clear burning, and unlingering heart,
 Mature to meet in Heaven
 His Saviour's face!

—*Felicia Hemans.*

LININGS.

NAY, nay, dear child, I cannot let you slight
 Those inner stitches on your gown's fair hem,
 Because, you say, they will be out of sight,
 And no stern critic will discover them.
 You do but build a most inviting hedge,
 Behind which falsehood and deceit may lurk.
 When you embroider fair the outer edge
 And to the inner give no honest work.
 The silken chain of habit which you wear
 So lightly now upon your careless youth
 Will strengthen the strand by strand; then have a care!
 Else it may thrattle the sweet soul of truth.
 I hold that every stitch truly set
 Weaves a soiled thread along your web of fate.

And each deceitful seam may prove a net
 To hurt and hinder, trust me, soon or late.
 Ah, dearest child, on everything you do
 Let the white seal of honor stamp its grace.
 Keep all your soul as clean with heaven's dew
 As the pink flower of your tender face.

God makes no clumsy things—Mark this bloom!
 A "fairy's glove," and though it grieves my
 heart
 To send the smallest blossom to its tomb,
 We'll tear the dainty little glove apart.
 In this and every flower that we behold,
 From crimson robe to pansy's purple vest,
 God sows the velvet on the inner fold
 And makes the linings fairer than the rest.

Is it not perfect, from the slender stem
 To the brown dapples on the curling rim?
 God folds not carelessly the foxglove's stem;
 Then try, my little child, to be like Him.

—*May Riley Smith.*

CHARACTER AND ORIGIN OF THE POTATO.

ALL over the earth, in tropical, sub-tropical, and temperate climates, there grow various members of an uncanny and highly suspected family, known to botanists as the solanace or nightshades. A more unpromising group than these doubtful herbs, in which to look for a human foodstuff, could hardly be imagined. There are families, like the grasses, which supply mankind with endless useful plants—wheat, rye, Indian corn, barley, millet, oats, rice, and sugar cane. There are others, like the pea tribe, almost every one of which has some economic value, either directly for human food, as in the case of peas, beans, and lentils, or indirectly for fodder, as in the case of clover, vetch, lucern, and sainfoin. But the nightshades are just one of those ill-omened families which bear in their very faces the obvious marks of an evil disposition, and which are regarded with a certain shrinking, instinctive disfavor even by those who have no first-hand knowledge of their objectionable character.

One of them is the well-known belladonna or deadly nightshade, which haunts old ruins or monastic buildings, and contains a powerful acrid narcotic poison, famous for its stupefying and relaxing action on the retina. Its flowers are a lurid brown in color, and look as deadly to the sight as they really are. Its berry is black, shining, and the whole plant has a distinctly murderous air, which its popular name exactly expressed. The potato, in fact, is a solitary, well-behaved, and respectable member of a peculiarly abandoned and dissolute family, a family in which poisoning and witchcraft and all evil practices run riot as commonly as crime and murder in a Mediaeval Italian princely home.

Unpromising as the nightshades usually show themselves, however, with their lurid flowers and their round, shining fruits, there are a few plants even in this wicked tribe which ingenious man has pressed somehow into his exacting service. The capsicum, to be sure, with its near relation, the delicious little West India bird peppers, one can hardly count

as a genuine exception; for though a small quantity of red pepper is pleasant enough as a flavoring to soup, a diet of cayenne would doubtless prove unduly pungent and exciting; and a single drop of the essential oil of capsicum is sufficient, as our medical friend would gracefully phrase it, "to determine death in great torment." But the tomato, that gentle and harmless vegetable, so unexceptionable in its character that early writers knew it as the love-apple, is a true nightshade—a *solanum* of the *solanums*; and though both flower and fruit have, in outer bearing all the distinctive poisonous type of the entire tribe, I have never yet heard a whisper of reproach against the unassailable character of the mild tomato. That from such a stock should have sprung the harmless, necessary potato—the pride of the New World and the joy of the Old, the support and stay of the sister island, and the confident boast of the *maitre d'hôtel* is one of those profound mysteries of heredity which, in the words of a once famous metaphysical inquirer, no fellow can understand.

And what is the tuber, which natural selection thus acting upon the necessities of the primeval potato, succeeded in producing for a hungry world? Essentially and fundamentally it is not, as most people imagine, a root, but an underground branch bearing buds and undeveloped leaves on its surface, which we know as eyes, and capable of doing all the work of a branch in producing foliage, flowers, and berries. All that is peculiar to the tuber, viewed as a branch, sums itself up in two cardinal points. First, it happens to develop underground (an accident which as we all know in the familiar cases of layers and suckers, may occur with any ordinary branch any day); and secondly, it is large, swollen and soft, because it contains large reserves of material, laid up by the plant in this safe retreat to aid the future growth of its stems and leaves in a second season.

A tuber, in fact, must be regarded merely as one of the many plans adopted by plants in order to secure for themselves continuity of existence. In woody shrubs and trees the material laid up by the individual to provide for next year's leaves and flowers is stored in the inner bark, which does not die; and this accounts for the way in which such trees as almonds, mezeron, and pyrus japonica are enabled to blossom in early spring before the foliage itself begins to come out. But soft, succulent plants, which die down to the ground with every winter, cannot act in this way. They adopt, perforce, a different plan; they bury their treasure deep in the ground to keep it safe from the teeth of greedy herbivores. It is true, rabbits and other burrowing animals get at it even so; but, at any rate, the chances of destruction are greatly lessened, and so the plant gains a point in the struggle for existence which often enables it to hold its own in the battle of species against all competitors.

This was the case with our primitive potato. A juicy and fleshy weed in its native form, much liable, as we all know, to the attacks of insects, and affording a juicy pabulum for the browsing ruminant, the aboriginal potato provided against a rainy day by storing up starch in its underground branches or

tubers, to set up the life of a plant afresh in the succeeding season. When winter came, the part above ground withered and died—a single frost will turn a whole field full black to this day with surprising rapidity—but the underground branches safe alike from cold and from animal foes, kept up their vitality in a dormant state beneath the hard clay through the long winter. In short, while man exploits the potato for his own use and benefit alone, the primitive ancestor intended to exploit it for its own growth and the continuance of the species.—*Cornhill Magazine*.

THE COMING WOMAN.

COULD an American statesman of a century ago come back to life, the thing that would amaze him most would not be, I suspect, the existence of electric lights and of phonographs, for these would lie outside the sphere of public life, which would be our supposed Rip Van Winkle's chief concern. Nor would it even be, within his own domain, the Australian ballot law, or civil service reform, or the efforts of a great nation to get rid of its surplus money. It would be the spectacle of a strange alteration in the very basis of government; it would be the fact that in organizing five new States, each of vast area and unknown resources, a large part of the time of the organizing body has been devoted to deciding whether men alone, or women also, should become voters in these new-born commonwealths. Nay, his chief wonder would lie in the fact that the final debate in each case did not turn on the question "whether," but rather on the question "how far," since all five States have finally made women voters about something. Idaho has given them school suffrage by its constitution; so have North and South Dakota; while in Montana those women who pay taxes will vote on all questions submitted to the vote of tax-payers.

We hereabouts take all these things very quietly, because we have come to them by degrees. But were some Rip Van Winkle of a deceased statesman to open his eyes upon them suddenly, he would justly pronounce them to involve a more deeply rooted change than any Australian ballot law, while the longest train of electric cars could not be so much as named in comparison.

He could only end in accepting Victor Hugo's high sounding phrase that this is—rightly or wrongly—the woman's century. All the traditions about the sphere of the two sexes, as being something unchangeable and eternal, must fall before this simple fact. A local experiment as in Massachusetts, or Kansas, or Wyoming, proves very little, it may be urged. But the founding of five new States by popular action, in communities drawn together from all quarters of the globe, is not only an extraordinary demonstration in self government, but offers, as it were, a cross-section of current American thought on governmental principles. That in five different Constitutional Conventions, acting not merely independently, but with an almost jealous degree of mutual independence, the uniform outcome should be some form of woman suffrage, brings with it irresistible inferences. For good or for evil, it is an advance

along the whole line; it is one of those revolutions which do not turn back. It is also a revolution based, like most American steps, not merely on facts, but on principles.

To some extent it is a step in the dark; that is, we do not know in detail what the result will be whether on women or on men; it is the result of an unconscious evolution which has brought these masses of men so far. It is not usually very easy to extend the suffrage, because this calls on a privileged class to give up power. Yet in each of these five prospective commonwealths the hitherto governing class has to some extent—no matter to what extent—done just that thing. No matter, again, what was the motive—whether impulse, or logic, or persuasion—the concession has been made. That this has been done in every one of five different States virtually settles the prevailing course of all our future national development.

That the result is to be of immediate, invariable, and unmixed good, I do not, for one, believe. If it were, it would be unlike the result of all previous extensions of the suffrage. Every newly enfranchised class needs to learn its work, to get control of its weapons, and this usually involves some cut fingers. Women are not so unlike men as to be free from all the perils and weaknesses of men, and they may even have some of their own. Men have, in many years of voting, partially attained to what the once famous jurist, Theophilus Parsons, called "an acquired intelligence" on many practical matters, which women, as a class, have yet to gain. Men have also learned how to get on with one another politically, even under apparent differences, and to acquiesce with amazing equanimity in the results of election-day. They are, I suspect, a little more patient of public evils than women, and a little less ardent in expectation. On the other hand, this very habit of moderation has its dangers, and there are many households which would go to pieces had not the wife more decision, at least in ordering the chickens out of the dooryard, than her easy-going husband. This strong quality again has its dangers, and the chickens sometimes yield, not so much to persuasive and angelic qualities as to a certain shrillness of voice which does not make the in-door hearth very tempting to others than chickens. What with the fear that women will prove too weak, and the yet more anxious fear lest they turn out too strong, there are doubtless many persons—though the writer is not among them—who will look with dismay on the action of these five commonwealths.

But the main thing to be considered is that, whatever we may think about it, and whether we approve it or not, the action is taken. When we look at the little fossil horses of the Peabody Museum at Yale University, and see the unconscious, inevitable way in which those little creatures became larger of size and more compressed as to foot—five toes, four toes, three toes, two toes, until at last emerged the large and single hoofed horse we now ride under the saddle—we can easily imagine that had those early races been consulted they might not have approved of the change, and might even have filed remonstrances

and held mass meetings to oppose it. A political tendency which five new State Constitutional Conventions have recognized can certainly not be ignored, even if not one of them has put it in any final and complete shape. A generation of women who grow up to see their own sex admitted to colleges and voting for school officials can never look at life precisely as their grandmothers did, for whom such a state of things would have been inconceivable. Before us stands that new generation, and we have got, with or without our own approval, to make way for the Coming Woman.—*T. W. Higginson, in Harper's Bazar.*

ONE THING AT A TIME.

"EARLY in life," relates a gentleman who has now spent many decades in the service of God and his fellow-man, "I learned from a very simple incident a wholesome lesson, and one which has since been of incalculable benefit to me.

"When I was between twelve and fourteen years old my father broke up a new field on his farm, and planted it with potatoes, and when the plants were two or three inches high he sent me to hoe it. The ground of that piece was hard to till; it was matted with grass roots and sprinkled with stones. I hoed the first row, and then stopped to take a general look at the task before me. Grass as high as the potatoes was everywhere, and looking at the whole from any point it seemed to be a solid mass. I had the work to do all alone, and as I stood staring at the broad reach of weedy soil, I felt a good mind not to try to do anything further than with it.

"Just that minute I happened to look down at the hill nearest my feet. The grass didn't seem just quite as thick there, and I said to myself, 'I can hoe this one well enough.'

"When it was done, another thought came to help me: I sha'n't have to hoe but one hill at a time, at any rate.

"And so I went to the next, and next. But here I stopped again and looked over the field. That gave me another thought, too. I could hoe every bill as I came to it; it was only looking away off to all the hills that made the whole seem impossible.

"I won't look at it!' I said; and I pulled my hat over my eyes so I could see nothing but the spot where my hoe had to dig.

"In course of time I had gone over the whole field, looking only at the hill in hand, and my work was done.

"I learned a lesson tugging away at those grass roots which I never forgot. It was to look right down at the one thing to be done now, and not hinder and discourage myself by looking off at the things I haven't come to. I've been working ever since that summer at the hill nearest my feet, and I have always found it the easiest way to get a hard task accomplished, as it is the true way to prepare a field for the harvest."—*anon.*

One of the most damaging forms of deception is when one deceives himself.

FERN-GATHERING IN KILLARNEY.

THE bristle fern delights in shade and moisture, and our first find was in a rocky cleft in the immediate neighborhood of the Tork waterfall. Subsequently, within the dim recesses of a cave, the mouth of which opened upon the upper lake and could only be approached by a boat, we discovered several splendid specimens, one of which, with a creeping rhizome some three feet long, contained no fewer than thirty perfect fronds. Nothing that I have ever seen in my varied experience of fern-life equalled the delicacy and pellucidness of these fronds, nurtured in the darkness and the mist. The veins were so prominent, and the green portion so like a membranous wing around the veins, that it resembled more a beautiful sea-weed than a fern. In this natural cave we also discovered some of our finest specimens of the *Adiantum*, or maiden-hair fern. This plant is called the true maiden-hair, to distinguish it from some other ferns which share its familiar name. The bright evergreen tint, the elegant form, and lightly waving attitudes of this fern render it very attractive, and when growing against the sides of the sea-washed rock, or any moist place in any abundance, no fern exceeds it in beauty.—*Popular Science Monthly*

FINGERS BEFORE FORKS.

THE Duchess of Beaufort, dining once at Madame de Guise's with King Henri IV. of France, extended one hand to receive his Majesty's salutation while she dipped the fingers of the other hand into a dish to pick out what was to her taste. This incident happened in the year 1598. It demonstrates that less than three hundred years ago the fingers were still used to perform the office now assigned to forks, in the highest and most refined circles of society. At about this time, in fact, was the turning-point when forks began to be used at table as they are now. When we reflect how nice were the ideas of that refined age on all matters of outer decency and behavior, and how strict was the etiquette of the courts, we may well wonder that the fork was so late in coming into use as a table-furnishing. The ladies of the middle ages and the Renaissance were not less proud of a delicate, well-kept hand than those of our own days, and yet they picked the meat from the platter with their slender white fingers, and in them bore it to their mouths. The fact is all the more remarkable, because the form of the fork was familiar enough, and its application to other uses was not uncommon.—*Popular Science Monthly*.

I was lately looking out of my window at night, and I saw the stars in heaven and God's great, beautiful arch over my head, but I could not see any pillars on which the great Builder had fixed his arch; yet the heavens fell not, and the great arch stood firmly. There are some who are always feeling for the pillars, and longing to touch them; and because they cannot touch them, they stand trembling and fearing lest the heavens should fall. If they could only grasp the pillars, then the heavens would stand fast.

EARLY STUDIES OF LINNÆUS.

WHEN seven years old he was put under the private tuition of Telandr, a teacher of only the ordinary stamp, and three years later was sent to Wexiö to school, his father wishing to prepare him for holy orders. The story was the same at both places. He made no progress in the routine studies of the course, except in mathematics and physics, but used every opportunity to look after flowers and turn over books of botany. With Gabriel Hök he did a little better, for that teacher allowed him some liberty to gratify his tastes; but the people at the Gymnasium were again troubled by his perversity. Finally, the father and the teachers held a consultation, and it was decided that, although his moral record was unexceptionable, he offered no promise as a scholar, and must learn a trade. So he was, or was about to be, apprenticed to a shoemaker, when the father, having some bodily malady for which he had to visit Dr. Rothman, spoke incidentally of the trouble Carolus was giving him. The doctor thought the boy might succeed in medicine and natural history, and offered to take him to board, and help him in his studies. He gave him private lessons in physiology, and introduced him to Tournefort's botanical system, by the aid of which Linnæus continued to study the local plants.

FROST.

FROST, the destroyer, hath begun his work
Upon the foliage; leaves that were as bright
With the clear dew upon them, as the light
Of luccent emeralds, show that in them lurk
Decay and death,—for the rich, hectic glow
Is burning in their cheeks, and they will fall
Before, with tender ministry, the snow
Shall hide them under an unspotted pall.
—*Park Benjamin*.

THE sweetest type of Heaven is home—nay, Heaven is the home for whose acquisition we are to strive the most strongly. Home, in one form and another, is the great object of life. It stands at the end of every day's labor, and beckons us to its bosom, and life would be cheerless and meaningless did we not discern across the river that divides it from the life beyond, glimpses of the pleasant mansions prepared for us.

AMERICA wants mothers good enough for their boys to admire and revere—mothers with deep insight and strong grasp, that their children may grow up in an atmosphere of verity and truth. In a way, these shall become constituents of their character, and thus their whole lives will catch their inflexible angle, temporal and eternal, at the mother's side. This, briefly put, is true, Christian motherhood.—*Parkhurst*.

WE are born for a higher destiny than earth; there is a realm where the rainbow never fades, where the stars will be spread before us like islands that slumber on the ocean, and where the beings that pass before us like shadows will stay in our presence forever.—*Bulwer Lytton*.

RAMIE.

RAMIE, and the machinery which prepares it for the market, is bringing about one of the most comprehensive industries known to the world. The Ramie plant is a native of China and India. Its roots, thick and woody, produce an annual crop for twenty or more years successively. So persistent is it in its growth that in the Southern States, on cultivated fields, the plants multiply with great rapidity. The stems, tall and straight, often reach a height of six to seven feet, even as much as ten feet, growing like long willow wands; the foliage is luxuriant, broad and attractive, especially when waving under the effects of wind. The flowers are small, brown, and borne so profusely as at times to hide portions of the stem from view. The formation in Philadelphia of a company to cultivate and manipulate Ramie was conceived by Monsieur Jules Juvenet, who had experimented with Ramie in Algeria and Louisiana. Last March he interested in the subject some of the merchants and manufacturers of Philadelphia, who subsequently united in raising the necessary means to build a machine of his design for decorticating Ramie stalks; that is to say, for separating the bark, which contains the valuable fibre, from the wood, which is valueless. This company was incorporated May 16, 1889, under the laws of Pennsylvania, the directors being Burnet Landreth, E. Stein, L. U. Malby, Thomas V. Cooper, George H. Stuart, George H. Paist, Jules Juvenet, with J. T. Stewart, Secretary, the executive office being located at 23 South Sixth street, Philadelphia.

To provide opportunity for a practical testing of the decorticator and chemical processes of Monsieur Juvenet, the Ramie Company procured 250,000 three-year-old roots and planted the larger portion on Bloomsdale, one of the farms of Messrs. D. Landreth & Sons, Bristol, Pa., a smaller portion being set out on the plantation of the Landreths in Virginia. Heretofore decorticating machines have generally been made at a point far removed from a growing crop upon which they could be tested, as, for example, of the many machines tried in India, not one of which has been worth the freight, all were made in England, and when tested in the field, were beyond the observation or alteration of intelligent mechanics. The Ramie Company of America decided to bring the farm and machine-shop together, that practical and mechanical observations and improvements could be made, and it is believed the question of successful decortication has been solved. The French government, having announced a trial of Ramie Decorticators at the Paris Exhibition, and offering a prize of 20,000 francs for one meeting the views of a jury of experts, the Ramie Company delegated Monsieur Juvenet as their representative and sent him abroad to observe the development in Ramie processes. He found the subject of Ramie attracting in France and Belgium a vast amount of attention, and as an additional incentive to the development of the art, the French government had placed large orders for Ramie cloth for army purposes. The machines competing for the Exposition prize all proved to be

on a small scale, and it is doubtful if any one will gain the coveted reward.

At the public field trial of October 10th, green stalks of jute grown at Bloomsdale were successfully converted into fibre; afterwards green stalks of Ramie, freshly cut from an adjoining field, were stripped of their leaves and likewise converted into fibre. Following this, dry stalks of Ramie of about six feet in length were fibrelized into long, flowing brown tresses. These fibres of jute and Ramie were next chemically treated for the removal of their natural gum, after which subjected to another chemical process, they were transformed to a perfect whiteness, ready for carding, and the observers took away with them hanks of the white fibre which two hours previously had been contained in the living stalks. The company is contemplating the establishment of a spinning mill for the purpose of placing a finished product upon the market. It is now being organized with increased capital and it is believed will rapidly develop a new and most comprehensive industry, for the products of Ramie include all linen stuffs and even velvet and silken goods. Our farmers can grow Ramie, for the new machine can take it in the field and ship it before the frost can kill it. The value of present crops in Louisiana and South Carolina is \$70 a ton, and an acre produces 10 to 20 tons. The Arbuton marsh mellow and jute are much alike in fibre and all of them can be grown in Pennsylvania, and all can be grown at good profits now that the machinery is ready for the work of decortication.—*Media (Pa.) American.*

A YOUNG CIGARETTE SMOKER.

WHILE out at the theatre last night, I stepped into the smoking-room for a glass of ice water and nearly fell backward in astonishment. For there, seated on the chairs and divans, were little boys of almost any age from six to twelve, puffing away at cigarettes. The room was quite crowded, and the air was blue with the wreathing clouds which almost hid the ceiling from sight. One little fellow, who could not possibly be over eight years old, had perched himself in a chair. I say perched, because he really looked like a bird on a perch. His legs reached little more than half ways to the floor. He was drawing in the nicotine-charged smoke with a gusto that looked verp precocious. His little head lolled on the back of the chair with evident satisfaction, as he allowed the smoke to curl slowly upward from his lips. His feet were swinging beneath the chair, and he wore an air of absolute abandon. At the rate he was inhaling the smoke a physician would give him, perhaps, ten years more to live. Probably less than that. When he is dropping off in a galloping consumption, aggravated by nervous strain, is it to be wondered whether it will occur to that boy's parents that they could have prevented it all? It is to be supposed that the boy has parents living. His snowy white linen collar and his tasteful silk tie; his well fitted cloth suit, and his natty little shoes, all gave evidence that he was no waif. He evidently had well-to-do parents or relatives; but there he was, at 9 p. m., in the hot, poisonous air of

the smoking-room, lolling back as comfortably as if he were thoroughly used to that sort of thing. This happened to be the first time I ever entered the smoking-room of that theatre. The same scene may have been going on every night for months.—*Boston Advertiser.*

NEWS AND OTHER GLEANINGS.

—Near Bradford, Penna., on the 10th instant, while the family of Patrick Daily were at supper, Daily went into the kitchen to turn off part of the natural gas from the stove, and by some mistake shut the throttle tight. Turning it on again the house suddenly filled with gas, and an explosion followed. Daily rushed out for assistance, but his wife and three sons, aged from 9 to 13 years, were overcome by the flames and perished in the house, which was consumed in a few minutes. Daily was severely burned.

—It is estimated that 20,000 Indians will be entitled to vote at the next presidential election, in the far western States.

—Four temperance conferences, addressed particularly to the young people, have been arranged to be held in Bucks Quarter, under the charge of the Quarterly Meeting's committee. The first of them took place at Makefield (Dolington) on the 6th instant, in the afternoon. Samuel Swain, of Bristol, made an opening address, and readings, recitations, class exercises, etc., were given by children and young people. The next conference or meeting will be held at Wrightstown on the First-day in Eleventh month (November).

—The *Troy (N. Y.) Times* of a recent date says: "In the circuit court at Saratoga this morning, George Dane pleaded guilty to grand larceny and was sentenced by Judge Putnam to Dannemora prison for four and one-half years. He stole a horse from liveryman Quick at Saratoga last June, and was arrested at Johnstown with the property. He has already served two terms in state prison, and he says that he is glad to return, as everybody appears to be against him and he has found it impossible to earn an honest living. He stole the horse for the purpose of being railroaded back to prison."

—"I do not believe," Senator Cullom is quoted as saying, "the people of Southern Illinois were ever before in such a prosperous condition as they are now. Their wheat, corn, oats, potatoes,—in fact, all sorts of crops—have produced abundantly. In small fruits there has been an ample yield, but the apple crop beats everything I ever saw. I believe a large portion of the Southern Illinois counties have the best lands in the world for the production of this fruit. The owners of apple orchards are having a rich time of it. At one station I saw large rail pens like those we used to see filled with corn, and these were piled full of apples, to be barreled and shipped East. At Xenia, in Clay county, one man, a Mr. Bridges, has an apple orchard of twenty acres. He sold the crop out in a lump to a dealer for \$150 an acre."

—The ninetieth birthday of Rebecca Taylor, widow of Joseph and mother of Bayard Taylor, was commemorated at Kennett Square, on the 13th instant. All her surviving children were present, and a cablegram of congratulation from the widow of her son Bayard, in Munich, Bavaria, was received early in the morning.

—The corner-stone of the new buildings of the Philadelphia House of Refuge was laid on the new grounds near Glen Mills station, Delaware county, on the 17th instant. A large number of persons interested in the institution were present. James MacAlister, Superintendent of

the Public Schools of Philadelphia, delivered an interesting address. Dr. D. Hayes Agnew and Judge M. Russell Thayer, of the Board of Directors, also made short addresses, and James V. Watson, chairman of the Building Committee, read the report of the committee, and a list of the documents, articles, etc., that were placed in the corner-stone.

—At the First Reformed Episcopal Church, in New York City, on the 20th inst., Dr. John M. Leavitt, who has been since 1849 a clergyman of the Protestant Episcopal Church, announced that he had joined the Reformed Episcopal body, and in an extended sermon explained his reasons. He thought the former had become too ritualistic. "Ritualism," he said, "is stifling Protestantism in the Anglican Church," and added: "In this city you can confess to an Episcopalian minister, you can be absolved by an Episcopal minister, you can hear mass said by an Episcopal minister, and you can have prayers said for the repose of the dead, if not actually have the dead prayed to by an Episcopal minister. Do you wonder that people who like this sort of thing in time get to prefer the coin to the counterfeit and go into the Roman Catholic Church?"

—"Two Hallowell sportsmen," says the *Portland (Me.) Press*, "saw an interesting family in the Cobscookceotee stream the other day. They suddenly found their boat surrounded by young muskrats, who were as playful as kittens, diving and coming to the surface again, swimming around the boat and looking up to it with eyes that did not betray the least suspicion of danger. For some minutes the gentlemen watched their manoeuvres until two old muskrats made their appearance. The latter came out from the shore and dove with a splash that seemed to be the signal for the younger ones to follow, which they quickly did."

—The European nations continue to increase their armament. A dispatch from Paris, Tenth month 18, says: "The Sixth Corps, which France proposes to double on account of the increase of the German garrisons in Alsace-Lorraine is now centred at Nancy. The Eastern Railway facilities will be increased by doubling the lines running between Lille, Lyons, and Besancon to the German frontier."

—A telegram from Havana says that the cocoanut disease has appeared in the district of Baracoa. The inhabitants are greatly alarmed, as cocoanuts are their principal source of income. This disease has nearly destroyed the cocoanuts in the western and central parts of the island.

—It is said that the prejudice against foreigners in the interior of China has been diminished very greatly by the assistance given by Europeans during the recent famine. Several missionaries, who were very forward in good works, have been treated with especial distinction by the general populace.

—A new waterfall has been discovered in New Zealand, which, owing to its great height and its superb surroundings of glaciers and snow mountains, is considered one of the finest in the world, but it is very difficult of access. Its height is 1,904 feet, which makes it third of all waterfalls known, the highest being the Yosemite Falls in California, (2,650 feet), and the second the Orco Fall of Monte Rosa, in Switzerland.

—The American expedition to proceed to West Africa to observe the total eclipse of the sun, on the 22d of Twelfth month next, has been organized under the leadership of Prof. David Todd. The U. S. war vessel *Pensacola* bearing the party, sailed from New York on the 15th inst. After landing at St. Paul de Loando, the expedition will proceed up the Quanza river a distance of seventy-five miles to a town called Muxima. At this place the observations will be made. Prof. Todd has had considerable experience in

conducting observations of this kind, he having been a member of the parties who were sent to Mexico and Japan. He was invited by the trustees of the Lick Observatory to conduct the observation of the transit of Venus in 1882. Among the members of the present party are: Prof. Cleveland Abbe, who is in charge of the meteorological department; E. D. Preston, of the U. S. Coast and Geodetic Survey, who expects to make determinations of gravity and magnetism; Mr. Corbutt, of this city, who has charge of the important branch of photography; C. A. Orr, sent by the Clark University; Harvey Brown, representing the U. S. National Museum; and others.

CURRENT EVENTS.

JOHN F. HARTMAN, who served as Governor of Pennsylvania from 1873 to 1879, and was prominent in the war for the Union, died at Norrisstown, Pa., on the 17th inst., aged 59.

An important conference of delegates from different nations to consider and formulate rules for ships at sea, the methods of signalling, and other maritime subjects, began its sessions in Washington on the 16th inst., and will continue for some time. Besides this country twenty other nations are represented, including China and Japan.

The senior class of Harvard College has elected Clement G. Morgan, a colored man, as class orator. Morgan entered college with little means, and during his freshman year worked in odd hours in a barbershop. Since then his rank as a student has brought him beneficiary money from the college. Last year, as a competitor for the Boylston prizes, he won first place.

The citizens of Johnstown, Pa., have raised \$5,000 to undertake the search for the dead. The work of clearing out Stony Creek river, where the State forces have left off, will be commenced at once and continued as long as the weather will permit.

NOTICES.

Purchase Quarterly Meeting will be held at Chappaqua, Tenth month 29th, 30th, and 31st. 29th meeting of ministers and elders, 2 p. m. 30th, Yearly Meeting's Educational Committee at Chappaqua Mountain Institute, 9 a. m. Quarterly Meeting, 11 a. m. Yearly Meeting Philanthropic Committee, 7 p. m. 31st, Yearly Meeting's Philanthropic Committee, 9.30 a. m. Religious Meeting 11 a. m.

Trains leave Grand Central Depot, New York City, as follows: 6.20 and 10.35, a. m.; and 2.05, 4.15, 5.13, and 6.35, p. m.; arriving at Chappaqua about one hour later.

Breakfast will be served at Chappaqua Mountain Institute for Friends arriving on the 6.20 a. m. train from New York.

Quarterly Meetings in Tenth Month will occur as follows:

- 26. Westbury, Flushing, L. I.
- 28. Baltimore Yearly Meeting, at Park Ave. Meeting-house
- 29. Concord Quarter, Darby, Pa.
- 30. Purchase, Chappaqua, N. Y.

The annual meeting of the Association for the promotion of First-day schools within the limits of Philadelphia Yearly Meeting will be held at Race street meeting-house, on Seventh-day, Eleventh month 2d, 1889, at 10 a. m.

LEWIS V. SMEDLEY, Clerks
CLARA R. MILLER, Clerks

Five Partners Half-Year Meeting. This will convene at Nine Partners, for Business, on Second-day, the 4th of Eleventh month, at 11 a. m. Meeting for Ministers and Elders on Seventh-day before, at 3 o'clock p. m. Public Meeting on First-day at 11 o'clock.

JESSE C. HAVILAND, Clerk.

. The Western First-day School Union will be held at Doe Run meeting-house, Chester county, Pa., on Seventh-day, Tenth month 26 at 10 o'clock a. m. All interested in the work are invited to be present.

EDWARD A. PENNOCK, Clerks.
LYDIA B. WALTON, Clerks.

PUBLISHER'S NOTICES.

. As usual at this season, we are looking forward to our subscription list for next year. We should like to further increase it. Will not our subscribers send us any names to whom they think sample copies might be profitably furnished?

. The publication office of the paper is at 921 Arch street, (second floor), Phila. Bills are sent from this office, and should be paid here. Remittances by mail are at the risk of the sender, but may be made entirely safe by use of registered letter or postal order.

. We do not discontinue a paper (except for continued delinquency in payment) without the order of the subscriber. Persons wishing to "stop" must so notify us.

. We have no agents except Friends' Book Association, 8 W. Cor. Fifteenth and Race streets, Phila.

. As a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

. Matter intended for insertion in the INTELLIGENCER AND JOURNAL should reach us by Third-day morning, though notice or advertisements relating to affairs of immediate importance may be used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is mailed on Fifth day and must be sent to press at noon of the preceding.

. We particularly ask that when money is forwarded to renew subscriptions, care be taken to give us the name of the person to whom the paper is now being sent. Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a new subscription, please say so, and this will also help to avoid mistakes.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. Sold only in cans ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

JARVIS-CONKLIN MORTGAGE TRUST COMPANY,

Capital Paid In, . . . \$1,500,000.

Six per cent. Guaranteed Mortgages on Farm and City properties.

Six per cent. Debenture Bonds interest payable half yearly.

Five per cent. Saving bonds in small or large amounts running six, twelve, eighteen, or twenty-four months.

These Bonds are issued under the supervision of the Bank examiners of the state of New York, with whom we have deposited 1-10th of our Capital in Government Bonds.

We issue Installment Saving Bonds, secured by real estate security, running 10, 15, and 20 year. Send for pamphlet.

THROUGH GOODNESS.

WHEN do I grieve most for my waywardness?

When do I long most for a perfect life?

Is it be neath pain's sudden, sear'ning stress,

Or facing ills that hint the final strife?

Nay! when earth's glory is too high for speech;

When love and friendship give most lavishly;

When favors fall for which I did not reach,

And God seems marvelously good to me,

Then, then, it is, contrition is most true;

Then my unskill'd ways distress me most;

Then would I hear my Father's heart anew

Would prove my love to him at any cost.

Charlotte Esler Bates, in S. S. Times.

JOHN WOOLMAN'S VISIT TO THE INDIANS AT WYALUSING.¹

In the *Journal* of John Woolman there is an account of a visit which he made, in the summer of 1763, to the settlement of Christian Indians at Wyalusing, in northern Pennsylvania. The narrative is quaint, and, —like everything that he wrote,—it conveys many intimations of the simple and sincere character of this devoted gospel laborer. It alludes, too, to circumstances and persons which have a historical interest apart from his own personality, and which will be explained by notes, in the present reprinting.

Wyalusing was a place, at the mouth of a creek of that name, on the north branch of the Susquehanna river, in what is now Bradford county, some twenty miles southeast from Towanda. It was known as an Indian town as early as 1659, and some of the Indians, having made acquaintance with the Moravians on the Lehigh, had adopted Christian principles and ways, and were desirous of pursuing their acquaintance with Christian people. As will be seen in the text, some of them were at Philadelphia, in Eighth month, 1761, and these conversed with John Woolman, who felt interested in their condition, and was led to plan a visit to them.

In the year of this visit, 1763, the situation of Pennsylvania was critical. The controversies of the Colonists with England, leading up to the Revolutionary War, were developing. The war between England and France, the "Seven Years War," begun in 1756, had just been concluded by the Treaty of Paris. But there were fierce Indian troubles on the Western borders. The Ottawa chief, Pontiac, one of the ablest of the Indian leaders, who during the long struggle of centuries vainly sought to stay the advancing wave of white occupation, and restore the

power of their own people, led this year the attacks upon Detroit and other English places which are known in history as "Pontiac's War," or, as Parkman calls it, "The Conspiracy of Pontiac." This war agitated the whole of Pennsylvania. It concerned alike the settlers who depended upon their weapons for defense, and those who desired to keep unimpaired the old bond of peace that Penn had established. John Woolman's visit, as will be seen, was made just when the dangers of the situation began to be imminent. He had not set off before the storm of Pontiac's attacks burst on the northwestern forts, and as he rode up by Quakertown, Bethlehem, and Mauch Chunk, over the mountains to the Wyoming Valley, and so up the North Branch of the Susquehanna, rumors of Indian outbreaks and attacks were flying in all directions, and emissaries of Pontiac's enterprise were secretly making themselves felt in every Indian town.

This preacher of peace, justice, freedom, temperance, and simplicity of life was 43 years old. The greater part of his work was done. (He died in England nine years later.) He had made many religious visits among Friends, including several southward, to labor with those holding slaves. The cause of the Indians, like that of the colored people, appealed strongly to his tender and sympathetic heart.

The matter now extracted from his *Journal* may be found, of course, in any complete edition of his work, but it may be mentioned that we take it for this purpose from the edition edited by John G. Whittier, and published at Boston (1882; Houghton, Mifflin & Co.) The excellent introductory chapter by Whittier gives this particular edition especial value.

EXTRACTS FROM JOHN WOOLMAN'S JOURNAL.

Having for many years felt love in my heart towards the natives of this land who dwell far back in the wilderness, whose ancestors were formerly the owners and possessors of the land where we dwell, and who for a small consideration assigned their inheritance to us, and being at Philadelphia in the Eighth month, 1761, on a visit to some Friends who had slaves, I fell in company with some of those natives who lived on the east branch of the river Susquehanna, at an Indian town called Wehaloosing, two hundred miles from Philadelphia. In conversation with them by an interpreter, as also by observations on their countenances and conduct, I believed some of them were measurably acquainted with that Divine power which subjects the rough and froward

¹ Notes by Howard M. Jenkins.

will of the creature. At times I felt inward drawings towards a visit to that place, which I mentioned to none except my dear wife until it came to some ripeness. In the winter of 1762 I laid my prospects before my friends at our Monthly and Quarterly, and afterwards at our General Spring Meeting; and having the unity of Friends, and being thoughtful about an Indian pilot, there came a man and three women from a little beyond that town to Philadelphia on business. Being informed thereof by letter, I met them in town in the Fifth month, 1763; and after some conversation, finding they were sober people, I, with the concurrence of Friends in that place, agreed to join them as companions in their return, and we appointed to meet at Samuel Foulke's, at Richland, in Bucks county, on the 7th of Sixth month.¹ Now, as this visit felt weighty, and was performed at a time when traveling appeared perilous, so the dispensations of Divine Providence in preparing my mind for it have been memorable, and I believe it good for me to give some account thereof.

After I had given up to go, the thoughts of the journey were often attended with unusual sadness; at which times my heart was frequently turned to the Lord with inward breathings for his heavenly support, that I might not fail to follow him wheresoever he might lead me. Being at our youths' meeting at Chesterfield, about a week before the time I expected to set off, I was there led to speak on that prayer of our Redeemer to the Father: "I pray not that thou shouldst take them out of the world, but that thou shouldst keep them from the evil." And in attending to the pure openings of truth, I had to mention what he elsewhere said to his Father: "I know that thou hearest me at all times;" so, as some of his followers kept their places, and as his prayer was granted, it followed necessarily that they were kept from evil; and as some of those met with great hardships and afflictions in this world, and at last suffered death by cruel men, so it appears that whatsoever befalls men while they live in pure obedience to God certainly works for their good, and may not be considered an evil as it relates to them. As I spake on this subject my heart was much tendered, and great awfulness came over me. On the first day of the week, being at our own afternoon meeting, and my heart being enlarged in love, I was led to speak on the care and protection of the Lord over his people, and to make mention of that passage where a

¹ Samuel Foulke was a notable Friend of the settlement at Richland. He was the son of Hugh Foulke, one of the first settlers there (a preacher for many years), and the grandson of Edward Foulke, of Merlone hshire, Wales, who in 1698 settled at Gwynedd, and whose account of his removal from Wales has been frequently printed. Samuel was a man of more than ordinary education and abilities (It was he who translated Edward's narrative out of the Welsh, in which it had been written.) He served many years as clerk of the monthly meeting at Richland, and also as clerk of the meeting of ministers and elders. In *Friends' Miscellany*, Volume III., will be found several brief memorials of Friends, written by him, and in Volume IV. there is an excellent essay on the ministry, from his pen, and an obituary notice of him. For eight years (1761-68) he was a member of the Provincial Assembly of Pennsylvania, from Bucks county, and no doubt, J. W., when planning this trip, had consulted him as a man of affairs, whose knowledge of the route northward from Richland into the wild and little settled country on the Susquehanna would be valuable.]

band of Syrians, who were endeavoring to take captive the prophet, were disappointed; and how the Psalmist said, "The angel of the Lord encampeth round about them that fear him." Thus, in true love and tenderness, I parted from Friends, expecting the next morning to proceed on my journey. Being weary I went early to bed. After I had been asleep a short time I was awoken by a man calling at my door, and inviting me to meet some Friends at a public house in our town, who came from Philadelphia so late that Friends were generally gone to bed. These Friends informed me that an express had arrived the last morning from Pittsburg, and brought news that the Indians had taken a fort from the English westward, and had slain and scalped some English people near the said Pittsburg, and in divers places.² Some elderly Friends in Philadelphia, knowing the time of my intending to set off, had conferred together, and thought good to inform me of these things before I left home, that I might consider them and proceed as I believed best. Going to bed again, I told not my wife till morning. My heart was turned to the Lord for his heavenly instruction; and it was an humbling time to me. When I told my dear wife, she appeared to be deeply concerned about it; but in a few hours' time my mind became settled in a belief that it was my duty to proceed on my journey, and she bore it with a good degree of resignation. In this conflict of spirit there were great searchings of heart and strong cries to the Lord, that no motion might in the least degree be attended to but that of the pure spirit of truth.

The subjects before mentioned, on which I had so lately spoken in public, were now fresh before me, and I was brought inwardly to commit myself to the Lord, to be disposed of as he saw best. I took leave of my family and neighbors in much bowedness of spirit, and went to our Monthly Meeting at Burlington. After taking leave of Friends there, I crossed the river accompanied by my friends Israel and John Pemberton;³ and the parting next morning with

² Allusion has been made, in the introductory paragraphs, to the events which are here vaguely mentioned. The fort which the Indians had taken "from the English" was that at Sandusky (now in Ohio), on Lake Erie. The affair took place on the 16th of Fifth month, but news of it quickly reached Pittsburg, and was forwarded east. The Indians threatened Pittsburg a little later, and captured three forts in northwestern Pennsylvania,—Venango, where the town of Franklin is now located; Le Boeuf, in Erie county,—now Waterford; and Presq' Isle, now Erie.]

³ Israel and John Pemberton were among the most eminent and valuable Friends of their time. Notices of them may be found in many works of Friends, and also of their brother James. They were the sons of Israel Pemberton, and the grandsons of Phineas, one of the first settlers of Bucks county. All three of the brothers were earnest and active workers in behalf of justice to the Indians, and Israel was especially prominent in the endeavor to maintain peace with them. He was the leader in organizing the "Friendly Association," in 1756, and in the movement which it represented of collecting from among the Friends voluntary contributions to a greater amount "than the heaviest taxes of war can be expected to require," to be used in conciliating the Indian tribes, and preventing them from joining the French in attacks on the Pennsylvania Colony. It was, no doubt, Israel Pemberton who encouraged and promoted this visit of John Woolman. He died in 1779, in his 64th year, in Philadelphia. In 1777 he had been, with his two brothers, John and James, in the company of "Friends exiled to Virginia" by the military authorities. John was also very active in the Indian work, and he rode with John Woolman, as appears in the narra-

Israel, John bore me company to Samuel Foulk's where I met the before-mentioned Indians; and we were glad to see each other. Here my friend Benjamin Parvin met me, and proposed joining me as a companion,—we had before exchanged some letters on the subject,—and now I had a sharp trial on his account; for, as the journey appeared perilous, I thought if he went chiefly to bear me company, and we should be taken captive, my having been the means of drawing him into these difficulties would add to my own afflictions; so I told him my mind freely, and let him know that I was resigned to go alone; but after all, if he really believed it to be his duty to go on, I believed his company would be very comfortable to me. It was, indeed, a time of deep exercise, and Benjamin appeared to be so fastened to the visit that he could not be easy to leave me; so we went on, accompanied by our friends John Pemberton and William Lightfoot of Pikeland.⁴ We lodged at Bethlehem,⁵ and there parting with John, William and we went forward on the 9th of the Sixth month, and got lodging on the floor of a house, about five miles from Fort Allen. Here we parted with William, and at this place we met with an Indian trader lately come from Wyoming. In conversation with him, I perceived that many white people often sell rum to the Indians, which I believe is a great evil. In the first place, they are thereby deprived of the use of reason, and their spirits being violently agitated, quarrels often arise which end in mischief, and the bitterness and resentment occasioned hereby are frequently of long continuance. Again, their skins and furs, gotten through much fatigue and hard travels in hunting, with which they intended to buy clothing, they often sell at a low rate for more rum, when they become intoxicated; and afterward, when they suffer for want of the necessaries of life, are angry with those who, for the sake of gain, took advantage of their weakness. Their chiefs have often complained of this in their treaties with the English. Where cunning people pass counterfeits and impose on others that which is good for nothing, it is considered as wickedness; but for the sake of gain to sell that which we know does people harm, and which often works their ruin, manifests a hardened and corrupt heart, and is an evil which detri-

ve, not only to Richland, but to Bethlehem. He died at Pyrmont, Germany, while on a religious visit to Europe, in First month, 1795.]

[⁴Of the two Friends who were companions to J. W., I have no definite details. Benjamin Parvin, I presume, was of Berks county, one of the family of that name settled on the Schuylkill below Reading. He, it seems, rode with Woolman all the way, under a sense of duty. He, no doubt, had some knowledge of the Indians, as his home was not far from their neighborhood. William Lightfoot, of Pikeland, Chester county, belonged also to a large family of Friends, some of them then or later residents in Berks.]

[⁵The Moravian settlement at Bethlehem, on the Lehigh, is one of the most interesting in the early history of America. It had, even so early as this trip of John Woolman, an important position in the country. Founded by the Moravians ("United Brethren") in the midst of the wilderness, in 1740, it received the support of Count Zinzendorf, their chief, and became in a few years the seat of several hundreds of orderly, industrious, and pious people. Their endeavor, from the beginning, was to convert the Indians to Christianity, and none ever engaged in this work more zealously than the missionaries of this body.]

mands the care of all true lovers of virtue to suppress. While my mind this evening was thus employed, I also remembered that the people on the frontiers, among whom this evil is too common, are often poor; and that they venture to the outside of a colony in order to live more independently of the wealthy, who often set high rents on their land. I was renewedly confirmed in a belief, that if all our inhabitants lived according to sound wisdom, laboring to promote universal love and righteousness, and ceased from every inordinate desire, after wealth, and from all customs which are tinged with luxury, the way would be easy for our inhabitants, though they might be much more numerous, than at present, to live comfortably on honest employments, without the temptation they are so often under of being drawn into schemes to make settlements on lands which have not been purchased of the Indians, or of applying to that wicked practice, of selling rum to them.

10th of Sixth month. We set out early this morning and crossed the western branch of Delaware, called the Great Lehigh, near Fort Allen.⁶ The water being high we went over in a canoe. Here we met an Indian, had friendly conversation with him, and gave him some beaver; and he, having killed a deer, gave some of it to the Indians with us. After traveling some miles, we met several Indian men and women with a cow and horse; and some household goods, who were lately come from their dwelling at Wyoming, and were going to settle at another place. We made them some small presents, and, as some of them understood English, I told them my motive for coming into their country, with which they appeared satisfied. One of our guides talking awhile with an ancient woman concerning us, the poor old woman came to my companion and me and took her leave of us with an appearance of sincere affection. We pitched our tent near the banks of the same river, having labored hard in crossing some of those mountains called the Blue Ridge. The roughness of the stones and the cavities between them, with the steepness of the hills made it appear dangerous. But we were preserved in safety, through the kindness of Him whose works in these mountains deserts appeared awful, and towards whom my heart was turned during this day's travel.

Near our tent, on the sides of large trees peeled for that purpose, were various representations of

[⁶Fort Allen was built on the (east) bank of the Lehigh river, in 1756 by Benjamin Franklin, as one of the defenses against the hostile Indians of the North. The site is now occupied by the town of Watsport. It is in Carbon county, a short distance below Mauch Chunk—on the latter (west) side of the river, opposite Weissport, is Lehighton, and it was near here that the Moravian mission of Gnadenhütten (Huts of Grace) was first located. Near Lehighton, also, on the Mahoning creek, where several settlers were killed by Indians, in 1758 stood the grist and saw-mill of Benjamin Fyberer (F. Fyberer), who was carried into captivity, by the Indians, in 1760, with his family. Their adventures, with Benjamin's death and burial in Canada, formed a most interesting chapter in the history of that time.]

[The mention that these Indians had a horse and cow is a matter of some interest. It must be recollected that until the white people came the Indians had no domestic animals whatever, except dogs. Their possession of horses and cows, even at the time we are considering, over a century after the arrival of the whites, was not very general.]

men going to and returning from the wars, and of some being killed in battle. This was a path heretofore used by warriors, and as I walked about viewing those Indian histories, which were painted mostly in red or black, and thinking on the innumerable afflictions which the proud, fierce spirit produceth in the world, also on the toils and fatigues of warriors in traveling over mountains and deserts; on their miseries and distresses when far from home and wounded by their enemies; of their bruises and great weariness in chasing one another over the rocks and mountains; of the restless, unquiet state of mind of those who live in this spirit, and of the hatred which mutually grows up in the minds of their children,—the desire to cherish the spirit of love and peace among these people arose very fresh in me. This was the first night that we lodged in the woods, and being wet with traveling in the rain, as were also our blankets, the ground, our tent, and the bushes under which we purposed to lay, all looked discouraging; and I believed that it was the Lord who had thus far brought us forward, and that he would dispose of me as he saw good, and so I felt easy. We kindled a fire, with our tent open to it, then laid some bushes next the ground, and put our blankets upon them for our beds, and, lying down, got some sleep. In the morning, feeling a little unwell, I went into the river; the water was cold, but soon after I felt fresh and well. About eight o'clock we set forward and crossed a high mountain supposed to be upward of four miles over, the north side being the steepest. About noon we were overtaken by one of the Moravian brethren going to Wehalaosing, and an Indian man with him who could talk English; and we being together while our horses ate grass had some friendly conversation; but they, traveling faster than we, soon left us. This Moravian, I understood, had this spring spent some time at Wehalaosing, and was invited by some of the Indians to come again.³

For Friends' Intelligencer and Journal.

BALTIMORE YEARLY MEETING, 1839.

The select meeting of this body was held on Seventh-day the 26th ult., the first session convening at 11 o'clock, in the new meeting-house on Park Avenue. The attendance was large, the unfavorable weather having interfered but little, if any, with the size of the meeting. Nearly all who were appointed representatives were present, besides many others, among whom were Friends from the other yearly meetings. The silence of the occasion was broken by John J. Cornell, who revived the exhortations of the Apostle, "Brethren mind your calling," in a living concern for those who had received the anointing that qualifies for the Gospel ministry, that they be watchful, each to stand in the allotment assigned, not judging one

³ This brother in Christian endeavor was one of the most remarkable of the Moravian missionaries, David Zeisberger, (born in Germany, 1721, died in Ohio, 1808). He had been at Wyalusing in the Fifth month, and being strongly urged by the Indians to become a missionary at Wyalusing, had gone to Bethlehem to consult the church authorities. Having obtained the

another, but seeking to promote love and unity in the fellowship of the Truth. The elders were reminded that they had a calling, and one that in its right performance was of the highest value to the church. They were exhorted to be watchful and to seek for that divine qualification which will enable them faithfully to fulfill the duties of their appointment.

The business of the meeting was proceeded with, and minutes for ministers and elders from other yearly meetings were read as follows: John J. Cornell issued by Rochester Executive Meeting and endorsed by Farmington Quarterly. Mary R. Heald, by Centre Monthly Meeting, Delaware, her companion Sarah S. Way, an elder from the same meeting; and Levi L. Benson, Stillwater, Ohio. These were all cordially welcomed, as were all others who were in attendance without minutes from their respective meetings. The routine business of the body with testimonies to the value and importance of this branch of the work of our religious organization, and the place it was intended to occupy as a factor in the advancement of religious life amongst us, occupied the remainder of the morning session. At 3 p. m., the meeting reassembled; after the appointment of the same clerks to serve the ensuing year, the consideration of the queries was entered upon. The general tenor of the answers gave evidence of a care to live in accordance with the requirements, one report only showing any abatement. The counsel handed forth was close and earnest, and the meeting settled into a precious silence under which the closing minute was read.

First-day morning was dull and lowering, with occasional showers. At an early hour Friends began to gather in the commodious and beautiful audience-hall of the new meeting-house, and before the hour for worship every available seat was occupied—chairs were brought in wherever a place could be found, and all who came were provided for.

Quite an array of recorded ministers occupied the gallery. John J. Cornell broke the silence in a strong and forcible testimony to the power of vital religion,—the religion that is pure and undefiled, and satisfies the longing of the soul; he spoke at considerable length, and was heard by the large concourse with marked attention. Nathaniel Richardson following approval, he returned to Wyalusing at this time. His labors there were interrupted in a few months by the war which had broken out on the Western border; and after the massacre of the Indians at Conestoga by the "Paxton Boys," (First month, 1764), the converted Indians at Wyalusing were removed to Philadelphia for safety. The next year, peace being restored, they returned, and built a new town, called by the Moravians, Friedenhütten, (Huts of Peace) on the Susquehanna, a few miles lower down than the older one. (The Life of David Zeisberger has been written by Edmund de Schweinitz, a Bishop of the Moravian Church, and two large volumes of his Diary while among the Indians of Ohio, 1781-88, have been published by the Historical and Philo-sophical Society of Ohio. The work of this simple, earnest missionary is very near in character to that of Friends, and his life is a very interesting one.)

The Indian man who accompanied Zeisberger, and "who could talk English," was Nathaniel, a convert of the Moravians, of the tribe of the Mohicans, on the Hudson. He is mentioned in De Schweinitz's life of Zeisberger, and his wife Zipporah, and his daughter, bearing the name of Zipporah also, are among the 58 Christian Indians who are known to be buried in the old Moravian graveyard at Bethlehem,—these being interred there between 1746 and 1761.]

lowed in a similar line of thought; a fervent supplication offered by Isaac Wilson of Canada, with the usual silent waiting, closed the exercises of the morning.

In the afternoon the Children's meeting was held in the same place, the larger part of those present representing the children and young people of the First-day School of the Yearly Meeting, their bright, happy faces being a joy to look upon. The programme of exercises was carried out by the responsive reading of the 107th Psalm, exercises from each school consisting of sentiments by individuals, readings and class recitation, and a concert reading of the poem, "Treasures in Heaven," closing with an essay on the value to the Society of the First-day school work. The attendance was large, and several short testimonies of approval and encouragement were offered. It was said to be the most satisfactory meeting of the kind they had ever held.

At Old Town Meeting, in the morning, at 11 o'clock, the attendance was small. Darlington Hoopes spoke words of cheer and encouragement to the little company. Louisa J. Roberts followed in the same line of thought, reminding the few who assembled, that the Divine promise was not made to the multitude, but to the two or three gathered in the holy name. These were to be the recipients of the Father's blessing. The meeting was felt to be a season of refreshment. At 3 o'clock the house was quite well filled. The ministry of the Word was acceptably handed forth by Darlington Hoopes and Joseph Ratcliff.

In the evening, at Park Avenue meeting-house, a large audience again assembled. The speakers on this occasion were Joseph Ratcliff, William Way, Isaac Wilson, and Levi L. Benson, and John J. Cornell in supplication.

SESSIONS FOR BUSINESS.

At the hour appointed, on Second-day morning, (28th) the business sessions began, at Park Avenue. Women's meeting occupied the main audience room, (in which meetings for worship are usually held), and the men convened in the lecture room, which is somewhat smaller and furnished with chairs. Both were large gatherings, nearly filling the seats, and it was hopeful for the future to see so large a representation of the youth of the Society present.

In Men's Branch, the opening minute was read, bringing the meeting into the silence so peculiar and precious to the Society of Friends. Minutes for Friends in attendance from other yearly meetings were read as follows: for John J. Cornell, from Rochester Executive Meeting, endorsed by Mendon Meeting, a branch of Genesee Yearly Meeting; Levi L. Benson, Stillwater Monthly Meeting, Ohio; Joel Birdsall, Camden Monthly Meeting, Jay county, Indiana; Justus E. Haviland, an elder of Nine Partners, New York; James Whinnery and Rachel, his wife, members of Salem Monthly Meeting, Ohio, and later (received from women's meeting), for Mary R. Heald, Centre Monthly Meeting, Delaware, a branch of Philadelphia Yearly Meeting, for her companion, an elder from the same meeting. A cordial

welcome was extended to all these Friends and to others also who were present from other yearly meetings without minutes. Responses from visiting Friends, expressing the love and sympathy that had drawn them to attend at this time and the thankfulness that had arisen for the privilege of mingling with them, followed.

The usual routine business was transacted. Three of the Epistles from other yearly meetings were read at this session with much satisfaction to the meeting, calling forth sentiments of concurrence from exercised minds. In the afternoon session the representatives recommended the continuance of the present clerks, which was united with. The Report of the Committee on Education was read, and as there was a request contained in it for the release of the present committee, Friends were nominated to unite with a similar committee of women to bring forward at a future sitting, names to serve on a new committee, and the session closed.

In the women's branch, after the reading of the opening minute, a precious silence covered the meeting. Louisa J. Roberts gave expression to the deep exercise that had taken hold of her mind as she looked into the faces of the women assembled in this beautiful edifice for the first time, to transact the business of their branch of Baltimore Yearly Meeting. She recalled the fact that this privilege, which in our own time is an acknowledged right, was first accorded to women by the Society of Friends, and an earnest exhortation went forth to the assembly then present, among whom she rejoiced to see so many of the younger members, that they prize this privilege and hold it as a precious legacy—that they let no outside interests draw them away from the beautiful, hopeful, and inspiring faith held by the Society, closing with an invocation to the Father of all our sure mercies that these precious young lives may be preserved in obedience to the divine will made known in each heart, that when we upon whom the burdens now rest are called home, they may be prepared and willing to take the vacant places.

The usual routine business followed. Emily Canby called attention to the great truth enunciated by our fathers, that God is the teacher of his people, and that he gives every one some service to perform for the furtherance of his truth. Let our hearts ascend as the heart of one man, that the windows of heaven may be opened and a blessing poured out upon us. Each was exhorted to be faithful, in that from the little there may be a growth into that which is greater.

A timely hint from the clerk to those who are appointed on committees, that they consider well the matter before declining to accept the service, was united with as tending to preserve the meeting from unnecessary delay in the transaction of the business.

The minutes for ministers, elders, and members from other yearly meetings, already read in men's branch, were presented and read, and a kindly welcome extended to all, and also to others from the same meetings who were in attendance without minutes. Special stress was laid upon the prospect of some of these to visit the small constituent branches

and appoint meetings as way opens. This was felt to be very comforting to many where the meetings are small and the voice of the Gospel messenger is seldom heard. At the opening of the afternoon session the representatives offered the names of Anna F. Matthews and Elizabeth M. Koser, for clerks, which were united with. Epistles from all the yearly meetings with which correspondence is held, were read at this session. As the reading of these loving epistles of sisterly regard progressed, brief expression was given to their value and to the earnest looking forward in all our meetings in hopeful expectation to the youth who are taking an interest in the affairs of the church that gives promise of future usefulness. The committee to essay replies was appointed with special care to bring into service the younger members.

The state of the society was entered upon by the reading of the first Query with the answers thereto. These answers indicate a growing interest in the Society. Encouraging words were spoken to those who have not yet taken a stand in regard to the regular attendance of the mid-week meetings; they were tenderly invited to seriously consider what is required of them in this particular. The timely assembling of all, that they may with "one accord" engage in this reasonable service, was urged, and the necessity of care in this particular was affectionately pointed out. Mary R. Heald appeared in supplication, and the session closed.

The Conference of the Central Committee on First-day schools, and representatives from subordinate meetings with Friends interested in the cause, was held in the evening at 8 o'clock. This conference corresponds with the associations for the promotion of First-day schools in other yearly meetings.

THE CRUSADE AGAINST POVERTY AND MISERY.

THE veteran English philanthropist, Octavia Hill, has recently delivered before a society in her own country, an address on the subject of work among the poor, which is of the most interesting and instructive character. To read it one cannot doubt that there has begun one of those great secular movements in the mind of the race, which like the anti-slavery crusade, cannot cease until they have done their work; and now the crusade is against poverty. She shows from what small beginnings this movement arose, when "men like Lord Shaftesbury, instead of being as they would be now, admired and sought for, had to take a lonely course, very much out of sight, half looked down upon as eccentric. . . . The men whom I remember as a child were lonely, solitary men, who would have been despairing, but that they were men of strong faith, knowing they were working with God and for men, and that they had little to do with results." Now the situation has wholly changed. "Sympathy on the part of the main body of the rich has increased. So has also a much greater sense of the responsibility for life, and independence in devoting it to earnest work of some

kind. Markedly is this so among women." This she says is owing principally to the greater freedom of action which women now enjoy, and to their release from household cares [by the change in the mode of supplying domestic wants] "and there are comparatively few parents who do not recognize for their daughters the duty of sympathy, and of rendering such service as other claims permit."

And then she sets forth what has been done for the poor, and what has been wrought for their benefit by the natural progress of society. "The people are more comfortable and healthier. They live a more varied life, and one fuller of pleasures. . . . The condition of working people in London has, since I can remember, distinctly improved with regard to all matters of comfort. The standard of living as to both food and clothing is much higher. The poor have more meat, more fruit, better tea, much better clothes. Everything is cheaper except rent and meat, and even rent is gradually falling. Yet wages have certainly risen." And she proceeds to mention various other particulars in which the condition of the poor is better than it was in her youth. I think I have seen somewhere in the pages of this journal, what Prof. Tyndall said of an East London parish in which he had spent some of his earliest years. That though he had since been round the world and seen every possible condition of savage life, he had seen "nothing worse, nothing more degrading, nothing so hopeless and miserable" as the life he had left behind him in London. The improvement must then be considerable.

But the lecture of Miss Hill is not intended to stimulate effort in this field, but to direct and indeed rather to restrain it. She seems to be very decidedly of the opinion that there is *some* truth in what Dr. Johnson said more than a hundred years ago. "Raising the wages of day laborers is wrong, for it does not make them live better, but only makes them idler; and idleness is a very bad thing for human nature." Taking a wider view of the subject, Miss Hill urges at great length the impolicy of giving to the poor, directly, in coal, bread, blankets, for which there would seem to have been special funds; or indirectly in taking their children off their hands. She strongly objects to providing superior dwellings at unremunerative prices, and indeed condemns all arrangements not based on sound commercial principles, because they cannot be permanent, and tend to buoy men up with false hopes, or accustom them to a way of life which some day they must relinquish. And, again, there are two other dangers. If a workman by the help given him has more money than is necessary to maintain his family according to his idea of the proper standard of living, he may be tempted to waste it, or he may be content with less wages, and thus by his competition reduce the wages of others who have not his resources.

But the immediate difficulty with the lower class of workmen is drink and low amusements, and as was once said in an editorial in this journal "until all influences combine to put cleanness in the place of degradation, and virtue in the place of vice, there will be leaks like the drink-waste if not for one

thing, then for some other." When the advocates for cheap homes for the poor tell of the horrors of overcrowded courts and alleys, she answers they are overcrowded not because they are cheaper, but because practices are permitted there that would not be tolerated in public places. Her letter is addressed to "Fresh Workers"—to the inexperienced and ardent philanthropists; and the most pressing needs, she says, are first a large increase in the police force to protect those who are disposed to be decent and who thus provoke ill-usage from the worse class, and secondly many more male workers who can give their time to companionship with the boys.

The subject has received consideration from the Established Church, but so far as I remember now, no measure has been suggested from that quarter except that the churches be kept open every day, which, seeing that this class of the people never attend at all, would seem to promise little good. Indeed it would appear to be suggested only by the practice of the Catholics, whose churches are open at all times, and are to a certain extent frequented by the devout and the unhappy who seek an hour's retirement in quiet and amid objects connected with solemn associations. The English church seems disposed to imitate the Roman in another respect, the creation of religious orders. Sisterhoods have been some time in existence, and have done great good; and there is now talk of brotherhoods—both to be under vows of celibacy. I must confess my individual opinion that in their dealings with the poor the Catholics are very far in advance of the Protestants, exerting a wider and more beneficent social, and I am also inclined to believe a superior moral, influence. This last proposition would require a volume to discuss. I will only say from what I have heard of peasant life in England and Scotland, and in the mountainous and isolated districts of our own country, I think the morals of the same class in certain respects much worse than in Catholic countries.

I have sometimes thought that the failure of Protestantism in this sphere might be the natural outcome of Luther's great doctrine of "Justification by faith," which is popularly supposed to mean that no matter how wicked a man's deeds have been, he will enjoy eternal happiness if he accepts as true certain metaphysical propositions. This was set up in opposition to the Catholic doctrine of the necessity of good works, which, their enemies charged, meant no more than filling the coffers of the Church. It is well that the Creator has implanted in us a desire to help our fellow-creatures without expecting reward either here or hereafter; and this is an impulse which is to be developed, cultivated, and guided.

The allusion by Miss Hill to the recognition by parents of the duty of sympathy by their daughters, and service too, marks an interesting phase in the growth of opinion. Parents are more careful than they once were, and more able also to make provision for their daughters' support. And among the comfortable classes, marriages are not so frequent as among the poor or the rich—for obvious reasons. What is to be the lot in life of these moderately endowed celibates? To give themselves up to amuse-

ments, to social enjoyments, to travel, and other mere dissipations? There is I think a growing belief that their happiness would be increased by some useful occupation for which they should be qualified by careful preparation. They have always affected church work, and in that department of church work which concerns the care of the poor they would find exercise for their intellectual faculties and scope for all their sympathies.

SCRIPTURE LESSON No. 42.

ELEVENTH MONTH 10, 1889.

DAVID'S GRIEF FOR ABSALOM.

GOLDEN TEXT:—A FATHER'S SON IS A GRIEF TO HIS FATHER, AND BITTERNESS TO HURT THAT BARE HIM.—PROV. 17. 25.

READ 2 SAM. 18. 18-33.

The conspiracy of Absalom ended in open revolt. He caused himself to be proclaimed king at Hebron, a royal city, and with his adherents started for Jerusalem to overturn the authority of David, his father, and place himself upon the throne of Israel. When word of what Absalom had done came to David and his trusted friends, it produced great excitement. David was ready to leave Jerusalem to his rebel son, and seek refuge in a distant part of the nation. Hastily gathering his forces, and taking his household with him, he left the city, in the trusting faith, "If I shall find favor with the Lord, He will bring me again; but if He thus say, 'I have no delight in thee,' let Him do as seemeth good unto him." We can scarcely think of a condition in which a man may be placed, where stronger evidence is needed to show how absolutely he was content to trust his cause to God, than in this deep trial to which David was subjected. He and his followers hurry over the brook Kedron, and continue their flight across the fords of the Jordan to Mahanaim, to which place Absalom and his forces follow him. Here a battle is fought, resulting in a great slaughter among Absalom's troops, Absalom himself fleeing for his life. David was not permitted to take the lead in this sanguinary conflict, but waited at the gates of the town for tidings. Here the messengers sent by Joab, his general, found him, and this brings us to the subject of the lesson of the day.

Is the young man Absalom safe? The fatherly heart of David was more concerned for the welfare of his rebel son than for the safety of his kingdom. It is a striking instance of parental love and the forgiving spirit that it manifests towards the erring one. So absorbed was he in the concern for his beloved son that he failed to show that sense of justice without which no ruler can be true to the trust reposed in him. His chief anxiety is not for the thousands who have remained true to him, but for this rebel son, who had in the revolt lifted his hand against the life of his father.

Would I had died for thee! This is an illustration of what love is ready to do for the beloved one; self-sacrifice becomes easy for his sake. There can be no stronger exhibition of its depth than for a man to give his life for his friend, but in this instance it

the parental love dominating every other consideration; forgetting the insults and indignities to which he had been subjected, he only remembers that Absalom, his best beloved child, is dead, and he weeps as one who refuses to be comforted.

Parental love is the strongest bond that binds the human family together; not only do we find it in mankind, but in the animals, which share with us the comforts and blessings so bountifully provided by the Creator for every living being. How the mother-instinct in animals overmasters every thought of self-preservation when the suckling is in danger! How she covers it with her own body, and protects it with every means of defense that she possesses, and becomes for a time incalculable for its loss. In the higher scale of existence parental love ceases not when the need of providing for the wants of the child no longer exists. The child is always the object of affection, and when the relation is maintained in love, parents are ever ready to make sacrifices for the welfare of their children. An unnatural parent is looked upon as one who has sunk below the level of the brute creation, and is the object of condemnation from every right-thinking individual. Parental love sometimes exceeds the limit of prudence and a proper regard for the right development of character. The young child needs restraint, and it must learn obedience. The discipline is not at first pleasant either to the wise parent or to the wayward child; but if firmly and lovingly adhered to, the natural instinct of the child will soon perceive the justice of the demand, and ready obedience in time will be the result. Parents "provoke not your children to wrath," is as truly a divine requirement as if it stood side by side in the Decalogue with the Commandment, "Honor thy father and thy mother."

NOTES ON THE LESSON.

Parental love is an instinct shared in common by all the animal creation, in which the perpetuation of the species depends upon the care and preservation of its young life by the parents. It is divinely implanted and like every other instinct is, when necessity calls it forth, overmastering.

The tie is slight in the lower orders and is only developed in the mother; as there is a rise in the scale of being we find the care of the offspring shared by both father and mother. In those creatures that stand nearest to man in intelligence, the devotions of the mother,—the readiness with which she risks her own life,—her utter self-abnegation, when her young are in peril, have been the theme of the poet and moralist from the earliest time. Many of the most beautiful lessons found in the Scriptures are drawn from this great natural law.

But it is only while the young are helpless, and unable to take care of themselves, that this instinct asserts itself in the orders of animated life below man, not so is it with the human race; though instinct gives the natural impulse, there is beyond and above all that comes through that channel, an emotion of the heart,—a divine intuition which goes out to the helpless thing that is "bone of their bone and

flesh of their flesh," and owes its existence to themselves; and a love that is without stint and lasting as life itself is born with the birth of the child.

And this love is bestowed upon the child without conditions, the wayward and disobedient sharing it alike with the respectful and obedient, and the depth and fullness seems rather to increase than to diminish with the lapse of years. Often, as in the case of David, the love is unwise and indulgent. Instead of a kind and patient, yet firm, discipline, under which the child is taught self-restraint and obedience to the will of the parents, there is a yielding to the will or caprice of the child which if continued ends most disastrously.

In the case before us, had Absalom's father been more faithful in his discipline while he was in his boyhood, had he restrained the waywardness of his youth, corrected his vanity and love of admiration; had he checked his vaulting ambition, and watched more closely the coincidences that were not wanting of his readiness to commit any crime that would gratify his revenge or bring him into favor with the heartless and dissolute whom he made his associates;—this son of his love might have grown into a noble as well as a beautiful manhood, and the talents he displayed in planning and carrying into effect the revolt against his unhappy father, and which brought himself to a dishonored grave, might have been used to exalt his nation and lead it onward in the path of enduring prosperity.

If the fond parent, blind to the faults and errors of his child would only for a moment stop to consider where this weak yielding will eventually lead, the greatness of his love and the absorbing desire for the future welfare of his son would show the necessity for wiser methods; and then for himself, what hope can there be of comfort in old age, and of the respect due from a child to the gray hairs of after years, if in his boyhood respect for parental authority has not been cultivated. The love of the parent for the child is divinely given, that each may be the better for the bestowal. The old adage that comes down to us with the sanction of holy writ, "Train up a child in the way he should go, and even when he is old he will not depart from it," has lost none of its efficacy through all the centuries that it has been made a motive of action.

There is an interdependence of the closest and most enduring nature that is developed in the true relation between parent and child. As in the helplessness of infancy the child clings to and finds its protector and provider in the parents, so when the infirmities of age bear weightily upon the parents, they turn to the child, assured that the love and tenderness thus bestowed will be returned in a fullness of measure, smoothing the pathway of declining years, and surrounding it with a halo of beauty and gladness.

No man tastes pleasures truly who does not earn them by previous business.—*Chesterfield*.

THE art of life is to know how to enjoy little and endure much.—*Hazlitt*.

PHILADELPHIA, ELEVENTH MONTH 2, 1889.

THE PRESENT MOMENT.

We are told in our childhood, and realize for ourselves in maturity, that the present moment only is ours. Ours for work, for duty, for self-denial; but, while this is true, there is also more to be said which is just as true, and perhaps more satisfying and inspiring. The present moment is the time to feel the healing influence of our Father's love, to know his presence and beneficence, to assure our doubting souls of his omnipotence. "Man never is, but always to be blessed," says the poet, and the stern prose of many a Christian's life is constant crosses, ever-present duty, and the denial of self in this present life, with a comforting assurance that in the life to come will be made up to him in full measure a recompense for all his suffering. But why put off to the future a blessing that is to-day, at this moment even, waiting for our acceptance? Why realize the cross and not the crown; why be satisfied with picturing to ourselves the joy that will be ours when we shall stand before the throne in the company of saints? We acknowledge that God is omnipresent and must therefore be with us now, and truly where he is there must also be heaven.

This moment, as we enter upon a duty that looks difficult and distasteful, we may solemnly realize the supporting power of our omnipresent God, we may be conscious that "the everlasting arms are underneath." Surely such a realization can never fail to bless us, and the blessing must be as continuous as the need, for an omnipresent help can never fail.

But we must seek this help, must open the door, that He who knocks may come in. The blessed summer breezes may be blowing all about our houses "with healing on their wings" but not a breath will reach our brows unless we open our windows. Cares and worries accumulate, we are distracted and tempest tossed, we strive as with the elements, in a great storm, while the "present Helper" is forgotten and uncalled for until the extreme moment of peril. "Peace, be still," and the "great calm" come only after we have awakened the true life that may be said to sleep. But true it is that this peace was ours before we asked it had our eyes been open to see, and not one emergency can find the trusting and attentive heart unprepared to meet it. To-day, then,

let us feel this omnipresent and omnipotent Spirit on our inmost consciousness, let us walk in its light and be led by its pointing, and we shall find it the true alchemist turning the brass of life to heavenly gold, ennobling our joys, solacing our sorrows, "the present help in every time of need."

We would call the attention of our readers to the announcement, on the first page of cover, of an important course of Lectures to be given in the interests of Education in Friends' schools. Such a course cannot fail to be beneficial to all engaged in the important work of teaching, as well as those preparing to teach. Such persons should endeavor to avail themselves of the privilege of hearing the Lectures; local school committees should encourage attendance, as well as attend themselves if possible, for only as Friends are enabled to keep their schools in the front rank of educational institutions, can there be hope of success in training our youth under a Friendly guarded care during the period when minds long retain the impressions made thereon.

CORRECTION.—In the article in reference to schools in Philadelphia, printed last week, the date near the beginning should be 1832, instead of 1823.

MARRIAGES.

LINTON GILLINGHAM. At the residence of the bride's brother, George L. Gillingham, near Riverton, N. J., Tenth month 2d, 1889, under the care of Chester Monthly Meeting, held at Moonstown, Isiah W. Linton, of Philadelphia, son of Hannah W. and the late Charles Linton, and Mary E., daughter of Elizabeth L. and the late George L. Gillingham, of Moonstown, N. J.

RHOADS—BARTLESON. Tenth month 24th, at the residence of the bride's parents, by Friends' ceremony Samuel D. Rhoads, of Seaside, Pa., son of James D. and Mary H. Rhoads, of Upper Darby, and Mary, daughter of Samuel P. and Ruthanna Bartleson, of Clifton Heights, Delaware county, Pa.

DEATHS.

CHAMBERS. In West Chester, Pa., Tenth month 2d, 1889, Caleb E. Chambers, aged 79 years, a member of Birmingham Monthly Meeting.

CLEMENT. At Woodbury, N. J., Tenth month 20th, 1889, Hannah C., wife of the late Samuel E. Clem. It, aged 68 years; a member of Woodbury Monthly Meeting, N. J.

GROOME. Tenth month 2d, 1889, at the residence of Rachel Johnson, Philadelphia, Elizabeth S. Groome, in her 70th year.

MELVIN. At the residence of his parents, Woodbury, Pa., on the morning of Tenth month 21st, 1889, Abraham Robinson, eldest son of J. Gibbons and Elizabeth M. Melvin, in his 21st year; a member of the Monthly Meeting of Friends of Philadelphia.

MOORE. At his residence, near India, Baltimore Co., Md., of dropsy, Tenth month 15th, 1889, Samuel B. Moore, in his 74th year. A lifelong member of the Society of Friends.

PARKER. At his residence, Tenth month 19th, 1889, at his residence in Philadelphia, Robert Parker, in his 83rd year, a member of West End District Friends.

This beloved Friend was of a meek and quiet spirit, and evinced a loving, charitable disposition. He was born at Newtown, Bucks county, Pa., of Presbyterian parentage, of which persuasion he continued for many years after his removal to Philadelphia. He was afterwards led to connect himself with the Methodists, and in the course of time he believed he would feel most comfortable to identify himself with Friends, and was an exemplary member, often feeling called upon to express a few words by way of testimony, and at the same time felt a care to keep from mere creaturely wisdom or emotional exercises.

His sister, the late Hannah Parker, was an esteemed minister of our Makefield Monthly Meeting. The testimony concerning hersays: "When Friends were permitted to hold an indulged meeting for worship in the old courthouse at Newtown, in the spring of 1815, Hannah was among the children that regularly attended on First-day morning, but was not noticed until the meeting was established in the present house in 1817, when she appeared among us in a plain dress at our mid-week meeting. About this time she had to pass through a dispensation of deep suffering in body and mind. . . . When she had so far recovered as to attend our meetings, she publicly espoused the cause of her Redeemer, who had thus wonderfully raised her up a monument of his adorable mercy and goodness. She then made application to become a member with Friends, was received in 1827, and soon after opened a concern to visit the families of the Monthly Meeting, which was united with, and she set at liberty and assisted in the concern; and it is the testimony of many Friends, that a more precious visit was never paid since nor before. The ensuing year her gift as a minister was brought before our Monthly Meeting, according to our excellent order, and fully acknowledged and united with."

Robert always spoke of this dear sister in the most affectionate manner, and remarked that if it were not an offense against their discipline he had often felt he would like to visit all the meetings where she had been wont to minister.

He was in very limited circumstances and had many trials to pass through, but these tended to redeem him from the world and the spirit of it, and to centre his mind on the inheritance incorruptible, which endureth forever.

J. M. T., Jr.

PARRY.—At her residence, Parry, N. J., Tenth month 20th, 1889, Alice, widow of William Parry, in her 69th year; a member of Westfield Preparative and Chester Monthly Meeting, N. J.

POTTS.—At the residence of her brother, in Philadelphia, on Seventh-day morning, Tenth month 19th, 1889, Sarah A., daughter of the late James and Elizabeth Potts.

ROBERTS.—At his residence, in Chester Valley, Pa., Tenth month 21st, 1889, William Roberts, in his 78th year.

RULON.—At the residence of her son, Elwood Rulon, Magnolia, N. J., on the 18th of Tenth month, 1889, Eleanor Rulon, aged 87; for many years an esteemed elder of Had-donfield Monthly Meeting of Friends.

SHOARDS.—Suddenly, Tenth month 20th, 1889, William C. Shourds, in his 73d year; for several years the caretaker of Green street meeting-house, of which Monthly Meeting he was a member.

THATCHER.—Suddenly, in Willistown, Pa., on Tenth month 23d, 1889, William W. Thatcher, in the 33d year of his age; a member of Goshen Monthly Meeting.

UNDERHILL.—On Fifth-day, 24th ult., 1889, at the residence of her son-in-law, Charles F. Franklin, Hempstead, Long Island, Phebe Ann Underhill, in her 73d year.

UNDERHILL.—At Chappaqua, N. Y., on Sixth-day the

18th of Tenth month, 1889, Alfred Underhill, in the 84th year of his age.

VANSANT.—At her home, Richmond, Indiana, suddenly, Tenth month 20th, 1889, Grace P. Vansant, in her 73d year; a member of Whitewater Monthly Meeting.

VIVIAN.—Tenth month 20th, Elizabeth, widow of Sampson Vivian, late of Burlington, N. J., aged nearly 90 years. Interment at Frankford, Pa., Friends' ground.

WARNER.—On Fifth-day, 18th ult., Elizabeth S., wife of William E. Warner, of Newtown, Bucks county, Pa.

SITES FOR THE GEORGE SCHOOL.

A MEETING of the General Committee of the Yearly Meeting (Philadelphia), on the George School, was held on the 18th ult., and as we observe some reference to its actions in other newspapers, we think it may be best to state the essential facts. The sub-committee on location (15 members out of the 68), was requested, at the meeting in Sixth month last, to proceed with its examinations of properties which might be suitable for the purpose, and to report "a limited number" of the most promising of these to the general Committee. It therefore presented, at the meeting on the 18th ult., three places as being among those best entitled to consideration. These three are at West Grove, in Chester county, on the Baltimore Central R. R., 41 miles from Philadelphia; at Sadsbury, (near Christiana Station, Penna. R. R.), in Lancaster county, 48 miles; and at Yardley, on the Bound Brook R. R. to New York, in Bucks county, 30 miles. The general Committee received this report, and after some explanation and discussion of details, it was resolved to meet again in four weeks, (Eleventh month 15), so that in the interval those members who desire to do so might personally inspect the proposed properties. The Committee declined at that time to commit itself definitely to the idea that the choice must now be restricted to one of the three places named.

On Sixth-day of last week, the 25th, about twenty-five members of the Committee visited the Yardley property. Those who went by way of Philadelphia left 9th and Green Sts. at 9.30 o'clock, and were met by others on the way, and at Yardley. About two hours were spent in inspecting the property offered. Next week it is proposed to visit Sadsbury, and West Grove will also be visited before the meeting of the general Committee.

It may be said, for general information, that the Committee find it a very perplexing and difficult matter to find a place suitable in all particulars. There are many which present some good features, but which lack some one or more deemed essential. The size of the property, its price, water supply, convenience to railroad, nearness to communities of Friends and Friends' meeting, health etc., etc., are all to be considered. It has been found that desirable places, of good size, (100 acres or more), near a station on any of the railroads running out of Philadelphia, are mostly held at high prices within a moderate distance of the city, and hence all the three places now being examined are beyond the limit which was set down by some members of the Committee,—say 20 or 25 miles from the city. Other

institutions which have recently had to look for such sites,—the Williamson School, the House of Refuge, and others,—experienced the same difficulty, and the demand for them has of course tended to enhance prices.

A member of the Committee gives these points as in his judgment essential to a proper site for the school. It is probable that others of the Committee would agree with him; "First and foremost, a healthy location. Second, a tract of proper size, say 100 to 200 acres. Third, a reasonable price, (which excludes "fancy" suburban rates). Fourth, convenience of access from the different quarters of the Yearly Meeting. This includes not only nearness but frequency and rapidity of railroad service, and reasonable charges for passengers and freight. Fifth, contiguity to communities of Friends, and to an established Friends' meeting. Sixth, an adequate and pure water supply. Seventh, general qualities of the site,—drainage, fertility, "lay" of the land, view, etc. Eighth, character of neighboring residents, dwellings, business, etc., with a view to the probable changes of the future."

There is a strong desire with many members to select a location as soon as possible, but the importance of getting a satisfactory one is so great that time must be taken to insure this result.

CAPE MAY MEETING, N. J.

In Ezra Michener's "Retrospect of Early Quakerism," it is said that "the meeting at Cape May was established early, and then formed a part of Great Egg Harbor Monthly Meeting." Samuel Smith in his history says: "A monthly meeting hath been held there (Great Egg Harbor) for some years, composed of the Friends who live there, and those of Cape May; they belong to Salem and Gloucester Quarterly Meeting." "On the division of Haddonfield Quarter from that of Salem, Great Egg Harbor and Cape May Monthly Meeting was embraced in Haddonfield." (E. Michener.)

The writer's first recollection of Cape May Meeting was of its being a branch of Maurice River Monthly Meeting and of Salem Quarter; as to time of transfer from Haddonfield Quarter, he has no knowledge. "Maurice River Monthly Meeting was established in 1805, and continued till 1855, when the meeting there being reduced to a few families, they were attached to Greenwich Monthly Meeting by their own desire." (Thomas Shourds.)

Cape May Meeting, which, by the way, was twenty miles from the Cape, was the last to be laid down, but meetings are occasionally appointed to be held there and Friends are always warmly welcomed by the residents of the vicinity, many of whom are descendants of the early Friends. A meeting was held there on First-day, Tenth month 20th, attended by a committee of which the writer was one, and he feels moved to give a short account of the visit and of other matters connected therewith. After a ride by rail of from 60 to 75 miles or more we alighted at Ocean View, a station on the Sea Isle branch of the West Jersey Railroad, and in full view of Sea

Isle City and the salt water surrounding it. A carriage was in waiting to convey the women of our party, but men Friends were under the necessity of proceeding on foot, through the sun, a distance of a mile and a half, but the journey was a pleasant one, with a breeze from the ocean fanning our brows; and the road running parallel with the beach the ocean was constantly in sight. The train having been delayed we did not reach the meeting until 15 minutes late, when we found the house filled to its utmost capacity, in fact the floor had settled more than an inch before our arrival, yet it held out to the end. The house, believed to have been built between 120 and 140 years ago, is of itself quite a curiosity. It is a one story building about 20 by 25 feet square, and is of hewn frame-work, neatly dressed, weather boarded with cedar plank, two inches thick, set upright around the frame; although the planks are sound, the elements in some places have eaten nearly an inch into the wood. Inside, the planed and beaded planks are as bright as though the work had been but recently done, although much more than a century has passed since the house was finished. A few years ago the Methodist neighbors having occasion to make some repairs to their own house of worship, obtained Friends' consent and occupied the house for a short season, and the courtesy thus shown them has been amply repaid.

The day being warm, swarms of wasps, hovered around the ceiling and windows, but they did not molest or disturb in the least degree. The meeting upon this occasion, from the expressions of the listeners who were present, was certainly a very satisfactory one, beginning after a time of silent waiting with words of explanation as to the peculiar views and customs of Friends, and ending with exhortations to all, to heed the law written by the finger of God on the fleshy tablet of the heart. A Methodist minister who was present, expressed, after meeting, his entire unity with all that had been spoken.

The visiting Friends were kindly entertained by the friendly people near by, who appeared solicitous that we should come again and come often. Returning to the station we were interested in watching our train apparently passing very slowly down the beach from Ocean City, six or eight miles away. It appeared as though moving upon the face of the water, but it finally reached our station and we embarked for home feeling that the day had been profitably spent.

A. E.

Mullica Hill, N. J., Tenth month 23.

"FORGIVE one another, even as God, for Christ's sake hath forgiven you," is the rule which Paul prescribes for the observance of Christians. (Eph. iv: 32.) The forgiving temper of mind is an indispensable element in Christian character. Christians are in this respect to be like God, who has forgiven them. An unforgiving and implacable heart is and must be a stranger to true godliness.—*Independent.*

THE one prudence in life is concentration; the one evil is dissipation; and it makes no difference whether our dissipations are coarse or fine.

THE RIVER CHARLES.

ABOUT thirty miles southwest of Boston lies a ridge of high, broken, and rocky land, varied by swamps and strewn with boulders. On this elevation stands the village of Hopkinton and from its slopes descend the beginnings of that classic stream, the River Charles.

Rivers have always played an important part in the life of nations. Romantic associations cluster on the banks of many a stream which, like the Charles, is geographically and commercially insignificant. "Tweed's fair river, broad and deep," the Avon, the Tiber, and even our own "Suwanee Ribber" are names that bring with them a crowd of mind pictures.

And so the Charles, winding its tortuous way among the hills, and traveling more than twice the thirty miles that would bring it to the sea ere it reaches Charlestown Navy Yard and empties itself into Boston Harbor, has become an element in the history and poetry of our nation. Its peaceful tide flows through a region teeming with the memories of nearly three centuries of progress, and poets, statesmen, and scholars have been reared upon its banks.

I have recently made the acquaintance of this lovely historic river and am not surprised that several of our poets have made it a theme for their verse. Here it glides slowly through marshy meadows, its deep blue color in strong contrast to the russet grasses on its banks, or set off vividly by the crimson and scarlet and gold of some solitary maple outlined against its waters.

Farther on it passes into the secluded woodland, and from some sloping bank one may obtain a nearer view, and find the waters brown instead of blue. On the opposite side the autumn foliage is reflected in the current which is washing the roots of the trees close to the bank. Half way across a group of rushes reveal a shallow place. Nearer the edge stands a clump of willows, half in and half out of the water. Leaves are floating on the surface, swept seaward by the current. On the bank, rock-strewn and moss-covered, stand graceful elms hanging their long arms downward, maples glowing with autumn tints, silver-stemmed birches, cone-shaped cedars, and sturdy pines. Here and there on either side towers some hill that aspires to be a mountain, its wooded sides wrapped in a blue haze. Near the village picturesque red boat houses appear, and caecoes shoot swiftly beneath the arches of some gray stone bridge.

Since seeing the Charles in all its autumn beauty, I have been particularly delighted with Lowell's "Indian-Summer Reverie," in which he pays a beautiful tribute to this stream on whose banks he was born. The whole poem is full of exquisite description, and it is hard to pick out lines to quote, but here are two choice specimens:

"Below, the Charles—a stripe of nether sky,
Now hid by rounded apple-trees between,
Whose gaps the misplaced sail sweeps bellying by,
Now flickering golden through a woodland screen,
Then spreading out at his next turn beyond,
A silver circle like an inland pond—
Slips seaward silently through marshes purple and green."

Then of the marshes in autumn :
"Another change subdues them in the fall,
But saddens not ; they still show merrier tints,
Though sober russet seems to cover all ;
When the first sunshine through their dew-drops glints,
Look how the yellow clearness, streamed across,
Redeems with rarer hues the season's loss,
As Dawn's feet there had touched and left their rosy prints."

Lowell, however, is not the only poet who has sung praises of the Charles. Longfellow made this river the subject of one of his short poems, but the lines are not in his best style and are far inferior to those of Lowell. He, too, knew the stream intimately and he says :

"Four long years of mingled feeling,
Half in rest and half in strife,
I have seen thy waters stealing
Oward, like the stream of life."

Indeed a majority of our literary men have lived upon the banks of this "silent river" at some period of their lives. Cambridge has been a natural center of intellectual life and the stream which flows beside it has come to partake of the "classic" atmosphere which, it is to be supposed, still pervades that old university town as it did in the days when Holmes was an under-graduate member of that famous class of '29.

ANNA NICHOLS GOODNO.

OBJECT LESSONS.¹

It is widely conceded by educators of the present day that no instruction is more efficient than that imparted by object lessons. In point of comparative interest, what an illustrated story is to a child, an illustrated lesson is also. Mere authoritative statement often touches the surface only of the mind unused to reason, compare, and generalize; but if the statement be illustrated by anything visible, it is proven true in at least one case to the hearer's very eyes, as well as spoken to his ears; and a thing grasped by two senses is doubly impressed.

In our own school we have for years pursued a course of object lessons monthly, whenever anyone could be found to give them. They have always proved a source of great interest, and have served to train the wandering young minds and eyes to that attention without which the teachers might as well talk to the wind. They serve, too, to unite the school in one body and so call up the feeling of belonging and ownership in the scholars. "Our school" is said with a greater degree of just pride, of one that holds together—in which are exercises that pleasantly unite the entire body as one. Several lessons of this nature have also been given to single classes that were scarcely practicable to give before the entire school, as when the objects used for illustration required to be closely examined by each separate scholar.

And again, the Great Teacher, if you will read his life with this thought in view, taught by object lessons constantly. There was nothing, it seemed, in the commonplace lives of his hearers that he did not beautify and elevate to their understandings by show-

¹Read at Concord First-day School Union held at Newtown Square, Delaware county, Tenth month 19, 1889.

ing it to be the holder of important, glad, helpful truth; nothing so lowly or simple but that he found use for it as an illustration to enforce his teachings. Sheep, lambs, goats; thorns and thistles, grapes and figs; ripe fields, vineyards, water and bread, little children,—everything his listeners' eyes beheld from day to day, were used as foundations for object lessons.

If then our Great Example employed so largely this method of instruction, what better can we do (our purpose being to fulfill his saying, "Feed my lambs,") than to follow him in this particular? Think what it must have been to those neglected men and women to have everything about them speaking as with tongues of the eternal goodness and divine love. We find here the grand secret of the overpowering, ineffaceable impression the Master left upon those who heard him. He left behind him not a written word; but he wrote himself upon the landscape and in the home. There was no escape except by wilful blindness.

So let it be with the little ones under our care—all with the child-spirit are little ones to Him who waits above. Let us so surround them with simple, natural, *unforced* illustrations of the Father's love, wisdom, power, that they shall see him everywhere they turn their eyes.

Not the smallest benefit of object lessons is the originality, the self-reliance they call forth in those who try to give them. To search our intimate surroundings for illustrations of a Divine Providence is as opening of the eyes to the blind; we begin at last to see how limitless are the resources of our Father's love, how infinite are the sweet ways in which his word is always seeking us.

"The heavens declare the glory of God, and the firmament showeth his handiwork." "The earth is full of the goodness of the Lord."

When everything speaks to us of God, then we can say we *know* something about heaven; then truly we have at least tasted of the delights of our Eternal Home.

ALICE L. DARLINGTON.

SAD DISAPPEARANCE.

THE facts stated below have been known to the friends of John Mason Child for a fortnight past, but were made public at the beginning of the present week. As given here, they are taken from a New York daily paper, of the 29th inst., with some corrections.

Prof. John Mason Child, principal of the Beverly School, at 28 West Twentieth street, has been missing since the 12th inst. From the circumstances of his disappearance his friends fear that he became suddenly demented and that he committed suicide. Although he disappeared over two weeks ago the matter was not made public until yesterday.

Prof. Child formerly lived at 472 West Twenty-second street, but moved from there about two months ago to 28 West Twentieth street, where, in September, he opened the Beverly School for the preparation of students for college examinations. He worked very hard in organizing and perfecting

the arrangements. The school opened with an encouraging number of pupils.

On the night of his disappearance he spent the evening with his family, as usual. He retired at 10 o'clock while Mrs. Child went to the room of her son Allan, who was slightly unwell, saying that she would sleep there, and suggesting to her husband that he remain during the night with their other child. Early next morning, she heard the latter crying and calling, and upon going down to the room, discovered that John was not there, and his bed had not been occupied at all. He had left behind a check, drawn to the order of his wife, covering all the money he had on deposit in bank, and beside it was found all the cash that he is supposed to have had in his possession. He had also left his shirt studs, sleeve buttons, and watch and chain. This was first-day morning. On the next morning his wife received a postal card through the mail, signed J., stating that when it reached her all would be at end with the writer. It had been mailed late on Seventh-day night.

The police were immediately notified, and Inspector Williams and his officers assisted in making a diligent search, advising, for several reasons, that no publicity be given to the matter for the present. This search having proved barren of result, his friends determined to make his disappearance public and a general alarm was sent out to all the stations, giving his description, and the facts were thus communicated to the newspapers.

His friends think that the constant strain of his mind during the past six months caused temporary insanity. He had no cause for pecuniary anxiety, as his business had every prospect of success.

At this writing, no tidings whatever have been obtained concerning him.

SWARTHMORE NOTES.

—The study of the modern Greek, and the reading of the New Testament in the original, form a feature of the Greek course at Swarthmore. As the complete study of a language requires that each period of its history should receive some attention, of course, in due proportion to the relative importance of the periods, the modern Greek should certainly come in for at least a brief notice, being as it is the only living representative of the ancient tongue, and showing, even in its debased condition, the unmistakable features of the original. The new Greek, as a language, is growing in its influence in south-eastern Europe.

—Maria Davis, of Baltimore, has been appointed an assistant to Professor Bancroft in the department of Art.

—Lydia Shackleton, of Lufan, Ireland, a friend who has been spending some time in the United States, visited the college last week. She took tea with the students on Sixth-day evening, and remarked upon the interesting coincidence, that the last time she had eaten with so many persons was in a tent near Swarthmore Hall, England, after which place the college is named.

—The Senior and Junior English classes have united in asking Acting-President Appleton to give a series of select Shakespearian readings for this winter, and the Professor has announced his willingness to do so.

—Mary J. Murphy, instructor in gymnastics for the young women, has decided to begin her classes in physical culture in a few days. Dr. Shell will not take the young men into indoor practice until the weather forbids outdoor work.

—The ex-members of the college and the first foot-ball eleven will contest for honors at that game on next Third-day afternoon.

—Professor Edward H. Keiser, M. S., who graduated at Swarthmore in 1880, and is now Professor of Chemistry, at Bryn Mawr College, spent First-day last with his friend, Professor William Penn Holcomb. S.

NEWS OF FRIENDS.

—Our friend Abel Mills, of Mount Palatine, Ill., sends us notes of his visits amongst Friends in Indiana, previous to Indiana Yearly Meeting. The details are largely personal and social. Leaving Lostant, Illinois, he attended the mid-week meeting at Fall Creek; it was not a large one, but there was a feeling that it was owned by the great Head of the Church. Testimony was borne to the necessity of a practical righteousness. Visiting a number of Friends in that vicinity, he proceeded to Pendleton, and then, after several social visits, reached Richmond, Ninth month 28th.

—At Birmingham Monthly Meeting, at West Chester, (Pa.), on the 26th instant, Lydia H. Price obtained a minute of unity "to visit the quarterly meetings belonging to Philadelphia Yearly Meeting, and visit and appoint, if required, meetings within the limits of Philadelphia Quarter." A memorial of our deceased friend, Sarah Hoopes, was united with and directed to be forwarded to the Quarterly Meeting, and the committee on visiting and corresponding with members made an interesting and suggestive report, showing how extensive and important this field of labor is.

We, worn out by days of toil and sorrow,
And sick of pleasures that are false and vain,
Would freely give our golden hoards to borrow
One little hoar of childhood's bliss again.

Yet He who sees their joy beholds our sadness,
And in the wisdom of a Father's love
He keeps the secret of the heavenly gladness;
Our sweet surprises wait for us above.

I SEE, but cannot reach, the height
That lies forever in the light. . . .
For thine own purpose, Thou has sent
The strife and the discouragement.

—The Golden Legend.

Our of men who have life in them shall grow a society that has life, and the kingdom of the world shall be made in truth a kingdom of God.—F. A. Froude.

THE CRY OF THE MOTHERS.

EDITORS INTELLIGENCER AND JOURNAL:

I SEND you two contrasting poems which may well be entitled "The Cry of the Mothers." I believe they have appeared before in your paper, but so long as Death and Sin are in the world they will remain an ever recurring-cry. A pathetic difference is seen in the fact that the mother of the "stray lamb" can not sign her name to her verses. O, you troubled ones, whoever and wherever you may be, whose sorrow may not be spoken of, who may not know the comfort of human sympathy, my heart goes out to you—

"With *silence* only as a benediction
God's angels come,
Beneath the shadow of a great affliction
The soul sits dumb."

The mother of the "stray lamb" looks upon the "Mater Dolorosa" and exclaims within her heart: "Oh, Thou weeping mother, thy sorrow was joy compared to mine. Thou wert the mother of a perfect son, in whose death God was glorified, because of faithfulness. I have no comfort. I can not even say 'Thou didst it.'"

This vast army of once innocent, loving babies, converted into revolting men and women. What is thy message, Lord, to the parents of such as these? What comfort exists for this great affliction? Night and day a great cry goes up with "groanings which can not be uttered." The cry of the Psalmist, "Why standest thou afar off in time of trouble?" is echoed in thousands of hearts. All thought of one's own salvation is lost in the desire for the salvation of the "stray lamb." "Any fate for me, only save my child alive."

What consolation to that mother that in *time* conditions will be better,—"God's truth is marching on?" Yes, she believes it, but it will be too late for hers. That is comfort for future mothers, but for her, alas! Even the shepherd himself must wait and watch and travail. "Will the lamb ever turn? Will he tire of feeding on husks? Will he die in his sins? Will his soul be lost?"

She knows God has many ways of reaching and finding his sheep, but will he reach all? Eventually, it may be, but now, here? Lost, lost to his mother, his father, brother, sisters, wife, children,—fear like a great horror of darkness hanging continually over them, darkening the sun, shutting out the stars. This, this is to be in torment, and for no crime of their own. Truly "no man liveth to himself." Alas other hearts must suffer with him.

How can one be reconciled to sin? Over and over, this moan comes in myriad hearts to-day. Who can answer? "The soul that sinneth it shall die?" Did God say that, and will it die utterly? Will not some germ of eternal life be spared to develop in the world to come? And must it be so long delayed?

Over and over again, through the night-watches, these unanswered questions pass and repass, until exhausted nature comes to the rescue, and "He giveth his beloved sleep." But oh! the awakening,—to look out upon the bright world, and then to remem-

ber that it is not for her, this sorrowing one, that the world is bright. The old pain returns with even redoubled force and the heart sinks down with its heavy weight, and the eyes, grown hollow, fill with unshed tears,—tears that must be pushed back and smiles assumed that other lives may not be shadowed before their time. She recalls the hymn :

"Give to the wind thy fears,
Hope and be undismayed,
God hears thy sighs and counts thy tears,
God will lift up thy head.

"Through clouds, through waves, through storms
He gently clears thy way.
Wait thou his time, so shall the night
Soon end in joyful day."

"'Soon!' Oh Lord, how long? My heart could be so light if it were not for this. Pain, poverty, toil, I think would be light, if this anxiety were removed. If I could see the 'white stone with the new name written thereon,' the 'old man cast off' and the new man risen into dominion.' Will it ever come in our child?" Blessed is that mother whose little "lost blossom" is folded from her sight to blossom afresh in the Paradise of God. The cry of the Savior rings in the mother's ears: "Ye will not come unto me that ye might have life." "O, Savior dear, if thou canst not bring them in, what can we do?" Must we submit, must we be resigned to see them lost? What is salvation for us with our lambs left out? If thou wept over Jerusalem who "would not be gathered" what hope have we? O, this despairing "cry of the mothers." Who shall answer? Let us look to it. Let us do what is in our power to prepare the way of the Lord, make his paths straight, clear the way for unwary feet, remove pitfalls, let the sunlight into dark places, clear out the "mire and the clay," and make the world a safer place for the lambs committed to our care. Let the Master work through us, and let us cooperate with Him in the restoration. Let no self-indulgence, no love of ease make us indifferent or unheeding to this great call.

"Only Thy leadings let us see,"

* * *

A STRAY LAMB.

"For thus saveth the Lord his hold I even I, will both search my sheep and seek them out."—Ezekiel 34: 11.

O Tender Shepherd, gather my lamb
Into Thy fold!
How can I sleep while he is astray
On the mountain side?

Behold, I watch through the perilous night
With dreary fears:
Seeking my lamb with longing eyes
That are dim with tears.

O Infinite heart! that for such as he
Bore mortal woe,
Is he not dearer to Thee than to me,
Though I love him so?

Seeking my lamb on the mountain side
And wastes forlorn,
I meet Thee, Shepherd, with bleeding feet
And crown of thorn.

And while thus watching, I hope pray
The long night through
It is comfort and rest to feel and know
Thou art watching too

And surely Thou with Thy rod and staff
Will fold him in,
Safe, safe at last from the snares of the foe
And the wiles of sin.

O, if he came not, my soul would stand
At the pearly gate—
Missing my lamb from the heavenly fold
And weep and wait.

Speak to me, comfort me, Lord of Life!
Make me sure of this, —
That he will be with me before Thy throne,
In the world of bliss.

LOST BLOSSOMS.

As I look through the gate of the arbor
Out into the wintry wood

I remember how green in the spring-time,
The grave in its beauty stood

And how the wrenmons glistened,
Drooping, side-wile, all over the ground,
While the little white violets listened
To the wren's breakfast's musical sound.

I remember how trustful the other
Blue violets opened their eyes,
Smiling up like a babe to its mother,
To the sound of the smiling sky.

I remember I pressed to my bosom
My boy in the woodland green,
And I thought him the lowliest blossom
The spring-time has ever had seen.

As I look through the gate of the arbor
Out into the forest lone,
I can see that the blossoms are all withered,
I can see that the flowers are gone.

I do not know why they were bidden
Away from our side to go,
I do not know where they are hidden,
This only I sadly know:

That when the long winter is ended,
And the earth grows warm in the sun,
The Lord will give back to her bosom
Each lost little blossoming one.

I do not know where they have borne him,
My blossom, so bright and so pure,
I do not know why I must mourn him,
Of this only this, I am sure!

That when the long winter is ended,
And the spring time of Heaven begun,
The Lord will fold back to my bosom
My lost little blossoming one.

M. R. C. Stoddard.

Let every dawn of morning be to you as the beginning of life, and every setting of the sun be to you as its close, then let every one of these short lives leave its sure record of some kindly thing done for others—some goodly strength or knowledge gained for yourselves.

HINTS FOR READING.

At this season, when our readers are making plans for winter reading, the following suggestive rules from one of our exchanges may be helpful.

Read according to some plan or system.

Don't wait for books to come to hand, and don't read as many people are supposed to fall in love, simply as a matter of propinquity. It is a universal truth that the best way of living is to do the duty that lies next one, but this truth does not apply to books. Too many people read the books that lie next them, and read no others. These contiguous books are sometimes good and often bad, but they are always miscellaneous. If you were born in a library, well stocked with the best literature, this article is not for your reading. It is for the reading of those who pick up books as they lie on the counters of the bookstores, or on the parlor table, or are offered for sale on the cars. Don't depend on this floating material for your intellectual food and stimulus. Give time and thought to the selection of your books. Take some line which interests you, and follow it. Decide in advance what you are going to read, and when you have finished one volume follow it with another intelligently chosen.

Read regularly.

The habit of reading is easily formed, and once formed there is small danger that you will lose it. It is a habit which grows stronger as one yields to it, and its resources of pleasure are so many and so un-failing that no man cares to break away from its thrall. No man or woman, except during those crises which occasionally interrupt the regularity of life, ought to be willing to live without constant intercourse with books. Books are the necessity of a full, rich, intelligent life—unless one happens to be a Stanley opening up a continent, and even in that case books go with the arsenal and medicine chest.

Keep your book near you.

It is surprising how much time ravel out and escapes us; slips through our fingers, and leaves nothing but empty regret behind. Keep the book you are reading at hand, and when you have five minutes invest those minutes in reading. A great many people think apparently that time is not worth saving unless they have it in large quantities. Give them a day, and they fancy they could do something; but with fifteen minutes what can be done? Well, fifteen minutes a day at the end of a month aggregate ten hours, and at the end of a year a good deal more than a working week! Time is saved, like money, in small amounts; the savings banks represent small, not large, investments, and they stand for the wealth of the community. Save your minutes as you save your quarters, and you will have a considerable investment in good season.—*Exchange.*

“THE human idea of happiness is to receive more than one gives. The divine idea of happiness is to give more than one receives.”

THE soul is elevated, the heart is inflamed, by contemplating the highest models.—*Rousseau.*

THE PERENNIAL FLOWER GARDEN.

The claims of sentiment rest, says the *Country Gentleman*, almost wholly with the permanent garden. It is the old flowers—the flowers that come up year after year in the same places and look at us like old friends—that touch the heart. We become fond of them after we have watched, with a keen thrill of pleasure, the red shoots pricking through the wet soil, when spring brings its mysterious assertion of a new life. We find a delight in studying the advancing development of leaf, and spray, and bud; at last we look for the full glory of the expected flower! With every species it is a little drama.

Different flowers become associated with those whom we love; those who are nearest and dearest to us have worn them or have cared for them; they have had a place at times of fullest emotion; they come to belong to us in that deeper sense in which our circumstances and surroundings mingle with our consciences.

The mixed border, somewhat more ambitiously arranged than in our grandmother's time, with a view to harmony and that art of heightening by juxtaposition which the artistic sense demands, is the newest, and is it not the best thing in gardening? All the favorite flowers may appear in it, each in due proportion, and by skillful arrangement one after another seems to predominate, as its time of blooming arrives. This is really far less difficult than it appears.

One may say that such a garden is naturally filled with tulips, hyacinths and daffodils in the spring, with roses in June, with lilies in July, and with chrysanthemums in October. There is infinitely more variety and constant interest as the season passes, than when one depends for summer beauty upon formal beds of geraniums and foliage plants.

It is a slight drawback, looking at the question as an advocate, that perennials do not usually make a large return the first year. The compensating satisfaction is found in the knowledge that they will go on steadily improving for many years. A really grand show of flowers can only be expected from strong, well established stock. By setting them out in early fall, so that they become established before the ground freezes, a year is gained.

“WHILE sorrow has its outbursts, it also has its periods of silence. There are many times when the soul prefers to smother its griefs so that none but the ear of God can hear them. They are of such a delicate nature sometimes that the heart does not want the sound of its sighings to strike upon the cold ear of the world. And so it secludes itself from the busy throng and in solitude whispers its grief to God. Down beneath the surface of visible sorrow there are silent depths which can never be seen and throbbings of anguish which can never be heard by a fellow being.”

DUTY of every kind, containing within it the germs of delight and beauty, will, if cherished, develop the sweetest flowers and richest fruits, and the good and the beautiful thus clasp hands and claim kinship forever.

WHITE SPRUCE TREES ON THE MAINE COAST.

Boston is the heart, Massachusetts Bay the heaving bosom, and Capes Ann and Cod the extended arms of Massachusetts. The bay is the dividing line along our coast. North of it on the Cape Ann side all is rocky, south of it on the Cape Cod side all is sandy. As might be expected on bottoms so diverse as rock and sand, different plants and animals would be found. Agassiz was constantly calling attention to these differences. Yet after all, they are not so conspicuous at first sight to a mere superficial observer. From Maine to Florida, along shore, whether on rock or on sand, one finds, if he finds anything of true life, the evergreen type predominating. The hard woods with their broader foliage appear on the whole to be less well adapted to such salty and stormy locations. Indeed, one might almost say, as Burroughs has, that the "pine leaves sift the air" whether on ocean side or on mountain top. The broad leaves, of more tender texture and ampler expanse, are less capable of resisting a hurricane than these firmer pine needles. Hence, possibly, the pines, spruces, and firs have come to be naturally selected as the occupants of such exposed places.

In the last issue, the illustration fairly showed the pitch pines on Cape Henlopen, where they alone of all our trees appear capable of living. Let this number show in how marked contrast the spruce-covered, rocky coast of Maine is. But there, or here alike, the sea-side forest is sombre. Even the chalky trunks of the white birch, interspersed here and there, only change the scene without enlivening it, and for gloom substitute ghostliness. Out of such forests one might imagine would come men stern, relentless, and reticent. The gray *Usnea*, whose long festoons hang from the spruce branches, suggested the bearded harpers in the opening stanzas of *Evangeline*. Even the sunlight that trickles through where it can, comes so subdued that it has something of weirdness in the rays. One from the lighter forests of broad-leaved trees must school himself to realize that the interior of a dense spruce forest is, after all, a thing of earth and not of some place lower.

Two species of spruce make up the great bulk of these dark forests north of Cape Ann, to wit: *Picea Alba*, the white, and *Picea Nigra*, the black spruce. It might appear to the uninitiated as though one could always readily distinguish between the species. This, however, is far from being true. Between the types of each species occur intermediate forms which lead to the question as to whether they may not be from seed which was a cross between these alleged species. Such things do occur occasionally among other trees.

Indeed, the Maine woodman is sometimes at fault in determining whether to call a green specimen white or black spruce.

Thoreau, who, in spite of his eccentricities of speech and behavior, must be reckoned among the truth tellers, claims that his Indian could always readily distinguish the species. Let me give his own statement:—

"My companion, wishing to distinguish between

the white and black spruce, asked Polis to show him a twig of the latter, which he did at once, together with the black; indeed, he could distinguish them about as far as he could see them; but as the two twigs appeared very much alike, my companion asked the Indian to point out the difference; whereupon the latter, taking the twigs, instantly remarked, as he passed his hand over them successively in a stroking manner, that the white was rough (i. e., the needles stood up nearly perpendicular), but the black smooth (i. e., as if bent or combed down.) This was an obvious difference both to sight and touch. However, if I remember rightly, this would not serve to distinguish the white spruce from the light-colored variety of the black."

I have the "courage of my conviction" concerning Thoreau, and do not hesitate to say I find great pleasure in quoting him. This, as also the earlier extract, is taken from "The Maine Woods":

"In some of these dense fir and spruce woods there is hardly room for the smoke to go up. The trees are a standing night, and every fir and spruce which you fell is a plume plucked from night's raven wing. Then at night the general stillness is more impressive than any sound, but occasionally you hear the note of an owl farther or nearer in the woods, and if near a lake, the semi-human cry of the loons at their unearthly revels."

Though the trees making up the forest in the illustration are mainly spruces, our northern shore-woods are by no means entirely so. The arbor-vitæ and the fragrant balsam each contribute and bring with them peculiar characters of their own. It must be allowed, however, that of the four trees thus far named, neither one nor all are of first importance, though each has its value.

The spruce trees, both species, furnish a light wood which, though only fairly strong, has a somewhat extended use, as in coarse building masts for small vessels, laths, piles, etc. The root fibres of the black spruce the Indians use for sewing their bark canoes.

The arbor vitæ (*Thuja occidentalis*), or, as it is more commonly known in Maine, the white cedar, is with us seldom seen, except where planted for hedges, and then cut back so that it never approaches the dignity of a tree. It has, in its Northern home, aspirations enough to lead it to a height of fifty feet, with a diameter of over four feet. Indeed, it has wandered south along our mountains and somehow found an exceptionally congenial home at the Natural Bridge in Virginia, where there are, or were until recently, two specimens of such robust proportions that the late Prof. Asa Gray sent word to a botanical friend, who had photographic propensities, that he greatly desired a picture of these trees,—alas, dear man, he died before his wish was gratified!

How eloquently he could have discoursed over the lineage of those specimens, as he told of the ancestral migration, step by step, from North to South, in advance of the ice mass which lowered the temperature in Virginia to that which is normal in Maine! There is about the arbor vitæ a clean appearance. The resin so ever present in most of its

cone-bearing relatives is missing with it. The year through it is sheltered comfortably inside its own scaly foliage, making no sign to the world of all the rough usage it receives from winter, save in the browner hue of its leaves. Its weak, light wood makes up in durability what it lacks in strength.

As for the balsam tree, otherwise known as balsam fir, or balm-of-Gilead fir, and by botanists now called *Abies balsamæ*, it is difficult to write of it without show of enthusiasm, not that it is of great use in the arts, but because the romance of the northern woods lingers in the fragrant leaves beside me now. I do not think that it ordinarily makes up a great bulk of the wood. Such, at least, has not been my observation. I should say seldom very common, seldom wholly wanting. Its distribution is singular. On one or two adjacent islands it is exceptionally scarce, on the other exceptionally abundant. Yet, so far as one may see, the islands are equally suitable, and no human hand has disturbed the normal relation of the forest trees to each other.

Something has already been said about the white birch giving an element of character to our northern seaboard forest. Here and there great clumps of it appear to monopolize the soil, and it might ever call to mind in its occupancy of neglected clearings, the old field pine of the South.

Glance at those fine maps produced by Prof. Sargent for the last census report, and you will see that while along our Eastern coast the pines begin in force at the Gulf of St. Lawrence and run south to the Gulf of Mexico, the spruces and firs begin at the same point and run westward as a belt across the continent (as the pines also do), but send only a detachment of their main body southward along the mountains and hilly region as far as the high peaks of North Carolina.—*Dr. J. T. Rothrock, in Forest Leaves.*

NEWS AND OTHER GLEANINGS.

—The London correspondent of the New York *Times* says (Tenth month 26): "Miss Amelia B. Edwards, who sails on the *Etruria* to-day to give 100 lectures before American colleges and learned societies, does not advertise herself so vigorously as many English public women, but in solid attainments and worth of work done she is easily in the first rank. She is a leader in the woman's suffrage movement and a novelist and a poet of repute, but in late years she has devoted all her energies to Egyptology, and this, I believe, is what she will chiefly dwell on in her American lectures, which begin with a course at Columbia College, New York City."

—In Chester county, (Pa.), the Woman's Christian Temperance Union, at its meeting at Coatesville, on the 21th ult., divided, one side withdrawing to organize a separate and non-partisan movement, with the name, for the present, of "Christian Temperance League." It is stated that the W. C. T. U. organizations in the county included about 1,600 persons, and that those withdrawing are about one-half of this number.

—A sensation has been created in the National Temperance Congress of Great Britain by the disclosure that shares of a recently launched brewery are held by clergy of the English Church. The buyers are said to include an archbishop, two bishops, three deans, four archdeacons, and six canons.—*London dispatch.*

—About 85,000 tulips have been received in New York city from Holland for planting in the public parks.

—There is a very fair crop of Smith cider apples in middle Bucks this season, and as there is said to be a scarcity of apples in western New York, they are selling quite well. Men are going through the county buying orchards by the lump. The apples on the Jericho farm, late of Stephen Betts, Jr., sold for \$850, and equally good prices were obtained for other orchards. Fallen apples command a very fair price at the cider presses, and they are being bought at Lambertville by the car-load to be sent to the New Jersey jelly factories.—*Newtown, (Pa.) Enterprise.*

—Many ladies who had flowers blooming in their yards picked them in the snow storm Wednesday morning, and on placing them in water in the house they were found to be untouched by their severe treatment in the storm. Said one lady to a reporter who admired her profusion of blooms: "I never gathered flowers under such circumstances before; I had to shake the snow from them, but, with the exception of a few tender plants, they have not been hurt." This morning the case was different; the ground in some locations was frozen quite hard, and plants which had bravely held up their heads through all previous weather are now drooping.—*West Chester (Pa.) Local News, 24th.*

—Robert Browning is at Asolo, Italy, and in good health and spirits. He has completed the manuscript of his new volume of poems.

—It is a mistake to suppose, wisely says *Medical Classics*, that work, when properly directed, will ever cause a premature breakdown either of body or mind. Uniform industry is as conducive to health as is regularity of diet.

—A magnificent English tree known as the "Winfarthing oak," which measured thirty-eight feet seven inches in girth in 1774, has just been measured and found to have grown just seventeen inches in the interval of 130 years.

—The *Electrician* reports a rumor from Berlin to the effect that a means has been discovered of using electricity for ascertaining the true north, instead of the magnetic needle,—that, in short, the new means will be superior to the compass, and is likely to supersede it.

—The postal card was twenty years old on the first of last month. Austria has the credit of first adopting the invention, though it was first advocated by the German Postmaster-General, Dr. Stephan. On October 1, 1869, a "Correspondenz Karte" first burst on the astonished Continental world.—*Exchange.*

—A subterranean river has just been discovered in the Department of Lot, France. The discoverers worked their way down stream for a couple of miles through a succession of wonderful grottoes sparkling with stalactites. They found seven lakes on their way, and had to shoot thirty-seven cascades or rapids.

—"Thousands of head of cattle have perished in western Montana for want of grass and water," says L. B. Rae of Miles City. "Ranchmen there are paying as high as \$20 and \$25 a ton for hay, and in a week or two it will be impossible to get it at any price. Water is being hauled in some cases as far as twenty miles, and several ranchmen have made preparations to go further west."

—Professor Shaler says: "Among those who resort to Harvard College with the expectation of inheriting large fortunes, there is at present a curious desire to study the organization of charity, and in general to make themselves acquainted with wise methods of using money for the public good. An elective where the students are instructed in a very practical way concerning the subjects of charity is mainly attended by such persons. I have been in int-

mate personal acquaintance with many of the young men, and know that they are full of plans concerning the responsibilities to come upon them as administrators of fortunes." He declares that each year more and more of his time is given to the consideration of the projects for active life which students present to him for criticism, and his experience is also that of a score or more of his colleagues. *The Student.*

—The sum of \$1,200,000 was offered for a lot 50 feet by 120 feet at Broadway and Liberty streets, in New York city, last week. This is at the rate of \$8,742,000 per acre.

The unanimous voice of the New York press is for retaining Miss Grace Dodge and Mrs. Agnew on the school board. More to the purpose, perhaps, the teachers ask that they remain. Women generally prefer to be tyrannized over by men, rather than superintended by women: so we think these ladies have scored a point. Apropos of women on school boards, Mrs. Alice Freeman Palmer, ex-president of Wellesley, succeeds Mr. Horace E. Sessler on the Board of Education at Cambridge, Mass.—*Hartford Courant.*

CURRENT EVENTS.

SNOW fell on Fourth-day of last week (23d ult.), in New York, Pennsylvania, Maryland, and Northern Virginia. In the neighborhood of Philadelphia it fell persistently from early in the morning until about noon, partly melting for a time, but gradually gathering, especially in sheltered places. It had disappeared generally by next morning.

SUBSCRIPTIONS have been begun in New York toward a guaranty fund of \$4,000,000 to start the World's Fair Movement. The amount subscribed up to the night of the 29th ult. was \$1,053,146.

PRINCESS Sophie, the sister of the Emperor of Germany, (and grand-daughter of Queen Victoria), was married, on the 27th ult., at Athens, to the son of the King of Greece, Duke Constantine. There was much enthusiasm in the Greek capital over the event.

REPORTS from London assert that the Prince of Wales, heir-apparent to the throne of England, is in bad health, and has, or is threatened with, Bright's disease. As if confirming this rumor, he went directly away from the wedding ceremonies of his niece, at Athens, to Egypt, accompanied by his sons.

ANNOUNCEMENT was made, on the 29th ult., that President Harrison had appointed John Field postmaster of Philadelphia, in place of the present incumbent Wm. F. Harity. He is a member of the firm of Young, Smyth, Field & Co., merchants of Market street, and the appointment is regarded as a good one.

NOTICES.

A Children's Temperance Meeting under the care of the Friends' Temperance Committee of Bucks Quarterly Meeting, will be held in the meeting-house at Wrightstown on First-day, Eleventh month, 3d at 2:30 P. M. All interested are cordially invited to attend.

HANNAH K. FLOWERS, Clerk.

Evening Meeting. The meetings heretofore held on First-day evenings at Race street, Green street, and Girard avenue, will, during Eleventh month, be held jointly at Race street, only, at 7:30 o'clock. Friends are desired to attend and invite others to do so.

Nine Partners' Half Year Meeting. This will convene at Nine Partners, for Business, on Second-day, the 14th of Eleventh month, at 11 a. m. Meeting for Ministers and Elders on Seventh-day before, at 3 o'clock p. m. Public Meeting on First-day at 11 o'clock.

JUSTUS C. HAVILAND, Clerk.

Circular Meetings on the following:
3. Chichester, Pa. 3 p. m.

Quarterly Meetings of Eleventh month occur follows:

1. Nine Partners' Half Year Meeting Poughkeepsie, N. Y.
2. Philadelphia Race street, Pa.
3. Farmington, Farmington, N. Y.
4. Abington, W.erry, Pa.
5. Stamford, Chatham, N. Y.
6. Miami, Waynesville, O.
7. Salem, West O.
8. Baltimore, Little Falls, Md.
9. Easton and Saratoga, Easton, N. Y.
10. Shrewsbury and Highway, Shrewsbury, N. J.
11. Short Creek, O.
12. Centre, West Branch, Pa.
13. Duaneburgh, Duaneburgh, N. Y.
14. Fairfax, Woodlawn, Pa.
15. Stillwater, Richland, O.
16. Blue River, Clear Creek, Ill.
17. Warrington, Pipe Creek, Md.
18. Burlington, Crosswicks, N. J.
19. Southern, Camden, Del.
20. Bucks, Langhorne, Pa.
21. Nottingham, Little Britain, Pa.

The annual meeting of the Association for the promotion of First-day schools within the limits of Philadelphia Yearly Meeting will be held at Race street meeting-house, on Seventh-day, Eleventh month 24, 1889, at 10 a. m.

L. WIS V. SWEDELY, Clerks.
CLARA B. MILLER, Clerks.

PUBLISHER'S NOTICES.

**As usual at this season, we are looking forward to our subscription list for next year. We should like to further increase it. Will not our subscribers send us any names to whom they think sample copies might be profitably furnished?

ROYAL

BAKING
POWDER
Absolutely Pure.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. Sold only in cans. ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

The Autumn and Winter 1889-1890

FINDS prepared with our usual complete stock of LADIES' FINE HAND-SEWED SHOES.

Our facilities for *fitting* work *short* notices are greater than ever before, inuring promptness and faithfulness in execution.

THE MASTER'S TOUCH.

In the still air the music lies unheard ;
In the rough marble beauty hides unseen ;
To make the music and the beauty needs
The master's touch, the sculptor's chisel keen.

Great Master, touch us with thy skillful hand ;
Let not the music that is in us die !
Great Sculptor, hew and polish us ; nor let
Hidden and lost, thy form within us lie !

Spare not the stroke ! Do with us as Thou wilt !
Let there be naught unfinished, broken, marred ;
Complete thy purpose, that we may become
Thy perfect image, thou our God and Lord !

—*Horatius Bonar.*

For Friends' Intelligencer and Journal.

BALTIMORE YEARLY MEETING, 1889.

THIRD-DAY, Tenth month 29. Before entering into the business of the meeting, I find it necessary to correct an error in the report given last week. The name of one of the ministers who spoke on First-day afternoon, and also in the evening, is given as Joseph Ratcliff; it should have been Joel Birdsall. It might be well to add that a parlor meeting was held in the large and pleasant parlor of the meeting-house on Second-day evening, before the First-day School Conference, at which Isaac Wilson spoke with great acceptance.

On Third-day morning the first business to claim the attention of men's branch was the report of the proceedings of the Executive Committee, including the report of the Building Committee. The report was accepted, and much satisfaction was expressed in regard to the manner in which the Building Committee had performed its duty. A committee was appointed to have oversight of the educational needs of the Society, and disburse the proceeds of the Fair Hill fund. The report of the committee appointed to visit the various subordinate meetings belonging to the Yearly Meeting was presented and read. They have found a large, open field for work, but for sundry reasons, they have paid few visits, and have accomplished but little.

In women's branch, after the reading of the minutes of the preceding day, John J. Cornell and Isaac Wilson paid visits, in which both had acceptable service. Business was resumed by the reading of the Second Query and the answers thereto. The summary indicates that love is generally maintained and efforts made to end difficulties. It was remarked that it is needful to guard against differences in the

very beginning. Love is the very keystone of the arch; where this prevails there cannot be any differences. If we have the "love that casteth out fear," we can go to our brother or sister and speak the kindly word that will not offend. The love of the mother is strong, but the love of our Heavenly Father is stronger. We may be called, as was Abraham, to lay our children upon the altar, to give up, to sacrifice, before we know what this divine love is. As the Christ is lifted up—lifted up in each heart—he will draw all men.

The Third Query was then considered. The summary answer showed that many Friends are concerned to observe the several particulars of this query; but more care seems necessary. One report calls attention to the demoralizing influence of much that finds a place in the daily newspaper, and in other publications which flood our land. Much earnest counsel was called forth at this time. It would be impossible to reproduce the stirring words that ran like an electric current through the assembly. It was felt that the wife and mother must give her influence against the reading of those things which unduly excite the imagination and demoralize the mind. All good efforts are of value; no good can be lost; if the influence is not at first seen it will appear in due time.

In the afternoon the Fourth Query, with answers thereto, was read. In the summary an exception to its faithful observance was noted in one report, in which the use of cider as a beverage was mentioned. They are clear of frequenting taverns, but not entirely clear of attending places of diversion. The use of tobacco is generally discouraged; it is only raised in Nottingham quarter. The summary to the Fifth Query shows that Friends' necessities are cared for as queried after. The summary to the Sixth Query shows that a faithful testimony to a free Gospel ministry, resting upon Divine qualifications alone, is mostly maintained. The summary to the Seventh Query shows Friends to be generally careful in the several requirements of this important query. The same is true of the Eighth Query; the violation of the first part of the query with regard to oppression, called forth the expression that it requires care to avoid it in all the various points relating thereto. The Ninth Query with its answers and summary answer, indicates a care to deal with offenders in the spirit and manner queried after. The remaining answers show care in the several particulars queried after.

In the exercises that came before the meeting at this time, we were reminded that when a vessel is

full it will hold no more, so if our hearts are filled with Christian love, we will be less likely to see that which is evil in the heart of another. A deep exercise overspread the meeting at this time, reviving the concern in respect to pernicious reading, which without our own sanction may find its way into our homes and destroy the innocence and purity of the young life. It was believed that a work for us will be found both in our own Society and with the representatives of the daily press.

Our testimony to Peace was revived at this time by Phebe C. Wright, of New York Yearly Meeting, who said in substance: The answer to this query shows you are clear, but I would ask, Do you do all you can to promote peace in your homes, and on all occasions? We as a Religious Society are a peace-loving people, and Friends make a higher profession in this respect than any other denomination. It offers such a broad field of labor for our younger members that I invite you to use your influence to promote peace and arbitration, which are now claiming so much of the thought of the best minds of our country and of many other countries, looking to the establishment of a Court of Arbitration.

The consideration of the question whether the meeting for worship usually held in the middle of the week convene on the morning of Fourth-day, or conform to the usage recently adopted of holding it in the evening, was weightily considered, resulting in the decision to hold public worship in both houses on Fourth-day evening, and have two business sessions on that day.

The annual meeting of the Temperance Committee was held in the evening, and was largely attended. It was opened by a few remarks by the President, Dr. Edward Janney. In introducing the speaker, John J. Cornell, he referred to the danger our country is exposed to from the terrible ravages of the Drink-traffic. John J. Cornell in his address said the time has come when we no longer need to argue the question of intoxicating liquors as a beverage; but another question arises, How can we best grapple with the evil? How can we as Friends best plan to eradicate it? If we could convince all men that it is wrong, we would have no need of law; we must have moral suasion first,—educate the children. But all moral reforms to be successful must be followed by law. At this point the speaker referred to the work of John Woolman and other Friends in the Anti-Slavery cause; they enlightened the people, and Pennsylvania and New Jersey passed laws to prohibit slavery within their borders. So we have to make prohibitory laws to restrain and restrict in this evil. The meeting was a satisfactory one, and calculated to awaken renewed thought and activity.

In men's meeting, Fourth-day, the Committee to look after isolated members made a report which was accepted; and the Committee was continued for further service. Levi K. Brown proposed that a census be taken of our membership, it being the custom to do so every ten years. No action was taken. The report of the Committee on Philanthropic Labor was read and approved. The Committee ask for an appropriation of \$150.

The 4th, 5th, 6th, and 7th Queries were read and answered. Considerable discussion, in a friendly, Christian spirit, was elicited by the 4th Query and answer thereto. It was thought that patience and Christian charity would do more to bring the erring into the fold than harsh measures, as it is better to restore and retain than to sever the ties that may eventually bring all together in one harmonious whole. This sentiment seemed to prevail; and after the reading of the epistle from Illinois, the meeting closed with a feeling of charity and love prevailing.

In women's branch the first business of the morning was the reading and consideration of the report of the Central Committee on First-day schools, which was adopted with the recommendation that a nominating committee be named, to unite with men Friends in bringing forward a new committee which will serve as a Standing Committee. Attention was called to the necessity that the appointments circulate, so that those who are named shall not be hindered in the service by other appointments.

The report of the Committee to disburse the Fair Hill fund was read. Men's meeting sent word that they proposed that the Committee on Education take charge of the whole subject. This did not meet with entire approval, yet the meeting agreed to leave it with the Committee already appointed, with the addition of a few more names. The report of the Committee to visit subordinate meetings was then read and accepted, and the Committee continued, with the suggestion that monthly meetings add from their own membership others who will aid in this important work.

Both meeting-houses were open for public worship in the evening. Large and attentive audiences gathered, and the spoken word was handed forth with great clearness.

In men's meeting, Fifth-day, Levi L. Benson expressed a desire to visit the women's meeting. Jesse Hoge and Darlington Hoopes signified their willingness to accompany him. The meeting expressed its concurrence, and they were set at liberty to pay their proposed visit in gospel love.

Women's meeting reported they had appointed Emily Canby on the committee to visit subordinate meetings, which was united with. Eli M. Lamb suggested that the committee's expenses should be paid by the meeting, as many of the committee could not afford the cost of travel and therefore could not attend to the duties required. It was a concern of the meeting which imposed the burden, and therefore the meeting should pay for it. This occasioned some discussion; after which it was agreed to appropriate \$100 for the use of the committee.

After the matter had been settled and the clerk had made the minute, a Friend revived it by expressing his doubts and fears as to the result. After a number had spoken, J. J. Cornell arose and said he was a lover of order; after a question had been decided and the clerk had made his minute, it was certainly out of order to revive it again. He thought much time had been wasted in the meeting, and much improvement is needed in this respect in some of our meetings. A memorial for Lydia Lupton, of

Hopewell, Va., and one for Sarah B. Farquhar, of Sandy Spring, Md., were read, to the edification of the meeting. They were valuable members of the Society.

In women's branch, after the reading of the minutes of the preceding day we were called to consider the words of the Psalmist: "The mercies of the Lord are new every morning," and encouraged to put ourselves in the attitude of those who realize the spiritual meaning of this, which was so true in his own experience. Levi L. Benson, Darlington Hoopes, and Jesse Hoge, paid us an acceptable visit at this time. They all spoke, each delivering his message with great tenderness. A brief supplication followed, and unity was expressed with what had been handed forth. The business was resumed by the appointing of a nominating committee to propose fifteen names to be added to the Representative Committee, as is usually done. (A similar number from men's branch were also to be named.)

The subject of Impure Literature was revived, with a proposition to refer it to a small committee to consider the propriety of preparing an appeal to be addressed to the representatives of the public press, and if way opens to prepare such an appeal. There was great unity all over the meeting with the course this matter had taken. The committee was named. In the afternoon the minutes of the Representative Committee claimed attention. Much unity was expressed with the details, which embraced a full statement of the financial condition of the yearly meeting. As these were read, a feeling of thankfulness arose that Friends in the past had made bequests which enable the meeting to increase the educational advantages of their children. The report of the Indian Committee was read and united with. The report of the Philanthropic Labor Committee was also read. At this point Mary R. Heald made a very tender appeal for the feathered creatures. The young women were urged to dispense with such ornaments in their attire as are obtained by torture, it having been affirmed that to retain the perfection of plumage the feathers must be removed while the birds are alive. The report was united with, also the proposition to appropriate \$150 for its use. Names of Friends to serve as the Central Committee on First-day schools were read and approved. The names of Friends to distribute the INTELLIGENCER AND JOURNAL were offered and united with, (this committee is composed of women). The report of the committee in charge of the erection of the new meeting-house was read; the summary showed a deficiency of about \$1,000 which it was believed Baltimore Friends would assume. The standing committee on isolated members made a brief report and were continued. Several of the epistles to other yearly meetings were read at this time. They were excellent papers, evincing an intelligent understanding and appreciation of the principles and testimonies held by us on the part of the committee, very many of whom are yet in the bloom of youth. The committee to prepare as way opened, an appeal to the editors and representatives of the public press, presented the following, which was fully united with.

To the Editors of the Public Press within the limits of Baltimore Yearly Meeting

In the Annual Assembly of Baltimore Yearly Meeting composed of the Friends of Maryland, parts of Pennsylvania, and Virginia, a deep concern has pervaded the Women's Branch of this body respecting the demoralizing influence of much that is presented in the columns of the Public Press.

We, as conservators of the home,—the wives, mothers, and daughters,—do most earnestly ask your cooperation in an effort to mitigate this growing evil, whose baleful influence is felt in all the ramifications of social life.

We ask this of you, realizing the great and irresistible influence exerted by the daily paper, coming as it does into every household.

Believing that you will be willing to aid in this great reform we are—

Your friends,

Signed on behalf of the Yearly Meeting.

It was proposed to send the appeal to men's meeting for their cooperation. That body gave it their cordial approval, but thought it would be more effective to go forth as a distinctive work of the women's branch, with their endorsement. Several other nominating committees reported at this session, which was continued beyond the usual hour of adjournment.

At the opening of women's meeting on Sixth-day Louisa J. Roberts expressed a concern which had been resting upon her to visit in gospel love the men's meeting. Sarah Jane Dare gave expression to a similar concern; both were united with, and on inquiry the time was found to be convenient. Esther Lamb was named to accompany them. The remaining epistles to other yearly meetings were read; they were united with as very satisfactory, and a few friends named to transcribe and forward. A messenger from men's branch, came in with a request for Isaac Wilson and Joel Birdsall that they be privileged to sit with us after the conclusion of the business. This was granted. Two memorials, forwarded by the Representative Committee, one for Sarah B. Farquhar, and one for Lydia Lupton, were read at this time.

After considerable routine work was accomplished, the meeting settled into profound quiet, a few giving expression to the overflow of gratitude for all the favors of the week just closing. The final minute was read, and men's meeting was informed thereof. The two before-mentioned Friends then came in and sat with us. Both had words of encouragement and of hopeful looking forward to blessed results that it was said cannot fail to be realized after such a pentecostal feast as we have partaken of together. The closing was indeed a season long to be remembered.

L. J. R.

THERE is a time for the eye to dwell on the printed page, but there is also a time to gaze on earth air, ocean, and the starry sky; there is a time to look into the face of our fellow beings, the bright and laughing face, or the sad and sorrowing one; there is a time too, for silent, solitary, spiritual looking inward into the soul itself, and thus by no one function, but by many, does man build up his moral life.
—Henry Reed.

JOHN WOOLMAN'S VISIT TO THE INDIANS AT WYALUSING.

(Continued from Last Week.)

TWELFTH of Sixth month being the first of the week and a rainy day, we continued in our tent, and I was led to think on the nature of the exercises which hath attended me. Love was the first motion, and thence a concern arose to spend some time with the Indians, that I might feel and understand their life and the spirit they live in, if happily I might receive some instruction from them, or they might be in any degree helped forward by my following the leadings of truth among them; and as it pleased the Lord to make way for my going at a time when the troubles of war were increasing, and when, by reason of much wet weather, traveling was more difficult than usual at that season, I looked upon it as a more favorable opportunity to season my mind, and to bring me into a nearer sympathy with them. As mine eye was to the great Father of Mercies, humbly desiring to learn his will concerning me, I was made quiet and content.

Our guide's horse strayed, though hopped, in the night, and after searching some time for him his footsteps were discovered in the path going back, whereupon my kind companion went off in the rain, and after about seven hours returned with him. Here we lodged again, tying up our horses before we went to bed, and loosing them to feed about break of day.

Thirteenth of Sixth month. The sun appearing, we set forward, and as I rode over the barren hills my meditations were on the alterations in the circumstances of the natives of this land since the coming in of the English. The lands near the sea are conveniently situated for fishing; the lands near the rivers, where the tides flow, and some above, are in many places fertile, and not mountainous, while the changing of the tides makes passing up and down easy with any kind of traffic. The natives have in some places, for trifling considerations, sold their inheritance so favorably situated, and in other places have been driven back by superior force; their way of clothing themselves is also altered from what it was, and they being far removed from us have to pass over mountains, swamps, and barren deserts, so that traveling is very troublesome in bringing their skins and furs to trade with us. By the extension of English settlements, and partly by the increase of English hunters, the wild beasts on which the natives chiefly depend for subsistence are not so plentiful as they were, and people too often, for the sake of gain, induce them to waste their skins and furs in purchasing a liquor which tends to the ruin of them and their families.

My own will and desires were now very much broken, and my heart was with much earnestness turned to the Lord, to whom alone I looked for help in the dangers before me. I had a prospect of the English along the coast for upwards of nine hundred miles, where I traveled, and their favorable situation and the difficulties attending the natives as well as the negroes in many places were open before me. A

weighty and heavenly care came over my mind, and love filled my heart towards all mankind, in which I felt a strong engagement that we might be obedient to the Lord while in tender mercy he is yet calling to us, and that we might so attend to pure universal righteousness as to give no just cause of offense to the gentiles who do not profess Christianity, whether they be the blacks from Africa, or the native inhabitants of this continent. Here I was led into a close and laborious inquiry whether I, as an individual, kept clear from all things which tended to stir up or were connected with wars, either in this land or in Africa; my heart was deeply concerned that in future I might in all things keep steadily to the pure truth, and live and walk in the plainness and simplicity of a sincere follower of Christ. In this lonely journey I did greatly bewail the spreading of a wrong spirit, believing that the prosperous, convenient situation of the English would require a constant attention in us to Divine love and wisdom in order to their being guided and supported in a way answerable to the will of that good, gracious, and Almighty Being, who hath an equal regard to all mankind. And here luxury and covetousness, with the numerous oppressions and other evils attending them, appeared very afflicting to me, and I felt in that which is immutable that the seeds of great calamity and desolation are sown and growing fast on this continent. Nor have I words sufficient to set forth the longing I then felt, that we who are placed along the coast, and have tasted the love and goodness of God, might arise in the strength thereof, and like faithful messengers labor to check the growth of these seeds, that they may not ripen to the ruin of our posterity.

On reaching the Indian settlement at Wyoming,¹ we were told that an Indian runner had been at that

[The point at which Woolman reached the North Branch of the Susquehanna, and which he here calls Wyoming, was doubtless at or near where Wilkes-Barre now stands. There were a few Indians, mostly Delawares, living in the Valley, and white settlers had begun to come. But Woolman makes no allusions to any of the latter, and perhaps he encountered none. In the previous autumn, (1762), a party of men from Connecticut, said to be two hundred in number, had come into the Valley, unaccompanied by women or children, and had cleared considerable fields, and sowed them with wheat, after which they returned to Connecticut. In the spring or early summer of this year, (1763)—in time to reap their grain,—they came back with their families, designing to make a permanent settlement; and as it was near the middle of June that Woolman reached the Valley, it seems surprising that he does not mention seeing them.

The Valley was, at this time, at the beginning of sad experiences. The Indians had long known its richness, and jealously repelled the white men's advances toward it. In the Fourth month of this year, a few weeks before Woolman arrived, the cabin of Teedyuscung, the chief of the Delaware Indians, who had lived at Wyoming for some time, was set on fire while he was lying within, and he was burned to death. Though addicted to intemperance, he had been an able leader, and his people, offended at his murder, (which was by some ascribed to the whites, though instigated, no doubt, by the Iroquois—Five Nations—of New York), and angry at the encroachments on their lands, fell upon the white settlers, on the 15th of Tenth month, and killed about twenty of them, and drove the others away. (They did not return until six years later.)

What is known as the "Massacre of Wyoming" took place Seventh month 3, 1778. Historians of later time, after careful investigation, agree that it was a border battle, of ordinary character, and that its "massacre" character has been much exaggerated.]

place a day or two before us, and brought news of the Indians having taken an English fort westward, and destroyed the people, and that they were endeavoring to take another; also that another Indian runner came there about the middle of the previous night from a town about ten miles from Wehalaosing, and brought the news that some Indian warriors from distant parts came to that town with two English scalps, and told the people that it was war with the English.

Our guides took us to the house of a very ancient man. Soon after we had put in our baggage there came a man from another Indian house some distance off. Perceiving there was a man near the door I went out; the man had a tomahawk wrapped under his match-coat out of sight. As I approached him he took it in his hand; I went forward, and, speaking to him in a friendly way, perceived he understood some English. My companion joining me, we had some talk with him concerning the nature of our visit in these parts; he then went into the house with us, and, talking with our guides, soon appeared friendly, sat down and smoked his pipe. Though taking his hatchet in his hand at the instant I drew near to him had a disagreeable appearance, I believe he had no other intent than to be in readiness in case any violence were offered to him.

On hearing the news brought by these Indian runners, and being told by the Indians where we lodged that the Indians about Wyoming expected in a few days to move to some larger towns, I thought, to all outward appearance, it would be dangerous traveling at this time. After a hard day's journey I was brought into a painful exercise at night, in which I had to trace back and view the steps I had taken from my first moving in the visit; and though I had to bewail some weakness which at times had attended me, yet I could not find that I had ever given way to wilful disobedience. Believing I had, under a sense of duty, come thus far, I was now earnest in spirit, beseeching the Lord to show me what I ought to do. In this great distress I grew jealous of myself, lest the desire of reputation as a man firmly settled to persevere through dangers, or the fear of disgrace from my returning without performing the visit, might have some place in me. Full of these thoughts, I lay great part of the night, while my beloved companion slept by me, till the Lord, my gracious Father, who saw the conflicts of my soul, was pleased to give quietness. Then I was again strengthened to commit my life and all things relating thereto, into his heavenly hands, and got a little sleep towards day.

Fourteenth of Sixth month. We sought out and visited all the Indians hereabouts that we could meet with, in number about twenty. They were chiefly in one place, about a mile from where we lodged. I expressed to them the care I had on my mind for their good, and told them that true love had made me willing thus to leave my family to come and see the Indians and speak with them in their houses. Some of them appeared kind and friendly. After taking leave of them, we went up the river Susquehanna about three miles, to the house of an Indian called

Jacob January. He had killed his hog, and the women were making of bread and preparing to move up the river. Here our pilots had left their canoe when they came down in the spring, and lying dry it had become leaky. This detained us some hours, so that we had a good deal of friendly conversation with the family; and, eating dinner with them, we made them some small presents. Then putting our baggage into the canoe, some of them pushed slowly up the stream, and the rest of us rode our horses. We swam them over a creek called Lahawahamunk,³ and pitched our tent above it in the evening. In a sense of God's goodness in helping me in my distress, sustaining me under trials, and inclining my heart to trust in him, I lay down in a humble, bowed frame of mind, and had a comfortable night's lodging.

Fifteenth of Sixth month. We proceeded forward till the afternoon, when a storm appearing, we met our canoe at an appointed place and stayed all night, the rain continuing so heavy that it beat through our tent and wet both us and our baggage. The next day we found abundance of trees blown down by the storm yesterday, and had occasion reverently to consider the kind dealings of the Lord, who provided a safe place for us in a valley while this storm continued. We were much hindered by the trees which had fallen across our path, and in some swamps our way was so stopped that we got through with extreme difficulty. I had this day often to consider myself as a sojourner in this world. A belief in the all sufficiency of God to support his people in their pilgrimage felt comfortable to me, and I was industriously employed to get to a state of perfect resignation.

We seldom saw our canoe but at appointed places, by reason of the path going off from the river. This afternoon Job Chillaway,⁴ an Indian from Wehalaosing, who talks good English and is acquainted with several people in and about Philadelphia, met our people on the river. Understanding where we expected to lodge, he pushed back about six miles, and came to us after night; and in a while our own canoe arrived, it being hard work pushing up the stream. Job told us that an Indian came in haste to their town yesterday and told them that three warriors from a distance lodged in a town above Wehalaosing a few nights past, and that these three men were going against the English at Juniata. Job was going down the river to the province-store at Shamokin.⁵ Though I was so far favored with health as to

³ Woodman and his companions, after reaching the river, followed it up to Wyalising, with a canoe in the stream, and horses on the banks. The creek where they swam here was no doubt the Lackawanna. The distance from Wilkes-Barre to Wyalising is about sixty miles.

⁴ This Indian, a Delaware, is particularly renowned in the minds of the Mohocks of this time. He was active at this time at Wyalising, in 1757. He is reported to be 1779 he became a native assistant to the missionaries. In 1783, he had been a special favorite of Sr W. White Johnson, and one of his interpreters. After a life of great piety and integrity, he died in Oct. in Sixth month, 1791. He was then residing in company with Kisbergers.

⁵ Shamokin, a town of the Susquehanna Indian Nation, on the Susquehanna, about 100 miles from the mouth of the river, now the

continue traveling, yet, through the various difficulties in our journey, and the different way of living from which I had been used to, I grew sick. The news of these warriors being on their march so near us, and not knowing whether we might not fall in with them, was a fresh trial of my faith; and though, through the strength of Divine love, I had several times been enabled to commit myself to the Divine disposal, I still found the want of a renewal of my strength, that I might be able to persevere therein; and my cries for help were put up to the Lord, who, in great mercy, gave me a resigned heart, in which I found quietness.

(Conclusion Next Week.)

OLD YEARLY MEETING ADVICES.

SOME advices given forth from time to time by the Yearly Meetings for New Jersey and Pennsylvania held alternately at Burlington and Philadelphia.

1710. It is the sense of this Meeting according to the Epistle that was sent to us from London, that in all stations and conditions, whilst we are in unity with the body of Friends, we be careful that we act nor do anything contrary to the principle or discipline of Truth, because there is no person that is a member that is exempted from the censure of the Church. An article of the Book of Discipline which wholly forbids brother to law with brother (before disowned) upon any account, was desired by the Quarterly Meeting of Philadelphia to be further considered; which having been under the consideration of this Meeting, who for the present, upon emergent occasions are willing to entrust the Monthly Meetings to be judges, if there be a necessity for any Law Suit between Friend and Friend, to give such liberty, provided it be not to the reproach of Truth, both parties requesting the same, and declaring there is no other way to obtain their right.

As to Friends going to law one with another whilst both in unity with the Body, or before one party be denied as an evil-doer or unjust person by some meeting having authority, according to our Holy order and known Discipline, it is the sense of this meeting that such things may not be admitted amongst us, but that as one party is ever in the wrong, that that may be found out, and proper advice given and justice demanded, which if neglected or refused, let such be testified against as unworthy of our communion

town of Sunbury, county-seat of Northumberland county. (There is a town, Shamokin, in that county, about 20 miles from Sunbury, but it is of comparatively recent origin, having grown up since 1834.) This place the Indians regarded as an important post, as it commanded the passage of the river, and their war parties made it a place to rest or fit out. Sassoonan, one of those whose name is signed to a deed of land, executed at Philadelphia in 1718, removed to Shamokin, somewhat later, (he was there in 1728), and seems to have led the movement of his tribe from the Delaware region to the Susquehanna. A very able Indian chief, Shikellimy, a Cayuga, lived at Shamokin for several years as a representative of the Iroquois. He was the father of the celebrated chief, Logan, and died in 1749. The Moravians, at the request of Shikellimy, built a smith-shop at Shamokin, in 1747, and provided a blacksmith. In 1756, the provincial authorities built a fort, Fort Augusta, near the place,—about a mile above,—and this was doubtless the "province-store" to which Job Chulawny was now going.]

and that without too much delay, that when the law of God, of Righteousness, and Truth doth not take place in the heart the laws of men may curb and punish the wrong and injustice; but if any fall short in his temporal affairs by some unseen and unavoidable accidents, (not having intruded into things out of his way as aforesaid) and shall offer his all to his creditors, and when that falls short his Person is also at their disposal, Let such have compassion among you, and aid as an object of Christian Charity, and help him as a brother; he hath done what he can, and we can expect no further from him.

1719. And let all Friends proceed in this manner, viz.: The party who finds he hath reason of complaint, first himself calmly and friendly to speak, or (if he lives at a distance) write to the party by whom he apprehends himself injured, or to be in danger of suffering in his just rights, and endeavor by gentle means, in a brotherly and loving manner, to obtain his right; but if that do not prevail, or the same be refused or neglected, then let him (or if they live at a distance, and belong to different meetings, some Friend whom he may write to, or empower on his behalf) take one or two with him, either the overseers, or other judicious and discreet Friends, and in like friendly manner make his claim or demand; while Friends so accompanying the complainant are to use their endeavors and give their utmost assistance to have the matter justly and expeditiously ended either by the parties themselves, or by the immediate assistance of those Friends, who, if the matter appears plain and easy, or to be an uncontested debt, or that it be a bond against which no reasonable objection is made by the debtor, are to advise the party complained of to make satisfaction, without carrying the matter further, either to arbitrators or the meeting. But if there do appear in the matter to be unsettled differences in accounts, or reason of debate, then if they cannot persuade the determination thereof, by the parties themselves, or cannot procure the same by such, their advice and assistance, they are to admonish and persuade the parties to choose referees, or arbitrators, and that they engage themselves to stand to and abide by the determination of such referees or arbitrators, as is usual in the like cases.

If either of the said parties refuse such advice, or endeavors to end the difference, he or she so refusing may be complained of to the respective monthly meeting, and notice is to be given him or her, of such intention of complaint, that they may attend (as they ought to do) the meeting at the time appointed.

When the same is brought into the meeting, the first inquiry there should be, whether the above-mentioned Gospel order hath been duly observed; if not, the complaint ought to be referred back thereto and no notice taken of such complaint in the minutes. . . .

1751. On consideration of the Query from Chester Quarterly Meeting, "Whether the Rule of Discipline against Friends going to law with each other is intended to include controversies concerning real estates wherein titles of land are concerned." After perusal of that Rule of our Discipline, this

Meeting is unanimously of opinion that the intention of our Discipline is to discourage and prevent all Law Suits as much as possible, and that to the provision and allowance therein expressed, nothing more is necessary to add, save that in cases of difficulty in which referees, or arbitrators may be at a loss how to come to a right judgment for want of knowledge in the laws, it be recommended to such arbitrators or referees at the expense of the contending parties to take the opinion of counsel learned in the laws, in order to their being enabled to come to just and lawful judgment of the matter submitted to their determination.

SCRIPTURE LESSON No. 43.

ELEVENTH MONTH 17, 18-9.

DAVID'S LAST WORDS.

GOLDEN TEXT:—"He hath made with me an everlasting covenant, ordered in all things, and sure."—

2 Samuel, 23: 5.

READ 2 Samuel 23: 1-7.

We are not to understand these "Last Words" of our lesson as the final or closing utterances of David previous to his decease, but as the gathering up and expressing of his best thoughts in view of the experiences through which his checkered pathway had brought him. His grief for Absalom was so great that Joab found it his duty to remonstrate with him, and remind him of the people who were undecided and in a ferment, not knowing what to do. David is made acquainted with the condition of the people, and is induced to put away his grief and return to Jerusalem to resume authority. The rebellion is not immediately quelled, and Israelite confronts Israelite in the strife of war. Many of the circumstances that occur during this period are of thrilling interest, but are not made the subject of study.

It is when David finds himself at the head of his people, and the fightings and famines that afflicted them are among the things that are past, that he indites the beautiful psalm which we have in these "Last Words."

Many learned scholars have regarded this prophecy concerning the Messiah as referring to Jesus, a descendant of David, whom he saw in the future of his nation as the Ruler over men, and through whom the Divine promise of succession to the kingdom would be fulfilled. It is as full of instruction to us in our own time when we regard it as referring to a wise ruler, one whom God will make a blessing to the people that have him for their sovereign.

David the son of Jesse, etc. In introducing the subject of his reflections, David takes great care that the authorship shall not be questioned. He reminds those who hear him that he is the man who was placed on the throne, and set apart to be the king by the anointing which he received,—adding also that he, the writer, is known as the sweet psalmist of Israel. This is not said in a boastful manner, but as an introduction to what follows.

The spirit of the Lord spake by me, etc. In this he claims to have been inspired, and his message to be a revelation from God, and because he is made the messenger of God to them, he gives forth for their instruction these Divine words.

One that ruleth, etc. He must be to those over whom he is set as the bright shining of the sun is to the earth. We all know how beautiful this light is, and how everything is enlivened after the rain is over, and the clear shining of the sun makes every tiny drop as a sparkling jewel. The ruler must bring out and develop all that is true and good and beautiful among his subjects.

Verily my house is not so with God. David is sadly conscious of the evil course of his sons, who should have succeeded him, yet he believes that the covenant which was revealed to him must be fulfilled, and although the present prospect is dark and unpromising, the ungodly will yet find that there is a power comparable to him who is armed with iron, and this power will finally triumph.

Herein David found consolation, and it is for us to see his hope fulfilled in that from his seed was born One who taught men how this power of God becomes man's salvation.

What we are assured of is ours, and we know that it belongs to us, as surely as if we could see and handle it. We may not be able to describe the process through which it has come into our possession: like the man in the days of Jesus, we can only say, "One thing I know, that whereas I was blind, now I see."

But our assurance must have a basis and foundation in truth,—in the everlasting verities of God. Anything short of this will not stand in the hour of need.

The "full assurance of faith," of which the apostle speaks, is essential to the proper recognition of the right of God to rule our lives and direct our steps.

The everlasting reign of the "Ruler of Men," that was such a comfort and hope to David by the perpetuity of its continuance, points to a Spiritual leader and controller of the hearts of men, of which his own reign had been a type and figure, as divinely appointed to lead the "chosen people" upward and onward to higher levels of attainment, both in worldly good and in the revealings of the "Holy Spirit" to their inward perceptions. In this view we can regard Jesus as the first and greatest of the posterity of David who carried out and filled up the ideal that David had presented to his mind in the "Ruler of Men," so graphically described by him in the beautiful psalm which forms the subject of our lesson: and we can unite with him fully when he declares, "He that ruleth over men must be just, ruling in the fear," and we may add, "in the love of God."

NOTES ON THE LESSON.

In his enumeration of the qualities that should adorn the character of a ruler, David rises to the very summit of excellence. He shows his own advance to higher levels of thought and feeling, the result, doubtless, of a nearer approach to the Divine ideal, and the closer walking with God in the later years of his life. Many regard his transcendently beautiful delineation of the Ruler of men as prophetic, and pointing to Jesus. While having no controversy with any one on this subject, it has ever been pleas-

ant and inspiring to think that a time may come, if not in the near, yet in the far-off future, when he that ruleth over men might be just ruling in the fear of God. We make slow progress, but the fact that men are asking that those who govern them shall rule in righteousness is a promise of better things yet to come.

David was not in doubt about his own house,—he saw no prospect of his inspired and inspiring thought finding its fulfillment in the immediate heir to the throne; but with the same unflinching trust in God, that had been his stay and support in the darkest hour of his eventful life, he believed such a ruler or rulers would arise, and bring hope and confidence to the souls of men.

The word-picture here given to us is in the most exalted strain of him who delighted to speak of himself as the "sweet singer of Israel." Let us find in his words an inspiration to noble effort, first for ourselves, that in the little spot given us to rule over and improve, we may worthily fill up our measure of service, and as this brings us into relations with others, we may give evidence that the spirit of the Lord is with us, and "his word in" or upon our lips.

SUCCESS is not a question of sex. When the question of sex comes up as between employer and employee, it is usually because the woman will not forget her sex, nor allow others to forget it. Not many months ago a woman who makes a large income from her pen, but who never held any office position, said to another woman holding such a position, with some hesitancy, "Do you not find it embarrassing to be put in such relations with men? I do not suppose they offer you a chair when you go in their offices, or that they would close a window for you, for instance." "You mean to ask me if we hold ourselves in the drawing-room attitude?" was asked. "Yes, yes!" was the response, eagerly. "No, we do not. We forget the question of sex. I forget I am a woman, and I am sure they never make me remember it. It is to this I attribute whatever success I have gained, and will always feel deeply indebted to them. . . ."

The woman who finds it necessary to remember her sex to preserve her womanliness would, were it possible to subject her mental elements to a chemical test, find that that element in her nature was in danger of disappearing, because of its minuteness, if subjected to the mere business of living.—*Exchange.*

WHAT mean we by our lives? By our constant demand that all things shall minister to us? By our refusal to go about doing good; by our impatience and repudiation of duties that demand self-sacrifice; by our unreadiness to take pains; to bear burdens; to meet unpleasantnesses for the sake of others? By all this, what mean we, while we call Christ "Lord"? Can it be that we are of those who cry "Lord, Lord! but do not the will of the Heavenly Father"?—*R. F. Alsop.*

It requires nice stepping for those who walk close together, to avoid jostling one another.

WINTER EVENINGS.

We are now in that season of the year when the shortening days give us the long evening hours between the setting sun and bed-time. These are not, as in days of old, dimly-lighted seasons, for the application of science and art to discovery, have caused darkness to be almost obliterated, and brilliant artificial lights leave us little room to mourn after the departing sunshine. But how we shall best use these fleeting moments, is a grave question to be met in most households, and one that each must decide for itself.

There are, however, some pursuits that seem by right to belong to these long evening hours, when the warmth, light, and cheer inside, are intensified by cold and darkness outside. And one of these pursuits, and one of the most charming, is that of reading. It is also one whose variety is almost endless, and that too if one keeps strictly in the line of good literature. For with this, as with the opportunity for fine artificial lights, modern improvements have placed good books within easy reach of almost all classes. Only let there be the earnest desire, and avenues will be opened for a literary feast. Some one has well said that "good literature is like nature: there is always enough of it, always the unexplored, always the surprise.

What other form of enjoyment is there that all can so easily command? or what is there so well calculated to enlarge the mind as good, wholesome reading? Not only the few that pursue a course of study in college or university, but the many, can grow wise at home if good use is made of these evening hours. Comparatively few can travel to foreign lands, but the masses can view them through the eyes of others by means of books of travel. And it is not a bad way to do it, if only one brings the contented spirit to the aid of the willing mind in thus acquiring knowledge without the expense and discomfort of journeyings. Give the evening hours a chance and they will enrich life. Let it be done in an orderly, systematic way, not dissipate the time by a dip here and a launch there, but select one good sea upon which to embark and explore it well, ere the sails be set for another port.

Another good comes from quiet evenings at home after a day of toil. The haste, and noise and fret of the day being over, the physical can be at rest, while the mind can take its exercise, and in the quiet too, the spirit is being refreshed and made ready for another day of struggle with material things, which it is the lot of most to encounter. True there are those whose days are given to mental strain, these may need other methods for their leisure, but for the physical toilers let us plead for their evening hours to be mainly given to the delights of good books enjoyed by a united family circle.

We call attention to the advertisement elsewhere of periodicals which may be subscribed for in connection with the INTELLIGENCER AND JOURNAL. A few changes have been made in the list. Cash should accompany all orders, as we are obliged to forward it with our orders to the publishers.

FRIENDS' CENTRAL SCHOOL, (now at 15th and Race streets), was started Ninth month 1, 1845, and not 1854, as the transposition of two figures in the article by J. M. T., Jr., in our issue of Tenth month 26, made appear.

MARRIAGES.

EASTBURN—CHANDLER.—At the residence of the bride's parents, by Friends' ceremony, Tenth month 9th, 1889, Louis B. Eastburn, of Mill Creek Hundred, Del., son of William M. and Mary E. Eastburn, and Anna M., daughter of Edwin A. and Hannah H. Chandler, of New Garden township, Chester county, Pa.

FURNAS—CLIFFTON.—By Friends' ceremony, on Fifth-day, Tenth month 31st, 1889, at the residence of the bride's mother, John D. Furnas, son of Davis and the late Elizabeth S. Furnas, of Wayne township, Warren county, Ohio, and Ella D., daughter of Sarah L. and the late William Clifton, of Plainfield, N. J.

GARWOOD—PITMAN.—Tenth month 29th, 1889, under the care of Haddonfield Monthly Meeting, at Race-street meeting-house, Joseph Burden Garwood, son of Barzillai and Margaretta J. Garwood, of Mt. Holly, N. J., and Ellen Lowden Pitman, daughter of the late Jacob and Mary H. Pitman, of Camden county, N. J.

JONES—HOPKINS.—On the 24th of Tenth month, 1889, at the residence of the bride's brother, Isaac F. Hopkins, under the care of the Monthly Meeting of Friends of Philadelphia, John Barclay Jones, son of Charles and Ann M. Jones, of Germantown, and Helen Lee, daughter of Robert G. and Hetty Ann Hopkins, of Philadelphia.

LOVETT—TORBERT.—At the residence of the bride's mother, by Friends' ceremony, Tenth month 30th, 1889, William Penn Lovett, of Philadelphia, son of Mercy Ann and the late David H. Lovett, of Newtown, Bucks county, Pa., and Emeline C., daughter of Anna Mary and the late Samuel Torbert, of Philadelphia, Pa.

TAYLOR—AMOSS.—Tenth month 17th, 1889, at the residence of the bride's father, in Harford county, Md., under the care of Little Falls Monthly Meeting, David H. Taylor, son of Elizabeth S. and the late T. Clarkson Taylor, of Wilmington, Del., and Mary Liza, daughter of Gilbert and the late Ruthanna P. Amos.

DEATHS.

BRELSFORD.—Fourth month 31st, 1889, at the Old Man's Home, West Philadelphia, John Brelsford, aged 78 years. Interment at Fairfax Friends' ground.

COATES.—In West Philadelphia, Tenth month 24th, 1889, Elmer Ryan Coates, youngest son of the late Caleb Coates, aged 57 years, 1 month, 9 days.

DUTTON.—On the 18th of Tenth month, 1889, at Waterford, Loudoun county, Va., Lucina Schooley, wife of John B. Dutton, in the 83d year of her age, a lifelong member of Fairfax Monthly Meeting.

GARRIGUES.—In Philadelphia, on First-day morning, Eleventh month 3d, 1889, Edward B. Garrigues, having entered his 95th year last month.

JARRETT.—Eleventh month 1st, 1889, Mary W., only child of Charles and Anne M. Jarrett, aged 13 months.

KING.—In Philadelphia, Tenth month 31st, 1889, Miles King, aged 19 years.

McHVAIN.—On the morning of Tenth month 21st, 1889, at the residence of his parents, Woodbine, Pa., Abraham R., eldest son of J. Gibson and Elizabeth M. McHvain.

Mingled with the sorrow of this bereavement, is the feeling that all is joy and gladness now for the loved one, whose sufferings for the last fifteen months have caused so many heartaches to those who have carefully watched and nursed him.

In the twenty-first year of his age, with everything in life to render its pleasures and allurements attractive, he was called upon to surrender all and be prepared to submit to his Heavenly Father's will.

Patience and loving thoughtfulness for his parents and those around him characterized him until the end, which came so quietly that the closest watcher only could discern the moment when his sweet spirit passed from earth to eternity, and another life entered the realms of everlasting peace and joy. "Blessed are the pure in heart for they shall see God."

OFFLEY.—Tenth month, 30th, 1889, Joseph W. Offley, in the 45th year of his age; a member of Baltimore Monthly Meeting. A valued Friend.

PAINTER.—In West Chester, Pa., Tenth month 29th, 1889, Cyrus P. Painter, in the 63d year of his age; a member of Birmingham Monthly Meeting of Friends.

PAXSON.—Eleventh month 1st, 1889, Emma S., widow of Jacob L. Paxson, in her 81st year; a member of the Monthly Meeting of Friends held at Greenstreet, Philadelphia.

PEDRICK.—In West Philadelphia, Tenth month 28th, 1889, Elizabeth A., wid. w. of George L. Pedrick, in her 60th year, a member of the Monthly Meeting of Friends held at Greenstreet, Philadelphia.

ROBERTS.—Tenth month 30th, 1889, Tacy A. Roberts, interment from residence of Edwin C. Walton, Willow Grove, Pa.

WOODROW.—On Tenth month 26th, 1889, at the residence of her son and son-in-law, Joel Pennington, near Oxford, Pennsylvania, Ann Way, widow of the late James Woodrow of Little Britain, Lancaster county, Pa., aged 80 years, 6 months, and 23 days.

There has passed from this world a woman, who by her quiet, unobtrusive life, has in many instances, as of age of kindred, been a blessing to her friends.

Her life was characterized by a most loving and happy as well as a most devoted and unselfish devotion to her family and friends.

She was a member of the Friends' Monthly Meeting in

herited from her ancestors, who were early and conspicuous sufferers for conscience' sake.

A kind thoughtful parent, a fond neighbor, and a loving friend. During her long illness, though suffering intensely, not a murmur escaped her lips; everything was always right. She often expressed a perfect willingness to endure any and all suffering; but was ready at any time to answer the summons.

This tribute is due to her from the writer, who has known her intimately for nearly 40 years, and who has been the recipient of innumerable acts of kindness at her hands.

Farewell, dear loved one, may we whom thou hast left behind, and upon whom thou hast lavished thy love with a free hand, so live as to meet thee beyond the river. Farewell!

P.

BLAKEY BUNTING.

[Memorial read at meeting of Bucks First-day School Union, at Wrightstown, Pa., Ninth month 28th, 1899.]

In presenting this memorial of our deceased friend, Blakey Bunting, we desire not to eulogize the dead, for nothing could be more distasteful to his modest, retiring nature, than idle words, but to thus briefly bear testimony to his exemplary life and Christian character, for our encouragement, and as an example, particularly to the young.

Blakey Bunting was born the 4th of Third month, 1824, and died Second month 1st, 1889. His early life was characterized by an earnest desire to obey the Divine will as made known to him, even in what to some might seem trivial matters. In this connection we recall an incident of his school-boy days. When he felt required to use the plain language, such was the influence upon his playmates that they invariably addressed him in the same manner. He was strictly truthful, and was pained by any form of untruth, whether a direct falsehood or an exaggerated expression.

In the home circle his life was even more beautiful than his public character. Kind and thoughtful to those around him, he was also intensely social, and delighted to mingle with not only his near friends and neighbors, but his doors were always hospitably opened, and friends from a distance ever found a warm welcome. His religious life was exemplary; diligent in the attendance of his meeting, not only on First-day, but also in the middle of the week, never allowing his home duties, however pressing, to prevent him from performing this reasonable service. He was deeply interested in the affairs of the church, and an active participant in its business, having been an overseer for a number of years, and chosen an elder of Middletown Meeting just previous to his death. During the last few years of his life he publicly briefly exhorted Friends to a continued faithfulness to duty as revealed to them, urging obedience to the "light within." He keenly felt a lack of religious instruction for our youth, and to his concern that they might lead exemplary Christian lives, and become more thoroughly imbued with the principles of the Society of Friends, we may attribute the founding of Edgewood First-day school, in 1870; and during the thirteen years of its existence he was ever one of its most active and earnest workers. His interest in our First-day School Unions continued unabated to the time of his death, and he filled acceptably for several years the office of treasurer. He was frequently heard to express his great satisfaction that these social religious gatherings were so profitable to both young and old. He ever closely connected the moral and religious in our Society work, and at the time of his death was an active member of the Quarterly Meeting's Temperance Committee, proving by his life rather than words the beauty of a consistent, temperate life.

To the young people present who are just entering the busy turmoil of business life, would we especially commend the example of this honest, conscientious man, in whom the Christian virtues are most strikingly exemplified. In this day, when men seem to thirst for notoriety, this humble life shines as a true example of modest worth. Ever abounding in good deeds, yet so quietly were these acts performed, it might be said "his right hand knew not what his left hand did." They were not done for his own honor or to be known of men. His honest, straightforward dealing with his fellow-men was a living exemplification of the words "do unto all men as ye would that they should do to you."

"So when a good man dies,
For years beyond our ken,
The light he leaves behind him lies
Upon the paths of men."

HENRY PIKE.

"The righteous shall give thanks unto Thy name,
The upright shall dwell in Thy presence."

In contemplating the life of our dear friend, the notice of whose death appeared in your issue of Tenth month 26, 1889, a life lengthened out beyond the years usually allotted to man, it is deemed fitting to offer a little tribute to his memory.

He was born in the city of Trenton, New Jersey, on the First-day of the Tenth month, 1795. He was a brother of Stephen Pike, the compiler of Pike's Arithmetic, a standard work some fifty years ago. We believe from childhood he was remarkable for his love of goodness and of associating with the good and the true, and faithful in upholding the principles and testimonies of our Religious Society; hence he was preserved in innocence, sobriety, and exemplary deportment, adhering closely to his conscientiousness in all respects. In the early years of manhood he was subjected to imprisonment in consequence of a refusal to submit to some military requisition. This indignant penalty was borne with unflinching courage and a full reliance upon the overruling providence of God, a reliance which was a marked feature of his character through all the years of his life and sustained him in calmness and patience as the infirmities and privations of advancing age increased upon him. As an Elder in the church he was a good example of simplicity, modesty, and faithfulness, ever retaining a deep interest and enjoyment in assembling with his friends on the days appointed for religious worship; from these little gatherings his presence will be much missed.

Nature seemed to have adapted him to the occupation of teacher and caretaker of little children, and for many years of his active life his energies were thus devoted. In connection with his excellent wife, he established a boarding school for little boys which was in successful operation for years, where parents placed their children in full confidence that they would receive the rightful influences of parental care and training. Many of those entrusted to their care retain a strong attachment and remember with gratitude the counsels and admonitions which were designed to promote their real happiness. It may be that some of them may glance at this feeble effort to review those days when they were happy participants of the wholesome discipline and regularity of habits inculcated by their worthy preceptors. When our friends believed the time had arrived to release themselves from their responsibilities they removed from Byberry and settled in the city of Philadelphia, where they continued to reside. The death of his wife, which occurred in the year 1875, was a sore bereavement; but accepting this trial and whatever of

life's cares and perplexities were allotted, with a calm submission to the behests of Him who ruleth the universe and who regardeth "the integrity of the upright," his remaining years were passed in much tranquility and peace. A few days before his death, addressing one of his attendants, he remarked, "Henry's time is but short," and after a few moments added, "I can see nothing in the way," thus demonstrating the truth "that the end crowns all."

11.

LETTERS FROM PRESIDENT MAGILL: THE OLD CITY OF ROUEN.

ROUEN, FRANCE, Tenth mo. 21.

EDITORS INTELLIGENCER AND JOURNAL:

On arriving in this city, about four weeks since, I discontinued my letters for a time, as we intended making something of a stay here for purposes of study. We at once employed a teacher for three hours each day, and made the necessary arrangement for facilities in the use of the public library. This is open every day and evening, and but for the fact that it was not warmed, and the weather was unusually cold for this time of year, we should have found it a very convenient and accessible place for the pursuit of our studies. As it is, except for occasional reference, we have used it but little during our stay.

We have endeavored to give some time each day to visiting places of interest in the city, occasionally extending our visits into the country immediately around us. I think that some account of this city, where we have spent a pleasant and profitable month, may not be found wholly without interest to your readers; and in my description I shall try to avoid what they could find equally well in guide books and encyclopedias. First of all, and the most conspicuous object as you approach the city is, of course, the great Cathedral, with its iron tower about 480 feet high. This is about in the centre of the original and most ancient part of the city, which is on the north side of the Seine, and joined to the modern, manufacturing suburb of St. Sever by two fine bridges, from which may be obtained commanding views up and down the river. The old city still retains many of the original streets, many of the houses in them being from four to six hundred years old. Victor Hugo has characterized Rouen as "*la ville aux vieilles rues*." These old houses, in many cases, are so built that each of their four or five stories projects some distance beyond the one below it, and the streets being quite narrow, they present the singular effect of houses dangerously out of perpendicular, and leaning out into the street. Of course such streets cannot supply the light and air demanded by the sanitary regulations of these more enlightened days. Many of them have given way to the march of modern improvements; and there are a number of streets which are broad and airy, and quite modern in their construction, and add much to the beauty and attractiveness of the city of to-day. The facades of the old houses are unique and interesting, being adorned in many cases with curious carved work, busts, statues, and various artistic designs. Being built of timbers, with brick laid in between, and the timbers showing on the outside, and

these timbers being old and weather-beaten, or painted of a different color from the walls, all this adds to the unique and striking effect of these narrow streets. The Cathedral is one of the most richly adorned specimens of Gothic architecture in France; but like so many others, it has been sadly defaced, not only by time, but in the religious wars which prevailed through the Middle Ages, and of which Rouen was a prominent centre. Accordingly, in place of many of the statues which originally adorned the exterior of the Cathedral there are now empty niches, and others in which stand mutilated statues. The present Cathedral is about 700 years old, and was built on the site of the one that preceded it, which was burned in 1200.

One is deeply impressed with the great antiquity of the Cathedral by looking at the tombs which it contains. The oldest of these that we saw was that of Rollon, the first Duke of Normandy, who died a little more than a thousand years ago and was buried in the first Cathedral, and afterwards transferred to this. There is a fine statue of him in the garden of the church of St. Ouen, here. He is in the attitude of public speaking, and his words, inscribed below, are: "We shall remain their masters and their lords"—July 25th, 885. Another ancient tomb in the Cathedral is that of "William the Long Sword," the son of Rollon and the grandfather of William the Conqueror. The tomb of Richard Cœur de Lion is also shown, and in the "Trésor" of the Cathedral we saw the lead box in which his heart had been buried, and which was found while making some excavations under the Cathedral in the present century. There are two boxes, one having been found enclosed in the other, and from the lid of the inner one I copied this inscription, which was distinctly engraved upon it in Latin: "Here lies the heart of Richard, King of the English." There are many more modern tombs, some of them richly adorned with statuary and sculpture. Upon all of those that I have mentioned are reclining statues, in marble or stone, of those that slept beneath. The stained glass windows of this Cathedral are of the most exquisite workmanship, and some of them date back several centuries. Of the distinguished men born at Rouen, none are perhaps so worthy of mention as the poet, Pierre Corneille. In one of the old streets we visited the house where he was born. It is now occupied as a store below and a residence above. Over the door is a small bust of the poet, and bears the inscription: "Here was born Pierre Corneille, the 6th of June, 1606." On one of the bridges over the Seine, at the end of an island in the river, there is a very fine bronze statue of Corneille, upon a marble base. It was modeled by the sculptor David Anger, and was erected by public subscription in the present century. He is represented standing, with a pen in his hand, and writing upon a scroll, and the whole pose of the statue is very fine. The original model of Anger's, which is in the court-yard of the Corneille Lycee, here at Rouen, is even more life-like than the copy in bronze.

Rouen is also a place of interest, as being the scene of the burning at the stake of Joan of Arc, and

15th century. Upon the spot where she was burned there is now a fountain, surmounted by her statue, with a long Latin inscription beneath, beginning as follows: "*Joanna d' Arc, quae sexu femina, armis vir, fortitudine heros.*" A curious old tower stands not far from the centre of the city, which is a remnant of a chateau built in the 13th century by Philip Augustus. The chateau was flanked with seven towers, and the principal one was called the dungeon of Philip Augustus. This principal tower alone remains standing, the rest of the chateau having been destroyed by Henry IV. This is called the Tower of Joan of Arc, as being the place where she was confined, and subjected, under torture, to her cruel examination. An inscription referring to this scene is found in the basement room of the tower. It contains three dungeons, and its walls are twelve feet thick. It now belongs to the city, and is carefully preserved as a curious relic of more barbarous times. Of the churches in the city by far the largest and most imposing is that of Saint Ouen. It is somewhat larger than the Cathedral itself, and although far less lavishly decorated, it is a most imposing structure, remarkably harmonious in all of its proportions, and is said to be one of the best specimens of Gothic architecture in Europe. One of the most curious of the old streets has a rapid stream (called the river Robec), running along one side of it close to the houses, and the ingress and egress of these is over a long series of bridges connecting the houses with the street. In some places these bridges are almost continuous, and in others the swiftly flowing little river shows between them. The city being on low ground and surrounded on all sides by high hills, is remarkably well supplied with water from natural fountains. One of the finest of these, adorned with statuary, and with its abundant flow presenting a striking appearance from its commanding position at the head of one of the finest streets running northward from the river, the "*Rue de la République*," is called the fountain of St. Mary.

The peculiar situation of the city presents very pleasant views of distant wooded slopes or of rugged cliffs, when looking up the more modern wider and straighter streets, which gradually rise from the fine quays along the river toward the high hills around. One pleasant First-day afternoon we took an omnibus, securing seats upon the "*impériale*" for the sake of the views, and set out for a high point upon the chalk cliffs, about 3 miles to the northeast of the city, called Bon Secours, from a church of that name situated there. We slowly ascended the cliff by a very well constructed zigzag road, and on reaching the high land, we soon found the best point of view in a small cemetery near the church, on the very edge of the cliff, and the site of the first monastery erected in this part of France. Let me say, in passing, that the old monks, with all their self-abnegation, and their unselfish lives devoted to good works, seem often to have selected, with even artistic eyes, the most delightful and attractive situations in which to erect their monasteries. We took our seats on a broad stone at the foot of a cross, and there spread out before us, was a picture that I may possibly faint-

ly indicate, but could never hope to describe. We were looking down into a fertile valley, apparently surrounded on all sides by high chalk cliffs or wooded hills. Our eyes were turned southward. Far away to the southeast the river Seine seemed to come breaking through the line of hills, and dotted with many wooded islands it came flowing toward us in its winding course through the green meadows. Just below us it passed at the very foot of the cliff, and then onward toward the southwest, dividing the old city of Rouen from the new suburb of St. Sever; sweeping under the two fine bridges that connect them, and on through the green meadows beyond, and skirting the line of chalk cliffs in its semicircular sweep, it at last disappeared through the line of hills to the far southwest as it had appeared to break through them in the southeast.

The river is very winding at this part of its course, sometimes almost doubling upon itself in a few miles, and in the sweep of it that lay before us it completed almost an entire circle. The general view of the city itself from this point is also very complete, and it has been selected as the point from which to take the views of it which have been made familiar to the public. We spent almost the entire afternoon in enjoying this scene, and after turning away we even returned, and did not leave it until the glorious picture was glowing with the varied tints of the setting sun. It was a day and a scene that we shall remember while memory lasts. Another fine afternoon we took a carriage and drove some miles down the Seine to the southwest, and ascended the heights of "*Canteleu*," whence we obtained a view of the same scenery as that already described, but from the other end of the valley; and the heights of Bon Secours rose before us to the northeast, distinctly outlined against the sky. And on a Third-day we drove some miles back into the country toward the north, through a great public forest of many miles in extent where large parties engage under certain regulations in hunting deer and other game in their season; and in going up the slopes toward the forest, and in our return to the city in the late afternoon, we had from still different directions, the views of the fertile valley of the Seine before described.

There was one curious and interesting sight which we saw in the city on one of the public market days. Near the Cathedral is an old public square, through which we passed one day, entirely empty, and surrounded by low buildings that looked like barracks for soldiers. We were told that this empty square was well worth seeing on market day, so one afternoon we walked down through it, and it was literally thronged with wares of almost every possible description, exposed for sale in the open air,—fruits, vegetables, meats, animals, poultry, dry goods, groceries,—in fact such a medley that it would be more easy to enumerate what was *not* there than what *was*, were arranged in crowded squares, leaving scarcely room for the throng of purchasers to pass, and all crying out their wares in French of all kinds, from the more refined city accent to the most uncultivated patois. To one in search of the spoken French language, here was surely an opportunity to get it all at once, in every possible variety!

I have mentioned some of the objects that especially interested and attracted us during our month's stay in Rouen. To give anything like an exhaustive account of what we saw and enjoyed through all that period, would far transcend the limits of a single letter. And we leave the city to-morrow and turn our faces towards Paris, feeling that we know just enough of the beautiful old mediæval city to wish to see it more and know it better. But Paris and the Exposition, with all their attractions and means of improvement, are before us, and two months of our year are already gone, and we must not longer delay. As the Exposition does not close until the 6th of next month we shall have about two weeks, during which we hope to see it fairly well; and after that we shall settle down to our regular courses of lectures and studies for the winter.

In my next I may give some account of the Exposition, and of Paris, as it now impresses us under its new régime.

EDWARD H. MAGILL.

AIKEN AND MT. PLEASANT SCHOOLS.

The school for colored children at Aiken reopened on the 14th of last month. That at Mt. Pleasant reopened on the 4th of this month, Anna M. Nicholas, (this name was wrongly given in our paper a few weeks ago), being in charge until the return of Abby D. Munroe. The latter was in Philadelphia, on her way South, at the beginning of the present week, and conferred with the Executive Committee of the Association to aid the Colored Schools. Her health is re-established, and she hopes to carry on her work, in the new school house, comfortably and well. The department of Industrial Training, which had to be discontinued while the school was held in the church, will now be re-established under Anna M. Nicholas who is an experienced teacher, having taught in Charleston, Wilmington, N. C., and elsewhere. Her aid to A. D. Munroe, as well as her society, will be very welcome. The Industrial Department will somewhat increase the expense of the school, but its work is very important. For several years it was supported by a friend of A. D. Munroe, Abby Francis, of Cambridge, Mass., but she is now deceased. (She left \$500 in her will to help build the new school house.)

The collection and forwarding of funds to aid these schools will be, it is hoped, as prompt as possible, this season. With the increased labor at Mount Pleasant, and the building of the new Deborah F. Wharton Industrial Hall, at Aiken, those in charge of the schools deserve to be relieved of the anxiety and strain of financial embarrassment. Will not all those who are interested in this excellent work give it their help? A little from each one will be enough, for the aggregate amount needed is not great.

THE foundation of culture, as of character, is at last the moral sentiment. This is the fountain of power, preserves its eternal newness, draws its own rent out of every novelty in science.

SELF LOVE is a great enemy to man, and very much hinders his eternal happiness.—Thomas Chalkley.

THE FIRST-DAY SCHOOL ASSOCIATION.

THE annual session of Philadelphia First-day School Association was held at the Race street meeting-house on Seventh-day last, the 2d instant, the morning session beginning at 10 o'clock. The attendance was good of those deeply interested in the work, both old and young. Reports were read from all the unions in the yearly meeting, and from some independent schools. These showed that much good work is being done, and the statistical reports were listened to with interest. As one remarked, they were not merely so many figures, but represented living creatures, giving and receiving benefits. There were 64 schools reported, 43 of which are under the care of committees appointed in the meeting. The number of officers and teachers is 596, of children 3,126, and of adults 1,716.

But one feeling seemed to prevail,—that of love and interest in the work, and desire to improve it. An excellent epistle was read from New York F. D. S. Association, and the feeling words of encouragement given at the close by Isaac Wilson of Canada, were fitting to complete a very satisfactory meeting.

YOUNG FRIENDS' ASSOCIATION.

THIS excellent organization of young people,—and of older ones also,—has resumed its meetings after the vacation of the summer. They occur monthly, and two have already been held. The third will be held on Second-day evening next, the 11th instant, at the parlor, at 15th and Race streets.

The objects of the Association, as was stated in a paper read at the time of its organization, are: To attain for its members a thorough knowledge of the history and principles of the Society of Friends; to disseminate such knowledge among others, as way may open; and to promote a closer acquaintance and association among those connected with our Religious Society either by membership or community of interest.

Some of the most practical work of the Association is in charge of four standing committees, which report from time to time,—on History of the Society of Friends; its Literature, its Discipline, and "Current Topics of Interest" to the Society. These committees afford an excellent opportunity for students to engage in profitable, as well as practical, research concerning the Society, and the membership of the Association ought to be large.

NEWS OF FRIENDS.

CONCORD QUARTERLY MEETING

CONCORD Quarterly Meeting was held at Darby, Pa., on Tenth month 29th, with a good attendance. Robert M. Croasdale was present with a minute from Falls Monthly and Bucks Quarterly Meetings, and spoke acceptably, as did also Samuel S. Ash and Frances J. Newlin, who were present from neighboring meetings without minutes. Ezra Fell, Lydia H. Price, and others of Concord Quarter, added words of counsel and encouragement that were well received. In the business meeting the usual work of this Quarter was transacted, with more than the usual expression, and at the close there was read in joint session

a memorial for Sarah Hoopes, prepared by Birmingham Monthly Meeting. A reverent feeling overspread the meeting during this reading; and the quiet that followed, as well as the tender utterances, gave evidence that there had been in her life that which could still reach out to the spiritual needs of the present and touch the divine chord that unites us all as children of the one Father. The Memorial was approved and directed to be forwarded to the Representative Committee.

SWARTHMORE COLLEGE NOTES.

THE College Association of the Middle States and Maryland, of which Dr. Magill was one of the prime organizers, will hold its annual meeting in Philadelphia about Thanksgiving. A paper from Dr. Magill will be read in the meeting,—he having been requested to send it from abroad.

—The observatory has been presented with a new Draper self-registering thermometer, a very valuable instrument, which was the gift of a friend; and a number of handsome astronomical photographs from C. Fred. Kohl, '86.

—Dr. Appleton addressed the session of the Delaware County Teachers' Institute, at Chester, on Fourth-day morning. He was greeted by a large audience of instructors and friends of education.

—Professor Cunningham has recently been honored with elections to membership in the Astronomical Society of the Pacific, and the American Society for the advancement of Science.

—Julia Hicks, '89, has been admitted to the post-graduate course at Cornell University leading to the degree of Master of Science, with all the privileges and the same standard accorded to Cornell graduates. This fact is worthy of note as being a very high compliment to the value of a Swarthmore degree, and proving that Swarthmore is doing a work scarcely excelled among the intermediate colleges of the country.

—W. C. Sproul, '91, associate editor of the *Phoenix*, was elected chairman of the executive committee of the Intercollegiate Press Association of the Central States at its recent convention.

—More room appears to be a necessity in Science Hall, and the matter is spoken of in the annual reports of the professors of Engineering, Chemistry, and Physics. The scientific classes have increased nearly one hundred per cent. in the past few years and the building which was considered ample a short time ago is now too small. If the engineering department could be moved into a separate building, all of the branches could be taught to much more advantage.

—James W. Ponder, '90, has been elected editor-in-chief of the *Phoenix* to succeed Edgar Allen Brown, lately deceased, and Frances E. Otley, '90, has been added to the staff.

S.

For the conduct of life, habits are more important than maxims, because a habit is a maxim verified. To take a new set of maxims for one's guide is no more than to change the title of a book, but to change one's habits is to change one's life.—*Amiel*.

WHEN SHALL WE THREE MEET AGAIN.

When shall we three meet again?
When shall we three meet again?
Oft shall glowing hopes expire,
Oft shall wearied love retire,
Oft shall death and sorrow reign,
Ere we three shall meet again.

Though in distant lands we sigh,
Parched beneath a burning sky;
Though the deep between us rolls,
Friendship shall unite our souls;
Oft in Fancy's rich domain;
Oft shall we three meet again.

When our tarnished locks are gray,
Thinned by many a toil-spent day;
When around this youthful pine
Moss shall creep and ivy twine,—
Long may this loved bower remain—
Here may we three meet again.

When the dreams of life are fled;
When its wasted lamps are dead;
When in cold oblivion's shade
Beauty, wealth, and fame are laid,—
Where immortal spirits reign,
There may we three meet again.

—*Author Unknown.*

POEMS OF THE SEASON.

THE DYING YEAR.

THE year is dying, soberly the trees
Are mellowing,—with a dull sad face
They lean against the sadness of the sky;
The glory of the summer has gone by,
Gone is the smile of gladness from the place.

Oh, sad to see the sun come later up
And sad to see him pass betimes away,
And sad the pallid glints he throws across
The leaf-strewn garden; sad the sense of loss,
The all-pervading fragrance of decay.

Yet at the open window, as I sit
With closed eyes, and hear the gentle rain
Fall on the damp green earth like lovers' sighs,
And feel the breath of dying earth uprising,
From far and near, from hillock and from plain,

And hear the tender caving of the rooks'
Melodious symphony among the trees,
I am in other places far from here;
I stand upon the threshold of the year,
Among remembered sounds so like to these.

—*Christina C. Liddell.*

EARLY NOVEMBER.

The crimson, and the russet, and the gold,
The palest green that gives a hint of spring,
And nameless colors that swift breezes fling
From waving trees; tall dahlias crisped by cold
Vie with the sunrise, as some men when old
Are brightest, or as swans, when dying, sing,
Or a sweet strain the fickle zephyrs bring
Stopped short before its harden is all told.

—*Maurice F. Egan.*

INDIAN SUMMER.

Then past the yellow regiments of corn
There came an Indian maiden, autumn, born,

And June returned and held her by the hand,
 And led Time's smiling Ruth through all the land,
 A veil of golden air was o'er her flung,
 The south wind whispered and the robins sung
 — Benjamin F. Taylor.

HORSE-CAR ETHICS.

A HORSE-CAR is a good place in which to study human nature. It is not always the best side of human nature, however, that is revealed in this rolling box. Sometimes it is the passenger who is the victim, sometimes the conductor. For the most part the conductor, we think, has the hardest time. It is a good deal of strain upon a man's good nature to run over the road ten hours a day in contact with all sorts of people, some of whom have developed to an unusual degree the art of rubbing their fellow-men the wrong way. It is the conductor who often has to suffer for rheumatic limbs, bad digestion, or tired nerves in his passengers. He is the scapegoat for the sins of the corporation. There are few situations, therefore, that demand more equanimity and self-control than that of a horse-car conductor. And there are some who, in this very severe school, have succeeded in developing the finer and more gentlemanly instincts to a high degree. A man who can embody the spirit of Chesterfield on the platform of a horse-car is a product of the higher order of civilization.

The writer witnessed a scene, a few days ago, which showed how the spirit of justice, combined with mutual respect and tolerance, could settle a difficulty. The conductor in collecting the fares came to two ladies who had entered the car together. One of them tendered him a piece of money. He gave the usual professional wink at its value, dropped it in his pocket, punched his slip, and returned the change. The lady questioned whether the change was correct. She asked the conductor what she had given him. He replied, "A quarter of a dollar," in which case the change was correct. Her companion encouraged her to think that it was a fifty-cent piece, remarking that she had seen Lizzie give her a fifty-cent piece before she started from home. The conductor did not undertake to argue. He simply replied, "Your word is as good as mine, madam; if you say it was fifty-cents, all right," and tendered her another quarter. Her companion again encouraged her to believe that it was the value of the coin she had given. The lady therefore took the twenty-five cents from the conductor and put it with some hesitation in her pocket-book. Evidently, she was not sure that she was right. The conductor did not look as if he thought she was right either, but he bore her decision with the fortitude of a man who, for the sake of peace, is willing to sacrifice twenty-five cents of his day's wages, even when the wages are not very large. He said nothing more, but the lady evidently felt as badly about taking a quarter that did not belong to her as the conductor could have felt about losing it. She once more opened the question. The conductor simply replied, "The only way I can tell is to count my money." He went on the platform, counted his change, compared it with the record on his slip of the number of fares received, and then told the

lady that he was just one quarter out. The lady, evidently with much relief, took the quarter from her pocket-book and returned it to the conductor; the writer, who happened to be standing in a favorable position for observation, noticed a fifty-cent piece in her pocket-book, which was probably the one that Lizzie had given her.

Thus the matter was settled. There were no high words or muttered reproaches, no insinuations of dishonesty or brow-beating conductors. The passenger was a lady, the conductor a gentleman, and the evident desire of both parties to be perfectly just helped in itself to bring about a just decision.

The method and the spirit which settled this difference, though invaluable on a horse-car, are just as much needed in a thousand other situations in life. There are few differences which cannot be reconciled where there is a basis of good feeling. It is ill-feeling, and intolerant disregard of the judgment of others, and an overweening self-assertion, which create and continue personal differences. In a church as in a horse-car, in the home and in the office, in court or on 'change, there is nothing better for settling misunderstandings than a spirit of justice combined with abundant good feeling.—*Christian Register*.

SCOLDING IS NEVER IN ORDER.

MANY a father who will not strike his child, feels free to scold him. And a scolding mother is not always deemed the severest and most unjust of mothers. Yet, while it is sometimes right to strike a child, it is at no time right to scold one. Scolding is, in fact, never in order, in dealing with a child, or in any other duty of life.

"To scold" is to assail with noisy speech. The word itself seems to have a primary meaning akin to that of barking or howling. From its earliest use it has borne a bad reputation. In common law, "a common scold" is a public nuisance, against which the civil authority may be invoked by the disturbed neighborhood. And it is true to-day as it was when spoken by John Skelton, four centuries ago, that

"A sclanderous tongue, a tongue of a skolde,
 Worketh more mischief than can be tolde."

Scolding is always an expression of a bad spirit and of a loss of temper. This is as truly the case when a lovely mother scolds her child for breaking his playthings wiffully, or for soiling his third dress in one forenoon by playing in the gutter which he was forbidden to approach, as when one apple-woman yells out her abuse of another apple-woman in a street corner quarrel. In either case the essence of the scolding is in the multiplication of hot words in expression of strong feelings, that, while eminently natural, ought to be held in better control. The words themselves may be very different in the two cases, but the spirit and method are much alike in both. It is scolding in the one case as in the other; and scolding is never in order.

If a child has done wrong, a child needs talking to; but no parent ought to talk to a child while that parent is unable to talk in a natural tone of voice, and with carefully measured words. If the parent is tempted to speak rapidly, or to multiply words with-

out stopping to weigh them, or to show an excited state of feeling, the parent's first duty is to gain entire self-control. Until that control is secured, there is no use of the parent's trying to attempt any measure of child-training. The loss of self-control is for the time being an utter loss of power for the control of others.

In giving commands, or in giving censure to a child, the fewer and the more calmly spoken words the better. A child soon learns that scolding means less than quiet talking; and he even comes to find a certain satisfaction in waiting silently until the scolder has blown off the surplus feeling which vents itself in this way. There are times, indeed, when words may be multiplied to advantage in explaining to a child the nature and consequences of his offense, and the reasons why he should do differently in the future; but such words should always be spoken in gentleness, and in self-controlled earnestness. Scolding, rapidly spoken censure, and protest in the exhibit of strong feeling, is never in order as a means of training and directing a child.

Most parents, even the gentler and kindlier parents, scold their children more or less. Rarely can a child say "My parents never scold me." Many a child is well trained in spite of his being scolded. Many a parent is a good parent notwithstanding the fact that he scolds his children. But no child is ever helped or benefited by any scolding that he receives; and no parent ever helps or benefits his child by means of a scolding. Scolding is not always ruinous, but it is always out of place.

If, indeed, scolding has any good effect at all, that effect is on the scolder, and not on the scolded. Scolding is the outburst of strong feeling that struggles for the mastery under the pressure of some outside provocation. It never benefits the one against whom it is directed, nor yet those who are its outside observers, however it may give physical relief to the one who indulges in it. If, therefore, scolding is an unavoidable necessity on the part of any parent, let that parent at once shut himself, or herself, up in a room, where the scolding can be indulged in without harming any one. But let it be remembered that, as an element in child-training, scolding is never in order.—*S. S. Times.*

THE COTTAGE OR HOME SYSTEM.

ONE of the most striking improvements contemplated in the new House of Refuge, whose corner-stone was recently laid at Gleo Mills, Delaware county, Pa., is the introduction of the home or cottage system of building. This is the result of an intelligent examination of improved ways and means in the care of children. This system has been successfully tried in the Presbyterian Home for Orphans, in our own city,—and is now in use in most of the countries in Europe. In speaking of the new features in the organization of the Philadelphia House of Refuge, Professor McAlister said:

"The chief feature of the reorganization of the institution which the new buildings will render possible will be the establishment of the cottage system in place of the congregate system in caring for the

pupils. Houses for the accommodation of not more than fifty boys are to be erected. The boys are to sleep, take their meals, read, amuse themselves—in one word, live in these cottages. All the time not required for the school, the workshop, the outdoor work and recreation, will be spent within their homes. Over each home will preside a man and his wife, who will stand in the place of father and mother to the children. This cottage life will bring the children within the family organization, and the nearer it can be brought to the best type of home-life the more effective will be its power for good."

ANNUAL REPORT ON ALASKA.

LYMAN E. KNAPP, the governor of Alaska, in his annual report to the Secretary of the Interior, says that the number of natives in the territory number about the same as when the census of 1880 was taken, but he thinks that the next official enumeration will show an increase. The white population, he estimates, has increased, and now numbers about 3,500. He says the government schools, the mission work of the various religious societies, and contact with the better class of white people are influencing the natives for good. He calls attention to the fact that under existing laws no legal titles to land, except mineral lands, can be secured by any process whatever. He dwells upon the lack of facilities for enforcing the laws, and says that after two years of occupation by the government there is, with the exception of twenty-one Russian titles before the treaty, absolutely no homes within the territory except the precarious ones of squatters. The policy of neglect that has been pursued, the report states, has been entirely effectual for the prevention of progress and development in the past, and if persisted in will continue to be a bar to future progress.

The natives generally live in comfortable houses, some of which are tidy and attractive, while others reek with filth and offensive odors. They are usually free from thieving habits, but do not scruple at falsehood or deception. They become devoutly pious and swear like pirates. Though the improvement of the moral condition of these people during the last ten years has been as great as could be expected under the circumstances, it must be admitted that they have not yet attained to a state of perfection, and he fears that those who assert that chastity among them is only a relative term could easily point out specific examples to prove their position.

The old tribal relation, he says, has given way. The witch doctor has lost his prestige and power, and they live in better houses and have more of the conveniences of life within them. They generally dress in a more civilized and comfortable manner than formerly, and their food is more wholesome and better cooked. Unfortunately, however, there is another side to this picture. While the white people have taken away their native medicine men, they have given them no better system of remedies for physical diseases. Chronic and hereditary diseases are frightfully prevalent. Consumption and pneumonia prevail to an alarming extent, with terribly fatal results. The governor complains of inadequate mail facilities, and asks that the attention of the government be directed to this subject.

THE DEMORALIZING "FEE SYSTEM."

THE New York correspondent of the Philadelphia *Ledger* says: When will New York revolt against the slavery of the "fee system?" It is becoming worse here than in European cities. No menial service can be obtained without double payment. Our waiters, lackmen, and servants do not ask in so many words for the gratuity, as is often done in Europe, but they employ a more subtle and a more effective method of bleeding the pockets of those they serve. The man or woman who will not pay the servant, as well as the master, is badly served, or not at all. The fees expected also are out of all proportion to the service performed. A New York servant will not look upon the gratuity that a London servant would receive with a tip of the hat. I have seen a waiter at the Manhattan Beach Hotel pocket with a gesture of contempt a gratuity of 35 cents, and a friend of mine who tried the experiment of leaving a dime for a Delmonico waiter, was crushed by the *garçon* returning the coin in full view of the dining room, and with a sarcastic display of mock civility. Three ladies from the country stopping at an up-town hotel complain to me that they cannot get their slightest want satisfied without the payment of a gratuity. Their trunks are brought to their rooms. The porter lingers for the quarter or half a dollar. They ring for a pitcher of water and the boy expects a gratuity. They order a breakfast of coffee and rolls and the waiter looks for a fee nearly as big as the cost of the meal.

It takes an amount of courage to resist these demands that few are equal to. No one likes to appear mean, and strangers especially do not wish to look as if ignorant of the customs of the city. So the exactions are submitted to, and they are growing bigger every year. The thoughtless and extravagant "man about town" is largely responsible for the evil. He sets the pace, and everybody else must keep up with him or else he left behind deserted and unserved. Some of the clubs, I am glad to say, are setting the good example of forbidding their members to give and their servants to receive gratuities. Waiters, drivers, porters and menial helpers of all kinds should be paid, and paid well, for faithful service, but the whole system of gratuities is wrong in principle and demoralizing in practice.

TO RESTORE WORN CLOTHING.

THE mystery to many people how the scourers of old clothes can make them look almost as good as new is explained in the *American Analyst* as follows: Take, for instance, a shiny old coat, vest or pair of pants, of broadcloth, cassimere, or diagonal. The scourer makes a strong, warm soap-suds and plunges the garment into it, soouses it up and down, rubs the dirty places, if necessary puts it through a second suds, then rinses it through several waters, and hangs it to dry on the line. When nearly dry, he takes it in, rolls it up for an hour or two, and then presses it. An old cotton cloth is laid on the outside of the coat, and the iron passed over that until the wrinkles are out; but the iron is removed before the steam ceases to rise from the goods, else they would be shiny.

Wrinkles that are obstinate are removed by laying a wet cloth over them and passing the iron over that. If any shiny places are seen they are treated as the wrinkles are—the iron is lifted, while the full cloud of steam rises and brings the nap up with it. Cloth should always have a suds made specially for it, as if that which has been used for white cotton or woolen clothes lint will be left in the water and cling to the cloth. In this manner we have known the same coat and pantaloons to be renewed time and again, and have all the look and feel of new garments. Good broadcloth and its fellow cloths will bear many washings, and look better every time because of them.—*Exchange*.

CLIMATE AND PHTHISIS.

THE question, Does climate cure phthisis? is answered in the affirmative, "beyond question," by Dr. James A. Lindsay, of Belfast, Ireland, in the current number of the *Popular Science Monthly*. "It does it, not usually by a single or specific quality of the air or by any definite combination of meteorological conditions," he says, "but by removing the consumptive from the evil influences of unfavorable meteorological conditions and of an injurious soil, and transferring him to a climate where fresh air, sunshine, and outdoor life may be enjoyed and their concomitant advantages realized. The best climates to cure phthisis are found at marine resorts and mountain resorts. The best marine resort is a sea going ship—a sailing vessel preferred—and the longer the voyage the better. Next our ocean islands, coast islands and shore places, of which Algiers, Tangier, and Malaga are among the best. Of the dry inland resorts, the best are Nubia, the interior parts of Algeria, the Orange Free State, and the vast interior plains of Australia, of which the Orange Free State is recommended on account of its altitude. The mountain resorts have proved most efficacious in cases of delayed recovery from pneumonia, with threatening tuberculosis, chronic pleurisy with much fibroid changes, incipient catarrh of the apex and chronic tubercular phthisis, with good reaction and the retention of fair constitutional vigor. They are not good for advanced and much weakened cases; and speaking generally, only chronic cases with fair reaction are suitable for climatic treatment."

THE wheel of life whirls round, and we with it, expecting that the motion will some day slacken, and that then life may be ordered anew and omissions be made good. But real wisdom consists in seizing the flying moment and in pressing upon it the seal of the eternal and the enduring; that is the great course of moral endeavor under which life receives its due form, like the blocks of marble under the hand of the sculptor. The eternal and the enduring here on earth consist in the morally artistic use of time.

THE coming hours are open, yet pure and spotless receptacles for whatever you may deposit there. Let us start up and live. Here come the moments that cannot be had again; some few may yet be filled with imperishable good.—*James Martineau*.

THE CLOSE OF LIFE.

It is a great mistake to suppose that the usefulness of life ceases with the power of active service. When the tired hands are folded in the repose which their toil has rightly earned for them, when the weary brain is relieved from the burden of cares and perplexities which it has nobly borne, there should be a season rich in blessings and in influence which no one would willingly forego. Then should come the leisure vainly longed for in past years, and the opportunity to attend to many things and to enjoy much that was before impossible. If the busy life has also been an honorable one, there are sweet memories, cherished friendships, the devotion of children, the respect of society, the power of helping others through the accumulated experience and intelligence of many years. The very presence of a venerable and beloved face is a blessing to those who look upon it, bringing suggestions of well-earned peace and calm to the busy toiler, and calling up emotions of tender reverence in the eager and buoyant youth.—*Selected.*

NEWS AND OTHER GLEANINGS.

—The "Pilgrim's Progress" has lately been translated into the Chinese dialect of Amoy, which makes the eighty-third language or dialect in which the book has appeared. No other book except the Bible ever had so wide a circulation.

—In Italy, no clergyman can be inspector or director of a State school, a law having been recently passed to the effect that the local control of schools shall be in the hands of heads of families. The object is to cut the schools loose from clerical influence.

—During the Ninth month, the Children's Aid Society, 127 South 12th street, Philadelphia, found places for sixty-seven mothers at service, each mother taking one child with her. There were also twenty children placed in private families to board, ten were placed in private families on trial, and two were placed in hospitals. Address Anna T. Wilson, General Agent.

—In his speech at Chester on the 26th of last month, W. E. Gladstone urged English workmen to study the history of the American Revolution. He asserted that it was by and from England that a love of freedom was sown in America. England now, in return, reaped advantages from the American vindication of those principles of freedom which animated the revolution. The system of government in America combined that love of freedom, respect for law, and desire for order which formed the surest elements of national excellence and greatness. It was no extravagance to say that, although there were only 2,000,000 people in the thirteen States at the time of the revolution, the group of statesmen that proceeded from them were a match for any in the whole history of the world, and were superior to those of any other one epoch.—*The American.*

—An interesting novelty in the application of electricity has been introduced on the Southeastern Railway, England. It is an electric reading-lamp, situated just over the passenger's head, which can be lighted by the introduction of a penny into the box, and by the pressure of a knob. The light is of five-candle power, and will last for half an hour, at the end of which time it is extinguished automatically. If the light be required for an indefinite period, a penny every half-hour will suffice. A special feature of

the invention is that, if the instrument is out of order, the penny is not lost, but can be easily recovered.—*Ez.*

—Thomas Foulke, of New York, accompanied by his son, Wm. Dudley Foulke, of Richmond, reached New York in the steamship *Columbia*, from Hamburg, on the 25th ult. Thomas's health is much impaired, and he has been quite unwell since his return.

—The United States consul at Buenos Ayres has sent to the State Department a copy of a decree just issued by the Government of the Argentine Republic for the sale of 24,000 square leagues of public lands at the upset price of \$2 per hectare, about 2½ acres. The proceeds of the sale are to be devoted to a conversion of the excessive issue of paper currency. Some of the lands are said to be quite desirable, especially those in Terra del Fuego.

CURRENT EVENTS.

ELECTIONS were held in several States, on Third-day of this week, the 5th inst. Governors were elected by the Democrats in New Jersey, Virginia, and Mississippi, (in the last named there was no opposition candidate), and by the Republicans in Massachusetts. Iowa and Ohio are in doubt at this writing. Other State officers were elected by the Democrats in New York and Maryland, and by the Republicans in Pennsylvania and Nebraska.

The delegates to the Pan-American Congress continued on their tour last week, and reached Cincinnati on the 5th instant. They will reconvene at Washington, for the business of the Congress, next week.

EARTHQUAKE shocks were felt at Cairo and Jacksonville, Illinois, at 1.50 o'clock the morning of the 2d inst., and St. Louis at 2 o'clock. Houses were shaken and windows rattled, but no damage was done. At Cairo the vibration was accompanied by "a low report."

THERE have been reports of great destitution among the farming communities in North Dakota, owing to the failure of crops. A telegram from Bismarck says the reports are greatly exaggerated. There is some suffering in Rodney and Kelso counties, "but aside from these localities, it is difficult to locate any one in actual want," and "there is nothing in the situation to justify the report that a famine exists in Dakota."

THE deaths in this city last week numbered 399, which was 69 more than during the previous week, and 76 more than during the corresponding period last year. Among the principal causes were: Bright's disease, 12; consumption of the lungs, 60; croup, 12; diphtheria, 10; scarlet fever, 9; typhoid fever, 16; inflammation of the bronchi, 13; old age, 15; paralysis, 8.

SEVERE storms occurred in Colorado, Wyoming, and New Mexico, last week. The railroads in Colorado were blocked with snow. Between two and three feet of snow was reported from Colorado Springs and neighborhood, and telegraphic communication with many sections was suspended. In New Mexico, three stock herders perished in the blizzard.

AT Johnstown a local fund has been raised to continue the search for the dead, and bodies continue to be found. A dispatch says that many of the dead heretofore unidentified, now being transferred from Prospect Cemetery to Grandview, are being recognized and claimed by friends.

PRESIDENT HARRISON on the 2nd inst. signed the proclamation admitting North and South Dakota to the Union.

EMPEROR WILLIAM of Germany reached Constantinople, on his visit to the Sultan, on the 2d instant, and was received with much ceremony.

A TERRIBLE accident occurred at Glasgow, Scotland, on the 1st instant. The gable wall of a building that was being erected alongside of a carpet factory was blown down.

An immense mass of debris fell on the roof of the weaving department of the factory, crushing it in, and burying a large number of women and girls employed in the mill. Reports the following day estimated the number of dead at fifty.

INFORMATION direct from Henry M. Stanley the explorer has been received. He appears to be on his way to the eastern coast, accompanied by 800 people, among them Emin Bey, whom he went to relieve.

A TELEGRAM from Santa Fe on the 5th inst., says that one of the severest snow and wind storms in the history of New Mexico has prevailed for the past three days and reports are being received of great damage to live stock on the northern ranges. A number of cowboys and sheep herders have been lost, and it is feared they have perished. All the trains are from five to twelve hours late, and the show plows are kept in constant operation on the Raton and Glorietta Mountains.

NOTICES.

A portion of Philadelphia Quarterly Meeting's Committee to visit the smaller branches will attend the meeting to be held at Schuylkill, on First-day morning, Eleventh month 10th, 1889, at 10 o'clock.

Trains leave Reading Depot, Broad and Callowhill streets at 8.15 a. m. for Phoenixville Station. Returning, will leave Phoenixville at 4.59 p. m. Arrangements have been made for conveying Friends to and from the meeting-house.

CHAS. E. THOMAS, Clerk of Committee.

A circular meeting of the Western Quarterly Meeting will be held at Erensdown, Pa. on First-day Eleventh month 10th, at 2 o'clock p. m.

A Religious meeting will be held at Friends Home for Children, 1011 Aspen street, First-day afternoon, Eleventh month 10th, at 3 o'clock. A cordial invitation is extended to all interested persons.

The regular meeting of Young Friends' Association will be held in the parlor 15th and Race streets, on Second-day evening, the 11th inst. at 8 o'clock. For exercises see the notice of the meeting in advertising columns.

Evening Meetings. Friends are reminded that only one Evening Meeting is held in Philadelphia, at 7.30 o'clock, at Race street, during this month. It is desirable that Friends generally attend and invite others to do so.

Quarterly Meetings in Eleventh month occur as follows:

9. Miami, Waynesville, O.
9. Salem, West, O.
11. Baltimore, Little Falls, Md.
13. Easton and Saratoga, Easton, N. Y.
11. Shrewsbury and Rahway, Shrewsbury, N. J.
16. Short Creek, O.
18. Centre, West Branch, Pa.

TRUST.

VAINLY I strive through the darkness to see
The path I must tread, 'tis hidden from me.
Halting despairingly, kneeling I say
Father, I cannot go—there is no way ;
Lo, as I kneel at his feet, humbly bowed,
My pathway is shown through a break in the cloud,
No road stretching far the horizon to meet,
Only one step in it, lying close to my feet.
Place my feet in it, O Father above,
Teach me to trust in thy Infinite Love,
The way that is hid from man, most still thou knowest,
Make me content with the one step thou showest.

—Schweitz.

JOHN WOOLMAN'S VISIT TO THE INDIANS AT WYALUSING.

(Concluded from Last Week.)

PARTING from Job Chilaway on the 17th, we went on and reached We-hal-oo-sing about the middle of the afternoon. The first Indian that we saw was a woman of a modest countenance, with a Bible, who spake first to our guide, and then with an harmonious voice expressed her gladness at seeing us, having before heard of our coming. By the direction of our guide we sat down on a log while he went to the town to tell the people we were come. My companion and I, sitting thus together in a deep inward stillness, the poor woman came and sat near us; and, great awfulness coming over us, we rejoiced in a sense of God's love manifested to our poor souls. After a while we heard a conch-shell blow several times, and then came John Curtis and another Indian man, who kindly invited us into a house near the town, where we found about sixty people sitting in silence. After sitting with them a short time I stood up, and in some tenderness of spirit acquainted them, in a few short sentences, with the nature of my visit, and that a concern for their good had made me willing to come thus far to see them; which some of them understanding interpreted to the others, and there appeared gladness among them. I then showed them my certificate, which was explained to them; and the Moravian who overtook us on the way, being now here, bade me welcome.¹ But the Indians knowing

¹ De Schweinitz, having described the return of Zeisberger to Wyalusing, as already mentioned, says: "He resumed his work with fervency and joy. He was in his element, preaching and instructing. . . . While so engaged, John Woolman, a Quaker evangelist, arrived. A council was called to receive him, and he spoke to the people at first by the mouth of an interpreter. But afterward, feeling his mind covered with the spirit of prayer, he expressed a wish that the interpreting should be omitted. Divine

that this Moravian and I were of different religious societies, and as some of their people had encouraged him to come and stay awhile with them, they were, I believe, concerned that there might be no jarring or discord in their meetings; and having, I suppose, conferred together, they acquainted me that the people, at my request, would at any time come together and hold meetings. They also told me that they expected the Moravian would speak in their settled meetings, which are commonly held in the morning and near evening. So finding liberty in my heart to speak to the Moravian, I told him of the care I felt on my mind for the good of these people, and my belief that no ill effects would follow if I sometimes spake in their meetings when love engaged me thereto, without calling them together at times when they did not meet of course. He expressed his good-will towards my speaking at any time all that I found in my heart to say.

On the evening of the 18th I was at their meeting, where pure gospel love was felt, to the tendering of some of our hearts. The interpreters endeavored to acquaint the people with what I said, in short sentences, but found some difficulty, as none of them were quite perfect in the English and Delaware tongues, so they helped one another, and we labored along, Divine love attending. Afterwards, feeling my mind covered with the spirit of prayer, I told the interpreters that I found it in my heart to pray to God, and believed, if I prayed aright, he would hear me; and I expressed my willingness for them to omit interpreting; so our meeting ended with a degree of Divine love. Before the people went out, I observed Paj-meh-ah-² (the man who had been zealous in labor-love was shot over the meeting) and when he left he prayed that the great work which Zeisberger had undertaken, might be crowned with success.³ Thus at the substance of what John Woolman himself says, as the reader will perceive. The Indian companion of Zeisberger, Nathaniel, mentioned in Note 889, the first installment of this manner, p. 925, 1790 was a Delaware, not a Mohican, and I am not certain whether all, but the two Ephraims buried at Bethlehem, were the wife and daughter of this Indian.]

² This Indian, John Paj-meh-ah, was a remarkable person. He had been a preacher and "prophet" at Wyalusing, for several years before the time here described, and had apparently been the subject of a religious conviction which had freed him above the crude ideas of God's will and of human duties, cherished among the Indians. About 1780, according to De Schweinitz, he began a religious movement, almost a religious revival, among the Delaware. The date of Paj-meh-ah's change is suggested by Anthony Bonomi's "Friends' Miscellany," Vol. 7, p. 241 as about 1790, a date which seems apparently the earlier preacher at Wyalusing before the arrival of Zeisberger. In 1790 he came to Philadelphia, accompanied by Job Chilaway as an interpreter, and they remained in the city several days visiting Friends, attending the meetings, &c. In the following year they

ing for a reformation in that town, being then very tender) speaking to one of the interpreters, and I was afterwards told that he said in substance as follows: "I love to feel where words come from."

Nineteenth of Sixth month and first of the week.—This morning the Indian who came with the Moravian, being also a member of that society, prayed in the meeting, and then the Moravian spake a short time to the people. In the afternoon, my heart being filled with a heavenly care for their good, I spake to them awhile by interpreters; but none of them being perfect in the work, and I feeling the current of love run strong, told the interpreters that I believed some of the people would understand me, and so I proceeded without them; and I believe the Holy Ghost wrought on some hearts to edification where all the words were not understood. I looked upon it as a time of Divine favor, and my heart was tendered and truly thankful before the Lord. After I sat down, one of the interpreters seemed spirited to give the Indians the substance of what I said.

Before our first meeting this morning, I was led to meditate on the manifold difficulties of these Indians, who, by the permission of the Six Nations, dwell in these parts.³ A near sympathy with them was raised in me, and my heart being enlarged in the love of Christ, I thought that the affectionate care of a good man for his only brother in affliction does not exceed what I then felt for that people. I came to this place through much trouble; and though through the mercies of God I believed that if I died in the journey it would be well with me, yet the thoughts of falling into the hands of Indian warriors were, in times of weakness, afflicting to me; and being of a tender constitution of body, the thoughts of captivity among them were also grievous; supposing that as they were strong and hardy they might demand ser-

returned, and it was they whom John Woolman saw there in the summer of 1761, as related in the first part of the present narrative. Job Chulaway said that "Papunehank had been an intemperate man; but the death of his father having affected his mind with sorrow and serious thoughtfulness he was led to believe there was a Great Power who had created all things. Feeling a strong desire to know more of his Creator, he went forth into the forest and remained for some time in great tribulation. At length it pleased God to appear for his comfort, granting him a sight of his own inward condition, and of his duty to the Author of his being." (Janney's "History of Friends," Vol. III., p. 363.)

It is evident from Zeisberger's account that he thought Papunehank's theology imperfect and unsound; the Moravian missionaries were in some particulars very orthodox. Papunehank became a convert to the Moravian faith soon after the time of this visit of John Woolman, and having accompanied the Delaware to Ohio, he died there, at their town on the Tuscarawas, in Fifth month, 1775, at the age of seventy.]

[This allusion is to the fact that the Delawares were subject to the Iroquois Confederacy of New York, the Six Nations. The precise degree of their subjection, the circumstances, and the time of the event, are all more or less in dispute. But it does not appear that Penn's first negotiations with the Indians on the Delaware were submitted for approval or ratification to the Iroquois. Afterward, when the lands toward and on the Susquehanna were secured, the title was regarded as more in the hands of the Iroquois than of the Delawares.—It may here be remarked that when the white men came, the New York Confederacy was the "Five Nations,"—Mohawks, Oneidas, Onondagas, Cayugas, and Senecas. It became the "Six Nations" in 1714, when the Tuscaroras, driven from North Carolina, came to New York, and were admitted as an equal member of the Confederacy.—These tribes are often called in Pennsylvania history, Mingoës, Minquas, Mengwe.]

vice of me beyond what I could well bear. But the Lord alone was my keeper, and I believed that if I went into captivity it would be for some good end. Thus, from time to time, my mind was centred in resignation, in which I always found quietness. And this day, though I had the same dangerous wildness between me and home, I was inwardly joyful that the Lord had strengthened me to come on this visit, and had manifested a fatherly care over me in my poor, lowly condition, when, in mine own eyes, I appeared inferior to many among the Indians.

When the last-mentioned meeting was ended, it being night, Papunehank went to bed; and hearing him speak with an harmonious voice, I suppose for a minute or two, I asked the interpreter, who told me that he was expressing his thankfulness to God for the favors he had received that day, and prayed that he would continue to favor him with the same, which he had experienced in that meeting. Though Papunehank had before agreed to receive the Moravian and join with them, he still appeared kind and loving to us.

I was at two meetings on the 20th, and silent in them. The following morning, in meeting, my heart was enlarged in pure love among them, and in short, plain sentences I expressed several things that rested upon me, which one of the interpreters gave the people pretty readily. The meeting ended in supplication, and I had cause humbly to acknowledge the loving-kindness of the Lord towards us; and then I believed that a door remained open for the faithful disciples of Jesus Christ to labor among these people. And now, feeling my mind at liberty to return, I took my leave of them in general at the conclusion of what I said in meeting, and we then prepared to go homeward. But some of their most active men told us that when we were ready to move the people would choose to come and shake hands with us. Those who usually came to meeting did so; and from a secret draught in my mind I went among some who did not usually go to meeting, and took my leave of them also. The Moravian and his Indian interpreter appeared respectful to us at parting. This town, Wehaloosing, stands on the bank of the Susquehanna, and consists, I believe, of about forty houses, mostly compact together, some about thirty feet long and eighteen wide, some bigger, some less. They are built mostly of split plank, one end being set in the ground, and the other pinned to a plate on which rafters are laid, and then covered with bark. I understand a great flood last winter overflowed the greater part of the ground where the town stands, and some were now about moving their houses to higher ground.

We expected only two Indians to be of our company, but when we were ready to go we found many of them were going to Bethlehem with skins and furs, and chose to go in company with us. So they loaded two canoes in which they desired us to go, telling us that the waters were so raised with the rains that the horses should be taken by such as were better acquainted with the fording-places. We, therefore, with several Indians, went in the canoes, and others went on horses, there being seven besides

ours. We met with the horsemen once on the way by appointment, and at night we lodged a little below a branch called Tankhannah,⁴ and some of the young men, going out a little before dusk with their guns, brought in a deer.

Through diligence we reached Wyoming before night, the 23d, and understood that the Indians were mostly gone from this place. We went up a small creek into the wood with our canoes, and pitching our tent, carried out our baggage, and before dark our horses came to us. Next morning, the horses being loaded and our baggage prepared, we set forward, being in all fourteen, and with diligent traveling were favored to get near half-way to Fort Allen. The land on this road from Wyoming to our frontier being mostly poor, and good grass being scarce, the Indians chose a piece of low ground to lodge on, as the best for grazing. I had sweat much in traveling, and, being weary, slept soundly. In the night I perceived that I had taken cold, of which I was favored soon to get better.

Twenty-fourth of Sixth month.—This day we passed Fort Allen and lodged near it in the woods. We forded the westerly branch of the Delaware⁵ three times, which was a shorter way than going over the top of the Blue Mountains called the Second Ridge. In the second time of fording where the river cuts through the mountain, the waters being rapid and pretty deep, my companion's mare, being a tall, tractable animal, was sundry times driven back through the river, being laden with the burdens of some small horses which were thought unable to come through with their loads. The troubles westward, and the difficulty for Indians to pass through our frontier, was, I apprehend, one reason why so many came, expecting that our being in company would prevent the outside inhabitants being surprised. We reached Bethlehem on the 25th, taking care to keep foremost, and to acquaint people on and near the road who these Indians were. This we found very needful, for the frontier inhabitants were often alarmed at the report of the English being killed by Indians westward. Among our company were some whom I did not remember to have seen at meeting, and some of these at first were very reserved; but we being several days together, and behaving in a friendly manner towards them, and making them suitable return for the services they did us, they became more free and sociable.

Twenty sixth of Sixth month.—Having carefully endeavored to settle all affairs with the Indians relative to our journey, we took leave of them, and I thought they generally parted from us affectionately. We went forward to Richland and had a very comfortable meeting among our friends, it being the first day of the week. Here I parted with my kind friend and companion Benjamin Parvin, and, accompanied by my friend Samuel Foulk, we rode to John Cal-

wallader's,⁶ from whence I reached home the next day, and found my family tolerably well. They and my friends appeared glad to see me return from a journey which they apprehended would be dangerous; but my mind, while I was out, had been so employed in striving for perfect resignation, and I had so often been confirmed in a belief, that, whatever the Lord might be pleased to allot for me, it would work for good, that I was careful lest I should admit any degree of selfishness in being glad overmuch, and I labored to improve by those trials in such a manner as my gracious Father and Protector designed. Between the English settlements and Wehaboosung we had only a narrow path which in many places is much grown up with bushes, and interrupted by abundance of trees lying across it. These together with the mountain swamps and rough stones make it a difficult road to travel, and the more so because rattlesnakes abound here, of which we killed four. People who have never been in such places have but an imperfect idea of them; and I was not only thus patient, but also made thankful to God, who thus led about and instructed me, that I might have a quick and lively feeling of the afflictions of my fellow-creatures, whose situation in life is difficult.

For Friends' Intelligencer and Journal.
IS REVERENCE ON THE DECLINE?

As it is generally admitted that humility and meekness are less appreciated than they were formerly, so also is there a prevailing sentiment that reverence is on the decline. Although all three of these conditions are held up by the Highest Authority as essential to a religious life, yet we find that the spirit of the age and the force of circumstances are antagonistic to the first two, and, if we may judge from the signs of the times, it would appear that the third is less and less regarded as the years roll on.

Extreme ritualism in some of the churches has probably caused a reaction in some of the others; and the rebound has been so powerful as to carry many of its votaries (may we not say its victims?) to the outer circle of religious belief, which lies close upon the confines of atheism.

The Society of Friends, from the beginning of its existence down to the present day, has been steadfast in principle, and fairly consistent in practice, in its opposition to the pomp and ceremony which are commonly known as ritualism. The teaching of the Saviour,—as we understand it,—the testimonies of the early Friends, and the rules of our "Discipline," all accord in this particular, and serve as bulwarks to guard us against the encroachment of those ceremonies which to us seem like Hebrew relics, though preserved and practiced in the name of Christianity.

But with all their opposition to ritualism, the early Friends were pronounced in their expressions of belief, and in their acknowledgment of reverence for the Supreme Being, for the Immaculate One—Divine and human—who walked up and down in

⁴ This was at Tankhannah, now the county seat of Wyoming county. It is on the bank of the Susquehanna, about 20 miles north of Wilkes-Barre.

⁵ It means, of course, the Delight. It was frequently described in early times as the West Branch of the Delaware, and its junction with the main stream, at Easton, was commonly known as "the Forks of Delaware."

⁶ This was John C. Moore, of Adams county. John, a wanderer, the oldest of the one hundred and three, was an eminent preacher among the Friends of the West. He died in 171, in the month of June, and was buried (as we wish John Estlin, on a recent visit, had seen) in the Friends' burying-ground at Easton.

Jewry; for the inward principle which they regarded as an emanation from the Most High; and for the Holy Scriptures, which they believed to have been written under the influence of the Holy Spirit. Whenever any one of these four subjects was taken as a theme, or was alluded to in discourse, it was approached with reverence, and treated with solemnity. Our predecessors being thus grounded in the faith, and careful in their daily walking, knew what it was to "grow in grace," and to desire a spiritual rather than a worldly life. By constant watchfulness and obedience to the inward monitor, they found that they could be in the world, without being of it. They had passed through the gateway of suffering, and had gone down into the river of baptism before they responded to the call to preach the glad tidings of the gospel, and the unction that attended their ministry furnished abundant evidence of the Source whence it came. Elders were anointed for service as well as appointed to it; overseers were chosen to guard against encroachments; and at length, by each one minding his calling, and all endeavoring to follow the pointings of Truth, a system of rules and advices which they called the "Discipline" was formulated for the government of the body. This outward law, which had been evolved from the inward principle, was clear and Scriptural in its doctrines, weighty as well as persuasive in its admonitions, and it has been pronounced by ethical critics to be one of the highest moral codes to be found anywhere outside of Holy Writ.

If we were not deficient in reverence, would we not desire to continue the practices and perpetuate the usages of those sons of the morning who purchased by their sufferings the liberties that we now enjoy? To tear down the structure which they in their superhuman wisdom reared, and to lay waste the heritage which they so dearly earned, in order to gratify our pride, our love for change, or to be more like our neighbors, seems like modernizing the old homestead, or altering the old meeting house, instead of preserving it in pristine simplicity and keeping it in good repair.

Not only the outward appearance, but also the inward condition in many of our meetings indicates the prevalence of a worldly spirit, and a restless craving for changes, so different from the feeling which must have pervaded the assemblies of our forefathers. These, when they met for the solemn purpose of worship, were so weighty in their spirits, and so serious in their demeanor, that the youth were brought under the influence, and the silent as well as the vocal part of the meeting was often watered with tears. How loving and candid were those early Friends with each other, and how circumspect in their intercourse with the world! Their manners were characterized by meekness, their conduct by uprightness, and their very countenances bore the stamp of reverence. The appearance of George Fox when engaged in vocal supplication—as described by William Penn—may give us an idea of the awe with which he who is sometimes called "the first Quaker" was impressed when he felt called to offer a public prayer. While the supplicant was thus moved

to approach the Throne of Infinite Majesty, the feeling which pervaded the assembly was, no doubt, one of great solemnity.

So it was in former times, but so it is not in the present. Now the same persons that are accustomed to rise and remove the hat—as a mark of respect—to a fellow-being, will make no change of posture or of manner, while a brother or a sister, on behalf of the assembly, invokes a blessing from the King of kings and Ruler of the universe. The practice which so many have fallen into, of keeping their seats in time of public, vocal prayer, has, in the opinion of the writer, had an unfavorable effect upon our younger members; and has, in connection with other practices, tended to lessen their appreciation of sacred things. If respect is not felt and manifested for the Supreme Being, how can it be felt for any object of His creation, or for any principle in which religion is involved?

There are many worthy, exemplary Friends who take a different view of this matter, and who remain seated in time of vocal prayer. The writer would not sit in judgment over these, nor censure them for the practice; but merely state that from *his point of view* it appears to be about the most open manifestation of irreverence that is likely to impress our younger members, and these, after their intuitive awe has been dissipated, and their sense of reverence blunted, come to look upon serious things in a common-place sort of way, and to desire some morbid excitement to arouse them to feeling. As this desire is ministered to it soon produces a craving for mental stimulant which must be made stronger for each new gratification. Then comes the demand for the breath-suspending novel, for the gaming table, or for some personal deed of daring. The mind is unfitted for calm seriousness, or for temperate enjoyment, but it can relish a theatrical exhibition where death, burial, and prayer—or the mockery thereof—constitute the principal features of the evening's amusement.

When the spirit which is inclined to be irreverent toward sacred things gets into our religious meetings, it disregards the light of the past, ignores the superior judgment of age and experience, and levels all to the plane of argument, on which he who can produce the most must stand in the front rank.

If good is to come to the Society from the First-day Schools, should we not look for some of it to enter by the door of reverence? If the children are to become useful and solid members should they not early learn these three lessons: a love for the Society of Friends, a willingness to be still, and a reverence for all sacred things? If such were the character of the teaching in our schools and our families, and if it were confirmed and exemplified in all our religious meetings, lessons of seriousness would be impressed on the youthful minds; the wisdom of age and experience would be respected, and the judgment thereof appreciated; the "Queries" addressed to the meeting would not be treated with indifference, or spoken of as obsolete; and there would be more silence and less haste in transacting the weighty affairs of the church.

Such conditions would, in the opinion of the writer, be a great improvement over those now existing; and should we ever realize them, we might then, for our own denomination, answer with a firm No, when asked, Is reverence on the decline?

Eleventh month 11.

II.

For Friends' Intelligencer and Journal.

NO CAUSE FOR DISCOURAGEMENT.

There is a feeling with many Friends that the decline in the attendance of our mid-week meetings is a sure evidence of a lack of spiritual life and an increased spirit of worldly-mindedness.

The simple fact of the attendance of meetings twice a week has too long measured the depth of spirituality. Friends who do not feel an obligation upon them to attend these meetings, may, while employed at some useful and necessary avocation, be enjoying spiritual reflections adding life and power to all their better nature.

While I would not desire to antagonize or discourage any who feel an obligation upon them to attend the regular mid-week meetings, I feel to say there are some forms and testimonies in our Society carried down from its origin that do not give evidence of the continued necessity which called them into existence.

I understand mid-week meetings were established to bear a testimony to the world that the worship of God was not to be confined to the Sabbath-day. And the persecution of Friends was so great at that time they felt a strength and support in frequently sympathizing with each other. It is very evident the body of Friends of this generation do not feel there is a necessity for bearing such testimony at this time.

The declension of Society has been a concern with Friends for a great many years; and yet what was done to arrest it until within a very few years! What instruction was imparted leading to a knowledge of the rules and testimonies of the Society, further than that scann'd from the answering of the Queries, which were not well understood or appreciated by the young members of society.

After many years of expectancy Friends learned we need something more than an intuitive knowledge to keep our membership alive to our principles and testimonies. With this fact before us we have entered a new era in our organization, wherein our young members as well as many older ones are being instructed and interested in everything pertaining to our views, doctrines, rules, etc.; as well as in a more thorough and extended knowledge of the Scriptures.

This work opens many fields of labor for both young and old, and the exercise of mind and the cultivation of religious feelings are happily relieving our Society from its former morbid condition.

The working members to-day are spending much time and means for its advancement. And he or she who is a diligent worker in the First-day school, watching the religious development of the young minds, and realizing a growth in religious sentiment which binds all together in harmony and love, must needs feel there is virtue in the cause.

The education and training in the First-day schools prepare the minds of the young to profitably serve in the weightier matters of society, as has been realized by their appointments upon important committees, and the great strength and encouragement they have afforded their elder brethren.

With the evidences we have before us we believe there are many young Friends deeply exercised for the advancement of Truth, and frequently feel the overshadowing of Divine Love.

Let us encourage all to be faithful to every intimation of duty, but try not to bind upon them forms without the spirit.

Chester Co., Pa.

SCRIPTURE LESSON No. 44.

ELEVENTH MONTH 21 1889.

SOLOMON S WISE, CHURCH.

GOLDEN TEXT:—"Wisdom is better than Rubies."—

Prov. 3: 11

READ I. Kings 3: 1-15.

The bloody records of war and self-avenging murders which blot and disfigure the early history of the Hebrew people, afford a fair illustration of the manners and morals of other ancient nations who made no special claim to be the chosen people of God, and to be guided and directed by him, as was their boast.

We find ourselves expecting better things of the nation making so high a profession, but we have constantly to remind ourselves that it all must be chargeable to the low state of morals that then prevailed, and the absolute power of kings and others in authority, whose ideas of God could rise no higher than their own standard of right, and who thought him a being altogether like themselves.

From such records of strife and cruelty we gladly and hopefully take up the history of the reign of the young Solomon, who is said to have been only twenty years old when he succeeded his father David on the throne of Israel. It is written of him (I Kings 3: 31) "Solomon loved the Lord, walking in the statutes of David his father: only he sacrificed and burnt incense in the high places." And this was idolatry, that in the end was one of the chief sources of his trouble.

In Gibeon the Lord appeared to Solomon, etc. Gibeon was one of the cities of Benjamin, and with its suburbs was allotted to the priests.

In a dream. It was universally believed that the Divine purposes toward a nation or an individual were revealed through dreams, visions, auguries, and signs. The Scriptures abound in evidences of this faith, and while a clearer knowledge of natural and invisible forces, and of the phenomena they exhibit, enable mankind to explain much that was then unknown, faith in manifestations of this kind is in no sense rooted out of the human mind in our own age. While we are not prepared to question or set limits to the Divine methods of communicating with men, a strong faith and confidence in the Divine will concerning our relations to our Heavenly Father, and to one another, is our best reliance, and to be faithful to the revelation of his will to our spiritual understanding gives us assurance of acceptance with him.

Give thy servant an understanding heart, etc. This was Solomon's petition—only wisdom to guide and direct the affairs of the nation is asked of the great Ruler of the Universe. This brings him into favor with God, who, one of the prophets declared, "delighteth in mercy," and who gives an understanding heart to all those who diligently apply themselves to its attainment.

And he came to Jerusalem, etc. The distance from Gibeon to the royal city was about six miles. It was an act in keeping with Solomon's experience at Gibeon, to present himself before Jehovah at the ark of the covenant, and there make his offerings. The feast that followed was usually made on such occasions.

Our lesson to-day refers to an interesting event in the life of King Solomon. Having succeeded his father David as king of Israel, and feeling the responsibility imposed upon him by this high position, he had a dream while engaged in offering sacrifice to the Lord, in which he thought God appeared unto him, and offered him whatsoever he should ask. We are told that being in a humble state of mind, and after reciting the favor God had shown his father, he proceeded to say, "Give thy servant therefore an understanding heart to judge thy people, that I may discern between good and evil, for who is able to judge this, thy great people?" And that this request so pleased the Lord that he granted it, and added other blessings beside, provided, however, that he should walk in the ways of the Lord. Wisdom may be defined as making the best choice of those things offered for acceptance, rather than such as are most pleasing.

Pain and suffering are always felt in one form or another whenever we disobey a Divine law. Hence we see, so long as Solomon remained true to his first love, his kingdom flourished, and his name spread abroad as one of the best and wisest rulers of his day. Were we all to live as wisdom dictated, we would be saved much suffering in this life, and be prepared to enter into the life to come with an assurance that great joy awaits us.

NOTES ON THE LESSON.

Solomon was the youngest son of David, the child of his old age, born at a time when the yearnings of "this man of war," as signified by the name he gave the new born infant,—Shelomoh, the peaceful one,—must have been for that peace and tranquility to which his life thus far had been a stranger. Solomon was ten years old when the rebellion of Absalom and his tragic end fell with its crushing weight upon his father. After that event the succession to the throne was promised Bathsheba, his mother, for Solomon. He was reared under the care of Nathan the prophet, and we may be assured that nothing was wanting in the training he received from this worthy man, to prepare him for the throne, and the effort of David seemed to have been to so guard and protect his young life that he might be preserved from the hardships, the wars, and the crimes that had made his own life so dark and discouraging; from first to

last it seems to have been David's desire that in Solomon might be fulfilled his highest ideal of true manhood, such as becomes him who is to be "a ruler over men." His education must have been conducted with the greatest care, and we have no reason to doubt the high attainments that had then been reached by scholars and historians. From his own enumeration of what studies he had given himself to, his knowledge was varied in natural history, and in philosophy, and all those abstruser metaphysical questions which the learning and wisdom of every age has found so full of interest.

Coming to the throne at the early age of twenty years, he could hardly be said to have formed any fixed purpose in life, either as a scholar or a ruler of men. His religious character had been developed under the wise tutelage of Nathan, and gave fair promise of a faithful adherence to the national religion, but it had not been tested. His choice of wisdom rather than great honor and riches, shows that his intentions were good and his chief desire was to rule his people wisely. "Thou hast pleasure in uprightness," David had said of the Divine Being, and this thought had found a place in the heart of Solomon.

As king it appears that his great concern was to carry out the plans and intentions of his father. The building of the Temple and the palace were undertaken at once and carried through to completion. One of the first steps in his career that is disappointing is his marriage with the daughter of Pharaoh, king of Egypt. In this his wisdom and piety were both at fault; foreign usages and a foreign worship were introduced into the land and a love of show and display were fostered that was entirely at variance with the simple habits in which he had been reared. The worship on high places degenerated into the worship of idols in the high places. We cannot be too careful of admitting into our lives even the least thing that is contrary to the Divine will as we understand it, though there may be no express prohibition. We can better forego some things that might be tolerated according to a strict construction of the requirement, than involve ourselves in a course of action that may end in a violation of both the letter and the spirit as was the case with Solomon. I. Kings 9: 11.

ONE of the officials of the Midland Railway, England, is the company's photographer-in-ordinary. The name of his functions is legion. When engines or carriages of a new pattern are constructed, he takes a record of their features. If it is reported to the engineer that a viaduct shows signs of giving way, or a wall is cracked, or an embankment has slipped, if the damage is only slight, instead of going himself to see the state of affairs, he sends the photographer to see and record it for him. If an accident has happened, there can thus be no subsequent dispute as to how the engine was lying, or whether the carriage left the rails.

THEY that have one end, can hardly disagree when they meet.—*Wm. Penn.*

HOW TO READ THE BIBLE.

THE Bible is the body of life and thought of the most religious people of the world. It is more than a collection of religious writings, and we shall fall short of a true conception of its worth, if we so regard it, and as nothing more. It is the tolerably complete picture of a people's life, and the many-sided record of a whole national existence. That people's life is shown in its beginnings, with the elements that went to make it up. It is followed on till at the end it ceases as a nation, but remains undiminished as a spirit, and its national chronicle as a spiritual temple. Not indeed that this spiritual temple, the Bible, is a structure unimpaired by the ravages of time. It might not ill be regarded as a sublime ruin of which, often, one stone is not left upon another, though preserving enough of base and column and pediment to show plainly the plan and the proportions. The parts of the Bible are often out of their historical order. Sometimes a book is put together out of great fragments, and the name of the author of one given to all. Sometimes the subject of the story is made to appear as the writer of the book. Such anomalies and dislocations give rise to many deep problems, not always wanting in a direct bearing on the meaning of the book as a whole. But the Bible remains the meat and drink of the spirit's hunger. Our century has seen the discovery of continents greater than those which crowned the adventurous spirit of the voyagers of the sixteenth century. Our eyes have been opened to such vast worlds as the civilization of the Aryas, of Egypt, of Chaldea, and Assyria. It has read not only their history, but their hymns and prayers, and reading them has thanked God for them. But it turns at once to the Bible, with the cry, Thou hast the word of eternal life.

The Bible meets the soul to-day at every one of its divine needs, and satisfies every one of its permanent satisfactions; not only the needs and satisfactions that are personal, but those which are heroic as well, as when one is abreast of men and faces them in the name of progress. It is in Abraham, Moses, Isaiah, Jeremiah, Paul, that we find the circle of heroic types, and in Jesus, the word of human perfectness made flesh. In the Christ we have the pattern of human living so summed up that it loses itself from the lines of time, and, while absorbing all nobility whether past or to come, lies back of life like the parent of all good. It completes the "lineage of the faith." In order, however, to get this full spiritual blessing from the Bible, it must be followed according to its own genius. If one is in the frame of mind of the Greek, and intent on the value of the expression, rather than on the lessons of life which are to be made our habitual practice, he will not naturally turn to the Bible, nor walk with it, if he do so turn. The secret of the Bible is not with those who are of such a merely literary turn of mind. The ideas of the Bible are for those only who are ready to give them effect. On the other hand, if one is disposed rightly toward the Bible as a word of God, but reads it incontinently and at hap-hazard, it will not open its treasures to such a one. For the mind is then out of harmony with the large method of the

Bible, which makes no little of mere passages and texts, that they are suffered to contradict each other, in the whole-hearted manner of its composition, embracing all sides of a thought, and only in fault to those who do not seize it all around. If one reads the Bible desultorily, it is almost certain he will come not to read it at all. Reading here a favorite chapter, or there a sterling exhortation, a psalm, a parable, it is beyond comprehension how the divine book contracts and seals itself. This part becomes too miraculous, and that too mythical, and a growing religious fastidiousness checks the will, permits the seasons to go by, and the desire perishes. The Bible is really read only when read in accordance with its own method, often the manner of its own spirit. To sort out the gems, is often to lose both the book and the gems. So closely interwoven with the whole fabric are the precious chapters, that when they are culled out in anthologies, they often become faded as the stones of the seashore when taken away from the waters that love to roll over them and keep them in hue. So organic is the Bible, and so vitally connected is each great part with the whole, that chosen passages seen apart from their relation are like bloodless limbs that have been severed from the body. The Bible then should be read as a whole. It remains a stumbling block to all who read it otherwise.

But the way is at best anxious, and leads between two equally false extremes, into one of which he is sure to go who neglects guidance. The Bible must be read as a whole, as the *epic of a people's life*, complete in its fulfilled orb. But this must not be understood to mean that every word in it is to be read. There are long lists of names, now supposed to be the names of races and not individuals. There are long notices about performing sacrifices, wholly wanting in pertinency for us to-day. There are "foolish genealogies." These matters are rather an interruption than an aid to understanding the Bible as a whole. If, however, we give a free rein to our individual choice, and read only just what each one sees to have a fitness and pertinency, the other danger is at hand of a Bible which contracts and interests us less and less. The evil of reading too little is greater than that of reading too much. There is needed a spirit of acquiescence, a willingness not to press the rule of immediate and obvious helpfulness. Moreover, much of the most helpful narration in the Bible is only disclosed after long familiarity.

Perhaps the safe course is to follow day by day a plan, keeping it steadily in view and looking for the result only after a fair and lengthy trial. By that time the spirit and teaching of the Bible will have become so incorporated with our spirit and living, that we shall wonder how we ever lived religious lives without its daily ministrations, the constant presence and assistance of its Holy Spirit. The busiest life could read the Bible through, in the main, once a year, and find it grow with our growth, and even as ourselves go on from strength to strength and from glory to glory.—*J. P. Entwinn.*

A good conscience is to the soul what health is to the body.—*Alison.*

PHILADELPHIA, ELEVENTH MONTH 16, 1889.

MISSION WORK IN PHILADELPHIA.

FRIENDS' Mission, at the northwest corner of Fairmount Avenue and Beech street, Philadelphia, has not been doing so much for the neighborhood in which it is located as was hoped for in the beginning of the effort. Those interested in the work at the commencement have from various causes been dropping out, until there are very few of the originators at present engaged in it.

But there has always been a feeling that this opening for such religious and educational efforts as come within the province of the Society of Friends, is a good one, and with an earnest, determined effort on the part of a few of our young and middle-aged people who are adapted to work outside the Society, a mission station might be put into successful operation that would be of solid and enduring benefit to the people of that part of our city, and the quiet, practical ways of Friends find a permanent lodgment in the social and home-life of those who come under their influence.

Quite a considerable sum of money has now been contributed and more will be forthcoming when the plan of reorganization is more fully matured.

The present proposition is to employ a suitable woman as matron, (perhaps a man and his wife would be better), who will have supervision of the various meetings to be held, and make the Mission a centre of effort in behalf of women no less than of men. Very much of the usefulness of the Mission will depend upon the person or persons thus employed, but the most suitable that can be obtained will not be able to accomplish all that is hoped for, unless there is a corps of active, intelligent, and systematic volunteers, who will feel it their bounden duty to do the part assigned them without wavering, and to the very best of their ability. These *must* count the cost, and be prepared to make whatever sacrifice it lays upon them, remembering that any cross ceases to be such when it is cheerfully and willingly borne; usually in such work the crosses that confront the worker are so magnified that until we in a measure come into the spirit of sacrifice,—the spirit of the Master,—we cannot realize the fullness of his words

when he said "it is more blessed to give than to receive."

There are many precious spirits among us, who are asking "Who will show us any good?" To these we would say the good comes to our own lives, as we make these lives helpful to other lives. In doing, not questioning,—in serving, not waiting to be served,—will this Christ-spirit come into and permeate our whole being, so that with him we can say, "I come to do thy will, O Father, and to finish the work thou hast given me to do."

THE statement in our report last week of the proceedings of Baltimore Yearly Meeting, that no action was taken on the proposal for an enumeration of membership, is an error. The action taken upon it was favorable. The minutes of men's meeting, (for advanced sheets of which we are indebted as usual to the Clerk), state the case thus:

"The subject of making an uniform census of our members during the coming year, as has been our custom in the past, was introduced. After being considered, it is hereby ordered that the Printing Committee be instructed to furnish each of our Monthly Meetings with the proper blanks for an enumeration of our membership, as of the first Sixth month next, and to forward the same when completed to our next Yearly Meeting by the usual channels."

We print elsewhere the circular notice sent out by the Committee of Nebraska Friends announcing the meeting to organize Nebraska Half-Year's Meeting, to be held at Lincoln on the 2d of next month. This will be an interesting occasion, and it is to be hoped there will be a full attendance of those who are able to be present.

MARRIAGES.

ANDREWS—KILLE.—At the residence of the bride's parents, Masonville, N. J., Tenth month 23d, 1889, under the care of Chester Monthly Meeting, held at Moorestown, Benajah D., son of Annie L. and the late Thomas C. Andrews, of Moorestown, N. J., and Hanna L., daughter of Joseph B. and Mary B. Kille.

FURNAS—CLIFFTON.—By Friends' ceremony, Tenth month 31st, 1889, John D. Furnas, son of Davis and the late Jane S. Furnas, of Wayne township, Warren county, Ohio, and Ella D., daughter of Sarah L. and the late William Clifton, of Plainfield, N. J. [This is reprinted, because of an error, last week, in one of the names.]

WOODNUTT—JACKSON.—Tenth month 3d, 1889, by Friends' ceremony, at the residence of the bride's father, Harry C. Woodnutt, Jr., son of Harry C. and Anna F. Woodnutt, of Mineola, and Grace A. Jackson, daughter of Solomon S. and the late Annie Jackson, of Jericho, L. I., N. Y.

DEATHS.

COALE.—Died at Newtown Square, Tenth month 30th, 1889, of spinal meningitis, Edmund J. Coale, in his 14th year. Son of Walter S. and R. Margaret Coale.

ELY.—Eleventh month 5th, 1889, Patience P., wife of Hueston T. Ely, of Philadelphia. Interred at Solebury Meeting ground.

HAINES.—At the residence of his nephew, Alfred L.

The next day after our arrival we made our first visit to the Exposition. I approach any consideration of this work with great hesitation. The subject is too vast in its proportions to receive any justice in even a series of letters of reasonable length. I am sure that I hazard nothing in saying that in extent of ground covered, and in the completeness of the display in the numberless departments, it surpasses any exhibition that has preceded it, either in Paris, or elsewhere. The Exposition which we saw here in 1867, both in extent and completeness, was far inferior to this. For our first visit we naturally began as nearly as possible in the centre, and therefore directed our steps first of all to the foot of the great Tower. The fountain at its base begins to play at noon, as do most of the fountains here, and we were there soon after eleven o'clock. The crowd had not yet assembled, and filled the great spaces under the Tower, as they did later in the afternoon, and we had a good opportunity to examine at our leisure this wonderful structure. The descriptions of the tower and of its dimensions which I had read, had failed to give me any real conception of its colossal size, as it appeared when actually beneath it. As I stood by the fountain, and looked up, my first impression was, where is the support for this immense structure, thus suspended in the air. On looking around I saw its four bases, but they were so far away as to give, at first sight, the appearance of a tower actually unsupported—and, floating in the air! And the fleecy clouds rapidly passing over it added to its appearance of insecurity and instability. As I passed under the four great arches on the four sides, supporting the first story, and saw the vast extent beneath, with the fountain in its centre, it would actually seem that a building like Swarthmore College could be placed between these bases, and under these lofty arches, and leave room for one or two smaller buildings beside it. The astonishing combination of massive strength and of the most light and graceful architectural proportions, make the tower a wonder to behold, and impress one deeply with the bold genius of the man in whose brain such a structure was conceived, and by whom that thought was developed into the actual and very tangible reality before us. We were quite content to see the Tower at first from the base, without ascending it to obtain the grand view from its summit. That pleasure we reserved for another occasion, and for it we intend to choose a perfectly clear, bright day. The best time to ascend is between 2 and 4 p. m. Earlier than that the morning mists are not so sure to be perfectly cleared away, and later they are liable to begin to rise again, and somewhat obscure the view. This was probably not so much the case earlier in the season, but it will be remembered that Paris is liable to mists and fogs, especially in the months of November and December. As the Tower is to remain as a permanent monument of this great Exhibition, and after five years is to become the property of the government, there will be ample time and opportunity for all who desire it to obtain the commanding view from its summit.

We spent a good deal of time the first day in the

department of the Fine Arts, where the display of painting and statuary was very fine. In this department it is not to be expected that our younger nation will compare with the older countries of Europe, with their fine galleries of painting and sculpture, the accumulations of many hundred years. It was very interesting to compare the characteristics of the different nations in their works of art, of all grades, from the simple and unaffected representations of nature, animate and inanimate, so faithfully portrayed by the Dutch artists, to the florid, extravagant, and highly colored paintings of the Spanish school. In the *Galérie des Machines*, in which I took a deep interest, America, as was to be expected, was quite well represented. Most conspicuous among the objects here displayed were the numerous and wonderful inventions of Edison. And from the fact that the tower, the fountains, and the grounds are brilliantly illuminated at night by the electrical apparatus for which we are indebted to this great inventor, it certainly must be admitted that at the head of the list of those who have contributed towards the brilliant success of this greatest of Expositions, stands the name of Thomas A. Edison.

I may say more of the Exposition after we have seen it more thoroughly. It closes on Fourth-day week, the 6th of Eleventh month, after being open exactly six months.

The libraries here are open free to the public, and every facility is offered to those who wish to use the books. The two nearest us, and those which we shall generally use, are the St. Genevieve and the Magazine Library. The former of these is very large, and is much used by the students of the Sorbonne and the College de France, both of which are a short distance from us. The Magazine Library is smaller, and more select, and I have found it in the past a delightful place for study. I have already begun to use it this year to much satisfaction. It is very pleasantly situated upon the banks of the Seine, just opposite the Palace of the Louvre, and is very central and convenient.

In walking over to our bankers, the other day, I passed through the Place Carrousel, which occupies the space between the Louvre and what was the Palace of the Tuileries, when this walk was very familiar to me in the winter of 1867-8. The change since then is very great. That was near the close of the reign of Napoleon III., and it was in this square that we saw the Emperor review the troops. Now the Palace has been destroyed by the Commune, and all vestiges of it are removed, and the place turned into a fine public garden. And on this same square of the Carrousel, and just opposite the gate leading into the palace grounds, there has been erected within the past two years a fine monument to Gambetta, with various inscriptions from his striking public utterances; the man, who perhaps more than any other, was responsible for the great changes in the government, and who made monarchy impossible, and the Republic a necessity in France. A more appropriate place for the monument of such a man could not have been selected than here in full sight of the spot where stood the Palace of the Tuileries. All that

the public can now see of this Palace is a collection of a few columns, pediments, statues, and carvings set up near the corner of the Eiffel Tower on the Exposition grounds, and labeled, "Ruins of the Tuileries." And even on this relic of royalty the names of Gambetta, and of Carnot, the President of the Republic, prominently appear. Although the country has recently gone through a serious struggle, in which there was a strange combination of Legitimists, Bonapartists, Boulangists, and Communists, against the Republicans in power, they failed signally in their united efforts to overthrow the existing government, and it seems now probable that France is to continue a Republic, upon a well established foundation, and that Monarchy and Absolutism in all their forms have forever passed. May it prove to be so!

EDWARD H. MAGILL.

For Friends' Intelligencer and Journal.

THE LATE YEARLY MEETING AT
BALTIMORE.

THE annual session of Baltimore Yearly Meeting ended on the 1st of Eleventh month. The final sitting was overshadowed by a solemnity deep and impressive. Into the women's meeting, prior to its close, came two concerned brothers, bearing messages loving and instructive to the mothers to whose fostering care and responsibility is confided the task of rearing and fitting for their life-work the rising generation. Their words of cheer and encouragement brought consolation to many a heart, and their feeling and tender farewell stirred the fountain of tears.

I feel it in my heart to say through the medium of this cherished little paper, that after an interval of some ten or twelve years since I have attended one of the yearly meetings, I consider that it has been a blessed privilege afforded me to come again and enjoy a religious mingling and communing with the members of our beloved Society. And though I have been but a silent listener,—not voicing the earnest thoughts and heart-felt interest which stirred me, yet I have been a sympathetic, and I trust, a benefited one. I believe we do not fully realize the advantage of being within reach of our own meetings until we are isolated from them.

I have noted with great pleasure that in the intervening years there has sprung up a new life and vitality in the business meetings and expression is given not only by the aged and middle, as in years gone by, but by those walking in the green pastures of life. Had this happy state of affairs existed long ago, and the youth been enlisted and interested as they appear to be now, in the work and advancement of our organization, we would not have to mourn today, the loss of so many bright minds who have withdrawn from us and gone to help build up and strengthen the churches. I have given this subject much thought, since I have been constantly thrown with those of other denominations and learned how the young members work with such earnestness and zeal in every department, especially that of the Sabbath school. Friends, until recent years, have been slow in this direction, to a hindering extent

they wot not of, retarding the advancement and growth of our Society to a degree scarcely realized; but they are bravely coming to the front now and in the face of some opposition are steadily going on with the good work, wading in its comparative infancy, and with that charity which recognizes the good wherever it exists, utilize the fitting passages in other Sabbath school papers and lesson leaves, apart from our own.

With this hopeful outlook, and with a renewed effort on the part of the teachers appointed to their responsible positions, to become prayerfully prepared to interpret clearly the Holy Scriptures, all efforts in this direction will assuredly be blessed.

During the many words of caution and admonition directed to the young during the Yearly Meeting by exercised minds, and the earnest love and interest manifested in their religious welfare expressed, I thought of the blessing that would come of it if we would have *more faith in them*. Do not feel discouraged, if in the joyousness of their youth, they are now and then led into the pleasures of the world, or a love of personal adornment; they are not callous to the requirements of a religious life. I know how these things have always had a strong hold on me, and yet, even in my young years, I ever felt a loving and restraining hand. My little girl said not long since to me, "Ma'ma, just say that you believe I will be good, and then I will be." Mothers, there is more in this than you really know.

Amongst the subjects brought up in the business meeting which called forth much lively expression, taking hold mutually of the minds of young and old, was that in regard to pernicious reading, and the distribution of literature of an immoral character, which frequently found its way into the sacred inclosure of the home circle. It is well to bend our every effort to suppress this, but at the same time, let us not be unmindful of the importance of as generously distributing that which we have at our hand, and which we know to be good. Many a time has come to me the wish that the little pamphlets, and I may say *tracts*, now being printed for the benefit of our members, portraying so clearly and beautifully the holy principles and truths we profess to believe and to do, could only find access to the homes of thousands unacquainted with our methods and tenets of belief. How their contents would contribute to hungry souls longing for just such nourishment! I have handed these little pamphlets to many who have discussed doctrines with me, and not a few have expressed thankfulness that their contents had explained away their doubts and fears, and appeared to them a new revelation of the truth. A young college student, the son of an Episcopal minister, who hoped his idolized son would accept the same calling in "the church," after reading the autobiography of one who always comes before me as a pattern of combined wisdom and child-like simplicity, thus writes me

"You know not how much I do, and always shall, look back upon the first insight I have had into the simplicity of the Quaker faith, how much it means to me to have become acquainted with the life of your

veritable 'Father in God,' Benjamin Hallowell, and everything has seemed since to tend in the same direction. Emerson, whom I again took up after years of neglect, seems an incarnation, not of the peculiarities, but of the deep, pure essence of the Friends' belief, and, so has come to me in this way, in the lonely communings, during the weeks and months I have spent in the mountains and on the plains, a strengthened and settling of my deepest practical belief which makes us ever true to our higher selves, and more unobtrusively helpful to those around us. And thus I have felt that I ought to honestly acknowledge my position to my father, though to deliberately wound so strong and tender a love, is as hard a duty as life can hold."

How truly it was said in our meeting, that the All-Father does not call us in one and the same direction of ministration; there are other ways than standing upon one's feet before the public. In the social world, and everywhere, what influences can be exerted for good; what opportunities offer for fitting words in truth's holy cause; how often the hand can reach down to help and lift up to a higher plane those who are blindly groping after one ray of light; a kindly look or pressure of the hand to some discouraged one;—all these are little things in themselves, but they "make for righteousness."

And so, if in our religious organization all faithfully fill their appointed niche, working for the universal good, according to individual light, accepting and adopting, even in the outward, that which is in accordance with religious advancement and progression, though it calls for the changing or doing away with some parts of our discipline,—as for instance that which refers to the disownment of members for having their marriages performed by ministers of other denominations, for having pianos in our homes, and some other unnecessary restrictions which have caused the sad loss of some of our most useful members.

I believe we will then no longer have the opportunity of listening to the world's fiat—that "Friends are dying out," or reading the many articles, which have so pained us, of the "decline of our religious Society," but we will have our strength renewed, and be made to rejoice that in the wise ordering of things there came upon us that state of coma, out of which we have awakened, and which indeed portended death.

E. P. JACKSON.

MANY of the huts which have been sent to the South African gold fields, and other places where portability is important, are made of wire-woven waterproof sheets. The sheets are less than half the weight of twenty-four gauge corrugated iron, for which they are mainly intended as a substitute; and, being composed of stout papier-mâché, with fine steel wire foundations, they are excellent non-conductors of heat and cold. The weight of a settler's hut, 14 feet by 10 feet, is thus brought down to a little over half a ton.

A good life is the best way to understand wisdom and religion.—*Jeremy Taylor.*

EDUCATION IN BALTIMORE YEARLY MEETING: COMMITTEE REPORT.

To Baltimore Yearly Meeting:

ON 11th Month 1st, 1888, the Yearly Meeting Committee on Education met for organization, re-appointed Eli M. Lamb, Clerk, and named an Executive Committee which was made larger than it had previously been.

At a meeting held 11th Month 12th, a report was received from Alexandria Monthly Meeting, which stated that there no longer existed a school under the care of that Monthly Meeting.

A Committee was appointed at that time with instructions to endeavor to foster an intimate relationship between the school in Washington, under care of Thos. W. Sidwell, and the Yearly Meeting Committee on Education.

This Committee, after having paid a visit to the school mentioned, reported it as in a very flourishing condition, and as managed in a most felicitous and satisfactory way. From that time to the present, way has not seemed open for further labor there-with, much to the regret of the Committee.

From time to time the Committee have received reports from most of the Monthly Meetings where there have been Friends' Schools, and in several of them considerable effort has been made to sustain schools of our own, where our youth might receive the benefits of a guarded education; but owing to the sparsely settled districts in which most of our meetings are, it is very difficult to sustain schools of a grade high enough or large enough to justify the employment of teachers competent to instruct in the number of branches required, or in the more advanced studies. For this reason several of our schools languish. To keep these schools up to the standard required to compete successfully with public or denominational schools of the various neighborhoods, we need more funds than this Committee, or our subordinate meetings can control.

To succeed in reaching the highest possibilities, we are of the opinion that schools should be kept open not less than nine months per year. The Committee have also reached the conclusion that there should be made a systematic effort to visit from time to time the various schools throughout our borders, and call attention of teachers and parents to the opportunities that may be obtained with no great difficulty for raising the standard of education in our Society, and for opening the way to our membership for obtaining a liberal education.

Business engagements and want of sufficient means to travel in this cause have greatly curtailed our opportunities for successful work in our field of labor.

The means afforded by the Yearly Meeting have been used sparingly, as there seemed to be needs for more money in other channels during the past year than usual, but where schools have applied for help in the way of apparatus, books of reference, etc., the Committee have supplied them.

In this way a number of schools have been aided, and the work therein has been improved.

Considerable correspondence has been had for the purpose of endeavoring to stir up more life in this

field of labor. Conferences have been suggested in various places, but there has not seemed to be a want felt for them.

It had been the hope of this Committee that through the efforts of the Yearly Meeting, Friends' Schools of grades to suit the needs of every neighborhood might be started and sustained. As a means of promoting the welfare of our Society, we considered the importance of educating our children liberally and under our own care, one of the greatest. Our young people could thus be equipped for many and useful stations in life, and opportunities afforded them for disseminating the views and principles of our Religious Society over new ground. A good teacher in membership with us finds but little difficulty in obtaining congenial and profitable employment, and there is for them such a demand that often when wanted for places within our own fold they cannot be found. Schools within reach of our people at home must be afforded, for it is in early life that a love for literary pursuits is generally laid, and if a course of systematic education be deferred until the later years of boyhood or girlhood, it in rare instances accomplishes as much as might otherwise be done.

The foundation at least should be laid before the child is old enough to leave home for study among strangers.

Opportunity has lately been afforded to such as might be well equipped to take a College course at Swarthmore free of cost, but in most instances it has been found that the ground work of those applying has been deficient.

This statement is made to call attention to the importance of having good preparatory schools at home.

This Committee then reiterates its oft repeated recommendation to all of our meetings to give attention to this important concern. The youth should be carefully looked after, and they will be; if not by our own Society, by others, who are always ready to gather good people into their folds.

The Committee has endeavored to collect as much information concerning educational matters as is possible, and to tabulate the same, but owing to insufficient returns, and incomplete reports, it has been found impossible to arrive at satisfactory results in this respect.

Having labored so far as has appeared to be practicable in the matter committed to our care, and accomplished results not at all commensurate with the desire and hopes of those who have worked, it seems that the present Committee should be reorganized. It therefore seems proper that they ask the meeting to release them from further service.

Respectfully submitted,

ELI M. LAMB, *Chairman*.

Baltimore, Tenth month 28, 1889.

This great saying of Christianity, "To die unto sin," remains still the highest theoretical solution of the inner life. Only in it is there any peace of conscience, and without this peace there is no peace.—Amiel.

EDUCATIONAL.

LECTURES AND INSTRUCTION IN SCHOOL WORK.

THE first of a series of lectures on Pedagogy, with instruction in school work, announced by the Educational Committee of the Yearly Meeting in combination with the Managers of Swarthmore College, was given at 15th and Race streets on Seventh-day last, at 10 a. m. There was a good attendance of teachers and those interested in educational work, and the lecturers were followed with close attention.

Dr. E. E. White, of Cincinnati, spoke on "The Elements of Governing Power." His lecture was filled with most valuable suggestions and the fine spirit which pervaded the discourse must have inspired the large number of teachers present with a new zeal in their profession. The Doctor believes the elements of wise government in school are seven in number, and first he named *good scholarship*. Children are quick to detect if a teacher is not possessed of the requisite knowledge, and a thorough mastery of the subject to be taught gives a teacher one important point of advantage in control. This knowledge must also be *fresh*, the reply of Dr. Arnold was quoted to one who asked why he continued to study daily: "I prefer to feel my pupils from a running stream rather than from a stagnant pool." The second requisite is *skill and management in teaching*; that is, the orderly calling and dismissing of classes and the machinery of the schoolroom. A teacher is an artist and should understand how to arrange and plan for successfully interesting the pupils. The third is *heart power*. There must be love for the children, even for the unlovely. There must be the power to see and love the soul, hidden perhaps under a repulsive exterior. The fourth is *backbone*. Not stubbornness, but firmness and evenness of control that will admit of no variableness nor shadow of turning from the law of right discipline. Fifth, *good eyes and good ears*. These are of special importance in the school room. A controlling eye and an attentive ear, (though sometimes it is necessary to see and hear not), are indispensable in a successful teacher. Sixth, *common sense*—that is, the ability to use that sense we all hold in common, to make the best use of the means at hand, and to have a grasp on the situation at every point. Seventh, *a positive moral character and a positive moral life*. This is not named last because least, but to crown all the rest, or, to reverse the order, the first round in a ladder, the top of which may be *good scholarship*.

We cannot attempt to give more than a meagre synopsis of a lecture that was a delight to hear and one that could not fail to impress itself upon an audience in earnest to improve in the high calling of teaching.

After the conclusion of Dr. White's lecture, Prof. D. Batchelor illustrated his system of Vocal Culture, with a class of students under his instruction in the Friends' school at 15th and Race streets. The work was followed with much interest and attention.

Dr. White will lecture to-day (16th inst.), at Swarthmore College, at 10:30 a. m., on "Character," and will be again followed by Prof. Batchelor with a class exercise in Vocal Culture.

NEWS OF FRIENDS.

PHILADELPHIA QUARTERLY MEETING.

PHILADELPHIA QUARTERLY MEETING, held at 15th and Race streets, Eleventh month 5th, was well attended by women Friends, but the absence of young men caused a feeling of regret in some minds. Speaking in the first meeting, Lydia H. Price was impressed with the need of charity, the charity that thinketh no evil. We should be true at home and true in our religious organizations.

Catharine P. Foulke, Robert Hatton, and Ellison Newport also appeared in the ministry.

In the meeting for business the three queries usually read at this time were answered. An interesting report from the Committee on Temperance called forth much expression of unity. The committee was continued to labor in this field, and the amount asked for granted. Lydia H. Price presented a minute issued by Birmingham Monthly Meeting, setting her at liberty to visit the quarterly meetings composing Philadelphia Yearly Meeting, also the meetings composing Philadelphia Quarter, and to appoint some meetings.

FARMINGTON QUARTERLY MEETING.

This was held at Farmington, N. Y., on the 6th instant, with a good attendance of Friends. After a season of silence Sunderland P. Gardner arose, and for over an hour dwelt in a powerful manner on the principles of Friends and of the Christian religion. In the business meeting, the usual routine matters were attended to. In the afternoon, at 2 o'clock, a Temperance conference was held. There were readings, recitations, etc., by Joseph Tritts, Dora Blaker, and others, and remarks by Edwin Ewer, Charlotte W. Cocks, and others.

On the following day, (Fifth-day, 7th inst.), the meeting assembled at the usual hour. Not quite so many were in attendance. Charlotte W. Cocks was the first to speak, her message relating to the subject of prayer; after which Sunderland P. Gardner spoke in his searching and convincing manner for near an hour, and the meeting closed under a solemn covering.

REPORTS OF PHILANTHROPIC WORK.

WE have received a copy of the report of the Penn Sewing School of Philadelphia, for 1888-89. It says:

The nineteenth session of Penn Sewing School opened Eleventh month 3d, 1888, with 67 children, 39 of whom were colored, and 28 white. The number increased during the winter until there were 152 names enrolled, the average attendance for the year being 106. All the sessions of the school have been regularly held and well attended, the conduct of the children being generally satisfactory.

351 garments have been distributed during the season, of which 66 were made by the pupils. Of the remaining number, part were bought at the 17th street House of Employment, the rest having been prepared by the Cutting-out Committee, and made at the House of Industry, 702 Green street.

Through the generosity of our contributors we have been enabled to give shoes to 140 children.

While this has been a great drain upon our resources, we still feel that we have supplied a need which otherwise might not have been met.

At the Christmas celebration there was the usual gift of a box of candy to each child, in addition to the contributions from the pupils of Friends' school, of toys and books, which gladdened the hearts of the little ones, whose daily surroundings are not of the brightest. We again have to thank the Friends of Race street Monthly Meeting for the use of the room and the supply of fuel. Only one pupil received a certificate of merit this year. We trust the cause is not due to an indifference on the part of the rest, but it is a source of regret that the majority of pupils are unable to remain with us long enough to pass through the course of sewing prescribed by the school, as their services are generally required elsewhere in aiding their families.

As this session completed the 20th year of the school, in addition to the usual exercises on the closing day, a report was read giving a retrospect of the founding of the school, and the work accomplished by it during that period. In looking back upon the work of former years, we note the progress that has been made, and can but feel encouraged to persevere in what we know is good work. But here at the threshold of another twenty years, the question arises whether there is not a call for an effort to still further extend the usefulness of the school. The establishment of "household schools," institutions in which the different departments of household work are practically taught, is an accomplished and successful fact.

Friends have been pioneers in many educational and philanthropic movements, but in the matter of "household schools" other denominations have taken the lead, and are doing good and earnest work; and the question is seriously asked whether Friends can afford to let this excellent work go on without a representation in it, and if not, is not the Penn Sewing School, with its strong organization, its number of interested and willing workers, and its 20 years of experience and prestige as an educator in one branch of household instruction, the most proper and fitting body to enter upon this new field of duty? But it must be borne in mind that this work, if undertaken, will require increased means, and the likelihood of obtaining this must claim the attention of the committee who may have the matter in consideration.

Meanwhile, there is still the long-felt want of more teachers. We would be glad to welcome the aid of our young Friends, who could here find a harvest ripe for gathering.

HANNAH R. GRUBE, *President*,
ANNIE C. DORLAND, *Secretary*.

We have also the annual report of the Young Friends' Aid Association of New York City, a neatly printed pamphlet, covering the operations of the Association for the year ending with Tenth month, 1889. The receipts, (including a balance of \$200.37 from last year), were \$1,306.63. Assistance to the amount of \$1,107.86 was rendered to 49 families during the year, and allowing for two small expense items, there re-

mained a balance of \$191.37. The report presents these forcible remarks on the general subject:

"The problem that presents itself to the charitable everywhere, is how to help the poor to help themselves. It is an easy matter for the unthoughtful philanthropist whose heart is pained by some pitiful story of poverty, sickness, or distress, to put his hand in his pocket and dole out to the seemingly suffering beggar, something for the relief of his immediate wants; but the true lover of his fellow man finds that not money alone, but something of himself besides is needed by the worthy poor, and that his aid to the unworthy is not a charity but a harm to its recipients.

"Poverty stalks not in public view, and only in cases of extremity, unless sought out, does it come under the observation of the benevolent, whilst pauperism blatantly portrays its assumed claims upon sympathetic ears in every household and business office. It is the aim of the Young Friends' Aid Association to help in the relief of the one, and, so far as may be, to abolish the other."

The Treasurer, Jos. A. Bogardus, 177 West street, New York City, will be glad to receive contributions in aid of the work.

HOME OF INDUSTRY FOR DISCHARGED PRISONERS.

EDITORS INTELLIGENCER AND JOURNAL:

ON the 7th instant an interested company gathered by invitation in the Home of Industry for Discharged Prisoners, at 46th street and Woodland avenue. (The train from Broad street stops at the door.) This institution will be understood by its name. Men who have received their discharge from prison, and have resolved to lead a better life, meet with a cold reception from the uncharitable, and frequently are compelled to return to crime in order to sustain life, and in recklessness oft times become a scourge to the community, as life becomes burdensome to themselves. The object of this institution is to provide a place for such as soon as they are relieved from prison life, to welcome them to this "Home," and to employ them at such occupations as they are fitted for.

It is designed by industries to make the institution self-supporting, while by employment and paid labor to its inmates, and by a course of moral instruction and religious influence brought to bear upon them, to save to taxpayers the cost of court and jury for another conviction and to restore the erring to good citizenship.

At present the "Home" will require additional capital to commence business on the plan proposed. It should be well equipped for successful operation, and funds are wanted for additional furniture, machinery, and the payment of increased expenses. The outlay will be expensive, but the return by labor produced will doubtless meet the current outgo. Institutions of a similar character, organized under the supervision of Michael Dunn, (the present Superintendent) are now in a prosperous condition in the cities of New York, San Francisco, Chicago, and Detroit. Already the good effects are being shown, as we were told that the sum of \$20 was placed in one of the Savings Funds by 12 of the men. This may seem a small item, but when we consider that these

men have not been producers, but quite the opposite, it shows that habits of thrift begin to appear. We were pleased with the order and cleanliness evident, also at the view of the men making brooms, which is quite largely carried on. The men take them into the city to sell, and (as I understood), get a percentage for their sales. If any are desirous of understanding more about this institution, they can do so by addressing John A. Stoddart, 925 Walnut street.

K.

THE LIBRARY.

FISHY' JIMMY. By Anne Trumbull Slosson. New York: A. D. F. Ranolph & Co.

This is a little book that can be read in an hour, giving the pathetic record of one lone human being who knew nothing of books, but from observation could tell each tree and shrub and flower with their uses. "He had never heard of entomology. Guénié, Hubner, and Fabricius were unknown names. Yet he could have told these worthies many new things." And the birds, "he knew each and all better than did Audubon, Nuttall, or Wilson." Illiterate, yet possessed of that knowledge which is of most worth; it led him into the true path. The spirit breathed throughout this well written little book is that of pure Christian love.

MARGARET ELLISON. A Story of Tuna Valley. By Mary Graham. Philadelphia: 1889. (For Sale by Friends' Book Association, 15th and Race streets.)

This is a simply told tale of country life that could easily have its foundation in fact in our mountainous districts, for in these modern days of searching for the hidden wealth they contain, many have isolated themselves from congenial surroundings.

The tone of the book is healthful, with an undercurrent of religious feeling void of bigotry and cant, and without denominational bias; the strong point being the advocacy of equal religious interests with similar views to secure happiness in married life. A simple plea for religion in the home, not to be supplanted by intellectual culture. A book easy to read and to understand, with a positive side towards that which is good.

SWARTHMORE COLLEGE NOTES.

THE Juniors will give a reception to the members of the freshman class on the evening of Seventh-day, 16th inst.

—Mary D. Pratt, '85, has been appointed instructor in mathematics in the preparatory classes.

—The college glee club, which gave much pleasure to the students last year, has organized by the election of William F. Levert, '90, president, and Professor George S. Hoadley, director.

—Several new students have been placed upon the roll during the past week.

—The games of football between the college eleven and the ex-members brought many old students back to the college. William H. Seaman, '88, Carroll H. Luller, '88, and Horace G. Vernon, ex '91, were among the more prominent ones who played in the game.

—Quite a large class of Swarthmore students went to 15th and Race streets last Seventh-day to hear the lectures by Dr. White and Professor Batchelor.

—An effort is being made to secure William Jones, of London, to lecture here on Sixth-day, 23d. Samuel Phelps Leland delivers the first lecture of the regular course on Sixth-day, 15th.

—The faculty have decided to grant a whole holiday on Thanksgiving day. A number of students will take advantage of it to go to their homes.

S.

INSPECTION OF SITES FOR THE GEORGE SCHOOL.

MEMBERS of the General Committee, about 35 in each case, visited the proposed sites for the George School at Sadsbury, Lancaster county, and West Grove, Chester county, the former on Sixth-day, the 8th instant, and the latter on Third-day, the 12th. The most of those who went to Sadsbury left Philadelphia at 8.50 a. m., and left Christiana at 1.42 p. m., on the return. The day was dull, and some rain fell before the inspection was completed, but the visitors were taken in carriages to the proposed site, (a short distance from Christiana station), and afterward a lunch was spread for them in the meeting-house, (Sadsbury), which is close by. Those interested in this place offer one hundred acres of eligible land, free of cost.

The visit to West Grove, for those going from Philadelphia, was made by a special train which left Broad street at 10 a. m., and ran directly to West Grove, (40½ miles), in a little more than an hour. The property proposed here includes the farm formerly belonging to the State, and called the "Experimental Farm." Those interested in the selection of this place have secured for the school the opportunity of buying the property at rates materially below the price which would be asked an ordinary purchaser. The visitors drove over the property, and were kindly provided with lunch at Samuel C. Kent's; those who returned to Philadelphia taking the special train at 2.20 p. m., and reaching the city about 3.35.

YOUNG FRIENDS' ASSOCIATION.

THE regular monthly meeting of Young Friends' Association was held on Second-day evening, 11th inst., in the Parlor at 15th and Race streets. There was a good attendance, the room being more than comfortably filled. Robert M. Janney presided. Several of the standing committees made reports of progress in the work assigned them; that on the study of the Discipline desires to collect from the several yearly meetings copies of their present and preceding books of discipline. An interesting resumé of the 10th and 11th chapters of S. M. Janney's History of Friends, describing the spread of Friends' views in Wales and Scotland between 1755 and 1760, was read by Emma Waln. Howard M. Jenkins spoke at some length, informally and conversationally, upon the Doctrines of Friends. He said no authoritative and official declaration of belief, accepted by all who claim the name of Friends, had ever been approved: the nearest, doubt-

less, to that was the "Apology" by Robert Barclay, written in 1675. That work, the speaker presumed, was acceptable in substance, if not in every particular, to George Fox, William Penn, and the other most prominent leaders in the Quaker reformation; and it remained a body of doctrine from which Friends might still draw the substance of their doctrinal views. It coincided with the preaching of George Fox, and with the specific and positive statement of William Penn, (in his preface to Fox's Works), in putting foremost the doctrine of Immediate Revelation, which was the corner-stone of Quakerism as a distinctive faith.

The speaker thought that the causes which produced the Separation of 1827 were undoubtedly a difference of view concerning doctrine, the "evangelical" view influencing one party, and the Unitarian view the other; but the two parties did not divide on this line; the point on which they split was the question whether uniformity of opinion should be demanded as a condition of membership. The Orthodox body held that it should, and would consent to no questioning of evangelical doctrine; the other body held practically that there should be liberty of variation on this point. The speaker thought that the difficulties since experienced by the Orthodox body in maintaining uniformity, and their several divisions, demonstrated the impracticability of holding Friends to a strict doctrinal line, beyond those matters which constituted the essentials of Quakerism.

THE "voice of the Lord" is the guide of the Lord's people. The Scriptures say much of the importance and the benefit of heeding the Lord's voice. A part of the blessing connected with this command is, however, lost when we restrict the province of that Voice, and limit its guidance to purely religious concerns. The voice of the Lord is to be listened for, not only in the sanctuary and in relation to our spiritual interests, but equally on the most practical occasions of life. It instructed the disciples in so small a matter as on which side of the ship to cast their net in order to catch fish. It should direct all the business plans and all the social visits of to-day "Lord, what wilt thou have me to do?" ought to be the Christian's constantly recurring question. The least duty providentially indicated, secular as truly as sacred, is the Divine call to action; and a prompt obedience is the only allowable response. Thus living, we shall have the fulfillment of God's promise to those who "do his commandment," "good success,"—as God estimates success.—S. S. Times.

EVERY good action conscientiously performed is a solid gain cast into the world's treasury of lasting good, and becomes an incentive to others, to whom the example is an object lesson of enduring value.

No true man can live a half life when he has genuinely learned that it is only a half life. The other half, the higher half, must haunt him.—Phillips Brooks.

ONE DAY AT A TIME.

ONE day at a time! That's all it can be;
No faster than that is the hardest fate.
And days have their limits, however we
Begin them too early and stretch them to late.

One day at a time! Every heart that aches,
Knowing only too well how long they can seem;
But it's never to-day which the spirit breaks
It's the darkened future, without a gleam.

One day at a time! When joy is at height
Such joy as the heart can never forget
And pulses are throbbing with wild delight,
How hard to remember that suns must set.

One day at a time! But a single day,
Whatever its load, whatever its length;
And there's a bit of precious Scripture to say
That, according to each, shall be our strength.

One day at a time! 'Tis the whole of life,
All sorrow, all joy, are measured therein;
The bound of our purpose, our noblest strife,
The one only countersign sure to win.

—Helen Hunt Jackson.

HARVEST.

We said, when the spring was late,
And the bitter winds were chill,
It were vain in hope to wait
For the ladage on vale and hill,
We were fain to mock at ruthless fate
And we sowed the fields to till.

We thought, when the summer rain
In floods from the rifted skies,
Was sweeping the upland and the plain,
A slant be for our eyes,
Our labor hard is a waste, and vain
Each needless sacrifice.

But to-day O fools and blind!
There are purple grapes on the vine,
And the smell of the fruit on the warm south
wind
Is sweet as the breath of wine,
And the sheaves the reapers go forth to bind
Are a gift from the Hand divine!

We never had need for fear
We had only need for trust;
Ever our lives to our Lord were dear
And ever his ways were just;
If our faith had but been strong and clear,
We had sown the moth and rust.

O'er our shiver no doubt and dread
Nor all on our way had come
With, morn'g a time, a drooping head
And lips for sorrow dumb
Dear Lord, we are hardly comforted
In thy harvest's plentiful sun.

Pardon our track of grief!
Gave us faith to be glad and gay
In the seed time as in time of throug't
Make us joyful every day
For what thou'ldst our tribute be,
Thy name shall when we pray.

—Margaret E. Snopcey, in S. — *Temper*

THE INDIAN COMMISSIONER'S REPORT.

WASHINGTON, Nov. 15.—T. J. Morgan, the Commissioner of Indian Affairs, has submitted to the Secretary of the Interior his report for the year ending June 30, 1889. He says that he has entered upon the discharge of his new duties with a few simple, well-defined, and strongly cherished convictions:

First—The anomalous position heretofore occupied by the Indians of this country can not much longer be maintained. The reservation system belongs to a "vanishing state of things" and must soon cease to exist.

Second—The logic of events demands the absorption of the Indians into our national life, not as Indians, but as American citizens.

Third—As soon as a wise conservatism will warrant it, the relations of the Indians to the Government must depend solely upon the full recognition of their individuality. Each Indian must be treated as a man, be allowed a man's rights and privileges, and be held to the performance of a man's obligations. Each Indian is entitled to his proper share of the inherited wealth of the tribe, and to the protection of the courts in his "life, liberty, and pursuit of happiness." He is not entitled to be supported in idleness.

Fourth—The Indians must conform to "the white man's ways," peaceably if they will, forcibly if they must. They must adjust themselves to their environment and conform their mode of living substantially to our civilization. This civilization may not be the best possible, but it is the best the Indians can get. They cannot escape it, and must either conform to it or be crushed by it.

Fifth—The paramount duty of the hour is to prepare the rising generation of Indians for the new order of things thus forced upon them. A comprehensive system of education, modeled after the American public school system, but adapted to the special exigencies of the Indian youth, embracing all persons of school age, compulsory in its demands and uniformly administered, should be developed as rapidly as possible.

Sixth—The tribal relations should be broken up, socialism destroyed, and the family and the autonomy of the individual substituted. The allotment of lands in severalty, the establishment of local courts and police, the development of a personal sense of independence, and the universal adoption of the English language are means to this end.

Seventh—In the administration of Indian affairs there is need and opportunity for the exercise of the same qualities demanded in any other great administration—integrity, justice, patience, and good sense. Dishonesty, injustice, favoritism, and incompetency have no place here any more than elsewhere in the Government.

Eighth—The chief thing to be considered in the administration of this office is the character of the men and women employed to carry out the designs of the Government. The best system may be perverted to bad ends by incompetent or dishonest persons employed to carry it into execution, while a very bad system may yield good results if wisely and honestly administered.

NEWS AND OTHER GLEANINGS.

THE Newtown (Pa.) *Enterprise* reports the return of a citizen (Oliver Allen) from a visit to northwestern Ohio, who said: "Potatoes were a fine crop, and are worth 25 cents per bushel in Fort Worth and Toledo; clover seed yielded well, turning out from two to five bushels per acre, price \$3.40; hay from \$5 to \$7 per ton; average crop of wheat from fourteen to sixteen bushels per acre, at 78 cents; oats 18 cents; corn 25 to 30 cents; butter from 6 to 17 cents per pound and of good quality. Mr. Allen also stated that he received a letter from Nebraska on Monday, in which it was asserted that they now have the best corn crop they ever raised. Prices ruled as follows: Corn 15 cents; oats 10 cents; potatoes 25 cents; eggs 10 cents. Oliver says it looks to him as if farming does not pay any better in the West than it does in the East, even at the low price of land there. Day hands on farms get \$1 per day and board, or \$1.50 and board themselves; carpenters \$2, and other labor in proportion."

—The Litchfield (Conn.) *Enquirer* attacks "hard" cider, and says: "We happen to be old enough to remember the breed of red-nosed, red-eyed elder toppers who survived for many years the first great temperance movement of half a century since. They were relics of the old days when farmers are said to have put as many as thirty or forty barrels of cider in their cellars every winter and hardly to have drunk water till it was gone. These drunkards were the sourest, most disagreeable grade of sots we have ever known. The farmers of Connecticut to-day are generally temperance men, but it is not due to the law that they are so."

—"People," says the Portland (Me.) *Press*, "are beginning to realize what a terrible thing the electric light wire is when it is not properly looked after. In the telegraph office at Brunswick, on Sunday, the switchboard suddenly began to blaze. With great bravery Mr. Reed, in charge of the office, tore the wires out to save the office from flames. He was at once knocked over by a tremendous current of electricity. An electric wire had been crossed with the telegraph wires, not in Brunswick, but twenty miles away in Lewiston. The light wire poured its dangerous current into the telegraph wires, and on them it traveled twenty miles to Brunswick before breaking out."

—From the returns compiled in the office of State Superintendent of Public Instruction it has been ascertained that the total number of trees planted on Arbor Day in the school districts throughout Pennsylvania, outside of the cities, was 21,166. These were all planted on school grounds.

—Alfred Parsons, of Fallsington, Bucks county, Pa., estimates his apple crop at from 8,000 to 10,000 bushels, grown on about 1,800 trees. He has about 4,000 trees under cultivation.—*Exchange*.

—On account of the stormy weather, the temperance meeting held in Wrightstown Meeting-house on the afternoon of the 3d inst. was quite small. The larger number of those expected to prepare exercises for this meeting were not present. The meeting was opened by Samuel Swain, of Bristol, who made a brief speech. Cynthia S. Holcomb read a chapter from the Bible, and commented upon it. She also announced the exercises. Recitations were given by Howard Wright, of Makefield, Charles Eastburn, of Newtown, and Howard Merriek, of Wrightstown. After this a number of short speeches were made. Among the speakers were Samuel Swain, Joseph Flowers, Oliver H. Holcomb, and Harrison Smith. The next meeting of the kind is to be held at Solebury, in December.—*Newtown, Pa., Enterprise*.

—Katharine Drexel, (daughter of the late F. A. Drexel, banker, of Philadelphia), who entered the Catholic convent of the Sisters of Mercy, at Pittsburgh, some months ago, definitely declared her purpose to become a member of the Order, on the 7th instant, and "took the veil." She inherited (with her sisters) a large fortune from her father,—said to be several millions of dollars.

—The Atlanta, (Ga.), *Constitution*, arguing that there is more prejudice against the colored people in the North than in the South, says: "No observant person can travel over the two sections without being struck with the difference between the negroes of the two sections, and by the attitude of the whites toward them. In Georgia, and wherever he went in the south, Governor Hill saw the negroes engaged in almost every branch of industry. He saw them as mechanics, working side by side with the white mechanics; he saw, or could have seen, negro contractors employing both white and black labor."

—Iron Eagle Feather, a Sioux Indian, has just completed the scientific course at Dickinson College.

—There are enough relics and exhibits of value stored away unpacked at Washington to fill another building of the size of the present National Museum.

—About 2,300 miles of main for carrying natural gas have now been laid in this country, and the total capital invested in the business exceeds \$50,000,000.

—Hollow bricks are coming into very general use in building. They crush at 30,000 pounds, and cost one-third less than the ordinary form, while making the walls proof against fire, moisture, and frost.

—The centenary of the introduction of the chrysanthemum into Europe will be celebrated by all the French horticultural societies, and exhibitions of this flower will be held at Orleans, Toulon, Lille, Bordeaux, and other cities.

—Mrs. Leavitt, the world's organizer of the Women's Christian Temperance Union, has already traveled seventy thousand miles in the cause of temperance. She will shortly return to London from Geneva, after which she will continue her travels by sailing for Africa and the Holy Land, and then, recrossing the continent of Europe, will once more visit the British Isles and finish up with South America.—*Christian Register*.

—Assiduous search through the hospitals and other institutions of like character in New York has failed to give any clue to the disappearance of Prof. John M. Child.

—American capitalists who have purchased 100,000 acres of land covering the oil deposits at Gaspé, on the south shore of the Gulf of St. Lawrence, have sent a force of engineers, with machinery, derricks, etc., who will sink two wells to the depth of 2,500 feet.

CURRENT EVENTS.

The 28th instant, (5th of the week), has been designated by the President, and by the Governor of the several States as "Thanksgiving Day."

The delegates to the Pan-American Congress reached Philadelphia from their Western tour on Seventh-day evening (9th inst.), and were entertained in this city until the 13th, when they left for Washington. They speak of their trip as one of great interest.

The English agent at Zanzibar, on the east coast of Africa, (a dispatch from that place states), has received a letter from Henry M. Stanley, in which the explorer says he hopes to reach Zanzibar about the middle of January.

THERE are now 12 States in the American Union. President Harrison issued his proclamation on the 8th inst., an-

nouncing the admission of Montana, and on the 11th a like proclamation in reference to Washington.

In Ohio, the Democratic candidate for Governor, Jas. E. Campbell, is elected over Foraker, Republican, present incumbent, but all the other Republican candidates on the State ticket are successful by small majorities. In Iowa, the Democratic candidate for Governor, Boies, is elected. The other officers chosen are Republican. The Legislature has a small Republican majority, but it is asserted that efforts will be made to force a repeal of the prohibitory law, it not being in the Constitution, as in Kansas.

It is announced that the Trustees of the Williamson Industrial School have appointed Robert Crawford Superintendent. He is now a Lieutenant in the U. S. Navy. He was for some time an instructor at the Spring Garden Institute in this city, and organized the Manual Training School.

WILLIAM B. HAUT, Treasurer of the State of Pennsylvania, died at Harrisburg early on the 9th inst. He was in his 15th year; his term of office would have expired in Fifth month next.

THE statement of the public debt issued on the 1st instant, shows a reduction of \$9,101,853, during the preceding month.

NOTICES.

A Social Reception will be held by the Committee of the Monthly Meeting in the Parlor, 1520 Race street, on Sixth-day evening, Eleventh month 15th, 1889, from 7 to 10 o'clock.

The attendance of our members and those in the habit of frequenting our meetings is invited, especially young persons from the country and strangers in Philadelphia.

The donation of cut flowers is solicited from such as may have time to spare, and at its close they will be sent to the sick, aged, and infirm as remembrances.

A Temperance Meeting under the care of Concord Quarterly Meeting's Committee will be held at Friends' meeting-house, Wilmington, on Fifth-day evening, Eleventh month 21st, at 8 o'clock. Friends and others interested are cordially invited.

AMY W. HICKMAN, Clerk.

Nebraska Half-Year's Meeting.—Nebraska Half-Year's Meeting of Friends will be organized at Lincoln, on the first Second-day in the Twelfth month, Twelfth month 2d, 1889, at 11 o'clock a. m. The meeting of Ministers and Elders on the Seventh-day preceding, at 2 p. m. Meeting for worship on First-day at the usual hour.

The committee of Illinois Yearly Meeting are expected to be present to assist in the organization.

Isolated Friends of Nebraska and Kansas are especially invited to meet with us on this occasion.

Any further information will be furnished by either of the undersigned:

Moses Britton, Lincoln, Neb.; Charles P. Walter, Lincoln; J. Russell Lawnds, Lincoln; Joseph Webster, Monroe, Platt Co., Neb.; Isaiah Lightner, Matson, Platt Co., Neb.; George S. Truman, Geneva, Nance Co., Neb.

* The Young Temperance Workers expect to attend the Temperance meeting at Friends' Mission next Fifth day evening, 21st, at 8 o'clock. Interesting exercises may be expected.

A Temperance Conference under care of the Committee of Western Quarterly Meeting, will be held at Fall-hold meeting house, Escondido, on First day next, the 17th, at 2 o'clock. All are invited.

ELMA M. PRESTON, Clerk.

Friends' Mission. A meeting of the workers in the various departments of Friends' Mission will be held in Friends'

Parlor, Race street, on Second day evening, 17th inst., to consider an important revision of operations.

As this will in great measure depend on the number of volunteers to aid in the work it is very desirable that not only those now associated with the Mission, but all others who are willing to aid at regular or irregular times should be in attendance. Come yourselves and influence your friends to do the same.

DAVID L. LUKINS,
Chairman of Executive Committee.

The 53th Annual Meeting of Friends' Charity Fuel Association will be held this Seventh day evening, Eleventh month 16th, in Race street Parlor. The annual statement and Treasurer's report will be read, officers chosen, and other business transacted.

The attendance of the contributors and other interested Friends is invited.

WM. HEAVOCK, Clerk.

Lydia H. Price expects to attend the meeting at Merion, at the regular hour, on First day morning next (11th inst.); and to be at Radnor, the same day, at 3 p. m.

Evening Meetings. Friends are reminded that only one Evening Meeting is held in Philadelphia, at 7:30 o'clock at Race street, during this month. It is desirable that Friends generally attend and invite others to do so.

Quarterly Meetings in Eleventh month occur as follows:

- 16. Short Creek, O.
- 18. Centre, West Branch, Pa.
- 18. Duaneburg, Duaneburg, N. Y.
- 18. Fairfax, Woodlawn, Pa.
- 20. Stillwater, Richard, O.
- 23. Blue River, Clear Creek, Ill.
- 25. Warrington, Pipe Creek, Md.
- 26. Burlington, Crosswicks, N. J.
- 27. Southern, Camden, Del.
- 28. Bucks, Langhorne, Pa.
- 29. Nottingham, Little Britain, Pa.

PUBLISHER'S NOTICES.

* * We do not discontinue a paper (except for continued delinquency in payment) without the order of the subscriber. Persons wishing to "stop" must so notify us.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kind, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only in cans.* ROYAL BAKING POWDER CO., 106 Wall-st. N. Y.

LED AWAY TO REST.

As a fond mother, when the day is o'er,
Leads by the hand her little child to bed,
Half willing, half reluctant to be led,
And leaves his broken playthings on the floor,
Still gazing at them through the open door,
Not wholly reassured and comforted
By promises of others in their stead,
Which, though more splendid, may not please him more:
So nature deals with us, and takes away
Our playthings one by one, and by the hand
Leads us to rest so gently that we go,
Scarce knowing if we wish to go or stay
Being too full of sleep to understand
How far the unknown transcends the what we know.

—Longfellow.

JOHN WOOLMAN'S VOYAGE TO ENGLAND.

HAVING been some time under a religious concern to prepare for crossing the seas, in order to visit Friends in the northern parts of England, and more particularly in Yorkshire, after consideration I thought it expedient to inform Friends of it at our Monthly Meeting at Burlington, who, having unity with me therein, gave me a certificate. I afterwards communicated the same to our Quarterly Meeting, and they likewise certified their concurrence. Some time after, at the General Spring Meeting of ministers and elders,¹ I thought it my duty to acquaint them with the religious exercise which attended my mind; and they likewise signified their unity therewith by a certificate, dated the 21th of Third month, 1772, directed to Friends in Great Britain.

In Fourth month following I thought the time was come for me to make some inquiry for a suitable conveyance; and as my concern was principally to-

¹ This voyage of John Woolman to England was the closing service of his life, as he died at York, of small-pox, in the Tenth month, 1772, about four months after his arrival in London. The trip was made, as the reader will perceive, five years after the visit to the Hullam on the Susquehanna, the account of which we have just reported.

Perhaps nothing better illustrates John Woolman's simple and self-denying character than the details which I give here of his unwillingness to go below the cabin of the ship, and of his decision to go in the steerage with the sailors. We hardly know of a more striking example of conscientious testimony in behalf of a simplicity of life.

² This was the "Select Meeting" of the Yearly Meeting, of course. It appears that for a minister wishing to go beyond home, the procedure was substantially all the same as now given in Philadelphia Book of Discipline. Approval was obtained, first of the Monthly, then of the quarterly, and finally of the Select Meeting, the last named issuing its certificate, addressed to those whom it was desired to visit.

wards the northern parts of England, it seemed most proper to go in a vessel bound to Liverpool or Whitehaven. While I was at Philadelphia deliberating on this subject I was informed that my beloved friend, Samuel Emlen, junior,² intended to go to London, and had taken a passage for himself in the cabin of the ship called the *Mary and Elizabeth*, of which James Sparks was master, and John Head, of the city of Philadelphia, one of the owners; and feeling a draught in my mind towards the steerage of the same ship, I went first and opened to Samuel the feeling I had concerning it.

My beloved friend wept when I spake to him, and appeared glad that I had thought of going in the vessel with him, though my prospect was toward the steerage; and he offering to go with me, we went on board, first into the cabin,—a commodious room,—and then into the steerage, where we sat down on a chest, the sailors being busy about us. The owner of the ship also came and sat down with us. My mind was turned toward Christ, the Heavenly Counsellor, and feeling at this time my own will subjected, my heart was contrite before him. A motion was made by the owner to go and sit in the cabin, as a place more retired; but I felt easy to leave the ship, and, making no agreement as to a passage in her, told the owner if I took a passage in the ship I believed it would be in the steerage; but did not say much as to my exercise in that case.

After I went to my lodgings, and the case was a little known in town, a Friend laid before me the great inconvenience attending a passage in the steerage, which for a time appeared very discouraging to me.

I soon after went to bed, and my mind was under a deep exercise before the Lord, whose helping hand was manifested to me as I slept that night, and I his love strengthened my heart. In the morning I went with two Friends on board the vessel again, and after a short time spent therein, I went with Samuel Emlen to the house of the owner, to whom, in the hearing of Samuel only, I opened my exercise in relation to a scruple I felt with regard to a passage in the cabin, in substance as follows:

"That on the outside of that part of the ship where the cabin was I observed sordid sorts of carved work and imagery, that in the cabin I ob-

² This was Samuel Emlen, the second son of the first Emlen having the same name. He was a very prominent and active Friend. He died in Philadelphia, Fourth month, 1780. He had said to Benjamin Jones something like this, when he was, through failing health, that he would not live to see 1800. This year to England at the time of John Woolman's sailing was one of those similar voyages to Europe.

served some superfluity of workmanship of several sorts; and that according to the ways of men's reckoning, the sum of money to be paid for a passage in that apartment has some relation to the expense of furnishing it to please the minds of such as give way to a conformity to this world; and that in this, as in other cases, the moneys received from the passengers are calculated to defray the cost of these superfluities, as well as the other expenses of their passage. I therefore felt a scruple with regard to paying my money to be applied to such purposes."

As my mind was now opened, I told the owner that I had, at several times in my travels, seen great oppressions on this continent, at which my heart had been much affected and brought into a feeling of the state of the sufferers; and having many times been engaged in the fear and love of God to labor with those under whom the oppressed have been borne down and afflicted, I have often perceived that with a view to get riches and to provide estates for children, that we may live conformably to the customs and honors of this world, many are entangled in the spirit of oppression, and the exercise of my soul had been such that I could not find peace in joining in anything which I saw was against that wisdom which is pure.

After this I agreed for a passage in the steerage and bearing that Joseph White had desired to see me, I went to his house, and next day home, where I tarried two nights. Early the next morning I parted with my family under a sense of the humbling hand of God upon me, and, going to Philadelphia, had an opportunity with several of my beloved friends, who appeared to be concerned for me on account of the unpleasant situation of that part of the vessel in which I was likely to lodge. In these opportunities my mind, through the mercies of the Lord, was kept low in an inward waiting for his help; and Friends having expressed their desire that I might have a more convenient place than the steerage, did not urge it, but appeared disposed to leave me to the Lord.

Having stayed two nights at Philadelphia, I went the next day to Darby Monthly Meeting, where through the strength of Divine love my heart was enlarged towards the youth there present, under which I was helped to labor in some tenderness of spirit. I lodged at William Horn's and afterwards went to Chester, where I met with Samuel Emlen, and we went on board 1st of Fifth month, 1772. As I sat alone on the deck I felt a satisfactory evidence that my proceedings were not in my own will, but under the power of the cross of Christ.

Seventh of Fifth month.—We have had rough weather mostly since I came on board, and the passengers, James Reynolds, John Till Adams, Sarah Logan and her hired maid, and John Bispham, all sea-sick at times; from which sickness, through the tender mercies of my Heavenly Father, I have been preserved, my afflictions now being of another kind. There appeared an openness in the minds of the master of the ship and in the cabin passengers towards me. We are often together on the deck, and sometimes in the cabin. My mind, through the merciful help of the Lord, hath been preserved in a

good degree watchful and quiet, for which I have great cause to be thankful.

As my lodging in the steerage, now near a week, hath afforded me sundry opportunities of seeing, hearing, and feeling with respect to the life and spirit of many poor sailors, an exercise of soul hath attended me in regard to placing out children and youth when they may be likely to be exampled and instructed in the pure fear of the Lord.

Being much among the seamen I have, from a motion of love, taken sundry opportunities with one of them at a time, and have in free conversation labored to turn their minds towards the fear of the Lord. This day we had a meeting in the cabin, where my heart was contrite under a feeling of Divine love.

I believe a communication with different parts of the world by sea is at times consistent with the will of our Heavenly Father, and to educate some youth in the practice of sailing, I believe may be right; but how lamentable is the present corruption of the world! How impure are the channels through which trade is conducted? How great is the danger to which poor lads are exposed when placed on shipboard to learn the art of sailing! Five lads, training up for the seas, were on board this ship. Two of them were brought up in our Society, and the other, by name James Naylor, is a member, to whose father, James Naylor, mentioned in Sewel's history,⁴ appears to have been uncle. I often feel a tenderness of heart towards these poor lads, and at times look at them as though they were my children according to the flesh.

O that all may take heed and beware of covetousness! O that all may learn of Christ, who was meek and lowly of heart. Then in faithfully following him he will teach us to be content with food and raiment without respect to the customs or honors of this world. Men thus redeemed will feel a tender concern for their fellow-creatures, and a desire that those in the lowest stations may be assisted and encouraged, and where owners of ships attain to the perfect law of liberty and are doers of the Word, these will be blessed in their deeds.

A ship at sea commonly sails all night, and the seamen take their watches four hours at a time. Rising to work in the night, it is not commonly pleasant in any case, but in dark, rainy nights it is very disagreeable, even though each man were furnished with all conveniences. If, having been on deck several hours in the night, they come down into the steerage soaking wet, and are so closely stowed that proper convenience for change of garments is not easily come at; but for want of proper room their wet garments are thrown in heaps, and sometimes, through much crowding, are trodden under foot in going to their lodgings and getting out of them, and it is difficult at times for each to find his own. Here are trials for the poor sailors.

Now, as I have been with them in my lodge, my

[⁴ James Naylor is a prominent figure among the early associates of George Fox. He was a powerful preacher. It was he, however, who was led away by fanaticism and self-glory, and permitted some of his companions to offer him worship, and who was terribly punished, (whipping, branding, holding the tongue, &c.), by order of Parliament, in the time of Cromwell.]

heart hath often yearned for them, and tender desires have been raised in me that all owners and masters of vessels may dwell in the love of God and therein act uprightly, and by seeking less for gain and looking carefully to their ways, they may earnestly labor to remove all cause of provocation from the poor seamen, so that they may neither fret nor use excess of strong drink; for, indeed, the poor creatures, in the wet and cold, seem to apply at times to strong drink to supply the want of other convenience. Great reformation is wanting in the world, and the necessity of it among those who do business on great waters hath at this time been abundantly opened before me.⁵

Eighth of Fifth month.—This morning the clouds gathered, the wind blew strong from the southeast, and before noon so increased that sailing appeared dangerous. The seamen then bound up some of their sails and took down others, and as the storm increased they put the dead-lights, so called, into the cabin win lows and lighted a lamp as at night. The wind now blew vehemently, and the sea wrought to that degree that an awful seriousness prevailed in the cabin, in which I spent, I believe, about seventeen hours, for the cabin passengers had given me frequent invitations, and I thought the poor, wet, toiling seamen had need of all the room in the crowded steerage. They now ceased from sailing and put the vessel in the posture called "lying to."

My mind during this tempest, through the gracious assistance of the Lord, was preserved in a good degree of resignation; and at times I expressed a few words in his love to my shipmates in regard to the all-sufficiency of Him who formed the great deep, and whose care is so extensive that a sparrow falls not without his notice; and thus in a tender frame of mind I spoke to them of the necessity of our yielding in true obedience to the instructions of our Heavenly Father, who sometimes through adversities in-tendeth our refinement.

About eleven at night I went out on the deck. The sea wrought exceedingly, and the high, foaming waves round about had in some sort the appearance of fire, but did not give much if any light. The sailor at the helm said he lately saw a composit⁶ at the head of the mast. I observed that the master of the ship ordered the carpenter to keep on the deck; and, though he said little, I apprehended his care was that the carpenter with his axe might be in readiness in case of any extremity. Soon after this the vehemency of the wind abated, and before morning they again put the ship under sail.

(Continued next week.)

THAT is not the most successful life in which a man gets the most pleasure, the most money, the most power, or place, or honor, or fame; but that in which a man gets the most manhood and performs the greatest amount of useful work.—*Smiles.*

[This sad description of the low condition of the sailors I only too just. Perhaps there has been some change for the better since 1772, but even now the description J. W. gives would apply. Thomas Chalkley's Journal gives the same impression as Wood's.]

[⁶ A composit is a volatile electric light, or *apogee*, some times seen about the masts or rigging of a ship at sea.]

From the Author's Review

THE BLOOD OF JESUS CHRIST: THE NEW TESTAMENT DOCTRINE.¹

It is doubtful whether any incident in the history of the religious thought of the Christian Church more strikingly illustrates and confirms the declaration of the apostle, that "the letter killeth," than its interpretation of the teaching of the New Testament respecting the blood of Jesus Christ. Upon the face of it, this teaching is metaphorical. The moment we attempt to realize it materially, even in imagination, it becomes repellent. And yet from a very early age it has been literalized, and the Church has been taught that it has been saved by the physical blood of Jesus Christ, flowing from his veins and arteries,—by the sanguineous fluid. To the present day it is taught by something like half of Christendom that a literal partaking of the blood of Christ is necessary, if not to salvation, at all events to any high and divine development of character; for the Roman Catholic Church holds that when the priest properly appointed for that purpose, pronounces a benediction upon the bread and the wine before him, the bread and the wine become literally body and literally blood of Jesus Christ; and that, then, those who partake of that literal body, that flesh, and that blood, are thereby sanctified and made anew. It goes further than this. It declares that in the sanctifying benediction of the priest the bread and the wine become the entire Jesus Christ. "If," says the Decrees of the Council of Trent, "any one denieth that in the sacrament of the most holy Eucharist are contained truly, really, and substantially, the body and blood together with the soul and the divinity of Our Lord Jesus Christ, and, consequently, the whole Christ, but saith that he is only therein as in a sign or in figure or virtue, let him be anathema."

Nor can we Protestants inveigh against those who have literally interpreted the metaphorical teaching of the Scriptures on this subject for their literalism. We do, indeed, repudiate the doctrine of transubstantiation,—the notion that the bread and the wine are converted into body and blood and soul and divinity by any magic touch or priestly benediction; but still, in a great many Protestant pulpits it is taught there is something sacred and mystical in the physical blood of Christ, and that the world is saved by the drops which fell from his hands and feet, or the larger portion which poured from his wounded side. And this notion has been wrought into hymns, and uttered in verse and in sermons and in expressions that have lost all metaphorical meaning whatever, and stand as though they represented a literal verity. It has been declared that this blood of Christ was necessary, in order that our own suffering might be intermitted. It has been declared that, because we were guilty of infinite sin, having sinned against

[¹ The article which is here extracted from the *Anti-Slavery Review*, Congress edition, is from the pen of Lyman Abbot, editor of the *Christian* from 1841 to 1853, and of the *World* in the pulpit of Philadelphia from 1853 to 1861. It will be read with interest by Friends. It is not the only view of so many points even though some passages may not be as fully acceptable as it must be read as a very interesting dissertation by an orthodox preacher on a subject.—*Low, INDEPENDENT AND JOURNAL.*]

an Infinite Being, and were therefore under an infinite condemnation, it was necessary that an infinite person should suffer physically; that Jesus Christ, an infinite person, did suffer an infinite amount of suffering in a finite quantity of time, in order that the infinite suffering might be taken off from the human race. So the love of God has been reduced to a mathematical formula. . . .

What, then, is the meaning of the "blood of Christ?" What does the New Testament mean by it?

I. Going back to the Old Testament, we find there the declaration that "the blood is the life." The blood of the sacrifice was the life of the sacrifice. The blood of Christ is the life of Christ. Turning from the Old Testament to other literature, we find this figure wrought into the language of all peoples, blood standing everywhere as the symbol and sign and token of that which is inmost in the person, his intrinsic and essential nature. It is difficult to say why. One might suppose that the nerves were more than the blood a representative of the man's character, that his brain was more a representative of him than his heart; but in all languages and literatures it is the heart that stands for the very essence of the man, not the brain; the blood, not the nerves. So we speak of a man as hot-blooded or cold-blooded, meaning thereby hot of temperament, or cold of temperament; so we declare that a man's blood is heated when we mean that he is aroused, and all his powers are alive with extraordinary activity.

First of all, then, we are saved by the character, the life of Jesus Christ. The blood of Christ signifies not the drops that trickled from his back when he wrestled with agony in the Garden of Gethsemane; nor that which trickled from the hands and feet as he was nailed on the cross. It represents not what he did or suffered eighteen hundred years ago. It stands primarily for Christ himself in his very personality. What saves, redeems, purifies the world, is not primarily what Christ said as a teacher, nor the example he set as a man, nor even the manifestation which he made of the nature of God, but what Christ was and is in himself, his individuality, his personality. He, the Divine One, not only living then, but through all centuries living, he is the Savior of the world. The world is saved, not by a "plan of salvation," not by something that we think about Christ; not by something that has been taught about Christ; not even by what Christ has said about himself; not even by his own teaching; nor yet by something that he did and suffered. It is saved by Christ himself. Because in him, the blood,—that is, the very heart of God is brought in contact with the heart of man, therefore Christ is the world's Savior.

In the desert of Africa, Livingstone, the missionary and traveler, writes in his diary these words: "What is the atonement of Christ? It is himself. It is the inherent and everlasting mercy of God, made apparent to human eyes and ears. The everlasting love was disclosed by our Lord's life and teaching. It showed that God forgives because he loves to forgive." This is the primary meaning of

the blood of Christ, the meaning which lies on the very surface of the phrase.

II. But if we look at this figure of blood as we use it in common language, we shall see that there is something more in it; we shall see that it represents, not only the character and person, but that it represents a character transmittible, and a character transmitted. We speak of blooded stock, meaning thereby stock not only noble in character, but with a noble pedigree. We speak of men of noble blood, meaning thereby not only men of noble nature, but men who have inherited from fathers and mothers a noble nature. That kind of character which comes through education we call culture. That kind of character which comes as a free gift, given and almost unconsciously received, that we call blood.

This may help to interpret to us the second element in the teaching of the New Testament. There is a power transmittible in God, and there is a power of reception in man. We take character as God's free gift, and he passes it over to us. The very blood of God, as it were, flows through our arteries; the very heart of God becomes itself the pulsating heart of humanity. He fills us with his own life, as though he had emptied us of our own corrupt blood and filled the arteries and the heart with a new and diviner fluid. A father adopts a son, taking him out of the street. He surrounds him with culture and educative influences; he gives him a refined home and educated companions; he sends him to a school and college; and yet in spite of it all there crops out in the adopted one's nature now and then some grossness, some coarseness, some element that belonged to his father or his grandfather. But if the foster-father in bringing into his family this boy out of the street could bring him into the inheritance of his own qualities; if one of a long line of noble ancestry, he could transmit to him the refinement received from that ancestry; if he could pour into him courage, nobility, fidelity, the fineness, the refinement of nature, such as is the product of generations of breeding,—he would do what God represents himself as doing for us. He adopts us into his household. He brings us under educative influences. He surrounds us with spiritual culture. He surrounds us with those who have been animated by his own spirit. But that is not all. When God adopts, he adopts not merely into the family and household of faith, but he adopts into the very generation of Divinity. We become sons of God; heirs of God; joint heirs with Christ; partakers of the divine nature. We are saved by the blood of Christ when the transmitted nature of God enters into us and becomes a part of our own nature through Jesus Christ.

III. But there is still one other thought current in our thought when we use this figure in common conversation. We say the blood of the martyrs is the seed of the church. What do we mean? We mean that the sacrifice of those who have been willing to suffer for a principle is the upbuilding of the church. Is the man who died upon the rack, and whose broken joints gave forth no drops of blood,—is he not a part of the seed of the church? Are Cranmer and Latimer, whose bodies are burned, no

part of the seed of the Church? The ashes of the martyrs are the seed of the Church as truly as the blood of the martyrs. We look back across the intervening years to the men who were willing to shed their blood for their nation's liberty; but we honor most of all the one who went through the war of the Revolution unwounded, shedding no drops of his blood. When we get away from theology, it is not blood that is precious, but that self-denial and self-sacrifice which is represented and typified by blood shed for those who have no claim except in the court of love. We are saved by the life of Christ; we are saved by the transmitted life of Christ; we are saved by that transmitted life poured out for us, laid down for us. These are the three thoughts involved in the declaration that we are saved by the blood of Christ. Not by something said or done or suffered eighteen centuries ago, but by that spirit of self-sacrifice and denial that was in the heart of Christ, and is in the heart of God, and will be in the heart of God as long as God is God, and as long as he has suffering children with whom to suffer.

But it is only as this spirit that was in Christ is in us, that we are saved by it. It is only as we take him into ourselves and make him a part of our own nature, that we are saved by him. It is only as he takes us unto himself and we take him unto ourselves that we are purified, cleansed, redeemed, sanctified, lifted up on high.

It is not true that gospel truth must always be stated in Scriptural form; but it may be very reasonably asserted that no doctrine is New Testament doctrine which cannot be stated in New Testament words. And theology has had to create unscriptural terms to state that doctrine of atonement on which it has insisted, a doctrine which cannot be stated in New Testament language. Are we saved by expiation? There is no word "expiation" in the New Testament. Are we saved by substitution? There is no word "substitution" in the New Testament. Are we saved by vicarious sacrifice? There is no word "vicarious" in the New Testament. Are we saved by atonement? There is no word "atonement" in the New Testament. Twice the word occurs in the Old Version; but in neither place does it belong there; in both places has it been taken out by the translators in the New Version. We are saved by One who brings the divine life down into the world; and we are saved when our own hearts and our own lives are open, and his heart and his life are poured into ours. As the stream pouring through a filthy receptacle cleanses it, so the poured-out life of Christ, filling the hearts of all his children, and all his followers, flows through the world, a constantly increasing river, cleansing humanity. As the waters of the Nile rise and overspread its banks, and carry harvests wheresoever they flow, so this life of Christ, flowing through the centuries, and rising above all bounds that would hold it within narrow limits, carries with it harvest in its open palm into whatever heart or home of life it enters. There are in two or three European Roman Catholic cathedrals phials that contain what is claimed to be the sacred blood of Christ. We are not worthy to be called Christians

unless we are such phials, unless we ourselves hold within ourselves something of that sacred life, personality, character, divinity, that was in Christ himself. The legends tell us that holy men have traveled over the world that they might find the holy cup in which Christ administered that first communion. We need not go far to find it, for right here, by our side, are holy men and women in whose hearts there is the life blood of Christ, and from whom we may drink, imbibing their spirit in their forth putting influences. For the true Holy Grail is the heart set to do Christ's service, and filled with Christ's spirit.

From the British Friend, (Glasgow), Eleventh month.
FIELDS OF LABOR FOR FRIENDS.

AFTER our somewhat lengthened discussion of the Church and State question, I recalled Weston's attention to his remark about the attractiveness of having a large field in which to labor and serve. He is occasionally inclined to smile at me, not only for the deep interest I take in the working of our little church, but also for the habit I have of looking at public and even so-called secular questions from a Quaker point of view. He says I seem to regard Quakerism as possessing the key to all the problems of human life,—ethical, political, and social. And perhaps if we have in view the great fundamental of true Quakerism,—that God is always with his trusting children to help and guide,—this sweeping claim is not far from the truth. I confess to him that in my judgment there is no security against the upgrowth in any of the churches of formalism and a human priesthood,—no safety for democracies and free communities,—no reliable controlling force in scientific research,—no preservative in private life against the spirit of self-seeking or of personal indolence and unfaithfulness,—except in the humble recognition of this direct relation of the soul of man with the Spirit of God. I tell Weston that in his heart of hearts, I am satisfied he agrees with me in all this; and he does not deny it. Still he is ready to think that even spiritual talents are often not made the best use of, when they are so much restricted to the service of "one small sect." He quotes the words of Goldsmith respecting Edmund Burke:

"Who born for the universe, narrowed his mind."

And to Party gave up what was meant for mankind," and he thinks them in measure applicable to some who restrict their service to one small religious body.

In answer to a remark in this direction made by Weston, I said, "I can freely admit that thou hast put thy finger upon a possible danger that ought to be guarded against; but I should say it applies much more to the past, when the notion prevailed that religious people should keep aloof from everything outside the circle of the Church, especially if it came under the name of politics, though singularly enough they always excepted those worldly pursuits, trade and commerce. That day of restrictions is gone. Religion is now felt to have a claim upon every department of life, and our danger probably now lies in a very different direction."

"No doubt," said Weston, "but both temptations

still exist, and both are probably doing mischief, and the question is, how are we to meet them?"

"With regard to the first," said I, "it seems to me that the man who is anxious to do his duty, and who is at the same time likely to become qualified for service in a larger arena, will find his way there almost in spite of himself. There may, no doubt, be 'mute, inglorious Miltons' and undeveloped Cromwells in small churches as well as in small country villages; but if it be so, and they are sincere, and devout, and faithful, their time will come for service, either in this life or else in that which is to come. I always like to put in that reservation, for this life by itself will explain nothing. It is only the bud or seedling; and who knows what and where will be the flower and fruit! Probably we may say—though it sounds, no doubt, rather common-place—that the great preservative against the danger referred to is to be found in that oft quoted maxim, *Mind your calling.*

"A man's influence and usefulness are by no means to be measured by the breadth and extent of the circle in which he labors. Work spent upon a small area, when thoroughly and conscientiously done, is often more resultant in permanent good—though it will be far less talked about—than the same energy spread over a wide surface. It does not answer to go in for a larger farm than you have capital for. Specialism—a limited area for effective work—is now more and more recognized in the world of scientific and literary research, and is there winning the day as regards permanent results. The old saying that *a man should know something of everything and everything of something* is more than ever the accepted principle in developing the all-round man. The first part of the maxim points to the unity of all true knowledge, and the second to our limited powers for doing real work. Dost thou not think that this doctrine of specialism needs to be more recognized in the religious world?"

"Mind where you are driving to, my friend, or you may land us in that dismal region where specialism is supposed to reign supreme; where preaching is a trade, and politics a trade, and philosophy a trade, and where the people are practically kept *in statu pupillari.*"

"I have not overlooked that danger," said I, "but I think I am suggesting the means most calculated to deliver us from it. My argument is the same that the apostle Peter used when he said, 'As each one has received a gift, even so let him minister.' That surely is a safe position; and the Society of Friends has not hesitated to endorse it by maintaining—in theory at all events—that every true member of the Church is called to be a minister, in some direction or other, and that he should mind his calling. In that dismal region of restriction and monopoly to which thou hast referred, there is but little recognition of the priesthood of all believers actively co-operating with Christ in all sorts of ways by means of the diversity of gifts. Look, for instance, at the professional preacher. He is often a sincere and devoted Christian, and sometimes a very gifted man. But instead of finding out and keeping to the service to which God has called him, and for which, if he do

it heartily, God will pay Him in something better than the world's coin, he practically monopolizes all the gifts and services of the church. He probably does this by no fault or assumption of his own. He is, like the master, a despotic government—only working the adopted and recognized method. But what does his position amount to? He is ruler, prophet, pastor, evangelist, censor, counsellor, and general director of the affairs of the church. He is supposed to have—all concentrated in one soul—the word of wisdom, the word of knowledge, the gift of prophecy, the discerning of spirits, to say nothing of divers kinds of tongues, and the interpretation of tongues. He baptizes, teaches, exhorts, rebukes, marries, consoles, and at last, if he survives them, buries his flock one by one. He is in fact the general factotum of the church, and all other servants and services are very subordinate. His power, it is true, is sometimes limited by the interposition of deacons, elders, wardens, trustees, and others; but with a strongminded and masterful man this does not amount to much. A system of specialism, as I have called it, which consists in the unqualified recognition that God has appointed to every man a ministry or work, and that in the body of Christ there are many members, could not, I think, lead to this."

"I see what you mean, Clio," said Weston, "though I think you have sketched a somewhat extreme case. There is also another controlling force often acting on the minister to which you have not referred. I mean his own sense of insufficiency for all these services, which continually leads him to enlist the efforts of competent and earnest Christians into various departments of Church work."

"Well, then," I proceeded, "still keeping in view our original subject as to fields of service, I must say a word or two on the other and far more serious danger to educated Friends, and probably others of the present day, as I apprehend it. I mean that ambitious craving to do as other influential and educated people do, and to aim at large things; and under this broad and Catholic impulse, as it is thought to be, to seek a wider arena in which there may be more scope and more apparent results. I think I could point to persons, who, though trained as Friends, and more or less appreciating the great principles professed by our Church, have practically left the Society, or, at all events, have withdrawn their children from its beneficent restraints, on some such plea as that thou hast been referring to. They say that a little Church like ours is apt to become conventional and petty in its methods—that it has a tendency to cramp the developing powers of the young, and the service of those in mature life; that in fact, it offers no scope for the training of youths who may become men of light and leading in the community at large. There seems to me an amazing blunder in all this, and one not easily accounted for, except on the supposition that personal ambition has begun to stir. We may freely admit that the Society of Friends differs from almost all the churches in the entire absence of openings or inducements to self-interest or personal distinction; but this is surely one of its merits. What nobler basis can any one

THE UNITY QUERIED AFTER.

THREE times a year in our preparative, monthly, and quarterly meetings, and finally in our annual gathering, we are called upon to make answer as to the state of our membership on the question of unity. It ranks with love, for the reason that no unity can exist where love,—that love which "taketh no account of evil" is wanting, and while the spirit of love rules, we have no ground for fear that harmony and unity will not prevail amongst us.

But it is becoming more and more an open question as to how far the unity queried after involves our individuality or commits us to the maintenance of uniformity in matters of belief concerning our soul relations to the great soul of the universe. Is the unity that which in questions of moral or social obligations requires the standard to be uniform and in harmony with the best thought of the age; a unity that accepting the brotherhood of the Church with all which that brotherhood implies, goes out to the whole human family with earnest desires and endeavors for the highest welfare that is possible for each individual? This is the unity that Jesus labored for—that he preached, and exhorted men to strive after, and the church or the society calling itself Christian, that fails to realize this community of interest in the welfare of all mankind, has yet to learn the first lesson of true fellowship.

Or, does this unity narrow itself down to uniformity in questions of belief, of doctrine, questions upon which men have differed since the beginning of religious history,—and daring thus to differ, the strong have oppressed the weak, and denied them the common humanities of the race? This is the aspect of the subject that earnest inquirers are now concerned for, and they are asking, with an interest that will not be set aside, Does this unity bind the conscience of to-day to the acceptance of doctrine and dogma entirely in accord with the conditions of society and the highest advances it had attained at the time they were handed forth as the word of the Lord? Or shall not the broadening influence of knowledge and a healthier condition of human society lead to a more spiritual understanding of the truths these dog-

mas and doctrines embody? Every branch of the Christian Church is in one way or another brought to the necessity of facing this important question. We, perhaps, are less involved than any other denomination, because of the simplicity of our profession, and the absence of any formal Creed, from nearly all the Books of Discipline which define the *faith and practice* of our branch of the Society of Friends.

Yet we are sometimes fain to inquire if there is amongst us, as a pervading spirit, the courage to answer the cavalier as did the Great Teacher, when queried with concerning what would be required of a fellow disciple, "What is that to thee, follow thou me." Or that other answer, when, being told "We saw one casting out devils and we forbade him because he followed not with us," he replied, "Forbid him not, for he that is not against you is for you."

It is only as we come into the spirit of the Master that we are able to see how much we differ in methods of religious work, in modes of thought, and in our manner of expressing thought; and instead of making these differences causes of fear or possible criticism, how it would help us to get at the whole truth, if each, without fear of offense or of being misunderstood, was encouraged to disclose "the mind of truth" (as early Friends expressed it) as it made clear to the understanding of the individual the divine will.

How many of the difficulties that perplex and disturb the tranquility of the sincere believer would be made plain if there was a willingness to "prove all things." In what we understand as the attributes of God there is a diversity among Christians as to their value and importance, and in all the varying phases of religious thought, we have need constantly to recur to the eternal Fatherhood taught with such emphasis by Jesus. This will enable each one to understand for himself all that he is capable of receiving of the perfections of God, and disclose the place he can occupy in the great field of the world's endeavor. He will realize that while he is doing his part, he has no occasion to fall out with his brother because his manner of working differs from his own. It is for this freedom in thought and work for the individual that the heart of the Church is asking, and nowhere do we find in the teaching of Jesus this right questioned, but on every occasion where reference is made thereto, it is insisted upon as divinely bestowed. Let us keep near to him and we shall be preserved in "the unity of the spirit which is the bond of peace."

HE who would gather immortal palms must not be hindered by the name of goodness, but must explore if it be goodness. Nothing is at last sacred but the integrity of your own mind.—*Selected.*

DEATHS.

DUFFLE.—At Fort Collins, Colorado, Eleventh month 10th, 1889, Chalkley Duffie, in his 65th year. Interment from his residence, Wrennah, N. J.

ROBERTS.—At her residence, Norristown, Pa., Eleventh month 12th, 1889, Ruth, widow of Isaac Roberts, in her 75th year; a member of Gwynedd Monthly Meeting.

SEAMAN.—At the home of her son, Wm. H. Seaman, Washington, D. C., Tenth month 14th, 1889, Ann R. Seaman, formerly of Brooklyn, N. Y., aged 84 years.

SLOKOM.—Eleventh month 14th, 1889, at Christiana, Pa., Samuel Skokom, in his 73d year. Interment Old Sadsbury ground.

SCRIPTURE LESSON No. 43.

TWELFTH MONTH 1, 1889.

THE TEMPLE DEDICATED.

GOLDEN TEXT.—The Lord is in his holy temple; let all the earth keep silence before him.—Heb. 2: 20.

READ I. Kings 8: 54-63.

The tranquility that prevailed in the kingdom after Solomon had become seated upon the throne and all rival factions suppressed, is best set forth in an expression made to Hiram, king of Tyre, whose services he had engaged in the erection of the Temple: "Now the Lord my God hath given me rest on every side; there is neither adversary nor evil occurrent." This being the condition of the whole people, he accepted it as an evidence of the favor of God, and set about the work which his father David, had so desired to accomplish. Yet because of the wars which were about him on every side he was not permitted to do more than gather the materials for its construction, which he did in great abundance. Solomon had carried on the work to its completion, and the magnificent temple was waiting only the ceremony of dedication to consecrate it to the worship of Jehovah.

Other nations had costly temples in which images of their gods were set up, but this temple contained no image or likeness of the invisible Deity to whose worship it was dedicated.

The dedication service and the prayer of Solomon are followed by the blessing of the congregation gathered out of all Israel, which forms the subject of our lesson. Solomon returns thanks to God that he has given rest to his people after all their wars and tumults; they are a united people, and are there to testify their faith and allegiance to the God of their fathers, and to worship him for the first time in the beautiful temple that had been erected for his service.

Let your hearts be perfect, etc. This is the exhortation of their young king who, doubtless, under the inspiration of the scene before him, was ready to wholly give himself up to serve the Lord. If the hearts of king and people were turned to the keeping of the Divine law,—the obeying of its commandments,—they were sure of the blessing of God. The same is true in our own time,—all who strive to be faithful to the requirements of truth and righteousness will not be forgotten. There is no promise outside the path of obedience. They who seek must do so with full purpose of heart, and such will find that God is not very far from any who call upon him in spirit and in truth.

Sacrifice of a peace offering, etc. The peace-offering differed from the burnt-offering and the sin offering, in that it was an offering to God of his own best gifts as a sign of thankful homage. "The characteristic ceremony was the eating of the flesh by the sacrificer, and it betokened the enjoyment of communion with God." How thankful we should be to live in an age when we can worship our Heavenly Father without the need of the outward offering of the "best fruits;" but realizing that he whom we worship—our God—"is a spirit," we worship him acceptably when we worship "in spirit and in truth."

Solomon, the name signifying "the peaceful," was the youngest son of David and Bathsheba, and was educated under the wise care of Nathan, the prophet. He was named by him Jehoiach, beloved of the Lord. He was looked upon as the heir to the throne after the death of Absalom. He was anointed by Nathan, and solemnly proclaimed king, 1015 B. C., a short time previous to his father's death.

The beautiful attribute of character, gratitude, so often wanting in those claiming to be the Lord's people, was most prominent in Solomon's prayer to his Heavenly Father at the dedication of the temple. He recalls what He had done for Israel in all the past, beseeching Him to still continue the Divine favor, and not forsake them, but direct and be with them, as He was with David, his father. He petitions that their hearts may be drawn to God, and that he will strengthen them, so that they may carry out his commandments. He entreats the people to look on high for that restful confidence, assuring them that God will be with them if they keep his statutes and obey his laws.

As the kings of Israel were required to offer sacrifices in that day, so God demands sacrifices of us in this. We offer not the slain beasts, nor the products of the fields, but willing, trustful, submissive hearts that acknowledge he is God, and there is none else beside him.

We, as individuals, have a temple to dedicate and consecrate to our Heavenly Father—the temple of the heart. Let us endeavor to keep this temple pure, not by outward sacrifices as Solomon did, but by watchfulness and prayer to our Heavenly Father, whose ear is ever open to the petition of the sincere and seeking soul.

NOTES ON THE LESSON.

The young king, Solomon, as he stood before the altar with his hands outstretched imploring the blessing of Jehovah, the God of his fathers, upon the assembled multitude that had come up from every part of the kingdom to share in the great rejoicing, presented a picture that the world had never before witnessed; not that large cities were wanting in the world at that time, many there were in which larger than this, but never before, so far as history records, had a temple been built and dedicated to the great Jehovah, worshipped by the Hebrews as the God of the whole earth, of whom no image or likeness was permitted to be made, and the holiest place of whose sanctuary contained only the chest in which was preserved the two tables of stone, engraved amid the

solitudes of Horeb with the law which constituted the covenant between God and the people. To take in and fully comprehend the significance of the occasion, we must go back more than a thousand years to a city "on the other side of the flood" (Joshua 24: 2), where men worshipped the heavenly bodies, and built great temples, adorned with images used in their idolatrous worship, and where one man, of all that multitude, saw beyond this, and as he meditated heard a voice speak to his inward ear, "Get thee out of thy country, and from thy kindred, and from thy father's house unto a land that I will show thee. This was Abraham, the father of the Hebrew nation, of whom Paul the apostle twenty centuries afterward wrote: "By faith, Abraham, when he was called, obeyed to go out unto a place which he was to receive for an inheritance, and he went out, not knowing whither he went." (Heb. 11: 8.)

And here is the outcome of that obedience to the Divine call: a great nation, dedicating its first Temple to the same Eternal Jehovah who led Abraham through all his journeyings, ever keeping him and extending over him the same watchful care, communing with him in the quiet hours of the day, filling his life with blessing and continuing his watchful care and preservation to his posterity, until they grew to be a great people. He had raised up among them from time to time prophets and seers who kept before them the knowledge of Jehovah as a living though invisible Presence ever among them, and leading and directing and protecting them as they turned away from the false gods of the nations about them and put their trust and confidence in him their Almighty Protector.

Bowing himself before the altar Solomon makes his petition to Him who dwelleth not in temples made with hands, whom "the heaven of heavens cannot contain," (I. Kings 8: 27) and we at this distance of time can scarcely realize what the building of the magnificent temple and its dedication meant to the human family in its religious aspirations. Everywhere there were temples dedicated to innumerable gods, containing images, emblems, beasts, and reptiles, revered as divine and worshiped with rites and ceremonies, many of which were of the most diabolical significance.

Not so with this beautiful edifice; its Holy of holies was the Ark of Testimony built while the people were yet in the wilderness, journeying to Canaan their future home. It had been kept under curtains all through the centuries that had intervened, and now with glad rejoicing, it had been brought into the house which Solomon had been permitted to build.

This dedication was an event in the history of the world that has had no equal. It was the first supreme effort of a people to testify to the whole world, their belief in one overruling and controlling Power in the universe; that he holds intercourse with those who worship in the spirit of trust and confidence, and that none who seek to know his will need be ignorant thereof. The whole dedicatory service, the prayer and the benediction, all bear testimony to these great truths, which through the Hebrew nation, have come

down to us, confirmed and established by the "greater than Solomon," who taught the same lesson in its broader, fuller, and diviner meaning, when he declared, "The hour cometh and now is when the true worshippers shall worship the Father in spirit and truth, for such doth the Father seek to be his worshipers. God is a spirit, and they that worship him must worship in spirit and in truth."

Shall not we, who are the inheritors of all that is true and enduring in these diviner ideas, lift up our hearts with thanksgiving and praise to the God whom Abraham worshipped, that in the far off time the seeds were sown of a faith that has its foundations in One who liveth and abideth forever, and that through this man who heard the call and obeyed it, has been handed down to our own time an assurance which each may verify in his own experience, that God communicates his will to his obedient children and all who hear and obey, will find him, as did Abraham, "a present helper in every time of need."

COMMITTEE REPORTS, BALTIMORE Y. M.

VISITING COMMITTEE.

THE Committee to visit subordinate meetings and encourage Friends to greater faithfulness in their religious duties, as way opens, in presenting a report for the past year, realize that less work has been accomplished than may be reasonably expected by the meeting. Circumstances, of home cares, widely separated meetings, and possibly some degree of apathy on the part of the committee, have been in the way of performing much combined labor.

During the past year four meetings of the committee have been held. Circular meetings have been attended within the verge of some of the Quarterly meetings, and some care given to visiting isolated members.

From reports received through our members, it appears that there is no abatement in the interest heretofore manifested in the effort to combine more closely our social and religious interests, and diffuse a more general knowledge of our principles and testimonies through the medium of Friends' Circles.

In the encouragement of these efforts, as well as the support of our regular meetings, many members of the committee have actively participated in their respective neighborhoods.

We feel to set our testimony here to what must be an apparent fact to observing minds, that the fields for useful labor within our fold, as well as without, are widening year by year, and that duty to ourselves and the needs of common humanity forbid that we be idlers while the harvest is being gathered.

Signed on behalf of the committee by

SENECA P. BROOMELL, Clerk.

COMMITTEE ON FAIR HILL FUND.

The Standing Committee to disburse the income of the Fair Hill Fund for educational purposes, report that during the past year the sum of \$758 00 has been drawn from the treasury of the Yearly Meeting and distributed for the aid of nine schools of Friends within the verge of seven Monthly Meetings. All ap-

plications for assistance received to this time have been acted upon and aid afforded.

It has been the policy of the Committee, as far as practicable, to distribute the proceeds of the Fund for the aid of schools where Friends' children will be benefited, rather than for individual help, that the benefits arising therefrom may be made as general as possible.

Signed on behalf of the Committee, (Solomon Shepherd and others.)

ISOLATED FRIENDS.

The Standing Committee appointed last year to ascertain the names, residences, and post-office address of our isolated members, reports attention to the subject. Some of the Monthly Meetings have furnished lists of their members. Others have thus far failed to do so. If continued, we think the service can be completed the coming year.

On behalf of the Committee.

LEVI K. BROWN.
SABILLA E. GRIEST.

INDIAN COMMITTEE REPORT.

The Committee on Indian Affairs has, during the past year, found little opportunity for usefulness in the field of labor assigned to it.

It is known, perhaps, to all Friends who take any interest in Indian work and who have followed the course of our committee for some eight or ten years past, that we have no official connection with the Government in our labors on behalf of the Indians. Nor are we engaged directly in the work of Indian civilization or education at any agency or with any tribe. Amongst all the schools, industrious or common, and amongst all the missions that are now in existence at the various agencies throughout the West, not one is under the care of our Religious Society.

The fact that a member of our Society is in charge of one of the Indian agencies is our only point of actual contact. This, taken with the circumstance that we are recognized at the Indian Bureau in Washington as trustworthy friends of the Indian and have some influence with Congress in shaping legislation, is all that we can lay claim to as channels of usefulness in this concern.

We continue to have a friendly oversight of the Santee agency and are in frequent correspondence with Charles Hill, the agent there, and with John E. Smith, the sub-agent in care of the Ponca Indians in Dakota. They keep us informed of the condition and wants of the Indians in those tribes and we do what we can to aid them. The usual contribution of Christmas presents to the Ponca children was made last winter and was gratefully acknowledged by the principal of the school and his wife. The little paper for children called "Scattered Seeds" is sent amongst them by the committee more largely than heretofore. During the past year we commenced sending agricultural papers to the Santees and Poncas for distribution amongst the young men farmers. These papers, the agent writes, are very useful and well appreciated.

The annual report of Charles Hill, a copy of which

we have, shows a gradual improvement in the condition of the Indians, in most respects, at the Santee agency. We regret to notice, however, that an increase of drunkenness among the men of the Santee tribe is admitted by the agent. Out of 55 cases that came before the Indian Police Court for trial, during the past year, 21 of them were on the charge of drunkenness. The agent expresses deep regret at this, and says notwithstanding his great watchfulness the Indians will stray off to the towns surrounding the reservation and there obtain liquor.

The Indians, both at the Santee and Ponca reservations, are farming their lands in a manner that reflects great credit on them, and the report of the agent as to quantity and value of their crops makes an excellent showing.

We continued our efforts at the last session of Congress, to obtain provision for the appointment of matrons to teach the women of the tribes the art of housekeeping, and I had good assurance of success, but were defeated at the last moment by the indifference of a member of Congress whose term of service was about to expire.

We expect to renew our efforts during the coming session, and shall not rest until we either accomplish what we want or discover that further labor will be useless. Every friend of the Indian to whom we have explained our object in advocating this measure, has admitted its great importance and encouraged us to persevere in bringing it about. We propose to ask for an appropriation to pay fifteen matrons to be assigned to the different tribes as they may need them.

Charles Hill, in a letter to the clerk of this committee, thus alludes to this subject:

"The necessity for a matron both at Santee and Ponca becomes more apparent all the time. I hope you will renew your efforts when Congress meets to have an item for pay of matrons included in the appropriation bill."

In further reference to the annual report of Charles Hill it may be well to state that he has requested the Commissioner of Indian Affairs to endeavor to have provision made for the Santee children who have been born since the allotment of land on their reservation was completed.

As all unallotted land was taken up by white people these children are unprovided for. It is the desire of our Committee, and the intention if way opens, to assist the Agent in this effort to secure land for these children by appropriate legislation.

A large number of dwellings and other buildings have been built at this Agency during the past year, all the work being done by Indian mechanics. Indian workmen of this Tribe earned during the past year \$7,450.00 exclusive of work done outside of the Agency not reported.

The new school building at Santee, erected this year to take the place of the old one, destroyed by fire last fall, is spoken of in the report as a model structure. It cost \$200,000, is heated by steam, and accommodates 120 pupils. The industrial training at this School is complete and thorough in its character. As an item of interest in this connection we quote

from the Agent's report as follows: "One feature of the training for girls was in assisting in the furnishing of the new School building. Crocheting under the direction of the matron $4\frac{1}{2}$ yards of cotton lace 9 inches wide, 29 $\frac{1}{2}$ yards of wool lace 12 inches wide, 25 yards thread lace $2\frac{1}{2}$ inches wide. This lace was made for lambrequins for windows of the new school building." "The good resulting from the fixing-up of the new school building has been almost inestimable, the pleasant effect produced in trimming the windows and carpeting the floors has interested the pupils as nothing else could have done, making an impression that will certainly be carried to their homes. I consider the teaching of crocheting and fancy work of great benefit to the girls, and should be taught in every school. It furnishes employment for many spare moments and keeps them occupied and interested, which time, if spent in idleness, they would be more liable to temptation."

The schools throughout this Agency are spoken of in the report as remarkably successful during the past year. An increased interest is shown by the Indians in the Sabbath-schools, and much good is being done through their instrumentality.

In Fifth month last, in company with Friends from New York Yearly Meeting, several members of our Committee and other interested Friends, paid a visit of respect to President Harrison and to the Secretary of the Interior.

We were cordially received, and our views on the Indian question, which we were allowed to present, listened to with respect. The President gave us the assurance of his full support in any measure tending to the amelioration of the sufferings of the Indians, or to the re-establishment of any right of which they have been deprived.

A delegation from our committee took part, by invitation, in the deliberations of the Board of Indian Commissioners at their annual conference held in Washington in First month last, and were impressed with the earnestness of those untiring workers in the cause of Indian enlightenment. We felt, however, as we always do on these occasions, how little, comparatively, we as a Society are doing in this broad field of labor.

But perhaps we have done what our hands found to do and whilst greater opportunities for usefulness seem to have come to others, if we have been faithful in the little we shall not miss the promised reward.

The Report of our Treasurer shows that the income from our Indian fund during the year has been \$234.98 and our expenditures \$81.43. The unexpended income now on hand is \$405.12.

On behalf of the Committee.

JOSEPH J. JANNEY, Clerk.

The sense that kept us back in youth
From all intemperate gladness,
That same good instinct now forbids
Unprofitable sadness.

IN their own hearts the earnest of the hope
Which made them great, the good will ever find.

—Shelley.

FIRST-DAY SCHOOLS.

NEW YORK FIRST-DAY SCHOOL EPISTLE.

To "the First-day School Association of Philadelphia Yearly Meeting," held Eleventh month 2d, 1859.

Dear Friends: Upon this occasion of our annual gathering to note the present condition of the First-day School work, to review its history for the past year, and to confer upon the best methods of expanding and promoting its efficiency in the future, we are renewedly impressed with the importance of our duties, and deeply conscious of our inability to fully meet the demands these duties impose. Verily it is not a light thing to undertake the instruction of the youth of the Society of Friends. Our faith is so simple, and yet offers few outward tangible points to grapple with; and so spiritual that it seems sometimes to require a certain "growth in grace" before it can be fairly absorbed into the religious consciousness. In its absence of all form, which may indeed have become a formality, it has no attractive power for those not otherwise impelled towards it; while in its ministry, which claims a higher source and authority, there is confessedly an abstinence, unlike others, from set and orderly and well considered discussions of moral and religious topics for reflection. To teach them our faith we must needs fall back upon the very foundation of religion. The religious sense must be quickened, cultivated, strengthened. The minds and hearts of our youth must constantly "with ceaseless iteration" be turned upwards towards the one true and living God as the source of all religious life and light; be taught early to seek His presence, His guidance, His approval upon every thought and word and act, and taught to value such approval as the highest reward and satisfaction this world affords. With this foundation "all things else will be added" unto them. We know it is a common thought that religious training should take another direction, and we cannot altogether dissent from the view that through outward benevolences, outward activities, men are frequently led into better and more intimate relations with the Supreme. We would, however, preferably work from the vital and living source. We would choose to begin at the root. "As is the vine so are the branches;" as is the root so is the vine. Let the soul be nourished by sending down its sap, root-deep, into the soil of the Divine love and goodness; let it drink constantly at the inexhaustible fountain of Divine life and energy. A soul so nourished cannot fail of expansion, and growth, and strength; a soul so nourished sends its influences through the entire life of its possessor; a soul so nourished cannot produce an unworthy life; its outward expressions will be all of love and good-will—of tenderness, of uprightness, of temperance, of purity; because, being permeated with the Divine essence, it cannot help partaking of the Divine attributes.

We do not desire to write to you without purpose; we do not desire simply to send you formal words of sympathy and encouragement; but in the fulness of our interest in the cause in which we are mutually engaged we would fain call the attention of all teachers renewedly to the deep foundations of all religious

life. We would earnestly direct them to the necessity and usefulness, never more needed than now, of constant and daily intercourse and communion with our Heavenly Father.

Through forms which appeal to the eye of our children; through the charms of music, in chants and hymns, which captivate the ear; through the eloquence of studied discourse which reaches the intellect and often the heart, it is not ours to teach. Rejecting these, we need not despair. Is it not written, "Ye need not that any man teach you," (John, I, 2: 27); and further, "They shall all be taught of God," (John 6: 45); and is not this the very essence of our faith, this abiding belief that God will teach his people himself? Trusting him, then, your strength and our strength will steadily increase. We shall all gradually comprehend the meaning of that well-worn phrase characterizing and identifying our Religious Society, "The Inner Light." Receiving our light and life from him we shall be equipped for teaching others. So trusting, so teaching, our work cannot fail to be blessed.

With a feeling of thankfulness that our work seems still to grow in depth and earnestness, and with a warm desire that the work within your borders may be fruitful, we subscribe ourselves your friends.

Signed by direction and on behalf of "The First-day School Association of New York Yearly Meeting."

CAROLINE J. TITUS, }

REPORT OF THE COMMITTEE OF BALTIMORE YEARLY MEETING.

THE report of the Central Committee on First-day Schools of Baltimore Yearly Meeting, presented at the recent session, has returns more or less complete, (in a few cases only the name of the Superintendent), from 23 schools. The largest enrollment in these is at Park Avenue, Baltimore, 96; Fawn Grove and Goose Creek have each 80; West Nottingham and Penn Hill each 75; West Branch 73, East Nottingham, 65, Drumore, 54, Eastland, 53; the remainder under 50. Of the superintendents 15 are men and 8 are women. We make the following extracts from the report:

"We have received reports from nearly all of the schools. We find that of 16 schools reporting, 9 meet after meeting, while the other 7 meet before. The sessions of the schools vary from forty minutes to an hour and one-half. A larger number than usual, four, report holding the schools open during the whole year. The average length of time during which they are held is a little more than seven months.

"We are surprised to find that five meetings, where there are schools, have no Monthly Meeting Committee to exercise a care or afford aid, comfort, and encouragement to those who feel called upon to give their time and efforts to this work. Children of these schools generally attend meeting regularly, others say, most, one says one-half do, another three-fifths, while a number say 'all do.' Much the same report is made of the teachers.

"Many of the meetings have libraries from which the pupils of the First-day Schools get books to read. In some instances teachers report using Commentaries of the Bible with the INTELLIGENCER AND JOURNAL, while in some the *Sunday School Times*, *Christian Register*, etc., are used.

"We regret to note that in Washington there is no longer any effort made to have a First-day School.

"In reference to the question whether First-day schools add to the attendance of meetings, one report states that three times as many children attend meetings during the sessions of First-day Schools as during the balance of the year.

"The committee regret to note a want of care in keeping records of attendance, etc., as requested by them, as this makes it impossible to supply such a line of statistics as might be of use to help in suggesting what would aid when help may be needed.

"Only one meeting reports holding teachers meetings; every other one reports 'no such meetings are held.' The committee are of the opinion that much loss is suffered on this account and would respectfully urge attention to this important matter.

"Upon consideration the committee feel that more life and earnestness in this important matter would tend to build up Society and strengthen many weak places in that which is already built. It seems to the committee that if the organization of the Society of Friends is to be maintained this is necessary, therefore we would encourage zeal and hard work throughout our borders.

"The committee are also of the opinion that there should be on the committee those who can give more time to this part of our Society's vineyard. Organizers are needed. Many schools languish for want of attention from those who have had experience in this kind of work, because those who have the matter in hand lack confidence in themselves and know not how to progress. It seems that there should be a First-day School Committee in every meeting and that those who really feel interested in the work and appreciate the importance of it should constitute these committees."

NEWS OF FRIENDS.

NINE PARTNERS HALF-YEAR MEETING.

THIS was held at Nine Partners, N. Y., on the 4th of Eleventh month. The meeting of ministers and elders convened on Seventh day, the 2d, at 3 p. m. We were favored with the company of Charles Robinson, Superintendent of Chappaqua Mountain Institute, and Robert Barnes and his wife, Esther H. Barnes, all members of the Yearly Meeting's Committee to visit subordinate meetings, and members of Purchase Quarterly Meeting. Their presence and ministrations to the fold thus gathered were very comfortable, calling to mind the many fathers and mothers that have received the call to "Come up higher," investing us to their example of faithfulness to known duty. The absent ones were not forgotten who were prevented by age and infirmities. The usual routine business was carefully considered, and we concluded to meet at Poughkeepsie, in Fifth month, 1890.

The general meeting for business assembled in joint session on Second-day morning at 11 o'clock. The opening minute was read, followed by the reports from the several monthly meetings. The representatives to attend were all present except one. The representatives, through one of their number, proposed the reappointment of the present clerks, with which unity was expressed, and they were appointed for one year. Robert and Esther H. Barnes were present with us, and others of the Yearly Meeting's Committee. In the accounts from the monthly meetings, presenting the answers to the Queries, there were but few deficiencies noticed. No breach was noticed in answer, in regard to the use of intoxicants. The queries were all read, and they with the answers were deliberately considered, and we felt to rejoice that we could answer so clearly. At the opening of the meeting for transacting the business before us, an invitation to all present was extended to remain with us, and at its close many thanks were expressed for the privilege from those not of our fold, some of them children of parents and grandparents who were consistent Friends. Their descendants never knew before anything of the views and practices of Friends, and were much pleased they had been with us at this time. A minute was presented from our late Yearly Meeting, women's branch, held in New York in Fifth month last. "This meeting recommends to its subordinate meetings, desiring that they may in turn recommend to their monthly meetings, that a copy of the printed *Extracts* of the Yearly Meeting be sent as far as practicable to each of their isolated members." In accord with the desire expressed in the above minute, this meeting recommends to its monthly meetings to take the action proposed. The clerks of this meeting were directed to furnish a copy and send to each monthly meeting. No further business appearing, we concluded, with the feeling that we had been favored to transact the business before us in harmony and love.

J. C. H.

EDUCATIONAL.

LECTURES AT SWARTHMORE.

THE second lecture in the combined course to teachers and students, etc., connected with Friends' Schools, was given at Swarthmore College on the 16th inst. The address on Character, by Dr. E. E. White, was listened to with marked attention, and though not so suggestive in the line of teaching as the preceding lecture, it was full of inspiring thought and happy similes, and it well portrayed the foundation stones of good character. The day was fine, and there was a good attendance of teachers from the neighboring schools, who embraced the opportunity given in the morning to visit the various classes to witness the teaching. These, with the college students, formed a good audience, enjoying the opportunity offered them. Professor Batchelor followed in his usual attractive method of instruction in vocal culture, illustrating by a class of his pupils from the school at 15th and Race Sts., Philadelphia.

TRUE piety is cheerful as the day.—*Cowper*.

AN EXCUSE.

EDITORS INTELLIGENCER AND JOURNAL :

A FIRST DAY SCHOOL Superintendent, who during fifteen years of service was absent from his post but five times, having been appointed on a circular committee to visit meetings throughout the Quarter, has endeavored to establish a rule that when any officer or teacher is absent from the school, they shall be required to give an account of their delinquency upon the ensuing First-day. On First-day, the 10th of Eleventh month, being absent from his post, he reports having journeyed westward a few miles, and gives some incidents of the journey.

After a day of almost incessant rain and an inauspicious morning, this day proved to be one of the brightest of the season, and we could realize the feeling that prompted the wise king to write: "Truly the light is sweet, and a pleasant thing it is for the eyes to behold the sun." Approaching Auburn,— "sweet Auburn, loveliest village of the plain,"—we were reminded that in the present instance, the plain was all in the imagination, or in the poet's dream, for we were upon the highest land in southern New Jersey. The proof of this lay around us in the shape of numerous boulders, (here called "bull-heads"), lying by the roadside. Scientists tell us that these stones were conveyed here by icebergs, when what is now Southern Jersey was a part of the great ocean. The theory is, that they were frozen-up in the ice on the shores of Greenland and as the bergs drifted southward they stranded upon the most elevated points of the deep sea bottom, and beneath the summer sun they melted away leaving their ballast of stones where we find them to day after the subsidence of the waters upon the highest points of land.

Pedricktown, or "Upper Penn's Neck Meeting," as it is called in the records of our Society, was reached in due time, and we were welcomed by a small but attentive gathering of Friends and Friendly people, and an hour was passed in their company, which we trust may prove to have been a profitable occasion both to the visited and the visitors. This meeting is one of those little ones that constantly need the fostering care of the larger branches, as oftentimes they are but the two and the three; yet we are reminded of the promise that if they "gather in my name there will I be in the midst of them."

This, like many Friends' meeting-houses throughout the country, occupies the most conspicuous site in the village, and is surrounded by ample shade trees, among which we noted a maple with a dense mass of bright green foliage, while all the others were stripped and bare. This peculiarity, we are told, appears year after year, but no cause has ever been assigned for the circumstance. May we not interpret it as an omen of good for the life of this meeting?

A. E.

Mullica Hill, 11th month 12.

WORDSWORTH'S better utterances have the bare sincerity, the absolute abstraction from time and place, the immunity from decay, that belong to the grand simplicities of the Bible.

THE GEORGE SCHOOL SITE.

THE General Committee on the George School held a meeting at 15th and Race streets, on Sixth-day last. There was a very full attendance, less than ten members being absent out of the 68 on the committee. Of these, one, George Watson, is in Europe; John J. Hallowell was unwell; and most of the others reside distantly. Two sessions were held: from 10 to 12.30, and from 1.30 to about 3. The three sites suggested by the Location Committee, Yardley, Salisbury, and West Grove, received consideration, and it became evident that each had its friends. Without ascertaining how many favored either place, it was decided very harmoniously to refer the subject back to the Location Committee, it being hoped that with further effort they would be able to report unanimously in favor of one place. There was a desire on the part of some to procure a situation nearer to Philadelphia,—regarding it as the centre of the Yearly Meeting,—than Christiana or West Grove, and if some other place should be found having the unquestioned attractions of these situations, but not so far distant, they would doubtless prefer it. The view was held by others that there was no disadvantage in a location either at West Grove (40 miles) or Christiana, (48 miles).

The General Committee will meet again, when the Location Committee has something ready for its action.

PHILADELPHIA NOTES.

THE Social Reception under the care of the Committee of the Monthly Meeting, at 15th and Race sts., on Sixth-day evening of last week, was largely attended by Friends from different parts of the city, and proved a very enjoyable occasion. Every one present seemed glad of the opportunity for social commingling that it afforded. Those who by sickness or the infirmity of age were prevented from participating were not forgotten, the flowers which were provided for the purpose being carefully sent them. One who was among the recipients of this attention says that the invalidism which kept her within doors was quite lost sight of for the time, in the beauty and fragrance of chrysanthemum, rose, and carnation,—each giving forth that with which it had been endowed, and forming a simple lesson for the heart; teaching in their silent way that what we have may be shared with others if it be nothing more than the aroma of a true and pure life.

—During the recent Unitarian Conference in this city Edward Everett Hale, of Boston, one of the most distinguished ministers of his denomination, and well known to a wide circle of readers by his literary work, attended the mid-week meeting of Friends, at 15th and Race sts., and spoke, the scholars from the schools being present. Some of the members of the Pan-American Congress were present at the evening meeting at the same place on First-day evening, the 10th inst.,—the delegates to the Congress being then in Philadelphia.

—Two meetings have been held in reference to the proposed enlargement of work at Friends' Mission, but as both were on stormy evenings the at-

tendance was small. Another meeting, to be held Sixth-day evening of this week, 22d inst., was decided on. The feeling was favorable to the employment of a suitable woman Friend to attend at the several departments when held, visit the families of the children and other persons that attend the schools, etc., leaving open the matter of a more extended labor to depend on the response that may be received to cooperate personally in carrying it out. At the adjourned meeting an address will be submitted.

SWARTHMORE COLLEGE NOTES.

AN autograph letter of John G. Whittier and some of the original manuscript of Henry W. Longfellow are among the recent additions to the college library.

—Wetly Lippincott and Sallie T. Conrow, '88, Jennie F. Waddington, '89, J. Riley Vansant, ex-'89, James S. Coale, Helen Barnard, Josephine T. Ancona, Rosa Ancona, and Jessie B. Masters, ex-'91, were among the old students who visited the college recently.

—The spelling bee held by the Eunomian Literary Society at their last meeting was won by Walter U. Hibberd, '93.

—William C. Sproul, '91, has been away from college during the past few days attending the funeral of his grandfather, Samuel W. Slokom, president of the National Bank of Christiana, Penna.

—The Skating Committee, composed of representatives of each class of the college and preparatory school, have chosen Walter Roberts, '90, captain. His assistants are E. B. Temple, '91, H. B. Coles, '92, and A. T. Conrow, '93.

—The juniors under Professor Weaver have completed their reading of Schiller's "Wilhelm Tell" and have begun his "Marie Stuart."

—Dr. Charles S. Doley of the University of Pennsylvania, formerly professor of Natural history here, has paid us several acceptable visits lately.

S.

COMMUNICATIONS.

EDITORS INTELLIGENCE AND JOURNAL:

THE committee on Social Duty, Brooklyn, desire to inform Friends who may be temporarily in that city, or who may have removed there, but have not yet become acquainted with our members, that meetings for social enjoyment are held once in two weeks during the winter, to which all are cordially invited. These meetings are held at the houses of different members, and are not only pleasant occasions, but have been found very useful in improving our acquaintance with each other, and in enlarging the social feeling so desirable amongst our members.

Margaret M. Haviland, No. 127 Park Place, Brooklyn, is the clerk of the committee, and will be pleased to give any information in regard to these meetings, or to the other duties of the committee.

E. M.

Brook'g'n, N. Y., 11th month 18

It is always safe to learn, even from our enemies—seldom safe to instruct, even our friends.—Colton.

THE HALO.

AROUND the head of pictured saint and Holy One of old
The painters drew a circlet of pale, effulgent gold,
What did it mean, this radiance that crowned the gentle
brow?

Ah! Hast thou never seen it—do we never see it now?

Hast thou never seen a mother with her child upon her
knees?

We can see her smiles of loving, but the child a halo sees;
And the mother's drooping lashes cover eyes, that round
the head

Of her darling, see a beaming crown its rays of brightness
shed.

Some there are whose heav'n-lit faces, wheresoever they
may go

Rouse our very souls to wonder,—stir our hearts to ardent
glow;

There are some whose true nobility commandeth every-
where;—

The crown of golden hallowed light right royally they
wear.

'Tis the glory of the presence of the ones we love the best;
And it fills our yearning spirits with a deep and quiet rest.
And dost thou tremble, doubting, lest the vision prove un-
true?

Nay, worship; 'twill not harm thee, 'tis the God-light shin-
ing through.

A. L. D.

DREAMS.

Ah! the dreams of spring when the year is young,
And the sky with a faint, far blue is hung;
Then the leaves slip out in a bright confusion
And lend their aid to the fair illusion.
That life is spring, and they gently screen
The scars of earth with their tender green.

Ah! the dreams of winter. The year is old,
And ready for rest, now its tale is told;
And 'tis not all sad, though the leaves' profusion
Has passed, and bared us the bold delusion.
For see! now the world can hide no more
The heaven-line as it did before.

—Julie M. Lippmann, in *S. S. Times*.

THE FOUR WINDS.

In winter when the wind I hear
I know the clouds will disappear;
For 'tis the wind who sweeps the sky
And piles the snow in ridges high.

In spring, when stirs the wind I know
That soon the crocus buds will show;
For 'tis the wind who bids them wake
And into pretty blossoms break.

In summer, when it softly blows
Soon red I know will be the rose;
For 'tis the wind to her who speaks,
And brings the blushes to her cheeks.

In autumn, when the wind is up,
I know the acorn's out its cup;
For 'tis the wind who takes it out
And plants an oak somewhere about.

—Frank Dempster Sherman, in the *Independent*.

LIVING HISTORY.

THE "Spectator" in the *Christian Union* noting some points of interest during a late European visit, was very much impressed by a small and unpretentious room in Geneva, about which comparatively little has been said. Geneva is rich in historical associations. It was the home of men so far apart in temper and character as Calvin and Rousseau—men of almost incalculable influence in human affairs, but well-nigh antipodal in their aims and morality; and yet it is very possible that when two or three more centuries set the events of the past in a new and larger perspective, it will be seen that the most potential influence that ever came out of Geneva came from the room in the Hôtel de Ville in which the Alabama Commission held its sessions. It is a small, entirely unpretentious room, furnished like a council chamber. At one extremity of the wall, at the back of the room, is a marble tablet commemorating the fact that within those walls, by the method of peaceful arbitration, two great nations settled differences that might easily have set the torch of war to their common prosperity, that in any earlier period of the world's history would certainly have been adjusted by fire and sword. At the other extremity of the same wall is another tablet commemorating the fact that within the same walls met more recently the representatives of the Great Powers, and agreed upon certain terms for the amelioration of the condition of the wounded on the field of battle. So much for the history written on the walls of this room—a history infinitely nobler and more significant than that written in the dismantled Schloss at Heidelberg, or in the ruins that crown the vine-clad hills of the Rhine. There is also a bit of prophecy in this room—a prophecy which springs like an inspiration out of its history. There is in another part of the room a large and finely constructed plow made of sabers and spears that have been borne on battlefields and flashed in the lurid light of that Inferno which men bring on earth when they settle their disputes by resorting to war. Amid the countless relics of combats in the past, and amid the endless tramp of increasing armies which one sees and hears all over Europe, the sight of this little room and the hope it inspires are like visions of paradise.

THE question whether petroleum or naphtha has or has not a vegetable origin, like coal, came before the British Association at its recent meeting. The situation of the oil-bearing regions in the immediate vicinity of mountain-ranges, *i. e.*, in localities of former greater geologic disturbance, has led to the theory of the chemical origin of oil, first announced by Prof. Mendeleef in 1877. His theory is in outline as follows: surface water by means of fissures may percolate deep into the earth and come in contact with beds of metallic carbides. Hydrogen is set free or combines with the carbon associated with the metal and a hydro-carbon is produced which will vary in composition according to the prevalent conditions of temperature and pressure. The occurrence of mineral oils, mineral pitch, ozokerite, asphalt, and similar products may thus be explained.—*The American*.

GOOD ROADS: THEIR COST AND THEIR ECONOMY.

[The following paper, the conclusion of which we shall give in another number, was read by Samuel R. Downing, of East Goshen, Chester county, Pa., at the meeting of the Pennsylvania State Board of Agriculture, at New Castle, 10th mo. 23. The subject is one of real importance, and the paper is an intelligent presentation of many important facts in relation to it. Convenience, comfort, and thrift would all be advanced by better roads: in no particular of our material interests are we so behind-hand, probably, as in regard to our highways.—EDS. INTELLIGENCER AND JOURNAL.]

A prominent Philadelphia journal, in a recent number, asserts that the main country roads of Pennsylvania macadamized within the best standard, would save their cost every ten years and their interest every six months.

In the report to this Board, 1888, Secretary Edge approaches this statement very closely, I think, in saying that in the case of the worst parts of township roads a sufficient sum to permanently improve them is expended in temporary repairs every ten years.

Seeing these statements falling from excellent authority, and deeming them worthy of consideration, I thought that an answer to the question, "Will a macadam road pay its cost every ten years?" might prove both interesting and profitable.

There is a broad advocacy now by the press and our monthly publications of "good macadam roads." The stress seems to be for the best, and in whatever I remember of the argument for good macadam roads, the proposition seems always emphasized that the best is the cheapest. And yet it is asked here and there, under the idea that economy means a low price, "Why should your mile of stone road cost \$3,000, when \$1,000 will build it?" It may be a matter of wonder with some that a man not overly rich will pay eight dollars for a pair of pantaloons when pantaloons can be bought for three. Of the two, the higher priced, as a rule, may be better worth the buying. A sixteen-foot road composed of heavy field stone surfaced by a feeble scum of rubble may cost but \$800 in the laying, but the laying is but the beginning of its cost. As the \$3 pantaloons must be restitched, rebuttoned, darned, patched, perhaps dyed, so with the low-priced road, the heavy blocks will rise, the small stone disappear, and it will require great and continual cost to save the anatomy and tissues of those who travel over them from dislocation and disruption. There will always be complaint as to them, expense, discomfort in such roads, and the only remedy for the grievance they impart is to take up the roads to the uttermost, grind and relay them. Thus it is pleasant to note that there is a spirited urging of "good macadam roads."

The macadam principle may involve the higher price, but then it is an economic principle, costly at first, but a source of satisfaction, ease, speed, saving in draft and money. The macadam road is simply composed of fine stone solidified, united by pressure, and bound with stone screenings.

Donald G. Mitchell, author of that old but charm-

ing book, "My Farm of Edgewood," says, in "A Scattering Shot at Some Ruralities," that the well ordered roads of England are "not so wide as to invite slatternliness." In the eastern counties of Pennsylvania on main roads the standard of sixteen feet has been adopted. The most favored measure before the New Jersey Legislature last winter, admitted of a twelve-foot track. If we canvass the width of roads, especially throughout sparsely settled townships, we will discover an average breadth of bed no more than sufficiently broad to hold a twelve-foot track. In fact, in eastern counties touching the outlines of the city of Philadelphia there are miles and miles of road not over ten and twelve feet in width.

The only turnpike entering West Chester is single track. It is paralleled within a radius of one mile by two dirt roads, and yet the pike has paid seven per cent, simply because during winter the travel centres on it, notwithstanding toll and the single track. In other words neither toll nor single track with its over-imagined difficulty in passing, will drive travelers to the dirt roads in winter, however constantly the dirt roads may be scraped, drained, and thrown to the centre. But in order to be within the lines of popular idea we will incorporate the 16-foot width road in my estimate.

A bed of fine stone, nine inches thick, well interlocked by rolling and thoroughly bound will easily have the resistance of a twelve-inch bed of loose, large, incompact stone.

Mr. Kratz, in a paper read some years ago before this Board, asserted that on a good, well drained soil a thickness of six inches will make an excellent road for "ordinary traffic." Ordinary traffic means general, average traffic. There is no better authority than Mr. Kratz, he being a resident of Montgomery county, in which county a majority of the main roads are of stone. Mr. Kratz bases his assertion upon actual realization. Mr. J. F. Pope, a prominent civil engineer, fixes a thickness of nine inches at center, dropping to four and a half for an eighteen-foot width—an average thickness of six and three-fourths inches.

Mr. A. J. Cassatt was elected Supervisor of Tredyffrin township, Chester county, and again reelected. He supervised the construction of macadam roads during his incumbency, and laid them, I am informed nine inches thick on lowlands and six on uplands—an average of seven and a half inches.

As there are plenty of our best citizens who at the present beginning of permanent road improvement will conclude that a six-inch thickness is simply ridiculous, let us take the average of the streets of West Chester, say ten inches, placing twelve inches on the low dips and eight on the uplands and slopes.

A crusher that will crush eighty perch of stone per day will cost, with belting, \$800. A wagon for moving it will cost \$200, making a thousand dollars. As a crusher will turn out stone as rapidly as may be required by four townships, then each of the four townships, by pooling, would be at the expense of \$250 in the ownership of a crusher. A crusher set on wheels can be transported by a traction engine as readily as a thresher.

Stone can be crushed at 15 cents a perch. Thus, turning out 80 perch at 15 cents, the earnings per day will be \$12, sufficient to meet three men's wages and the rent of and coal consumed by a traction engine.

Traction engines can be rented when not used in threshing. With the addition of a stone car, engines can draw stone to the dump and at the same time serve in lieu of rollers.

Stone can be hauled from the field or quarried, if not too hard, for 25 cents. Hauled from yard to crusher and crushed for 25 cents. Hauled to road-bed for 25 and 50 cents, corresponding with distance say an average of 37½ cents. The sum of these costs equals the cost of 87½ cents per perch. But in order to satisfy an opinion that may prevail that the crushing and delivery of stone will cost more, we will run the estimate up to a dollar per perch. Again, and in face of the fact that quarrymen are offering to quarry and crush stone at 60 cents a perch, which offer, of course, includes a profit, indicating that stone can be quarried, hauled to the crusher, and crushed at a cost of about fifty cents a perch.

As to the sum of difference between the cost of repair of macadam and dirt roads.

The opinion of Macadam himself obtains somewhat in this computation. He affirmed before a committee of the House of Commons that his experience proved that the expense of repair of stone roads was almost in the exact ratio of the sizes of stone used. Thus a road composed of three inch stone will cost in repair triple that of a road composed of one-inch stone. Then again there is a broad distinction of saving between a well knitted, solid, iron compact of stone and a loose bed. And still again the upheaval of large base stones adds a considerable percentage to cost, so it seems that a macadam composed altogether of rubble well-pressed is the one of all least costly to maintain. As proof of this the first macadam road built at Devon, Chester county, some eight years ago has not in that time, I am told, cost one cent in repair. Is it not then perfectly safe to fix the repair of a "good macadam road" at \$20 per mile?

By a recent inquisition upon the part of our county commissioners made under State direction, I find after deducting the cost of county bridging, also that of street repair and construction, that township roads cost in repair and construction say within a fraction of \$1,800 per township. The average of mileage is about twenty-five miles per township, making the average cost for repair and construction of our dirt roads per mile seventy-two dollars.

Should any township propose to macadamize, the roads selected would certainly be those bearing the heaviest strain of travel and traffic. Allowing that the cost in repair of our most used roads exceed the cost in repair of roads slightly traveled to an amount overlapping the cost of local bridging and township percentage in cost of new roads not separated from our general assessment, we still have seventy-two dollars as the average cost in repair throughout Chester county. Deducting twenty dollars per mile as the annual cost of repairing macadam roads, and we have fifty-two dollars as the average annual cost per mile in repair of dirt roads throughout Chester

county. Thus the average ten years' saving on a mile of road would be \$520.

This is, however, but the first chapter in the story of saving—a story that cannot be fully detailed. We can, however, take a moment and touch upon this and that instance as evidence that a good macadam road is a first-class investment. As a single and little item the wages of and profit on the work of my dairymen amounts to one dollar per day. It requires an extra hour every day during three months of every year furrowing the roads to and from the station in sending milk. The loss of this daily hour alone costs me ten dollars, or the equal of over one and a half mills on our township valuation.

(Conclusion next week.)

NEWS AND OTHER GLEANINGS.

"ONE of the victories we claim for Carlisle," says the *Red Man*, the monthly journal published at the Indian school, "is that its students, coming to us clad in rags and speaking no English, are sent home after five years, well clad, and generally with trunks filled with clothing and other useful things, and money in their pockets. The party of 117 that left July 8th, required a large baggage car to carry their trunks and valises checked through, and they carried in their pockets money of their own earnings amounting to over \$2,000. A hand-cart would probably have carried all their baggage when they first came to the school, and probably it would have been impossible to have found ten dollars in the whole party. Most of them came without English; they went away with the ability to speak and use the language intelligently." This is certainly a very forcible and practical statement of the case.

—A recent compilation of statistics relating to electric railways in the United States shows the number now building or in operation to be 61, employing 538 cars, and having a total mileage of 380.

—The people of Boston have free access to about 2,000,000 books in the different public and semi-public libraries. There are half a million volumes in the City Public Library and its branches, another half a million in the Harvard, Athenæum, and State libraries, and fully a million in semi-public and other libraries. It is estimated by Mr. C. W. Ernst, Mayor Hart's secretary, that there is an average of fifty volumes in each occupied dwelling-house in the city. According to the census of 1855, there were in the libraries of Massachusetts over 4,500,000 bound volumes, about 1,300,000 pamphlets, and 36,000 manuscripts.

—Australia appears to be keeping well abreast of the age as regards the education of women. The Universities of Melbourne, Sydney, and Adelaide are open to women. The University of Adelaide claims the honor of commencing the new departure in 1876; Melbourne followed, and then Sydney. At Adelaide a woman scored a more brilliant success in the Science Division than any of her competitors; while Melbourne has now nine lady graduates, and Sydney ten, of whom three have won the M. A. degree.
—*London Publishers' Circular.*

—A Chair of Biblical Literature has been established at Yale College, with a reported endowment of \$50,000. Professor Harper is appointed as the incumbent, adding the duties of this chair to those of his present professorship in the Theological Seminary.

—An interesting and valuable report was made by a large Committee of the British Association at its last meeting, on the scope and value of elementary science teaching.

The Committee proposes a scheme consisting of six stages: (1) object lessons with common and familiar objects; (2) lessons in measurement; (3) study of heat and behavior of things when burnt; (4) the problem stage, to determine what happens when iron rusts, burning in air, composition of chalk, action of acids, etc.; (5) the quantitative study of such substances as are now familiar; (6) the physical properties of liquids and gases, the atomic theories and their application. The report of the Committee was endorsed by many teachers present at the meeting, as well as by Prof. Huxley and others of experience in teaching science.—*The American.*

Edward Stabler, Jr., was one of the members of City Council (1st Branch) of Baltimore, who was reelected at the recent municipal elections, 5th inst. His service for the preceding year was highly commended in a circular address issued by a number of his constituents.

The Prohibition vote in Pennsylvania at the recent election was 92,101, against 18,531 in 1887. In Maryland it was 2,616; in 1887, 1,351.

—Charles Smith Cook, an Episcopal missionary at Pine Ridge Agency, Dakota, has recently visited the Indian School at Carlisle. He is a full-blood Sioux, by birth, but has been well educated; his wife is a member of an excellent family in New York State. Among many suggestive statements which he made concerning the Indian work, he spoke of the Indian men and boys who came back to the agency from the Buffalo Bill and other "Wild West shows." These, he says, have the very worst influence in the tribe, spreading corruption and vice in every conceivable way among their people.

—Dr. John R. Paxton is one of the leading Presbyterian ministers of New York City, and in the recent consideration by the Presbytery of that city, of the proposal to revise the Westminster Confession, he was strongly in the affirmative. In the course of his remarks he said: "A man who could preach some of the articles of our faith would not be a contemporary of the nineteenth century. He must have walked out of the seventeenth century. He would be a survival and not of the fittest. We cannot breathe with Abraham's lungs. We cannot look at God through Calvin's eyes. Calvin looked at God and saw nothing but his terrible sovereignty. We see that his name is Love."

There was never so much interest as at present in the study of the Bible and in study about the Bible. In these days of scientific discovery and research, and of manifold doubts and questionings, the Bible gains steadily as a center of interest and as an object of admiring wonder, among scholars as scholars, as well as among the common people.—*Sunday School Times.*

At Onshohocken, Pa. the Tradesmen's National Bank, which recently closed its doors, on account of the peculations of its Cashier, has been reorganized and has begun business again, with its capital reduced from \$100,000 to \$50,000, Isaac Roberts, a Friend of Norristown, being chosen Cashier. The place taken by Isaac, in view of preceding circumstances, is one of some difficulty but it is believed by those who know him that he will meet its requirements.

An Associated Press telegram from the City of Mexico says: "The sermon of Archbishop Ryan, of Philadelphia, at Baltimore has caused a great sensation here because of the Archbishop's support of the right of Catholic writers to criticize the faults of priests, while here Archbishop Labaree has excommunicated a number of persons for such criticisms, and charges have been brought against him in Rome for so doing."

CURRENT EVENTS.

THE attention of the world has been drawn to events in Brazil. News from Rio de Janeiro, the capital on the 16th, announced that the Emperor, Dom Pedro, had been deposed, and a Republic established. The Emperor was treated with civility, and took ship for Europe. He will receive a large annuity from the Republic. The revolution was unattended with violence of any sort. Exactly what the meaning of the sudden change may be is not known at this writing; nor is it certain whether the Republic will be stable.

THE Women's Christian Temperance Union closed the session of its national body at Chicago, on the 12th instant. A resolution declaring it a non-partisan organization was voted down by a large majority, and J. Ellen Foster and most of the delegates from Iowa withdrew. Frances E. Willard was reelected President.

THE Farmers' Congress, at Montgomery, Alabama, adjourned on the 15th instant. A resolution demanding the removal of the tax on tobacco was voted down. Resolutions were adopted demanding that all farm products shall be as fully protected as the most favored of the manufacturing industries.

NOTICES.

A portion of Philadelphia Quarterly Meetings Committee to visit the smaller branches will attend the meeting to be held at the Valley, on First-day morning, Eleventh month 21st, 1889, at 10 o'clock.

Train leaves Reading Depot, Broad & Callowhill streets, at 8.15 a. m. for Maple Station on Chester Valley R. R., changing cars at Bridgeport. Returning, leave Maple Station at 4.38 o'clock p. m.

CHAS. E. THOMAS, Clerk of Committee.

Those interested in Friends' Mission No. 1, Fairmount Ave. and Beach street, are requested to meet in the Parlor at Race above 15th street, on Sixth-day, the 22d inst., at 5 p. m., to complete the arrangements for the work.

A Temperance Conference under the care of Hadonfield Quarterly Meeting, will be held at Moorstown, on the 24th inst., at 2.30 p. m.

WM. C. COLES, Clerk.

Nebraska Half Year's Meeting. Nebraska Half-Year's Meeting of Friends will be organized at Lincoln, on the first Second-day in the Twelfth month, Twelfth month 2d, 1889, at 11 o'clock a. m. The meeting of Ministers and Elders on the seventh day preceding at 2 p. m. Meeting for worship on First-day at the usual hour.

The committee of Illinois Yearly Meeting are expected to be present to assist in the organization.

Isolated Friends of Nebraska and Kansas are especially invited to meet with us on this occasion.

Any further information will be furnished by either of the undersigned.

Moses Brinton, Lincoln, Neb.; Charles P. Walter, Lincoln; J. Russell Edwards, Lincoln; Joseph Webster, Monroe, Platt Co., Neb.; Isaiah Lightner, Watson, Platt Co., Neb.; George S. Truman, Genoa, Saline Co., Neb.

Evening Meetings. Friends are reminded that only one Evening Meeting is held in Philadelphia, at 7.30 o'clock, at Race street during this month. It is desirable that Friends generally attend and invite others to do so.

Quarterly Meetings in Eleventh month occur as follows:

23. Blue River, Clear Creek, Ill.
25. Warrington, Pipe Creek, Md.
26. Burlington, Crosswicks, N. J.
27. Southern Garden, Pa.
28. Bucks, Langhorne, Pa.
29. Nottingham, Little Britain, Pa.

COMMON THINGS.

We thank Thee for life's common things,

The limpid, lovely water springs,
The shining diamonds of dew,
The firmament's transcendent blue;
For the wild rose whose fragile cup
In field and hedge is lifted up.

For the shy tribes in glade and glen,
Whose sweet life is un-seen of men;
For humble grasses making meet
The rough earth for thy children's feet;
For lowly moss that creeps and clings,
A drapery for unsightly things.

For love's sweet looks upon us bent;
For baby faces innocent;
For helpless hands that reach and sue,
And make us patient, kind and true;
For youthful hearts unworn and bold
That keep our own from growing old.

We thank Thee for life's homely ways,
The discipline of working days;
For hearts made tenderer by trial;
For the stern teaching of denial;
For pain that keys the quivering chord;
For joy and grief we thank Thee, Lord!

—New York Journal of Commerce.

JOHN WOOLMAN'S VOYAGE TO ENGLAND, 1772.

(Continued from last week.)

TENTH of Fifth month.—It being the first day of the week and fine weather, we had a meeting in the cabin, at which most of the seamen were present; this meeting was to me a strengthening time. 13th. —As I continue to lodge in the steerage I feel an openness this morning to express something further of the state of my mind in respect to poor lads bound apprentice to learn the art of sailing. As I believe sailing is of use in the world, a labor of soul attends me that the pure counsel of truth may be humbly waited for in this case by all concerned in the business of the seas. A pious father whose mind is exercised for the everlasting welfare of his child may not with a peaceable mind place him out to an employment among a people whose common course of life is manifestly corrupt and profane. Great is the present defect among seafaring men in regard to virtue and piety; and, by reason of an abundant traffic and many ships being used for war, so many people are employed on the sea that the subject of placing lads to this employment appears very weighty.

When I remember the saying of the Most High

through his prophet, "This people have I formed for myself; they shall show forth my praise," and think of placing children among such to learn the practice of sailing, the consistency of it with a pious education seems to me like that mentioned by the prophet, "There is no answer from God."

Profane examples are very corrupting and very forcible. And as my mind, day after day, and night after night, hath been affected with a sympathizing tenderness towards poor children who are put to the employment of sailors, I have sometimes had weighty conversation with the sailors in the steerage, who were mostly respectful to me and became more so the longer I was with them.¹ They mostly appeared to take kindly what I said to them; but their minds were so deeply impressed with the almost universal depravity among sailors, that the poor creatures in their answers to me have revived in my remembrance that of the degenerate Jews a little before the captivity, as repeated by Jeremiah the prophet, "There is no hope."

Now under this exercise a sense of the desire of outward gain prevailing among us felt grievous; and a strong call to the professed followers of Christ was raised in me that all may take heed lest, through loving this present world, they be found in a continued neglect of duty with respect to a faithful labor for reformation.

To silence every motion proceeding from the love of money and humbly to wait upon God to know his will concerning us have appeared necessary. He alone is able to strengthen us to dig deep, to remove all which lies between us and the safe foundation, and so to direct us in our outward employments that pure, universal love may shine forth in our proceedings. Desires arising from the spirit of truth are pure desires; and when a mind divinely opened towards a young generation is made sensible of corrupting examples powerfully working and extensively spreading among them, how moving is the prospect! In a world of dangers and difficulties, like a desolate, thorny wilderness, how precious, how comfortable, how safe, are the leadings of Christ the good Shepherd, who said, "I know my sheep, and am known of mine!"

Sixteenth of Fifth month.—Wind for several days past often high, what the sailors call squally, with a rough sea and frequent rains. This last night has been a very trying one to the poor seamen, the water

¹ The scene which we may imagine of John Woolman conversing and laboring with the sailors is one of real interest. His statement that they became more respectful to him the longer he was with them may readily be believed.

the most part of the night running over the main-deck, and sometimes breaking waves came on the quarter-deck. The latter part of the night, as I lay in bed, my mind was humbled under the power of Divine love; and resignedness to the great Creator of the earth and seas was renewedly wrought in me, and his fatherly care over his children felt precious to my soul. I was now desirous to embrace every opportunity of being inwardly acquainted with the hardships and difficulties of my fellow-creatures and to labor in his love for the spreading of pure righteousness on the earth. Opportunities were frequent of hearing conversation among the sailors respecting the voyages to Africa and the manner of bringing the deeply oppressed slaves into our islands.² They are frequently brought on board the vessels in chains and fetters, with hearts loaded with grief under the apprehension of miserable slavery; so that my mind was frequently engaged to meditate on these things.

Seventeenth of Fifth month and first of the week.—We had a meeting in the cabin to which the seamen generally came. My spirit was contrite before the Lord, whose love at this time affected my heart. In the afternoon I felt a tender sympathy of soul with my poor wife and family left behind, in which state my heart was enlarged in desires that they may walk in that humble obedience wherein the everlasting Father may be their guide and support through all their difficulties in this world; and a sense of that gracious assistance, through which my mind hath been strengthened to take up the cross and leave them to travel in the love of truth, hath begotten thankfulness in my heart to our great Helper.

Twenty-fourth of Fifth month.—A clear, pleasant morning. As I sat on deck I felt a reviving in my nature, which had been weakened through much rainy weather and high winds and being shut up in a close, unhealthy air. Several nights of late I have felt my breathing difficult; and a little after the rising of the second watch, which is about midnight, I have got up and stood near an hour with my face near the hatchway, to get the fresh air at the small vacancy under the hatch door, which is commonly shut down, partly to keep out rain and sometimes to keep the breaking waves from dashing into the steerage. I may with thankfulness to the Father of Mercies acknowledge that in my present weak state my mind hath been supported to bear this affliction with patience; and I have looked at the present dispensation as a kindness from the great Father of mankind, who, in this my floating pilgrimage, is in

[² John Woolman had seen, during his visit to Newport, in 1760, in attendance upon New England Yearly Meeting, the slave-ships lying at the wharves of that town, with the sellers and buyers of human beings thronging the market-place. Newport was then largely engaged in the slave trade. What he now heard from the sailors, sitting in their dark and crowded quarters, or upon the deck where the winds of the sea blew free and fresh, confirmed in his mind the iniquity of the system which he had so faithfully endeavored to root out,—and which, so far as the Society of Friends was concerned, was then nearly done away with. It was in 1758 that the Yearly Meeting of Philadelphia took the definite step,—largely through John Woolman's efforts,—of declaring not merely against dealing in slaves, but also of holding them; and in the years intervening, most of the bond-people in this yearly meeting had been liberated.]

some degree bringing me to feel what many thousands of my fellow-creatures often suffer in a greater degree.³

My appetite failing, the trial hath been the heavier; and I have felt tender breathings in my soul after God, the fountain of comfort, whose inward help hath supplied at times the want of outward convenience; and strong desires have attended me that his family, who are acquainted with the movings of his Holy Spirit, may be so redeemed from the love of money and from that spirit in which men seek honor one of another, that in all business, by sea or land, they may constantly keep in view the coming of his kingdom on earth as it is in heaven, and, by faithfully following this safe guide, may show forth examples tending to lead out of that under which the creation groans. This day we had a meeting in the cabin, in which I was favored in some degree to experience the fulfilling of that saying of the prophet, "The Lord hath been a strength to the poor, a strength to the needy in their distress;" for which my heart is bowed in thankfulness before him.

Twenty-eighth Fifth month.—Wet weather of late and small winds, inclining to calms. Our seamen cast a lead, I suppose about one hundred fathoms, but found no bottom. Foggy weather this morning. Through the kindness of the great Preserver of men my mind remains quiet; and a degree of exercise from day to day attends me, that the pure, peaceable government of Christ may spread and prevail among mankind.

The leading of a young generation in that pure way in which the wisdom of this world hath no place, where parents and tutors, humbly waiting for the heavenly counsellor, may example them in the truth as it is in Jesus, hath for several days been the exercise of my mind. O, how safe, how quiet, is that state where the soul stands in pure obedience to the voice of Christ and a watchful care is maintained not to follow the voice of the stranger! Here Christ is felt to be our shepherd, and under his leading people are brought to a stability; and where he doth not lead forward, we are bound in the bonds of pure love to stand still and wait upon him.

In the love of money and in the wisdom of this world, business is proposed, then the urgency of affairs push forward, and the mind cannot in this state discern the good and perfect will of God concerning us. The love of God is manifested in graciously calling us to come out of that which stands in confusion; but if we bow not in the name of Jesus, if we give not up those prospects of gain which in the wisdom of this world are open before us, but say in our hearts, "I must needs go on; and in going on I hope to keep as near the purity of truth as the business before me will admit of," the mind remains entangled and the shining of the light of life into the soul is obstructed.⁴

(Conclusion next week.)

[³ John Woolman's sympathy for all who were in distress was one of his marked characteristics. He truly remembered all those in bonds as if bound with them.]

[⁴ This note of protest against the tendency toward the worship of Mammon is continually present in all of John Woolman's writings; and it was, indeed, the distinctive testimony of his life.]

THE CEDARS OF LEBANON.

We find in a late number of the *Sunday School Times* an article from the pen of Frank S. Woodruff, of Princeton, N. J. on the Cedars of Lebanon, that we regard not only as interesting, but as giving much information, especially to our First-day Schools, who, in the study of the Old Testament, these trees are so frequently mentioned.—[Eps. INTELLIGENCER AND JOURNAL.]

The cedar of Lebanon (*cedrus Libani*) is a distinct species, its home being on the higher slopes of Lebanon and Anti-Lebanon, and the ranges of the Taurus Mountains to the north, and again in the far east on the Himalayas. . . .

The traveler who now sails along the narrow strip of land known by the ancients as Phœnicia, looks up at the bare, rocky walls of Lebanon, and wonders where the verdure has gone. No cedars are in sight. As far as we can learn from history, the famous race has been retreating ever since the time of Hiram, and now any one who would know the venerable trees in their native fastnesses must climb far up into the solitudes of Lebanon. Several groves of comparatively young trees exist in various parts of the range,—at 'Ain-Zahalte and Bârik in Southern Lebanon and at El-Hadeh in the north; but the trees called by the natives *Arz Libânî*, the cedars of Lebanon, are found almost at the northern extremity of the range, near the village of B'shêrre.

There can be few more delightful mountain journeys than that from Beirut, sixty miles over the rocky bridlepaths of North Lebanon, to this historic grove. Our tents are pitched at night by the clear, icy springs that are fed by crevices of perpetual snow,—Solomon's "flowing streams from Lebanon." . . .

We are seven thousand feet above the Mediterranean, in the very solitudes of the mountain. There is something weird and grand about the very situation, and it is not strange that the natives regard with a superstitious awe these "ghosts of a vanished race." They are very jealous of the grove, and both Maronites and Moslems look upon the trees as sacred, assuring us that, if any of the wood were used for cooking purposes, the water in the kettle would turn into blood. This superstition has doubtless done much to save these trees from the fate of the rest of their species. Some years ago, Rustom Pasha, governor of Lebanon, caused a wall to be built around the grove, and a *nâîr*, or watchman, to be placed there as a protection against possible vandalism.

The only other work of man is a chapel which the Maronites have constructed,—a rude, square building, near the north wall of the grove. Here they occasionally hold religious services, so that as both a religious shrine and a pleasure ground the place has many visitors during the summer months. From November till late in the spring, the mountain passes are so blocked with snow that none venture up to the bleak home of the cedars. What makes the B'shêrre cedars famous is not their number, but the great age of some of the trees. We counted four hundred and twenty-one trees in all, of which twelve, named by the Maronites "The Twelve Apostles," are apparently very old. The largest is truly a monster, measuring forty-seven feet in circumference. Eight

people, with outstretched arms, can just reach around it. At about eight feet from the ground, it divides, and throws out several great branches—each one a huge tree in itself—seventy or eighty feet into the air. The data for judging their age are insufficient for accuracy; but the best Oriental botanists, Le Verrier and Post, say that they cannot be less than fifteen hundred, and they may be twenty-five hundred years old.

One great trunk near our tents has been used as a record-book by travelers. The thick bark has been cut away, and on the firm wood we can still read, "Martin, 1769;" "Girardin, 1791," "Silvestri, 1795." These tell their own story of the durability of the cedar-wood. Many of these names are on the weather side of the trees, and for more than a century the rain and sleet of the mountain storms have been beating and chiseling at the wood, and still the names are clearly legible. So little have the trunks grown over the letters, that to Martin, in 1769, they must have appeared as huge as now. Situated just at the head of the Qadisha gorge, the grove is exposed to the wildest fury of the tempests. In winter the storms gathering along the Mediterranean rush with fearful violence up the rocky pass, and leap with tiger-like fierceness upon the devoted cedars. Here and there a great branch lies on the ground, twisted bodily from the trunk, and yet the splinters on the stump stand out as bright and sound as though the wrench had come yesterday, instead of half a century ago. Not only in size and dignity, but in this incorruptibility of the wood, the cedar is a royal tree.

In the excavations of the palace of one of the Assyrian kings, some fragments of cedar beams were found by Mr. Layard, which have since been transported to England, and are now preserved in the British Museum. Mr. Carruthers, keeper of the Botanical Department of the Museum, has made a careful microscopic examination of the wood-cells of these beams, and confirms Mr. Layard's opinion that they were cedars from Lebanon. Thus these fragments have withstood the wear of time and the destroying chemical influences for perhaps thirty centuries, and are still the fragrant, incorruptible wood of the temple. Other woods may be riddled with worm-holes; no worm will touch the cedar. Giant eucalypti and sequoias may be "rotten to the core a thousand years before their fall;" there is not, and never has been, a false-hearted cedar.

"The trees of the Lord are full of sap, the cedars of Lebanon which he hath planted." There is a spicy and refreshing aroma about the cedar that greeted us long before we reached the enclosure. From broken branches the surfaces chafed by interlapping, there has exuded an abundance of fragrant gum, that serves not only to heal the wounded branch, but to fill the grove with fragrance. It was this that called forth the continued praises of the poets, especially Solomon. In recounting the incomparable attractions of his beloved, he sings, "The smell of thy garments is like the smell of Lebanon."

The mode of the cedar's growth is very striking and varies much, according to the location and surroundings. If standing single, it assumes a beautiful

symmetrical shape, branching near the ground, and rising from a base fifty or sixty feet across. This tapers regularly seventy-five or one hundred feet to the top, and has been compared to one of its own cones, greatly enlarged. From the straight trunk branches are thrown out at right angles, and the smaller twigs all grow on an exact level with the parent branch. The foliage, resembling the needles of the hemlock, all grows from the upper side, so that the whole gives the effect of a series of platforms rising one above the other. It is necessary to climb the tree to get at some phases of its beauty. The pistillate cones, maturing in three years, become brownish when ripe; and, as they stand perfectly erect on the horizontal boughs, the climber looks down on what appears a smooth cloth of richest green with tea-cups set irregularly on the surface. The staminate cones are very numerous. They are at first bright green, and, as they open and shed their pollen, they change to a brilliant lemon-color, thus contrasting beautifully with the dark needles against which they rest.

SCRIPTURE LESSON No. 42.

TWELFTH MONTH 8, 1889.

SOLOMON AND THE QUEEN OF SHEBA.

GOLDEN TEXT:—She came from the ends of the earth to hear the wisdom of Solomon; and behold, a greater than Solomon is here.—Matt. 12: 42.

READ I. King 10: 1-13.

THE great wisdom of Solomon was directed to the securing of a careful and judicious administration of the various departments of the government. Peace prevailed throughout all the land, and prosperity brought plenty and contentment to the people. He encouraged commerce by the way of the Red Sea, and his ships frequented the harbors of distant nations, exchanging the products of Israel's industry for the gold and costly treasures of other lands. The order that prevailed and the good management of his affairs won for him the respect and admiration of all who heard of his wisdom and what he was accomplishing for his subjects. Doubtless the beautiful temple he had erected to Jehovah and the worship conducted therein without any idol or image to represent the God whom he worshiped, had awakened the desire of those who thus heard to see and know for themselves the wonderful things told of him.

The Queen of Sheba, etc. Where the country was over which this queen ruled is not known, but the extent and costliness of the presents she brought to the king gave evidence that it was a wealthy nation, perhaps Arabia Felix, sometimes called Araby the Blessed, because of its enormous wealth. It matters little to us. Her object is the great thought of the lesson. She had heard of the fame of Solomon concerning the name of the Lord, and this brought her to Jerusalem. It was a religious inquiry, and like the ambassador of another great woman, Queen Candace, who was one of the first converts to the Christian faith (Acts 8: 26-40), she wanted to know more of this God and the temple that had been erected in his name, to whom Solomon owed all his wisdom and all the greatness of his kingdom.

And Solomon told her all her questions, etc. Answered to her satisfaction all her inquiries respecting the worship of God, the administration of the government, and all that pertained to the interests of the people. As a wise sovereign she desired to know what course he had pursued to bring to his people such prosperity. Solomon had been a great student of nature, and knew every plant of the field and forest, and was familiar with all the best literature of his age. This was not as meagre as we might be led to believe. The researches of antiquarians are disclosing certain evidences of the existence of great libraries, and the treasures of literature contained in them are engaging the thought and interest of our best scholars.

The half was not told me, etc. So great was the advancement that Solomon had made in all that pertained to wisdom and knowledge, and so magnificent were the buildings he had erected, and so strong and earnest were his devotions to God, who had brought him to the great honor and distinction to which he had attained, that she could say, "Of all she heard the half had not been told her."

The little wayside flowers arrayed in their lovely garbs of Nature's weaving have their God-given missions to fill, and Solomon in all his glory could not add to their loveliness or beautify them in any other than their own delicate tintings.

The fame of King Solomon was known to every nation, and no man was like unto him in wisdom and understanding. When the fair Queen of Sheba heard of this and his immense possessions, she doubted the report and came herself to prove him with hard questions, and found the half had not been told her of his wisdom and prosperity. No temple in the world equalled the one he built at Jerusalem in grandeur and costliness, but all this magnificence and worldly show could not endure forever. His wise maxims recorded in the Bible are helpful stepping-stones, and it is well for every reader to give them a thoughtful perusal. While he was a faithful servant of the Lord, and walked as He directed, he and his kingdom prospered, but when through disobedience he lost favor with his Heavenly Father, he fell from his high estate, and his kingdom passed into other hands; thus we see that outward greatness cannot bring peace and happiness. To be truly great we must be truly good and have our hearts tendered and purified by the Father's love. Our greatness in life does not depend upon human wisdom alone, but that kind of wisdom that Jesus of Nazareth manifested all through his life, ever seeking to do the will of his Heavenly Father.

NOTES ON THE LESSON.

The human race since the beginning has been full of questionings and the desire to know. Through this desire for knowledge,—the wish to know more than it was the Divine purpose to disclose, man is said to have lost the innocence of his primal condition, and plunged his posterity into untold evil and misery. This is an old, old story, repeated in the traditions of all races of men, but with less significance

as the progress of the ages reveal higher and nobler thoughts of God and his relations to his human children.

Communication between people in eastern lands had been carried on from immemorial time by the slow and uncertain medium of caravans, and by the more dangerous water travel. Some knowledge of navigation, not perhaps as a science, must have been acquired by the ante-diluvians. Through both these channels the men of our nation became familiar with what was transpiring among distant people, and the foundations were laid for commerce and friendly intercourse which in the reign of King Solomon extended to every known section of the habitable globe; what was new, or strange, or startling in one country in process of time found its way into others.

The difference between the older days and our own, is not that we are curious and inquiring, but in the means of satisfying our inquiries. That which reaches us in the small fractions of an hour, in the days of Solomon required months and even years to find its destination; we need only to contrast the present with a century ago to realize the rapid strides that inter-communication with the most distant people has made in our time.

The ships of Solomon required three years to make the long voyages down the Red Sea and along the Arabian Sea to the rich countries of the South, or through the Mediterranean and along the Atlantic to the coasts of Cornwall, England, which tradition points out as the northern boundary of travel by water at that period. It must have been extremely hazardous; but scarcely less dangerous were the long voyages undertaken with the camel, which has been rightly named the "ship of the desert." Such a journey as was made by the queen of Sheba to satisfy her curiosity in regard to king Solomon, and all she had been told of his wisdom, of the wonderful temple he had built, and of the God, Jehovah, to whose worship it had been dedicated. The distance between her kingdom, which was a district of Arabia probably lying along the eastern shore of the Red Sea, and Jerusalem, is believed to have been fifteen hundred miles. We are appalled at the slow progress the vast retinue that accompanied this queen must have made crossing the burning deserts that lay between the two sections. Weary months must have been consumed, and many privations and dangers encountered before the beautiful city with its glorious temple, "the joy of the whole earth," was reached, and the hospitality of its wise and royal ruler extended to his guest.

As we study this lesson, there is perhaps instruction to be gained from the example we have of perseverance and determination in the accomplishing of any object we have in view. The desire for knowledge, if it be the knowledge that enlarges our capacities, and gives breadth and scope to our understanding of the relations we bear to one another and to God, the infinite good, is the most worthy object that can claim our attention, and the only one that brings peace and joy to the soul.

For Friends' Intelligencer and Journal.

PRES. MAGILL'S LETTERS.—VII. THE
CLOSE OF THE EXPOSITION.

PARIS, Eleventh month 11, 1889.

AFTER I sent my last letter we attended the Exposition about every other day until its close. The price of admission was one franc at the gates, but at all the paper stands, and of runners in the streets they could be bought at prices ranging with the weather, at from 5 to 12 cents. The result was just what was desired by the authorities; that tickets were seldom bought at the gates, which would really have been a great inconvenience, as the crowd of those entering was so great during most of the time. Tickets not presented at the gates before ten a. m., were good for the day and evening. Some, very zealous in the cause of seeing every thing, took the ground, street by street, alley by alley, building by building, gallery by gallery, in regular succession, and although I hear of some who had been doing this for weeks, I have never heard of any who boasted of having completed their rounds. Of course the great number and variety of objects claiming attention as they went would sometimes keep them in a street or building for several days. In our own case this was so in the galleries of the Fine Arts, which we never wearied of visiting, though we made no attempt nor pretension to go any regular rounds. We were on the grounds most of seven days, and we certainly left far more unseen than we had time or opportunity to examine. For those who wish to have detailed descriptions of the objects of interest exhibited I will say that there are books published here, quite well illustrated, which can be obtained of the publishers, and forwarded to America for the moderate sum of about 8 francs. I must be excused from entering into any detailed descriptions of the various exhibits, within the necessarily restricted limits of a newspaper correspondent.

As the time for closing approached, strong pressure was brought to bear by the various journals to have the Exposition continued; and the last move was to have just one day added, and the results given to the poor. But the Government stood firm, and after keeping open this great Exposition just six months, the close was definitely fixed for the 6th of November, and so that night a grand illumination was to close the brilliant display. This, called the "Fête de Nuit," was very widely advertised for several days, and word was given out that unusual and remarkable preparations for the grand event were being made. To prevent too great a crowd from entering the gates at once in the evening, the ingenious scheme was devised of charging all who entered after 5 p. m., a franc each, and require five of the special tickets for the evening to be bought at once, costing 5 francs; whereas those who went through the day, at the cheaper rates, could remain in for the evening. We started after our noon meal (*dinner*), taking a basket of provision with us for the *lunch*, and went to the river to take a boat, as the grounds are about three miles below our home, on both sides of the Seine. All along the great stone quays we found

the throngs already collected to take the boats, and all the boats on the river, and their number is very great, were brought into the service of transporting the multitude. At each landing,—and they are quite near together,—on each side of the river, a line (a *queue*) was formed, shut in with ropes, and guarded by officers; and as the crowded boats came by, the word was passed up how many places could be had, and then the officers let through the gates just the required number, and the rest waited for the next boat. We were kept thus waiting at our wharf about an hour, during which time some dozen or so of boats passed before we succeeded in getting on to the head of the “*queue*”—and so securing our places. The fare on the boats was 2 cents. The careful arrangement for loading the boats, without overloading them, prevented all accidents. All the omnibuses and the tramways on the various lines were crowded as well, and were arranged in the same way, and the entire movement of the immense masses of people was conducted in the most thorough and systematic manner, for which Paris is the most noted city in the world. The massing of the multitudes was to take place in the large open spaces around the Eiffel Tower and the great fountains and between the Trocadero on the sloping ground north of the Seine and the great central dome of the main exhibition building on the south of the river, the Eiffel Tower occupying the space near the south bank of the river, and about mid-way between the Trocadero and the great central dome. By about 5 we secured good seats (2 cents each) near the principal fountain, and a short distance south of the Eiffel Tower. Here we had to wait until nearly 8 before the *fête* opened, and meantime the great spaces were being thronged and packed with the immense crowd. As the daylight faded away the sight was one to be remembered for a lifetime. The great dome to the south, the Trocadero to the north, and the Tower rising to the height of 1,000 feet between them, were gradually lighted up with mingled gas and electric lights, and a “*captif*” balloon rose high up into the twilight sky on either side of the tower. But this was but a faint prelude to what was to follow. Soon colored lights from Chinese lanterns filled the trees and shrubs around the open spaces; and many of them were lighted by the Edison electric light, so arranged as to form petals of bright light in the middle of glittering metallic flowers among the leaves and branches. Then revolving electric lights began to be displayed from the top of the Tower, sending out the well defined beams through the increasing darkness of the upper air, and falling in turn upon the various fountains and statues, and bringing them into view with startling distinctness. Soon Bengal fires were started near the outer edge of the great open square, and their deep red and green lights produced a wonderful effect, combined with the illumination by gas and electricity of the Tower, the fountains, the drives, the lawns, the shrubs, and trees.

At exactly 8 o'clock a shout arose from the assembled multitude, as the *grand* and *petit* fountains all began at once to play, their waters dyed with every possible hue of the rainbow. It was a splendid

sight the principal fountain,—rising in the centre almost 100 feet,—and its waters dyed with all of these various hues. And the colors kept constantly changing; sometimes all the fountains being of the deepest red, then all of a rich orange color; then deep green; etc., and then of all hues mingled; sometimes each fountain of a separated hue, and sometimes all mingled in the same fountain. These variations rested the eyes, and kept up the interest, the fountains playing and ceasing throughout the evening. But the grandest and most unique display of all was what they here call the “*Embracement*” of the Eiffel Tower. No language can do this grand sight any justice. On each of the three stories of the Tower, and at its base and on its summit, Bengal fires were simultaneously started, and in a few moments the whole Tower, throughout its enormous height of 1,000 feet, was as if in one grand conflagration. Had it been inflammable instead of iron, and actually burning, it could scarcely have made so grand a display. This was repeated over and over throughout the evening; as the first fires began to burn low, loud explosions on the various stories being the signal when a new *Embracement* began. I had seen pictures of the Tower here in the shop windows, thus lighted, but supposed them extravagant and sensational, but they fall very far short of the reality. About 10, feeling very weary, we started to cross the *Jena* bridge toward the grandly illuminated Trocadero, on our way home; but the immense throng so barred the way that we gave it up, and turned down a less attractive passage along the Seine, toward the esplanade of the Invalides. As we had decided in advance that it would be a fruitless attempt to try to get a carriage or public conveyance in that crowd, we started for a deliberate walk home a distance of some three miles, up the Seine and along the fine new Boulevard St. Germain. The moon was just passed its full, and the evening was a pleasant one for our walk, and taking our time we reached our rooms on the Rue de la Sorbonne about eleven o'clock.

On reflecting since upon the whole performance it so far transcends, in my mind, anything of the kind that I had ever before witnessed or imagined, as to make comparison wholly out of the question. The systematic movement of the immense crowds through the day and evening; the orderly conduct of all; the absolute freedom from all intoxication, or brawls, or disturbances of any kind; and the entire absence of accident, are to me quite as wonderful as the grand display itself. Observing similar good order when large crowds were assembled on the occasion of our visit to Paris 22 years ago, we were then told that it was the result of the iron rule of Napoleon III. But now all that has disappeared and a Republic almost as liberal as our own takes its place, and still the same characteristics are observed; and I believe they are inherent in the French people, let their circumstances be what they may,—the result of generations of training, and an unusually high degree of culture and civilization. And with all this display of excellent order it will not be forgotten that the numbers on the Champ de Mars on that night, as found by actual count at the various gates,

considerably exceeded 400,000! Is it an unreasonable prejudice in me in favor of this people to say that in no other city of the world except Paris could all of these results have been secured? It is to be regretted that we Americans derive so many of our impressions of the French people from the English, who have been their jealous rivals for centuries, and who never lose an opportunity to present them in the most unfavorable light possible, and magnify and distort any fault which they perceive. I wish that some one competent for the task would give us a true history of the French people from an outside and independent standpoint, and presented in popular form, for the benefit of the great American nation, who much more nearly resemble the French in their best characteristics than they do their jealous rivals across the channel. And I believe that such a work will some day be placed before the American public, doing ample justice to this truly wonderful nation,—with many faults, it is true, but surely occupying a foremost, if not the foremost place among the civilized nations of the earth.

As soon as the Exposition was over the work of pulling down and removal (*démolition et dénuagement*) was at once commenced, and after a very short time all evidences of the great Exposition of '89, except, of course, the Eiffel tower, and some fountains constructed for the occasion, will be completely removed from the broad fields of the Champ de Mars and the pleasant esplanade of the Invalides.

We shall now at once proceed to the completion of our preparations for our winter's work, and for this we find abundant facilities in the way of lectures and libraries, all open to us freely, without expense, nearly every hour of the day and evening. In addition to these we have daily practice at table, where fifteen regularly assemble, all the conversation being carried on in French, and also with the same company during the social evening hour. To supplement these advantages, and give definiteness and directness to our work we shall employ the services of a professor for an hour a day, and in seeking for the proper person, for to the honor of Paris be it said, we find that in the matter of expense it makes no difference whether a man or a woman be employed, the same remuneration being expected and received by competent instructors of either sex for the same services rendered. Friends will well understand that we have much to learn at home from the worthy example of Paris in this respect.

For the sake of the exercise I take long walks through the city every day, and believing that it will be pleasant for many of your readers to accompany me in some of these, I propose, in future letters, to give some descriptions of objects of the greatest interest.

EDWARD H. MAGILL.

His sermon were the healthful talk,
That shone in the mountain walk.
His way to text was flower and briar,
Where mingled with the groves words
The rattle of the tawny tree
A ripple wash of Gaïther.

—J. G. H. H.

BIBLE KNOWLEDGE.

THERE are two departments of knowledge which preachers are tempted to invade with no better equipment than traditional opinion,—Science and Bible criticism.

In both domains, whole generations of preachers have enforced views which are entirely false.

If men of science have erred for a time God's works, theologians have erred egregiously, centuries together, with the most disastrous consequences as to the true meaning of the Scriptures.

There has been an undoubted advance in Bible knowledge.

There are scores of texts which an instructed hearer knows to be mistranslated, or to have a meaning quite other than the one assigned to it.

The limitations of human language, and disabilities of human infirmity, were not miraculously removed from those who were chosen channels of revelation.

The Old Testament can no longer be appealed to in the indiscriminate way to which we have been so long accustomed.

The preacher who in these days thinks it necessary to refer acts of atrocious cruelty to the direct command of the All Merciful, and to maintain the righteousness of wars which ended in the cold-blooded massacre of innocent women and children, may revel in the admiration of religious cliques, but puts himself out of court when he claims to impose his views upon the consciences of thoughtful men.

The science of Bible knowledge has made immense advance in the last fifty years.

The tone adopted by some teachers is thoroughly reprehensible. They assume that the results of the new criticism are the consequences of "unbelief."

He is an "unbeliever" who refuses to recognize the truths revealed to us by the widening light of knowledge, and turns the Bible into a sort of "fetich" whose utterances he substitutes for the witness of his spirit and the voice of God.—*Archdeacon Farrar in The Forum.*

It has long seemed to us a disgrace to a Christian country that education should be considered complete which leaves wholly out of its curriculum any knowledge of that literature which is the source and foundation of its life. There can be no question that the Mosaic laws have a more intimate connection with American institutions than do the laws of either Greece or Rome, that the literature of the Hebrew people is more closely connected with English and American literature than is that of any other people, and that our philosophical and ethical systems are far more dependent on those imbedded in the Old Testament and the New Testament than on those of Plato, Aristotle, or any more modern authority. And yet a young man may receive his diploma from an American university and hardly know that a Hebrew people existed, still less have any knowledge of their laws, their literature, or their religion. It is high time that this extraordinary hiatus in education should be filled, and we are glad to see Yale College added to the increasing number of those who are making some earnest effort to fill it.—*Christian U.*

TO A HIGHER LEVEL.

THERE is much said and written about the equality and fraternity of all classes of people, and much of this is not directly in the line of true Christian progress. It is rather in the spirit that would sink men to such a level that all might have free access to that which ministers to the lower instincts of humanity. There can be but one true equality, that of *goodness*. Nothing short of this can lift us above selfishness. However we may desire to better the condition of our neighbor, so as to insure him comfort in material things, he cannot be our equal unless he is equally striving for that which is pure and good. When Jesus said to the erring woman, "go thy way; from henceforth sin no more," he did not mean that she was on an equality with those who had not sinned, he only, by his loving compassion, put her in the way of good. By kindness he lifted her towards a higher plane. And this is what we should all do. By living lives of righteousness, we show to our fellows that an exalted place can be reached, giving them the helping hand, not by engaging with them in questionable practices in order to gain them, but by constantly inviting them to a better way with such skill in the invitation as to disarm any suspicion of the feeling, "I am holier than thou."

Neither is it needful that men shall be good all in one way. As was said formerly, in rebuke to one who was too harshly condemning another for a fault, "that is not our way of sinning," so goodness shows itself in endless variety. Only let the heart be pure and it will thrive in very inauspicious surroundings. "It is the token of the large mindedness of God that he does not grudge men their individuality," says a clever writer, who deprecates that petty interference in non-essentials that would all the time try to regulate the world by some set rule of man's devising, forgetting that God has already made man in his own image. And his greatness and variety are so infinite that no finite man can comprehend Him; only let each one try to cultivate that spark of divinity within, to the highest possible level, that we may at last merit the plaudit of "well done."

Nor need we look afar off for the means to rise.

To perform our every day duties well is one step upward, and a kindly word to encourage another to like faithfulness is a second step; thus little by little we can all "to higher levels rise." Sometimes in the lives of real friends of progress, the zeal to uplift the lowly runs so far ahead of prudence that two great risks are taken, and the reaching forth is so eager the true balance is lost, and there is a descending to lower levels by the very force of contact with evil. Children have been subjected to unwholesome influences, that through their innocence others might rise, when the odds were too great and loss was the result. A cool head, steady nerves, and a heart well anchored in a goodness that has in it the elements of the Divine, are what is needed to succeed in this perpetual warfare between the forces of good and evil. We all have need to seek wisdom, and we can turn with profit to the beautiful and eloquent language of Joh in the 28th chapter, and solace ourselves with the closing words,

"Behold the fear of the Lord, that is wisdom;
And to depart from evil is understanding."

MARRIAGES.

ATKINSON—HAINES.—At Norristown, Pa., Eleventh month 21st, 1889, according to the order of Friends, under the care of Gwynedd Monthly Meeting, James Q. Atkinson, of Upper Duell, and Harriet W. Haines, of Norristown.

BEANS—DAVIS.—At the residence of the bride's parents, near Penn's Park, Bucks county, Pa., by Friends' ceremony, under the care of Wrightstown Monthly Meeting, on Fifth-day, Eleventh month 21st, 1889, Eugene Linford Beans, of Lower Makefield, and Adaline B. Davis, of Wrightstown.

DEATHS.

BENTLY.—At his home, "Bloomfield" near Sandy Spring, Md., where he was born and where he lived nearly all of his life, Richard T. Bently, in his 71st year.

He passed away calmly, after a lingering and suffering illness, which he bore with fortitude. A very kind, active, and useful Friend in private and public life.

DUDLEY.—At the residence of Rebecca W. Jacobs, Philad'a, Fifth-day, Eleventh mo. 21st, 1889, Ann S., widow of William Dudley, in her 90th year; a member of the Monthly Meeting of Friends of Philadelphia.

HAMBLETON.—At her home, in West Grove, on Eleventh month 22d, 1889, Henrietta S. Hambleton, in her 82d year.

MENDENHALL.—On the 22d of Eleventh month, 1889, at her home near Hamerton, Pa., Dinah, wife of the late Isaac Mendenhall, aged 82 years.

ROGERS.—At the residence of his son-in-law, John H. Ballinger, near Haddonfield, N. J., Eleventh month 18th, 1889, Abraham I. Rogers, in his 86th year.

SHEPPARD.—At the residence of her niece, near Jefferson, N. J., on the 20th of the Eleventh month, 1889, Martha Sheppard, widow of the late Richard S. Sheppard, in the 75th year of her age; an esteemed member of Chester Monthly Meeting, N. J.

For Friends' Intelligencer and Journal.

HOUSEHOLD SYSTEMS AND SERVANTS' TRAINING.

A RECENT lady writer, taking note of the increasing difficulty of obtaining domestic servants, and studying the signs of the times, looks forward to a period when domestic operations of all kinds will be performed on a very different plan from what attains at present. Most persons who can look back fifty years can remember to have seen wool brought into the house in the fleece, to be there carded, spun, and knit into stockings, or woven into cloth. I can well remember to have seen all these operations performed in my early home, sixty-five years ago. They have long since ceased to be carried on any where. Rarely are any articles of clothing made at home, even from purchased goods. As for food bread it is made on a large scale by bakers, as are all kinds of confectionery and desserts. And the time will soon come here, as it has abroad, when dinners and all but the simplest dishes will be prepared out of the house. It will be here as it is on the Continent of Europe, where you can purchase your own food, and have it cooked by professional cooks and placed upon your tables at the proper hour. As for house-work it will be done, as the lady writer thinks, by persons who will work "by the job," coming at a certain hour, going through the work, and departing without sitting down, still less remaining to eat. The only duty for which a resident servant would be indispensable would be to answer the front-door bell; but as society is becoming organized, visiting is confined to certain hours, and a six hours' tour of duty by an outsider perhaps would cover even that necessity.

This holds out a bright prospect for housekeepers who declare that servants are the plague of their lives. But the matter has another aspect. Few, perhaps, ever consider what an education it is for a girl to be taken from a home where want and a numerous family crowded together renders system and even decency impossible, and translated to a quiet and orderly home, surrounded not only by the decencies but by the elegancies of life, where she may hear while waiting at table perhaps, refined and instructive conversation. Such a life, continued as it even now sometimes is for years, raises the subjects of it to an elevation which would have been impossible of attainment in any other way. I have known some admirable women educated in this way, who became in every respect the equals of the family in which they lived. As an example of this influence I may mention that persons engaged in charitable work inform me that the most comfortable dwellings among the poor are those of colored women who have been in domestic service. Indeed they say the dwellings of the whites are in very unfavorable contrast with those of the indigenous colored population. Of the recent immigrants nothing is said.

All this education will be lost, and the progress of the process outlined above indicates the necessity for schools for teaching domestic economy and household operations which our article in the last INTELLIGENCER AND JOURNAL states to have been instituted by other denominations, and recommends to the at-

tention of Friends. Of their absolute necessity a very effective demonstration was made in an address delivered recently at the Women's Conference in Baltimore, by a Miss De Graffenreid, a lady in the service of the Government Bureau of Labor, who has interviewed 12,000 working women in this country. She is of opinion that many families spend in miserable and disorderly dwellings, unhealthy food, and flimsy clothing, wages that properly applied would keep them in decency, health, and comfort.

Does any one ever think what an educational instrumentality the city horse-car is? Here the day laborer sits for half an hour by the side of the Senator and banker, observes their behavior, and hears occasionally some of their talk. And so the wash-woman sits with the lady, and must sometimes learn lessons of conduct. Such meetings have their civilizing influence.

NEWS OF FRIENDS.

FAIRFAX QUARTERLY MEETING.

THIS body, one of whose sessions occurs thus early after our Yearly Meeting in Baltimore, convened at Woodlawn near Mt. Vernon, Va., the meeting of Ministers and Elders on the 16th, and that for the business of the Society in general on the 18th inst. The former was made more interesting by the presence and service of Joel Birdsall, a minister from Camden Monthly Meeting, Indiana, who 35 years ago, in his early manhood, left his childhood home, Goose Creek, (Lincoln, Va.), and now in the afternoon of life comes back to the old scenes.

On First-day, and again on Second-day, the voice of this Friend and that of W. W., of Fairfax Monthly Meeting, were instrumental in the presentation of the "good news" of the Gospel. The testimony was to a practical religion, whose fruit is to make men and women fulfill all the duties of life the better for the possession of it. Right views of life, of God and our relations towards him, are important, because they affect so deeply our conduct. But, as Friends, neither the Trinitarian nor the Unitarian view is to be allowed as authoritative. Long ago Friends asserted their freedom from dogma in this regard, and our safety is to be found in standing fast in the liberty wherewith we have been made free. As an organization we base our right to be on the realization that the Most High is the teacher of men now as ever. If there be weakness amongst us it must be due to some other cause than our fundamental faith. That has no flaw. Christendom more and more recognizes it. If we prove false to this it is not easy to see why we shouldumber the ground, for it is our life.

The Circular Meeting service was continued, having been found useful as we think to those who travel in this work, as well as the Friends at the smaller meetings where the service is established.

Though hardly so large as usual, the Quarterly Meeting at Woodlawn was held in the life and power, and Friends parted in sympathy and good fellowship.

H. R. H.

EDUCATIONAL.

MORAL AND SPIRITUAL TRAINING IN SCHOOLS.

From a report in *The Student* of a recent meeting of the Teachers' Association of Friends (O.) Philadelphia, we clip the following:

Joseph S. Walton, Superintendent of Public Schools in Chester county, Pa., being invited to speak on this subject, said that his experience was only with district schools. About them he had a strong conviction that there was too much intellectual training, and too little moral and spiritual, giving little strength to resist temptation; and even secular schools have probably the same fault. The development of character may be compared to the growth of a tree, which gains far more from the air by subtle processes than from the earth by the roots. Were the tree burnt down, a little pile of ashes would represent the earthly portion, while the great bulk of the matter composing the stately tree had returned to the air. So the subtle influences of environment affect a child more than direct teaching. It is the individuality of the teacher that impresses itself permanently. Boys should have men as well as women to teach them, else they miss part of the influences needed to build character.

The speaker gave an interesting report of an effort made by himself to turn the attention of a class of children to the deeper lesson back of physical science. He was visiting one of his schools, the teacher of which was called a good *disciplinarian*.—to the use of this word he objected, because it should mean a disciple-maker, and was here applied to keeping children standing still in an exact line. Her class were reciting a lesson in Physiology, and naming the four chambers of the heart. But on questioning them afterward the Superintendent found that they really knew nothing about it—only one little girl could tell that two of the chambers were used to send the blood to the lungs and receive it back, and the other two to send it over the body and receive it back. They were asked, "Have you ever seen tadpoles? Do you know anything about them?" Oh, yes; they knew a great deal about tadpoles—more than their questioner, and were so eager to tell that they stepped out of line. "If you took tadpoles out of water, what would happen to them?" "Die." "Why?" "Couldn't get no water."

"And if you were kept under water, what would happen to you?" "Die." "Why?" "Couldn't get no air." "Have the tadpoles any lungs?" "Suppose not." "Then how many chambers do you think a tadpole has in its heart?" "Two." "What becomes of tadpoles?" "They turn into frogs." "Have you ever seen them turn?" And the little girl had;—she had watched, and could tell that the tail disappeared and legs grew; and when asked what became of the tail, supposed it was used up, and illustrated this by telling that when her grand mother had a fever she was fat at first and thin afterwards. Then the children were asked whether the frogs could live in the water like tadpoles? The little girl thought not, because when they had been under a little while they always came up to breathe. "Then, if the frogs breathe like us, how many cham-

bers do you think they have in their heart?" "Suppose they have four like us." Finally the question was asked, "Who, do you think, sees to all this wonderful change from tadpole to frog?" And the little maid answered in a sweet and reverent tone that she thought God must have something to do with it.

A large part of the lessons in Science and History are susceptible of being used to lead to some spiritual thought.

—The Lecture Committee of Abington Friends' School has arranged an attractive course of lectures for the winter. It will be opened Twelfth month 5th by John R. Clarke, with his "To and Fro in London," a lecture which he has already given over one thousand times. He will be followed by Humphrey Frear in an evening of Readings; Hon. Thomas H. Murray, "How to Grow," and S. M. Spendon, the "Chalk Talker," on "Character and Characteristics." The proceeds of these lectures are for the school library.

THE LIBRARY.

CHARLES MORRIS, well known among the scientific students and literary workers of Philadelphia, has edited for the J. B. Lippincott Co. a new series of "Half-Hour" volumes. His former work of the sort for the same publishers has included "Half-Hours with the Best American Authors," "Half-Hours with the Best Foreign Authors," and "Half-Hours with American History;" he has now added "Half-Hours with the Best Humorous Authors," making four substantial duodecimo volumes of over five hundred pages each.

The definition of "Humor" which the editor has used permits a wide range of selections for his volumes. Thus, he has a sketch from the prose works of John G. Whittier, "The Yankee Zincali,"—that is the native gypsy of New England, the "straggler" who, in various disguises, or in none, secured his living by begging from house to house, year after year. We have here, too, a sketch by Edward Everett on "Shaking Hands," Irving's "Wouter van Twiller," out of his veracious pages of the "History of New York"; Harriet Beecher Stowe's description of Aunt Dinah's Kitchen, in the intervals of "clarin' up time"; a poem by Bryant,—his only humorous one, Charles Morris designates it,—on "The Mosquito"; Benjamin Franklin's "Dialogue With the Gout"; and other well-known passages in our literature. A large part of the selections, however, are taken from the writers who are better known as usually "humorous" in their style,—authors such as Saxe, Dr. Holmes, Samuel L. Clemens, ("Mark Twain"), Gail Hamilton, Bret Harte, Wm. D. Howells, J. T. Trowbridge, Chas. Dudley Warner, and many more. This description applies to volumes one and two, made of American selections; the third and fourth deal with English humor, and run far back to Shakespeare and contemporary writers, giving us in later time, selection from many names familiar in English literature. Altogether, the four volumes contain some four or five hundred selections. A few lines of biographical detail is usually given with the extracts from each author.

A new journal for women, the *Housekeeper's Weekly*, has been established under the direction of Henry Ferris, Manager, Arch and 6th streets, Philadelphia. It proposes for itself a character substantially different from that of any other of the many journals for women. It will devote itself to "Home Help, Information, and Entertainment," dealing with practical, serious, and useful subjects in a bright, fresh, and pleasant manner, and concerning itself less with the glitter and spangle of life than the real and solid qualities that lie beneath the surface. The *Weekly* commends itself to readers by its open and pleasing countenance, as well as its very moderate price,—\$1 a year. Clubs of four new subscribers can obtain it for three dollars; seventy-five cents each copy. It would no doubt be a welcome addition to the periodical list in many homes of our readers.

Old New York is a monthly magazine, published by W. W. Pasko, 19 Park Place, New York City, several numbers of which have reached us. The first is that for the Eighth Month of the present year, and is the first issue of the magazine. Its field is history and biography connected with the locality of the city,—Manhattan Island, perhaps we may say,—and the several numbers contain much matter of interest to those identified with New York. Subscription, \$5 a year; single numbers, 50 cents.

SWARTHMORE COLLEGE NOTES.

THE United States Census authorities have opened an office in the new post-office building in Philadelphia, for Dr. W. C. Day, our professor of chemistry, who has charge of the geological statistics. This is a great convenience for the doctor, as it saves him a weekly trip to Washington. J. L. Dudley, '91, has been appointed a computer in Dr. Day's office and has left college to take the position.

—William Jones, Secretary of the International Peace Union, will lecture at the college on Sixth-day evening next. His visit last year was very much appreciated.

—A large number of the students took advantage of the invitation of John B. Roach to witness the launch of the steamship *Orizaba* at the shipyard in Chester, on Seventh-day last.

—Acting-President Appleton took a short trip North during the early part of the week, and Vice-President Smith assumed the executive duties.

—The holiday on Thanksgiving Day was made the occasion for a visit home by many students.

—The senior class has appointed a committee to confer with the other classes with a view of arranging for a college reception. S.

To enjoy this life, it is necessary to possess a temper candid to the faults and mistakes of others, disposed to mutual accommodation, not easily provoked, and willing to see everything that occurs in the most favorable light. The utmost meekness under injuries and the most unbounded forgiveness are represented in the Sermon on the Mount as the only dispositions that lead to happiness.—*Amn.*

HOME FOR AGED AND INFIRM COLORED PERSONS.

THE twenty-fifth annual report of this excellent charity has been issued. The annual meeting was held in Sixth month last, and was an occasion of unusual interest. The report gives the number at present inmates of the Home as 121, of whom 29 are men and 92 women. Many of these are very aged and feeble. During the past year 4 men and 12 women have died, and 5 men and 14 women been received.

Some improvements have been made in the house and about the grounds, which add greatly to the comfort and sightliness of the premises. The main building has also been supplied with steam heat, which proved entirely satisfactory. Other improvements in the way of needed buildings have been made as funds were procured.

Thanks are extended to contributors and friends for their gifts of money and merchandise, and to all who have in any way brought gladness into the hearts of their numerous and dependent family. The Home is located at the southwest corner of Girard and Belmont avenues. It is open to visitors, and a cordial invitation is extended. Religious meetings are held on First-day morning, afternoon, and evening, by ministers and members of different religious denominations. When a fifth First-day in the month occurs, the morning meeting is not held, and the afternoon is conducted by Friends. Besides these, there are prayer and class meetings held during the week, in the evening.

DINAH MENDENHALL.

DINAH Mendenhall, widow of Isaac Mendenhall, who died Nov. 22d, 1889, aged 82 years, was born in Kennett township, the daughter of Obed Hannum, and grew to womanhood in this vicinity. On the 12th of May, 1831, she was married to Elijah Mendenhall, of Penubury, and settled down on the Mendenhall homestead. Thoroughly domestic in her nature, she nevertheless found leisure to extend a helping hand to humanity wherever she found it in distress. She had a ready sympathizer and counsellor in her husband, and long years ago Isaac and Dinah Mendenhall were names synonymous with philanthropy and hospitality. They became early workers in the anti-slavery cause, and were among the faithful band of workers, who, in connection with Thomas Garrett, of Wilmington, and Isaac Pennypacker, of Phoenixville, extended the operations of the underground railroad from Delaware to the borders of Montgomery county. In the Mendenhall mansion everybody was welcome, and everybody was on an equal footing, and Jew or Greek, or bond or free, were extended the same free-hearted hospitality. When Longwood Meeting was established, and the anti-slavery platform was set up, the Mendenhalls were among its founders, and shared with John and Hannah Cox the burden of entertainment which the overflowing yearly meetings entailed. Isaac and Dinah, while admirably suited to each other, were quite unlike in their characteristics. Isaac was long-suffering, patient to a degree, and often suffered by it, but while his good

wife was equally kind, she had a blunt, direct candor that made short work of sham and pretense. . . .

With Dinah Mendenhall the quality of mercy was not strained. No call upon her aid or sympathy ever went unheeded, and in all that she undertook, she was thoroughly in earnest. When the slave was no longer a chattel, her activity in temperance work and other reforms was zealous and earnest. It is only a few months since she presided at a temperance convention and spoke hopefully of the future.

On the 12th day of May, 1881, Isaac and Dinah Mendenhall celebrated their golden wedding. More than two hundred friends were present, and congratulatory letters were read from John G. Whittier, Mrs. Livermore, Frances D. Gage, the Garrisons, and many others who had been their co-laborers in a good cause. A few years later the good husband and father, whom to know was to love and reverence, passed calmly to his rest, and to-day the tired hands of her who was his life companion for more than half a century are folded across her breast, and she has gone to sleep to waken, as we believe, in the presence of the departed.—*Kennett Advance.*

IN THE FOG.

VEILS of pallid mist and grey
Wrap the world of yesterday;
Fir-fringed island, rocky cape,
Yellow sands, and mountain shape,
Sun and sky, and waters blue,
All are blotted from the view.
Out to sea we blindly stare;
Did we dream that such things were?

No; untouched, and safe and sure,
All these lovely things endure;
Underneath that hovering mist,
All the blue and amethyst,
All the rocky cliffs and sea,
All the surf-lines rippling free,
Mountain forms and islands green,—
All are there, although unseen.

If we bravely bide and wait
Through this brief eclipse of Fate,
Smile through the nmsmiling noon,
Keeping heart and hope in tune,—
Shadow shall give place to sun,
And, ont-stealing, one by one,
All the fair things mourned in vain
Shall be made our own again.

Dear heart, faint heart, who in shade
Sitteth pale, perplexed, afraid,
At the brief evanishment
Of thy yesterday's content,—
Courage take; for hope endures,
Though a little mist obscures,
And behind the fog-breaths dun
Brightens the eternal sun.

—*Susara Coolidge, in S. S. Times.*

IN NOVEMBER.

DAY full of sunshine, if thou be the last
In the expiring year,
However dark the days when thou art past,
I shall not fear.

The hope which thou hast given I will hold fast
Till light appear.

The glow and gladness of these hours shall be
A living thought, to dwell
Forever in the heart's deep memory,
Where thy beams fell,
Like sweet refreshment springing up to me
From some clear well.

As a fair lamp, refilled, and touched with fire,
Thy kindling ray
Shall ever in the winter's gloom burn higher,
Nor fade away;
And all the future with its light inspire,
O golden day!

—*H. F. Stratton, in Christian Register.*

GOOD ROADS: THEIR COST AND THEIR ECONOMY.

(Concluded from last week.)

I AM told that a citizen of Tredyffrin township, east of us, a generous and intelligent gentleman, opposed the macadam enterprise in its inception. Now he enthusiastically favors it and for the reason that while a certain road that he used was annually destroyed by winter storms and spring frosts, he was compelled to rush his 200 tons of hay to the Philadelphia market during the glut. This glut was and is caused by destructible roads, in that hay merchants, excepting those of Montgomery county, where stone roads prevail, are compelled to haul during the short period between harvest and winter. Thus, after the particular road was macadamed, the gentleman referred to received an advance of \$11 per ton, hauling during the winter and after the glut. This advance equals a saving on 200 tons of \$2,200. Not only this, but the gentleman gained further the value of his teams and men during corn harvest.

The saving in draft is self-evidently large and needs no illustration, because constantly realized or computed and thus well understood. A writer in the last *Century* magazine says truly: "Bad roads mean small loads, and small loads mean to the farmer proportionately small profits." He might have as truly said that bad roads mean a commercial blockade. He adds: "I know many and many a farm, where the saving in time from hauling larger loads, the saving in wear and tear of horseflesh, wagons, and harness, would over and over again pay for the increased initial cost of a good macadam road." It may be noticed that the writer deems it wise to use the words "good macadam roads."

Thus, upon a further detail of saving in time and draft, which means the saving of money, and in the light of the average individual saving of farm owners, I think it would be found that we would average from our macadam investment an annual profit of one mill out of the difference in time and draft between struggling through bogs and gliding over solid roads. But in order to clear my estimate from the imputation of being wild, let us drop to one-half and conclude upon half a mill saved per mile annually.

To sum up we charge, say East Goshen township Chester county:

To mile of macadam, 16 feet wide, 10 inches thick, 2,845 perches @ \$1.00 \$2,845.00
 And credit:
 By saving in repair @ \$52 per mile annually. 10 years. . . \$520.00.
 By $\frac{1}{2}$ mill on real estate, taxable value \$639,420, saving in time, draft, etc. 10 yrs, \$3,197.00 \$3,717.00
 Leaving unexpended, \$ 872.00

If these estimates are but an approximation, with a liberal allowance at that, the statement of the Philadelphia daily that a good macadam road will pay its cost every ten years with interest every six months, is reliable.

I have in mind a verification of Secretary Edge's statement in a piece of road that cost annually \$125 for repairs. The piking cost \$1,100; thus in ten years the pike saved fully its cost.

But then it may be said by some that this is after all but plausible, a matter of figures and speculation; but we find that a farmer in the prospect of a new barn gets the cost of lumber and stone and iron, sits with the builder, and figures as to size, number of feet of lumber, adds up and concludes upon the basis of figures that the barn will cost thus and so. Is this speculation? True, costs may overrun estimates, but notwithstanding this, we still figure as to barns and houses, knowing that such calculations cannot go far wrong. But figuring as to barns and houses is old, as to roads new, and certain citizens who guess that the cost of repair of the roads of their respective townships is but \$20, when it is really forty, easily conclude that an estimate as to the cost of a macadam road is speculation.

An estimate upon accurate data is often a revelation to me, disturbing some of my very precious and even selfish and timid notions. Some estimates, true as they may be, grate so harshly against the wish that is father to my thought, that I long to destroy them with a fiery eloquence if possible equal to the noise and flash and pomp with which on summer nights picturesque Babylons fall and "Pompeii" are destroyed at sea-side places.

Now there are certainly 5,280 lineal feet in a mile; certainly 24 $\frac{1}{2}$ cubic feet in a perch. The returns of County Commissioners are certainly reliable as to aggregate assessments. A two-mile rate is as apt to be below as above an average, and 20 as the mileage per township is as apt to be over as under the average. Inasmuch as I have personal knowledge of a stone road built twenty years ago, that during 12 years did not cost for repair that many dollars, I feel that twenty dollars per mile will maintain a good macadam road. As to thickness; I quote from the knowledge of men versed in road structure. As to the cost of crushing, I quote from the statements of three parties that now own and now run three crushers. As to the sum paid for and the capacity of crushers, I have authority from two parties that bought crushers and use them, and so on.

True, conditions vary. Because conditions vary we should not fold our hands and allow suffering and waste under the excuse simply that conditions vary.

It is well to remember that there are conditions favorable and that conditions are not altogether unfavorable. It is well to weigh as to whether the unfavorable conditions are not the exceptional. Pennsylvania includes valleys as well as mountains, smooth as well as rough surfaces, and so while we may see the mote that is unfavorable, we should have eyes to see also the beam that is favorable. We may cite unfavorable conditions from this till midnight, and yet favorable conditions may preponderate.

But \$2,845 is such a large price for a mile of road as almost to discourage hope. Can macadam roads be built for less? Mr. Pope, the civil engineer already quoted, fixes \$2,100 as the cost of a macadam 18 feet wide, and in depth an average of 7 inches.

As crushers can readily be moved, hauls can be shortened from crusher to dump. Thus hauls need not be expensive. If one horse and cart and man costs a township three dollars a day, stone can be hauled a short distance for a comparatively small sum. Thus, exclusive of quarrying, I believe without further calculation here, a 12-foot width, 10-inch depth track could be built for \$1,500. There are plenty of stone fence rows and banks of stone along roads that could be utilized. While as high as fifty cents a perch is paid for quarrying stone, stone in quarries of soft rock that I could name is quarried for fifteen cents. Or, if a contract is made with parties to haul stone, as high as seventy-five cents or a dollar may be paid, but the price for hauling per perch at township rates and by placing the crusher close to the work, will be surprisingly low. Thus, I think, we come within Mr. Pope's estimate, which is that of a civil engineer.

Even at all costs we want capital. Capital is used in business operations for the making and saving of money. We want it in order to span the time between investment and profit. Also a heavy tax would be oppressive, especially to farm owners who pay interest, and unjust to the tenant, whose holding is not permanent. Beyond this by the use of capital the best and cheapest roads can be built, not by oppressive taxation, but by the saving of money now wasted.

There is a feeling against borrowing money that is prudent under some conditions and false under others. I, and perhaps you, have known of farmers buying cattle at nine months' credit, or machinery at a year's credit, giving their note to bank for the same, which they may esteem as not borrowing, when they could have directly and individually loaned from bank and saved a good bonus. The resources and institutions of the West have been early developed by borrowed capital, so that now Kansas and Nebraska, so young in Statehood, have as fine schools as those of the very much older State of Pennsylvania, and thus early an equal capacity to earn money. Borrowing money for road purposes is within prudence, because it means the power to construct good roads; means an early completion of permanent roads, and thus an early stop in the waste of money; means relief to tax payers or light taxation; means the surety of a good investment early yielding its annual profit; means comfort and pleasure to all and

mercy to the beast that patiently, willingly, faithfully serves us; and in addition to all adds to the heritage of our children not only the sure profit of a good investment, but an increased estate to the extent of twenty or twenty-five per cent., in accordance with the perfection of the road. Thus it seems equally prudent with any other common business purpose to plead with our Legislature for the option, by county or township, of loaning money to extricate us from the bogs of winter and the sinful waste of money, nerves, comfort, health, strength, and I fear, religion.

There is another grant that I think we should ask of our Legislature, and that is that the burden of road reform should be shared in reasonable measure with real estate by personal and corporate property. As an indication of the drift of opinion in this direction, I was glad to bear such a leading, active citizen and legislator as General Gobin advocate at Williams' Grove a State appropriation in behalf of macadam roads.

It is mentioned as a hindrance that the people are apathetic. I think they are, but expecting, waiting hopefully, like Mr. Micawber, for something to turn up. The reason for this thought comes out of the wide and earnest interest manifested in certain meetings held last winter in our county in behalf of permanent roads. These meetings, starting feebly, increasing in attendance and spreading over our county, were set going by a little spark of advertisement in our local press, published by a committee and under the direction of Gosben Grange. Discussions followed and were reported by the column, committees on investigation, legislation, finance, and meetings were appointed. They reported and the reports were published. Editorials sanctioned. The most canvassing, intelligent public correspondence was almost unanimously favorable. There came of it all such a unit of opinion that our legislators were gratified, in that for once they could grasp the desire of the people and were free from the bewilderment of "many men of many minds." They met us by appointment and gave us good suggestions. Our attorney, Mr. Alfred P. Reid, one of the most capable and reliable in the State, drew up a bill asking the option to loan money in behalf of the townships of our county. Although our representatives worked strenuously for it, the bill failed because, perhaps, there were too many irons of the kind in the fire, and because, too, of the question of constitutionality as between a special and general law. But the people were not apathetic. All they needed was invitation, opportunity, leadership, plan.

It is not race or language that can inflict insolation, but some defect of sympathy with the simpler and more universal relations of human nature.—*Selected.*

"CREATURES of a day though we are, we have our roots far in the past. The child of yesterday is the last chapter in a long history."

GREAT is he who enjoys his earthenware as if it were plate, and not less great is the man to whom all his plate is no more than earthenware.—*Seneca.*

THE ROUND-TAILED MUSKRAT, (*NEOFIBER ALLENI*.)

THE habits and distribution of this mammal have been, until recently, matters of conjecture; but, thanks to Mr. Frank M. Chapman, we now have a number of interesting facts regarding both its habits and distribution.

The original place of capture by Dr. Whitfield, was at Georgiana, which is situated near the southern extremity of Merritts Island in Eastern Florida. Its present known locality is thirty miles south on the peninsula, opposite Micco, at "Oak Lodge," the residence of Mr. C. F. Latham. At this point the peninsula is about three-quarters of a mile wide, with a fringe of mangrove-bordered islands on the west shore. Upon the river side there are large savannas, caused by the water of the river making frequent inroads into the land, and it is upon these savannas that *Neofiber Alleni* may be found in large numbers. The vegetation of the savannas consists largely of *Rhizophora mangle* and *Avicennia nitida* (red and black mangrove) and "sedge," *Borrichia frutescens*, with occasionally black or "yellow mangroves" scattered irregularly over the entire surface of the savanna. The latter are also covered with grass to a height of two or three feet. It is of this grass that *Neofiber* constructs its nest, placing it in hollow stumps, around the trunks of the "yellow mangrove," or in the open savannas. The nests when placed in a hollow are of no particular shape, seeming almost as if thrown together to fill up the depression, but when placed in the open, or about the foot of the yellow mangrove, they are then elegant pieces of animal architecture, being of a pyriform shape, from ten to twenty inches in height and nearly as large in their greatest diameter. It was not at all unusual to see from ten to fifteen nests from one point, but it is not probable that all of these were inhabited. The nests are provided with two openings, situated invariably at the opposite sides leading from the single chamber within and connecting with two under-ground passageways leading in opposite directions. These runways are constructed just beneath the thick, matted, grass and they not infrequently extend for a considerable distance before emerging from the ground. The runways as a rule, have their exits upon the edge of some neighboring pond. Here the animal finds the succulent grass upon which it feeds, and which grows to a height of three or four feet in water half as deep. To procure the best portions of the grass the *Neofiber* constructs a platform of large sticks, upon which it sits and feeds at its leisure. The largest platform observed measured ten by seven inches. In all my many trips upon the water, by night, both with and without a light, I never saw *Neofiber* swimming. It is probably, therefore, not much given to nocturnal ramblings.

Mr. Chapman says of the habits of this animal: "It is probable that *Neofiber* is much less aquatic than the last-named species (the common muskrat, *Fiber zibethicus*), a fact which would largely account for the differences observed in their habits. That *Neofiber* is quite at home in the water, however, was clearly shown by the actions of a captured individual, which,

placed in a tub of water, swam and dived readily; in swimming using the tail in a peculiar gyratory manner, the tip describing circles."

After the departure of Mr. Chapman from "Oak Lodge," I spent four weeks in trapping this animal, and succeeded in catching two specimens, one of which left me nothing but his foot as a remembrance of the occasion; but the other was obtained alive and is now in my private collection. This animal when caught and placed in the bottom of my boat, made frequent attempts to escape by crawling over the side. That he is not cowardly when in captivity was shown by the ferocious manner in which he attacked my bare feet when I chanced to come in his way. Mr. Chapman's statements regarding the action of the tail in swimming were corroborated. I spent an entire morning in studying the nests and in following out numerous runways. One of these I found to extend for a distance of fifty feet and to have its exit in a pond near by. The course of this runway somewhat resembled the curves of a snake when in motion.

The description and measurements of the animal in my possession are as follows:

Above seal-brown; below silvery-white, with a mixture of rufous; sides seal brown, shading to a rufescent tinge, with here and there a few silvery hairs scattered about; forehead and tip of nose black; tail of a rufescent tinge mixed with black. Adult male. —[From the Proceedings of a late meeting of the Academy of Natural Sciences, Philadelphia.]

INTELLECTUAL LABOR.

The tendency of the present age is to place a pecuniary value upon everything, and to under estimate, or hold in contempt, anything which cannot at will be turned into cash. That this is a superficial, incorrect, and vulgar way of estimating the value of things cannot be questioned, but it is equally true that nowhere is this tendency more pronounced than in this country. Millet's "Angelus" is likely to attract wider public attention and be valued more highly than any other painting, simply because it has cost more, and no other means of advertising could have been more effective.

Intellectual labor can claim no such advantage to give it charm in the popular eye, nor can it hold out the attraction of great pecuniary rewards to young men choosing a career, such as many of the commercial activities of the present time can safely promise. When it is remembered that clergymen, lawyers, physicians, writers of all kinds, and artists are picked men, with more than average talent, and of many years of expensive discipline and experience, it is evident that their pecuniary rewards are small compared with those of many other callings requiring no greater talent and far less preparation.

The moment such a topic is suggested countless illustrations come to mind of the inequality between the service rendered to the world and the pecuniary return that the world has been willing to give. Milton received £5 for "Paradise Lost"; a host of authors whose names are inseparably connected with the chief glories of English literature, including Johnson and Goldsmith, almost starving in London, Heine

and De Musset dying in garrets in Paris, with the financial straits to which Carlyle, Matthew Arnold, and even Emerson, were often reduced, are striking examples of the truth running all through ancient and modern history, that great thinkers are not rewarded in money by the generation which they adorn.

Of a certain class of literary workers this is always true. The works of Herbert Spencer, widely as they are known and great as has been their influence upon contemporary thought, have never yielded their author an annual support. Great pecuniary prizes are frequently won by striking some popular chord, and the growth of habits and of facilities for reading have made the rewards of literary labor greater now than ever before; but, nevertheless, the world's thinking is still largely done for it gratuitously. The greater number of literary aspirants are obliged, like the Edinburgh reviewers, to "cultivate literature upon a little oatmeal," and the majority of professional men are compelled to live in modest circumstances and with the practice of a rigid economy.

There are many reasons why it is well that this should be so. There is a certain degree of self-denial which seems necessary to the attainment of the strongest influence over mankind. The thoughts and labors of many a man, living in poverty and sacrifice, have a weight which would never be given them if it were known that they were well paid. This has always been recognized by the great majority of literary workers, and considering the degree of their deprivations they have not been discontented at giving their labor to the world without adequate return. They have never struck for higher wages.

Few of the great writers of the world have not been more or less under subjection to the stern mother of invention. Whether, this, was best for them or not the world has freely left them so. It has often refused bare existence to its most richly endowed members, except on condition of earning by manual labor the rewards which the fruits of their intellectual toil were not thought worthy to receive.

It might have been thought that the latter part of the eighteenth century could have made a better use, for itself and posterity, of its most exquisite genius for song than to have made him an excise-man in the Scottish lowlands; or that Charles Lamb or Nathaniel Hawthorne could have been better employed than the one as a clerk in the India-office and the other as a custom-house officer in Salem. It was poor discernment, as well as inadequate reward of genius, to have left Thoreau with the larger part of the edition of "Walden" on his hands, and to have allowed Corot to have retained an almost unbroken collection of his own paintings until he was sixty years old.

It would be unjust, however, to speak as if the rewards of intellectual toil were confined to, or mainly represented by, either the recognition of mankind or pecuniary returns. In no other sphere of life can so much happiness of a high and noble kind be found. Whoever has fitted himself by whatever expense of time and toil to appreciate the best that has been said and done in the world, to take part,

however humbly, in molding public opinion, and in contributing to the advance of the race toward better conditions, has entered on a career which may have its deprivations, its perplexities, and discouragements, but has also an undercurrent of enjoyment that nothing can wholly disturb. The physician who has saved a valuable life, the clergyman who clears away the mists of superstition from the minds of a large congregation, and gives them a vision of religious things in their true rationality and beauty, or the statesman, author, or editor who aids in lifting his generation up above itself, can afford to be ill paid in mere money.

Such men's payment comes in different coin—in a daily increasing personal worth, in the satisfaction of thinking the best thoughts of the time, in the consciousness of contributing to the world's advancement, and in the increasing gratitude and affection of the best men and women.—*Providence Journal*.

LONGEVITY AND STATURE AT SANDY SPRING.

AN article in the Baltimore *Sun* gives the following details concerning the length of years and the stature of some of the residents at and near Sandy Spring. The article says:

"Back in Montgomery county, eleven miles from Laurel, on the Baltimore and Ohio Railroad, and twelve miles from Rockville, is the little village of Sandy Spring, a Quaker settlement, whose population is but seventy-five persons, yet which is noted for the length of time its inhabitants live and the stature they attain," said Robert H. Moran a day or two ago. "Now I am not what you would call a little or a young man. I am 77 years old, am six feet tall and weigh 200 pounds, yet I cannot hold a candle to some of the chaps who live there. The old people there are dying off, though. Now there is the Penn family. Mary lived to be 109 years old, Edward died at 104, Lizzie was 103 when she died, and Joseph was 101. Joshua lived to be 99 years and 10 months. Mary No. 2 was 98, and another Mary was 89. William Thompson was one of the oldest men in town. He died at 113 years. The Bell boys were triplets. They were Shadrach, Meshach, and Abednego. Every one of them was 100 years old, and the smallest of them was six feet four inches high. Both the others were six feet five. Then there were two men, one named Davis and the other Thatcher, both of whom were over 100. Isaac Moore lived to be 102. Mrs. Russell died at 104. Mrs. Kirk was 101. Billy Matthews and Will McCormick were each 101 when they died. Billy Simpson was 100, and Mahlon Chandler is now living at 100. Cornelius Sullivan was 94, William Brown was 92 when he left us, and Jimmy Whiteside is still living, hale and hearty, at 96. Now there is a raft of men over 80 years. Among those who are dead are William Thompson, Randall Thompson, and Joe Thompson, Joshua Lewis, Ephraim Murphy, Henry Stabler, and Edward Stabler. Caleb Stabler, Richard Tucker, Perry Lizear, and Jeff Higgins, are still living. There is such a raft of boys over 70 that it isn't worth while to mention them.

"Now for the big fellows. Edward Penn was 6 feet 4, Joshua was 6 feet 2, and Robert Sullivan was 6 feet 5. He had two sons, Will and George, who were 6 feet 4 and 6 feet 3 respectively. Mahlon and Nelson Sullivan were brothers, and each was 6 feet 4 inches high. There was Richard Sullivan, whom we used to call Long Dick. He was 6 feet 4. He had two sons, Edward and Perry, who are still living, both 6 feet 2. Dr. Artemus Riggs was 6 feet 5 inches tall, weighed 260 pounds, without an ounce of superfluous flesh, and was one of the best men in the county. There were three men who were named William Brown, and we had to nickname them to distinguish them. There was Big Bill Brown, 6 feet 3; Long Bill Brown was 6 feet 5, and Little Bill Brown was 6 feet 2½. Isaac Moore was 6 feet 2, but his son Nathan went him one better and was 6 feet 3. Perry Lizear is still living. He is over 80 years old, is 6 feet 2 in his stockings, weighs 220 pounds, is straight as an arrow, and one of the best men in the county. I tell you what, if you have any children and want them to live long and grow big, just send them to Sandy Spring."

WHO ARE THE GREAT POETS?

I THINK it indisputable that the Hebrew poets have a firmer hold on life than the Greek poets have; hence that it is to the Hebrew poets that we are to turn first for solace, for support, for "self-preservation" "against the wreckful siege of battering days." While by no means denying that in the poetry of the Old Testament, as in other great poetry, there is a commingling of much that is not poetry, I affirm that the undercurrent of great song is there, unending, and stronger than it is elsewhere to be found. From one point of view we do the Greek poets injustice by comparing them with the Hebrew poets through the medium of translations; for not only does the Hebrew expression lend itself more readily to translation, but rarely may we meet with such prodigies of reproduction as Tyndale and other translators of the English Bible. Westcott, in his "History," says of Tyndale: "He felt, by a happy instinct, the potential affinity between Hebrew and English idioms." This observation, besides honoring Tyndale's genius, points to one of the sources of the Hebrew poet's advantage over the Greek poet when read in our own language. From another point of view, the use of translations is no more than fair; for it discloses a most important fact: *viz.*, that, allowance being made for inferior translation, the ancient Hebrew poetry is the only pure poetry, the only poetry that is poetry through and through, the only poetry that holds its virtue against the sapping accents of a stranger-tongue. This fact of itself would seem to be sufficient to warrant the statement that the highest poetry is to be found, not in the adorable Homer, magnificent witness that he was to the truths of nature and of man but in the Book of Job.—*J. V. Cheney, in the Overland*.

THE purposes of the Almighty are perfect, and must prevail, though we erring mortals may fail to accurately perceive them in advance.—*Abraham Lincoln*.

THE ANSWER OF ALL SCRIPTURE.

If we consider every syllable that Scripture utters respecting things necessary to salvation, we shall be unable to deny that in the New Testament, at any rate, and all that is eternally precious of the Old, the elements of ritual are all but non-existent, and the sphere of opinion is reduced to the minimum. What is religion? what is its essence and its aim? What its be-all and end-all? Do not let us deceive ourselves about it. The answer of all Scripture may be summed up in one word: Righteousness. What is David's answer to the question, "Who shall ascend unto the hill of the Lord?" What is Micah's answer to the question, "What doth the Lord thy God require of thee?" What does Hosea mean, when, in the verse twice quoted by our Lord, he says, "I will have mercy and not sacrifice?" What does Habakkuk mean when he says: "The righteous man shall live by his faithfulness?" What does Isaiah mean when, after a scornful repudiation of all the ceremonialism of his day, he adds, "Wash you, make you clean; cease to be evil, learn to do well?" What does John the Baptist mean when in answer to the appeal, "What shall we do?" he ignores everything which priests and Pharisees insisted on, and simply replies, "Repent" and observe the commonest rules of righteousness? What does St. Paul mean when he begs the Galatians not to retrograde into the bondage of weak and beggarly rudiments? What does St. James mean when he sums up pure religion in beneficence? What does the beloved disciple mean when he says Love is the fulfilling of the Law? What does he mean—Our Lord, our Master, our only Teacher, when he says, "If thou wouldst enter into life keep the commandments?" when he bids us do to others what we would they should do unto us, for this is the Law and the Prophets? when he says, "The Kingdom of God is within you?"—*Canon Farrar in the Christian World.*

FINISH YOUR JOBS.

MANY persons seem to be always in a hurry, and yet never accomplish much: others never seem to be hurried, and yet do a very great deal. If you have fifty letters to answer, don't waste too much time in looking over to find which one should be noticed first: answer the one you first lay hands on, and then go on through the whole pile as fast as possible.

Some begin a thing and leave it partially completed and hurry off to something else. A better plan is to complete whatever you undertake before you leave it, and be thorough in everything. The going back and forth from one thing to another wastes valuable time.

Another thing: deliberate workers are those who accomplish the most work in a given time, and are less tired at the end than many who have accomplished half as much. The hurried worker has often to do his work twice over; and, even then, it is seldom done in the best manner, either for neatness or durability. It is the deliberate and measured expenditure of strength which invigorates the constitution and builds up the health. Multitudes of firemen have found an early death; while the plough-boy

lives healthy and lives long, going down to his grave beyond three-score and ten.—*Christian Register.*

LIFE is full of trials, and it is a perplexing thing to look around us and see the race of men groaning under their burden. We know but one satisfactory explanation of this strange mystery—thoroughly satisfactory—which claims all doubt. The cross of Christ is the explanation. The cross is the distinct announcement to us, of that wonderful law which fills all life, that "through much tribulation we must enter the kingdom of heaven." Perfection through suffering—that is the doctrine of the cross. There is love in that law. . . . Life is not done, and our Christian character is not won, so long as God has anything left for us to suffer, or anything left for us to do.—*Robertson.*

CHRISTIANITY is something more than a system of doctrines; it is a life, a tone, a spirit, a great current of memories, beliefs, and hopes flowing through millions of hearts.—*Selected.*

NEWS AND OTHER GLEANINGS.

A TEMPERANCE conference, under the care of Concord Quarterly Meeting's Committee, was held at Friends' meeting-house, Wilmington, on the 21st inst. in the evening. A Friend who was present writes, "It was small, owing, we hope, to the rain: two members of the committee were present. They had been disappointed in obtaining speakers. Elizabeth W. Smith read the minutes and an essay, and after a recitation by a young girl, Gertrude Magill read an essay, after which Lydia H. Price and others spoke, and the meeting was especially rich in earnest feeling and Christian love."

New Hampshire compels working-children of from fourteen to sixteen years to go to school three months of the year.

With Dom Pedro's departure, the Americas are left without one crowned head in all their borders. The air of this hemisphere doesn't agree with monarchy. We have no use on this side of the world for kings and emperors. By and by the people on the other side will find out that they have no further use for them, either.—*Hartford Courant.*

—In the race with automatic machines, Paris has put herself in the lead with a machine exhibited the other day in the Place de la République. You brought with you a penny and a cup. You parted with your penny, dropping it into the unostentatious slot, and your cup was full of steaming black coffee, judiciously sugared.

—The Babylonian expedition sent out last year by the University of Pennsylvania in charge of Dr. John P. Peters, discovered the only authentic document known of Naram-Sin, a King of Sumer, who reigned 3750 B. C. It is a stamp made of burned clay, which was used to stamp on the bricks for his building, the name and titles of this ancient monarch.—*Chicago Evening.*

—There is a beautiful custom in some of the northern parts of Europe. There the white poplar, in good soil, increases a shilling a cubic every year. The trees are generally cut down at the age of twenty years as they are then supposed to have attained their full growth. When a daughter is born in the family of a respectable farmer, the father, as soon as the season will permit, plants a thousand young trees, which are to constitute the dowry of the

maiden, "which grow as she grows, and increases in height and value as her virtues and beauty increase."—*Popular Science News.*

—Cardinal Lavigerie, one of the noblest and most heroic figures among those of the present day who are leading in the work of relieving human misery, has made an appeal to the colored people of the United States, and especially to the emancipated and enfranchised negroes of the South, to assist in the efforts that are being made to suppress the African slave trade. Cardinal Lavigerie is a devout Catholic, but the great work of humanity to which he has devoted his life is in no sense sectarian; it is a work broader than Christianity even, as broad and general as humanity itself, appealing not more strongly to Christians than to those of other creeds who believe in the common brotherhood of mankind and the right of the weak to be protected from oppression and cruelty of the strong.—*Public Ledger.*

—The Biological Department of the University of Pennsylvania has caused to be printed an elaborate catalogue, which explains fully the aims, capacity, and personnel of that Department. Two distinct courses are offered, one, the college course in Natural History, which represents the full work of the Biological School; the other, a course of two years, which is preparatory to the study of medicine. The laboratories, museums, botanical garden, and other resources of the institution are, we are glad to see, increasing in value and capacity for purposes of instruction, and the faculty list has been lengthened. Dr. Leidy is Director, the other teaching members of the faculty being Drs. Rothrock, Jayne, Ryder, Wilson, Dolley, and Cattell. Dr. Chas. S. Dolley has succeeded Dr. Jayne as Dean, upon the election of the latter as Dean of the College Department of the University.—*The American.*

—Iron is rolled so thin at Pittsburg, that 12,000 sheets are required to make an inch in thickness. Light shins through one of these sheets as easily as through greased tissue paper.

—The Kentucky University this year opened its doors to female students, and now the names of 20 young women are entered upon its rolls.

—The inland and coast waters of Japan furnish no less than 90 kinds of fish that are palatable to foreigners, and over 250 varieties which the natives use for food.

—The *Brooklyn Eagle* says: "Of the 371 churches of this city and county, 303 are equipped with mortgages. The Protestant debt leads, 239 societies owing \$2,165,962, an average of \$9,063. The Roman Catholics secure \$1,173,091 with sixty-four mortgages, an average of \$18,333. There is an important difference to be observed. A mortgage on a Protestant church shows that it has not been paid for. On the other hand, it sometimes happens that a mortgage is put upon an unincumbered Roman Catholic church for the purpose of providing new buildings for work to be done in other parts of the diocese. The substantial sympathy and cooperation of all the parishes in all the activities of the diocese is thus secured."

—An Ashburnham, Mass., correspondent of *Forest and Stream* writes: There is quite a curiosity here in the shape of a tame black duck. A farmer found a brood of them just hatched, and as he had some domestic ducks he caught one of the wild ones and put it with them. This was in the spring of 1888. It was as tame as any of the ducks, but in the fall it got to flying to a pond about a mile away. It would get its feed of corn in the morning, then leave for the water, coming back just at dark again. The 1st of April it disappeared, and it was supposed that some one had killed it. It came home, however, on the 1st of September, and is as tame as ever.

NOTICES.

*** Quarterly Meetings in Twelfth month will occur as follows:

5. Salem, Woodbury, N. J.
7. Whitewater, Maple Grove, Ind.
9. Prairie Grove, Marietta, Ia.
12. Haddonfield, Haddonfield, N. J.
15. Fishing Creek, Millville, Pa.

*** Circular Meeting in Twelfth month as follows:
15. Roaring Creek, Pa., 2 p. m.

*** A Children's Meeting, under the care of the Friends' Temperance Committee, of Bucks Quarterly Meeting, will be held in the meeting-house at Solebury, on First-day, Twelfth month 1, 1889, at 2.30 p. m. All interested are cordially invited to attend.

HANNAH R. FLOWERS, Clerk.

*** Philadelphia First-day School Union will meet on Sixth-day evening, Twelfth month 13th, at 8 o'clock, in Green street meeting-house, Fourth and Green streets. The subject of promotion in our First-day Schools will be discussed. Also exercises by Green street First-day School. All interested are invited to attend.

DAVID L. LUKENS, } Clerks.
SARAH M. HOLCOMB, }

*** Nebraska Half-Year's Meeting.—Nebraska Half-Year's Meeting of Friends will be organized at Lincoln, on the first Second-day in the Twelfth month, (Twelfth month 21), 1889, at 11 o'clock a. m. The meeting of Ministers and Elders on the Seventh-day preceding, at 2 p. m. Meeting for worship on First-day at the usual hour.

The committee of Illinois Yearly Meeting are expected to be present to assist in the organization.

Isolated Friends of Nebraska and Kansas are especially invited to meet with us on this occasion.

Any further information will be furnished by either of the undersigned:

Moses Brinton, Lincoln, Neb.; Charles P. Walter, Lincoln; J. Russell Lovnds, Lincoln; Joseph Webster, Monroe, Platt Co., Neb.; Isaiah Lightner, Matson, Platt Co., Neb.; George S. Truman, Genoa, Nance Co., Neb.

ROYAL

BAKING POWDER
Absolutely Pure.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. Sold only in cans. ROYAL BAKING POWDER Co., 106 Wall-st., N. Y.

THE SOUL ENDURES.

The gold of life may turn to gray,
The sun of life go down;
But truth and love will last away,
And win the victor's crown.

The tides of life may ebb and flow,
And kingdoms rise and fall;
But soul is one with God for aye,
And triumphs over all.

—Eliza M. Hickok, in *Christian Register*.

JOHN WOOLMAN'S VOYAGE TO ENGLAND, 1772.

(Concluded from last week.)

THIRTY-FIRST of Fifth month and first of the week.—We had a meeting in the cabin, with nearly all the ship's company, the whole being near thirty. In this meeting the Lord in mercy favored us with the extending of his love.

Second of Sixth month.—Last evening the seamen found bottom at about seventy fathoms. This morning, a fair wind and pleasant. I sat on deck; my heart was overcome with the love of Christ, and melted into contrition before him. In this state the prospect of that work to which I found my mind drawn when in my native land being in some degree opened before me, I felt like a little child; and my cries were put up to my Heavenly Father for preservation, that in an humble dependence on him my soul might be strengthened in his love and kept inwardly waiting for his counsel. This afternoon we saw that part of England called the Lizard.

Some fowls yet remained of those the passengers took for their sea-store. I believe about fourteen perished in the storms at sea, by the waves breaking over the quarter deck, and a considerable number with sickness at different times. I observed the cocks crew as we came down the Delaware, and while we were near the land, but afterwards I think I did not hear one of them crow till we came near the English coast, when they again crowed a few times. In observing their dull appearance at sea, and the pining sickness of some of them, I often remembered the Fountain of goodness, who gave being to all creatures, and whose love extends to caring for the sparrows. I believe where the love of God is verily perfected, and the true spirit of government watchfully attended to, a tenderness towards all creatures made subject to us will be experienced, and a care felt in us that we do not lessen that sweetness of life in the animal creation which the great Creator intends for them under our government.

Fourth of Sixth month.—Wet weather, high winds, and so dark that we could see but a little way. I perceived our seamen were apprehensive of the danger of missing the channel, which I understood was narrow. In a while it grew lighter, and they saw the land and knew where we were. Thus the Father of Mercies was pleased to try us with the sight of dangers, and then graciously, from time to time, deliver us from them; thus sparing our lives, that in humility and reverence we might walk before him and put our trust in him. About noon a pilot came off from Dover, where my beloved friend Samuel Emlen went on shore and thence to London, about seventy-two miles by land; but I felt easy in staying in the ship.

Seventh of Sixth month and first of the week.—A clear morning: we lay at anchor for the tide, and had a parting meeting with the ship's company, in which my heart was enlarged in a fervent concern for them, that they may come to experience salvation through Christ. Had a head-wind up the Thames; lay sometimes at anchor; saw many ships passing, and some at anchor near; and I had large opportunity of feeling the spirit in which the poor, bewildered sailors too generally live. That lamentable degeneracy which so much prevails in the people employed on the seas so affected my heart that I cannot easily convey the feeling I had to another.

The present state of the seafaring life in general appears so opposite to that of a pious education, so full of corruption and extreme alienation from God, so full of the most dangerous examples to young people, that in looking towards a young generation I feel a care for them, that they may have an education different from the present one of lads at sea, and that all of us who are acquainted with the pure gospel spirit may lay this case to heart, may remember the lamentable corruptions which attend the conveyance of merchandise across the seas, and so abide in the love of Christ that, being delivered from the entangling expenses of a curious, delicate, and luxurious life, we may learn contentment with a little, and promote the seafaring life no further than that spirit which leads into all truth attends us in our proceedings.

On the 8th of Sixth month, 1772, we landed at London, and I went straightway to the yearly meeting of ministers and elders, which had been gathered, I suppose, about half an hour.

In this meeting my mind was humbly contrite. In the afternoon the meeting for business was opened, which by adjournments held near a week. In these meetings I often felt a living concern for the estab-

lishment of Friends in the pure light of truth. My heart was enlarged in the meetings of ministers, that for business, and in several meetings for public worship, and I felt my mind united in true love to the faithful laborers now gathered at this yearly meeting. On the 15th I went to a quarterly meeting at Hertford.

[In a foot-note to John Woolman's narrative, John G. Whittier has added the following.—Eds.]

There is a story told of his first appearance in England which I have from my friend, William J. Allinson, editor of the *Friends' Review*, and which he assures me is well authenticated. The vessel reached London on the morning of the second day of the week, and John Woolman, knowing that the meeting was then in session, lost no time in reaching it. Coming in late and unannounced, his peculiar dress and manner excited attention and apprehension that he was an itinerant enthusiast. He presented his certificate from Friends in America, but the dissatisfaction still remained, and some one remarked that perhaps the stranger Friend might feel that his dedication of himself to this apprehended service was accepted, without further labor, and that he might now feel free to return to his home. John Woolman sat silent for a space, seeking the unerring counsel of Divine Wisdom. He was profoundly affected by the unfavorable reception he met with, and his tears flowed freely. In the love of Christ and his fellow-men he had, at a painful sacrifice, taken his life in his hands, and left behind the peace and endearments of home. That love still flowed out toward the people of England; must it henceforth be pent up in his own heart? He rose at last, and stated that he could not feel himself released from his prospect of labor in England. Yet he could not travel in the ministry without the unity of Friends; and while that was withheld he could not feel easy to be of any cost to them. He could not go back as had been suggested; but he was acquainted with a mechanical trade, and while the impediment to his services continued he hoped Friends would be kindly willing to employ him in such business as he was capable of, that he might not be chargeable to any.

A deep silence prevailed over the assembly, many of whom were touched by the wise simplicity of the stranger's words and manner. After a season of waiting, John Woolman felt that words were given him to utter as a minister of Christ. The spirit of his Master bore witness to them in the hearts of his hearers. When he closed, the Friend who had advised against his further service rose up and humbly confessed his error, and avowed his full unity with the stranger. All doubt was removed; there was a general expression of unity and sympathy, and John Woolman, owned by his brethren, passed on to his work.

There is no portrait of John Woolman; and had photography been known in his day, it is not at all probable that the sun-artist would have been permitted to delineate his features. That, while eschewing all superfluity and expensive luxury, he was scrupulously neat in his dress and person, may be inferred from his general character and from the fact

that one of his serious objections to dyed clothing was that it served to conceal uncleanness, and was, therefore, detrimental to real purity. It is, however, quite probable that his outer man, on the occasion referred to, was suggestive of a hasty toilet in the crowded steerage.

From Friends' Quarterly Examiner (London).

THE LIFE OF WILLIAM EDWARD FORSTER.

(MACAULAY AND PENN.)

It may seem late to refer to the above biography, a review of it by the editor having appeared some time since. Agreeing with the high praise awarded by the editor, especially to the admirable way in which the biographer has entered into the spirit of Wm. Edward Forster's Quaker training, and all the circumstances of his early life, yet there is one circumstance, at the very commencement of Wm. E. Forster's public career, in which his biographer has not, it seems to me, fully grasped the situation. The passage I refer to will be found in the first volume, page 285:—

"In 1849, stung into action by the extreme acerbity with which Macaulay had attacked William Penn, he published that pamphlet of which mention is made in the letter to Mr. W. D. Arnold, vindicating the character of Penn, one of the favorite heroes of the Society of Friends. The pamphlet had a marked success, and did much to mitigate the feeling which Macaulay's strictures upon Penn had occasioned."

In this slight manner it passed over what was really a very important passage in W. E. Forster's life, and one which introduced him to a wider circle than he had hitherto known; and many, who up to that time had not heard his name, were impressed by the evidence of thought and power which the publication manifested. Then as to the nature of Macaulay's extraordinary attack upon Wm. Penn: Forster's biographer speaks of Macaulay's extreme acerbity having stung W. E. Forster into action. Acerbity indeed! Macaulay might have been as acid as he pleased, if he had only been truthful. It was the absolute falsity of the charges which roused W. E. Forster, and his able criticism completely demolished Macaulay's false portraiture of William Penn. It is difficult to conceive anything more perverse and wrong-headed than Macaulay's treatment of Penn. He apologizes at the outset by saying that "To speak the whole truth concerning Penn is a task which requires some courage; for he is rather a mythical than a historical personage."

But this is equally absurd as untrue. There is no "historical personage," antecedent to the present century, of whom we have more abundant means of forming a correct judgment than of William Penn. His books and pamphlets mount up to hundreds; we have his journals, his letters, the very thoughts of his heart, and above all, his character expressed in his statesmanship, his great deeds, the records of which are as imperishable as the everlasting hills. In one sense there was something mythical about Penn in the universal homage paid by the Old and New World to his uprightness and liberality of heart, which raised him so high above his contemporaries. If Macaulay, before he laid his iconoclastic hands on

one of the noblest figures among the statesmen of the world, had taken the pains to inform himself from the abundant materials at his command, he could not have committed the gross—we are tempted to say the criminal—blunders of which he was guilty. To say the least, his conduct was reckless in the extreme. It is not necessary that we should repeat the exposure of Macaulay's confounding William Penn with George Penn the pardon broker.

What was William Penn's position in the country at that time? He had come to England that the disputed boundaries of Maryland and Pennsylvania might be settled by the Board of Plantations. His intention was to return to America as soon as the question was arranged, and his interests and tastes equally pointed to this course. But the death of Charles II., and accession of James, decided William Penn to delay his return that he might serve the cause of religious toleration, and be useful to his friends and others who, through persecution or otherwise, were in trouble. His doing so went sorely against his interests as Governor and Proprietor of Pennsylvania, and entailed upon him the cost of an expensive establishment in town, to support which he had neither place nor pension.

Penn's reception-rooms were crowded by supplicants for his good offices in one way or another. His influence with the King was exerted always on the side of mercy, and for the benefit of others, and without any personal advantage to himself; no fact in history is more clearly established than this. That such a person could be thought of for a moment as a suitable instrument to extort money from the Maids of Taunton involved in the rebellion of the unfortunate Duke of Monmouth is too absurd for argument. Apart from character, Penn's position as Proprietary Governor of Pennsylvania and ward of the King would have secured him from such an outrage as the offer of a commission for any purpose would have been; as well might a London tradesman offer Mr. Gladstone a commission to collect his debts.

A panegyrist of Macaulay likens him to Cuvier, who, when he had picked up a bone, could build upon it the entire animal. This may be very well as applied to bones, and if the scientist fails in any point nobody is any the worse. But this process applied to life and character is a very different thing: the building up a long and imaginary story upon some slight fact, or assumed fact, is a process unfortunately not uncommon, but is generally designated gossip and slander.

An illustration of the Macaulay method of telling a story is to be found in the incident of the Fellows of Magdalen College. William Penn, while paying visits to the Meetings of Friends, came to Oxford. The Principals of Magdalen College sought an interview with him, which was granted, and they laid before him the case between themselves and the King, alleging that what the King required was contrary to their charter and against their conscience to concede, and satisfied Penn that the position they took was just; upon which he promised, if they would draw up a statement, he would present it to the King himself. This he did, in a private audience, and plainly

told the King that his conduct was contrary to his own declaration of liberty of conscience, making the King very angry. Nothing could be more noble than the conduct of Penn in undertaking this mission. He and his friends owed nothing to the Church party; on the contrary, they regarded them more than the Government as the instigators of the cruel and murderous persecution to which they had been subjected. But Macaulay perversely declares absolutely that Penn was sent by the King to seduce the Fellows into an action contrary to their conscience of what was right. He might have had the wit to see that the King could not have chosen a more inappropriate or worse ambassador to High Church officials than the Quaker; but the Churchmen, in securing the good offices of the Quaker, obtained the best and most disinterested of advocates. Penn accepted no commission from James, except that to the Prince of Orange, to obtain his concurrence with the declaration of Liberty of Conscience.

William Penn was the pioneer advocate of Catholic Emancipation. His ideal of religious liberty extended beyond his own sect, beyond Protestantism, and he claimed for Roman Catholics the same liberty he demanded for himself. This exposed him to much obloquy, and he was denounced as a Jesuit by the unreasoning bigotry of the times. Of this we feel sure, that had he committed any one of the acts charged against him, it would not have been left to Macaulay to find it out, for it would have been made as notorious as the Trial of the Seven Bishops.

William Penn could contemplate without fear the accession of full toleration to the Roman Catholics.

"He had trusted the merciless Indian, and the tomahawk and scalping knife of the savage had not deterred him from acting upon principles of forbearance and justice; and was he wrong in placing confidence in the nationality and patriotism of his Roman Catholic countrymen? He regarded the security supposed to be gained by persecution as treacherous and fallacious, neither did principle allow him to seek security by means of injustice and oppression. This was no sudden impulse of his, for he had never placed the Roman Catholic beyond the pale of toleration; and when before a Committee of the House of Commons in 1675, to represent the hardships that Friends were subjected to in being prosecuted on Acts aimed at the Catholics, he plainly stated: 'I am far from thinking it fit because I exclaim against the injustice of whipping Quakers for Papists, that Papists should be whipped for their consciences. Not for though the hand, pretended to be lifted up against them, hath, I know by what observation, lighted heavily upon us, and we complain, yet we do not mean that they should take a fresh sin at them, or that they should come in our room, for we must give the liberty we ask, and cannot be false to our consciences, though it were to relieve ourselves; for we have good will to all mankind, and would have none suffer for a profession, and conscientious dissent on any hand. And I humbly beg leave to add that those no thanks to our persecutors, shall be able to do more to merit to be converted, or led into idolatry, to the reason of mankind.'"

One point more. Forster's biographer speaks of Penn as "one of the favorite heroes of the Society of Friends," but he was much more—he was one of the World's heroes. In the New World, in the city of Philadelphia which he founded, they are raising a

gorgeous structure for city purposes, which visitors to that city, as they go there again and again, find growing and expanding, and yet incomplete; this great building, in the centre of the city, is to be crowned with the statue of William Penn. William Penn is no myth in Philadelphia: the City Council made a formal and earnest appeal to Friends in this country that they might be allowed to disinter his remains and give them honorable sepulchre in his own city and province,—a request, which I, for one, regret was denied. The descendants of the early settlers, those who assisted him in the formation of the colony and held office under him, still find a place in the "City of Homes."

William Penn is the World's Hero, because he had the rare courage to found his State on principles of right and justice. He put into concrete form the dreams of the most advanced Liberal politicians. In the famous Constitution of Pennsylvania he gave not only tolerance but equality to all religions sects; established the freedom of his Parliaments, and the freedom and purity of election. He reformed the cruel criminal code of this country, and of one hundred and more offences punishable by death he retained but one, that of deliberate murder. Prison discipline was to be reformatory, and prisons were to be workhouses where useful trades could be taught. Perfect freedom of trade was established. In the Old World monopolies were the rule; every description of business was subjected to preference rights purchased from Kings and Governments, or tolls were levied directly for the right to trade. William Penn would have none of these extortions. He made full provision for the free education of children: he made no provision for the military defense of his province. This great act of moral daring was sustained by his just and wise treatment of the Indian tribes settled in the territory granted him. He held that the King's Charter did not abrogate the rights of these ancient dwellers in the land. He acquired such lands [as the colonists required by honorable purchase. He showed his appreciation of their character and] his trust in their honor by the famous treaty he made with them—the only treaty not ratified by an oath, and the only treaty that was never broken. Two centuries from Penn's Treaty the Soldier President of the United States invited the aid of Friends to overcome the difficulties of the Government in dealing with the Indian Tribes. Bitter experience had taught the lesson that "force was no remedy." A century after this Constitution had been so freely and liberally granted to Pennsylvania, the Fathers of the American Republic met in Philadelphia to frame the Constitution of the United States, and must have been largely influenced by the acts of the Founder of Pennsylvania.

If any ask why should this question of Macaulay and Penn be again stirred, I reply, because Macaulay's false portraiture is a continuous outrage: the libel is extant in a thousand ways, and is constantly being multiplied, and therefore no opportunity should be overlooked of making our protest on the side of Truth and Right.

JOHN TAYLOR.

For Friends' Intelligencer and Journal.
EUROPEAN DAYS.—II.

FROM ANTWERP TO BERLIN.

It was with a full appreciation of the strangeness of it all that we betook ourselves, on the morning of Seventh month 11th, to the railroad depôt in Antwerp and bought our tickets for Cologne. We followed our porter through a gate and then on and on for what seemed an interminable distance, between lines of box-like, gloomy-looking cars, until we reached our especial place,—a "*nicht rauchen*," you may be assured! Then we waited and waited for the train to start. As we looked out, we could have easily imagined ourselves in an American freight station surrounded by freight cars, such a curious appearance have these European apartment cars. They impress you with their *squareness*, their dinginess, their gloomy ugliness. Finally our train began to move, but soon changed its mind and waited a little longer. Our patience was at length rewarded, however, and we congratulated ourselves that we were at last on the way to Cologne. Time, however, was of small account on this line, and we meandered slowly along for about half an hour till we reached the first station. We heard the town bells ringing and imagined it was a summons to the people to come see the train, for they flocked from all sides and stood admiring the iron horse, while the train men walked about leisurely. There seemed to be a Sabbath stillness in the air, broken only by the throbbing of the engine or an occasional slam of an apartment door. The day grew warmer and the cars were not very comfortable. But we lost the sense of personal discomfort in watching the new scenes around us. At every road which we crossed stood the watchman—a woman, mostly bareheaded, with the horn used to herald the approaching train tucked under one arm, and knitting away as if there were no trains in existence. We enjoyed so much the signs of industry and thrift evinced in the cultivation of the land. Every little bit of ground along the track was made to yield its share of food for the people. Instead of rank growths of weeds we passed rows of beans or patches of potatoes or fine looking cabbage plants—but no Indian corn. That Indian corn we have been looking for ever since, and have only seen it twice—a stalk in a private yard and a stalk or two in the Thiergarten in Berlin, used as foliage plants! The fields were red with poppies. One field I shall never forget. It lay on a hillside, and the wheat, which was ripe, was so intermingled with poppies that it was a mass of red and gold, the red deepest in the middle of the field and shading out to the edges. We saw many wild flowers, mostly strangers, along the hedges and in the fence corners. We were struck by the richness of their coloring,—red, yellow, blue, and purple,—and felt that we could appreciate one influence which helped to make the Flemish school of painting what it was.

After a long, hot, tiresome ride we reached Cologne. Long before, we had experienced a thrill of delight as the characteristic double spire of the cathedral loomed up in the dim distance. I make no attempt to describe the cathedral, its beauty remains

with me like the memory of a pleasant dream,—indeliberate. Cologne is a beautiful city, and has besides its cathedral as attractions, the Rhine, crossed by a massive stone bridge, with a statue of Frederick William IV. on its approach from the side of the city, and a bridge of boats—one of the last on this stream to yield to the improvement influences of modern times.

Early on the morning of the 12th we took the "Deutscher Kaiser" for a ride up the Rhine, our destination being Mayence, or Mainz, as the Germans call it. The boat was crowded with American and English tourists, and the pleasure of the ride was somewhat marred by the crowd, and by frequent thunderstorms. But no trifling unpleasantness could detract from the beautiful scenery. We felt almost as if on holy ground, so consecrated was it by poetry and song. The Mouse-tower had become quite a household word to the little ones of our party, from their familiarity with Longfellow's "Children's Hour." Often had they repeated the lines,—

"They almost devour me with kisses,

Their arms about me entwined,

'Till I think of the Bishop of Bingen,

In his mouse-tower on the Rhine."

And here before them was the reality. It did not trouble them at all that some very practical people said that the mouse story was a foreigner, and did not, by right, belong here, and that the castle was built by one of the numerous "Robber Barons," that he might the better fleece his victims. They saw only the refuge of the terrified man, pursued by his myriads of little persecutors.

"The vine-clad hills of Bingen, fair Bingen on the Rhine" rose before us, and standing out in bold relief from the dark green of the vineyards, the huge "denkmal" which Germany has erected to commemorate a united people, and, perhaps, to serve as a menace to neighbors who for centuries have looked upon the Vaterland as lawful prey, and have used her fair fields as a parade ground for their troops.

At 9 o'clock in the evening we reached Mainz, where we were glad to have a comfortable supper and a good night's rest in the Hotel du Holland. From our windows we looked out upon the Rhine, and could see in the moonlight on the opposite bank the old town of Castel, which tells its history in its name.

While Drusus with his Roman forces was occupying the present site of Mayence in the century before Christ, in order to make his position stronger he constructed another *castellum* on the opposite bank of the Rhine. That *castellum* is now Castel, and as we looked across at it we felt more in tone with the past.

In the early morning of the 13th, we made a rapid survey of the town before setting out for Berlin. We had intended to devote two days to this part of the trip, but we found the cars so comfortable and changing from train to Hotel not so convenient, that when we reached Frankfort, a. m., where we were obliged to change cars and where we gathered our first wild-flowers on European soil, we decided to go straight through to Berlin. It was a twelve hours' ride, but by

"remembering" the conductor we were enabled to get an apartment to ourselves in a through coach, so we made the journey very comfortably.

We enjoyed the varied scenery as long as the daylight lasted. The peculiar manner of cultivating the fields attracted us. Whole hillsides were covered with rectangular patches of potatoes, wheat, cabbage, and other farm produce with no intervening fences and no houses in view. The various shades of coloring of the different vegetables and grains in all stages of growth added constant variety to the landscape, and often we could see the peasants, mostly women, cultivating the fields or carrying the produce in huge baskets strapped on their backs, ready for market, I suppose. The farm houses were clustered together in little villages and I were neither very large nor very inviting to American eyes. As night drew on, the little ones slept on the comfortably upholstered seats. The train hurried on bearing us nearer the realization of a long cherished dream. We rushed past groves of gloomy-looking pine trees,—across wide well-kept government roads,—not suggestive of any Peace policy,—through stretches of low, flat country showing no signs of life except the beautiful roads which intersected them. Yet we were within a short run of Berlin and soon the lights of the suburbs began to glimmer in the distance. Potsdam is passed, now Charlottenburg and soon the train stops at the Friedrich Strasse Bahnhof—where we leave it. We find our way without difficulty to the hotel which we have selected—but it is full. Picture it! A few minutes after twelve on a Seventh-day night in a strange city, where even the language is unfamiliar, our party tired from the long ride, the hotel full! The porter, however, seeing our slight dilemma kindly accompanied us to another house not far off, where we had good accommodation for what was left of the night. Early the next morning we found our friends without difficulty and on their recommendation took board at a *Pension* for the time being until we should find a *Mohnung* in this strange city, where we hope to make a home just as American as is possible.

SCRIPTURE LESSON No. 47.

TWELFTH MONTH 15, 1889.

SOLOMON'S FALL.

GOLDEN TEXT:—Let him that thinketh he standeth, take heed lest he fall.—1 Cor 10 12
READ 1 Kings 11: 4-13.

ONE of the saddest pages in all the history of Israel is now before us. In our last lesson Solomon was at the very zenith of power and influence; his fame had gone so far that people "came from the uttermost parts of the earth" to see him, and learn, if possible, the secret of his success.

To find this we have not far to go. It was with him as it is with every other greatly endowed man or woman that has become renowned for strong mental and intellectual qualifications. So long as he studied the open book of nature, which was the recreation of his earlier years,—so long as he busied himself with the concerns of his kingdom, giving his thought and great wisdom to the administration of

strict justice in all questions that arose between man and man in the kingdom, and even taking cognizance of women in their difficulties one with another (1. Kings 3 : 16-28),—so long as he was faithful to Jehovah, to whom he owed all his greatness ; setting an example to his subjects of the careful observance of his worship, giving his presence and his influence to the maintenance of the temple service, and kept himself aloof from the idolatries that were introduced into his kingdom through intercourse with other nations,—he was preserved in a good degree from an open violation of the laws upon which the fabric of the government rested. But his life was one of ease and luxury ; reared in a palace, he had no occasion to test the strength of his character, or to practice self-denial. His downward course began when he took for a wife the daughter of the King of Egypt, which made it necessary that she should be provided with priests and altars and all the forms of the worship in which she had been educated. We follow him in his course with sorrow ; his endowments and possibilities were so marked, yet, yielding to the love of ease and the sensuous pleasures with which he had surrounded himself, his career was downward and his fall ignoble.

Solomon loved many strange women, etc. The monarchs of the Eastern nations surrounded themselves with many women, some of whom were given a place of honor at the king's side, one or another, as his fancy or preference dictated. The rest were simply appendages or dependents of the king's household, occupying what is called the harem, or court for women, where their lives were passed in great isolation from the outer world. This condition of society is rapidly yielding to the Divine thought, which in the beginning established the law of marriage between one man and one woman. The Hebrew usage in the earliest ages conformed to this, and only permitted its setting aside when the wife was childless. As the Israelites grew to power and influence, their kings added to the number of their wives, adopted their idolatries, and so lost the high position of their first establishment.

At first thought it may appear that, for us of the present day, the account of Solomon's going after "strange gods" can contain no very practical teaching. Yet have we no lesson to draw from it? Do we not virtually sin as Solomon did when we doubt in any respect the goodness and love of God? And do we not prove, by lack of faith, that we have not truly accepted the high ideal of a Heavenly Father, which Jesus Christ revealed to us in his teaching? Is not all worry, all discontent, all deceit, the result of other standards rather than that which must exist if we are governed by Him in whom is no variable-ness, neither shadow of turning?

By yielding to temptations at first, perhaps in very small things, we gradually allow deceit to enter our hearts,—are false to our best convictions of right,—and when we let thoughts of praise from the world ideas of gain, or other ignoble considerations come between us and them, by so doing, we, like Solomon, forfeit the kingdom of Heaven in our hearts, and

lose that which the world can neither give nor take away,—the peace of God, which passeth all understanding.

According to the history of Solomon's early life, he craved wisdom, and it was given him above that of other men. He became great and renowned throughout the world. His kingdom was wisely governed, and his reign was prosperous, and his people happy. But like many another person, his prosperity was the cause of his downfall. He grew fond of earthly grandeur, and surrounded himself with every luxury. His horses and chariots were enough to supply the wants of a dozen kings. His seven hundred wives and three hundred concubines sought to flatter and cajole him in all the winning ways known to women. He was led to believe that his kingdom was to be made subservient to his whims and caprices. And allured by the wiles of women he was induced to forsake the God of his fathers, and to worship the false gods of the heathen. This led him into idolatry, and to indulge in all the foolish customs of the nations by which he was surrounded. His father David sinned, but, when convicted of his sins, always repented and sought to regain the favor of the Most High ; but we do not read that Solomon ever repented of any of his transgressions. The consequence was that, notwithstanding his boasted wisdom, he oppressed his subjects, and laid the foundation for the rearing of his kingdom. Thus it is with us all ; when we forsake the counsels of the Lord our eyes become blinded and we do not see the things that are best for us.

NOTES ON THE LESSON.

It seems almost incredible that one who had attained to such distinction as a ruler, and as a man of great wisdom and discernment should in the closing years of his life so utterly fail to fulfill the promise of his early manhood. Solomon was wise and good, yet when at the age of twenty he was called to the throne, made vacant by the death of his father, David, he had not been tested and he was without experience. His boyhood and youth had been passed under the careful tutelage of the prophet Nathan. The great desire and purpose of his father was to shield him from the hardships and dangers that had made his own early life so full of peril, and in the easy, luxurious life that he led, there was no opportunity to develop the traits of character so essential to one who is to rule over and direct the affairs of a nation.

He started well, for he meant well ; and for years he was the beloved of his people. Seeking Divine direction he was strengthened and supported in the management of public affairs, and while he continued to walk in obedience to the will of God as it was revealed to his understanding, he was faithful in upholding the laws instituted by Moses, but not in giving his own entire adherence thereto. These laws were written while the Hebrews were yet journeying towards their future home in the land of Canaan. Forseeing that when they were settled in their own land, they would desire a king to rule over them, Moses prepared a very careful but restrictive plan for the people to be guided by when the time for choos-

ing a king had come, as well as especial instructions for the king thus chosen, which were to be religiously observed under pain of the Divine displeasure. (Deut. 17: 14-20.) These rules had been carried out in the choice of Saul, and also in the placing of David upon the throne. Solomon succeeding his father, came by right of inheritance to be the ruler of the people, but in every particular he set at nought the laws that Moses had instituted, and failed utterly to conform to the letter or spirit of their teaching. It was a sad record which the scribe was obliged to make of Solomon, that "when he was old, his wives turned away his heart after other gods and his heart was not perfect with the Lord his God," and yet he was only between fifty and sixty—an age that should have borne the ripened fruit of the wisdom which marked the beginning of his career. But the years spent in frivolous and unprofitable intercourse with women born and reared under the blighting influence of the idolatrous worship which prevailed everywhere outside the Hebrew nation, led him away from the God of his fathers. The riches and luxury and magnificence of his palace life, unfitted him to enjoy the simple pleasures that conformity to the laws of the nation, and obedience to the Divine will, would have brought to his life and made his last years peaceful and happy.

For all his departures from God, and all the evils that gathered about his pathway, through disobedience, we are told that God was angry with Solomon, but as we read the records that make up the history of the Hebrew people, we must constantly bear in mind the state of society and the prevailing ideas of God, which could rise no higher than the level of their own attainment. They were full of revenge, resentment, and bitterness towards other nations, and believed the great Jehovah whom they worshiped as the God of the whole earth, exhibited the same passions, was "altogether like themselves," and they wrote of him as being angry, as commanding them to go out against other nations and utterly destroy them. Let us be thankful that a better understanding of the Infinite Father prevails, and we are coming to realize that it is his own holy spirit working in the hearts of his children which is leading us in this age to vindicate his name from such cruel charges.

Solomon wrote wise and wholesome maxims, and his proverbs are among the choicest bits of thoughtful and profitable teaching in the whole range of the world's literature, yet in his own life and character he was too weak and unsteady to put them in practice. How different was it with that great and good apostle whose chief concern for himself is best expressed in his own words, "I keep my body under and bring it into subjection, lest that by any means when I have preached to others, I myself should be a castaway."

We search the world for truth—we call
The good, the pure, the beautiful,
From heaven stone and written scroll,
From all old flower fields of the soul
And, weary seekers of the best,
We come back laden from our quest,
To find that all the treasures said
Lien the Book our mother read.

Pho. Meehan.

HE LOVETH WHOM HE CHASTENETH.

Man can grow stronger only by wrestling with temptation and sin, wrestling for himself or for another. Whom the Lord loveth he chasteneth, is the old proverb. God wishes to improve the good and to reject the bad. He wishes this whole world to be filled with men who have chosen the good and held fast to it, while he seems to wish the evil to be broken in pieces and trampled under foot till it disappears from the face of the earth. So he sends us through the furnace of affliction as the potter puts his vessel in his furnace. The poor vessels are cracked and ruined by the heat, but the good vessels are made a thousand fold better. If you should visit some of the great potteries of Dresden or China, and should see all the broken ware scattered about outside, you might think that it was hardly worth while to build such an enormous factory to make such poor stuff as you see. You might well think that the clay had better be left in the earth where it would at least help support man by raising food for him; so if you judge God's handiwork by the rejected vessels you will think some of his creatures hardly worth the clay of which they are made. But when you go into the ware rooms of the pottery and see the splendid specimens of perfect ware, you will change your mind. In this way must you look at the splendid specimens of God's handiwork to see what he is doing, not at the rejected rubbish.

But is there any rejected rubbish in God's workshop? If you should take some of those rejected cups and pitchers, cracked, discolored, misshapen as they are, and should show them to some savage in the heart of Africa, I dare say he would think them perfect and would give all he had to secure them. And so the souls which we think of as rejected and ruined, are not but at all judged by some lower standard.

Do you know how they make the very costliest porcelain ware? When the vessel is fashioned of a certain finer clay they wrap it about in common earth, cover it all over with a layer of ordinary clay, and then put it in their hottest furnace; the fierce heat burns and cracks the outer wrapper, but when the heat is over and the vessel withdrawn, that dull, fire-scarred, outer wrapper falls away, leaving the purest, most transparent and most precious of all earthen vessels—so clear and beautiful that it seems no longer of earth, but rather of some precious stone or rich crystal, fit for the table of a king. Why may not the wrapper of clay fall from these noble souls, leaving them pure and precious vessels fit for the noblest uses of God? The fiery furnace of affliction only helps them the quicker to their glorious transformation. Can we not be sure, then, that God treats us just as he would himself be treated if he were in our places, just as we would wish to be treated if we had his knowledge and his wisdom? Can we not say with the patriarch, "Though he slay me, yet will I trust in him?"—A. B. *God, in Unity.*

A slave unto Mammon makes no servant unto God.—*Sir T. Browne.*

THE SOURCE OF TRUE HAPPINESS.

THE unrest of the present age, the dissatisfaction everywhere manifested in respect to the social and civil order of our time, and the wide-spread revolt against its industrial systems, are due in large measure to the more general diffusion of knowledge which the school-house and the printing press have made possible to every class and condition of men.

But these levers as they move the very substratum of society are not always steady; there is a jostling; a stumbling and disaster follows. Like the "Ark of Testimony," the motive power is not always the broad shoulders of men fitted and prepared to bear the precious symbol of the Supreme Ruler, and his indwelling presence in the hearts of his children,—the insignia of the right of the individual to every privilege and possibility that will contribute to his highest good,—to his happiness.

This condition is the outcome of the frailty and weakness of human nature uncontrolled, and undisciplined. The desire to gratify the ambition, to increase the stores of worldly gain, to add to the stock of knowledge unduly indulged, leads away from the only Source of true wisdom. We need vastly more than commercial prosperity, than industrial advance;—more than schools and colleges, can give, to bring the race to a better condition and diffuse peace and contentment among the people.

As individuals, we do not find our highest good in the accumulation of worldly possessions that "perish with the using;" it is not possible for things temporal and evanescent to satisfy the longings that only the eternal verities can fill, and there is still a void when we have encompassed all knowledge. This we must believe is in accordance with the Divine intention when a three-fold nature was given to man. What is true of the individual must be true of the race, and it is a great blessing to the human family that its true happiness is not dependent upon the circumstances of the outward life. While it is desirable that "plenty crown the board" and education in all its widening range of possibilities shall give its light and intelligence to the intellect, it remains an uncounted favor that our beneficent Cre-

ator has not made our highest good to depend upon these things, that "within ourselves this treasure lies."

What a sad spectacle would the world present if only those who are possessed of an abundance of riches, those who are learned in the wisdom that intellectual pursuits bestow,—if only these were capable of attaining to true happiness, while the great mass of the Father's children, equally precious in his sight, and having equal claim to his care and love, were left to grope their way without the happiness in living that their more fortunate brethren possess.

It is only as we make all things subordinate to the imperishable part of our three-fold nature that we find the joy and peace which the world alone can neither give nor can it take away. This peace and gladness of heart is not lessened by the addition of earthly treasures, it is only not conditioned upon them. The humblest toiler on the highway of life may overflow with the blessing of peace and happiness, though like the Master, "he have not where to lay his head." The highest endowed can have no more, and thus has our beneficent Creator made it possible for each one who turns to the enduring source of happiness with a full purpose of heart, to have within his own soul the kingdom of Heaven, bringing joy and gladness to the lowliest family, and withholding from none who seek the privilege of finding Him "a present helper in every time of need."

MARRIAGES.

BUNTING—KINSEY.—At Race street meeting-house, Philadelphia, Third-day afternoon, Eleventh month 26th, under the care of the Monthly Meeting of Friends of Philadelphia, Joseph Bunting, Jr., son of the late Joseph M. and Elizabeth S. Bunting, of Darby, Pa., and Sarah, daughter of the late Dr. John and Margaret Kinsey, of Willistown, Chester county, Pa.

DEATHS.

BENTLEY (*Correction*). By inadvertence, the date of the decease of Richard T. Bentley, of Sandy Spring, was omitted in the notice published last week. He died Tenth month 29th, 1889.

BROWN.—At his home, near Fawn Grove, York county, Pa., Tenth month 3d, 1889, Milton Brown, in the 67th year of his age; a member of Deer Creek Monthly Meeting.

CLEMENT.—In Camden, N. J., Eleventh month 16th, 1889, William Lloyd Garrison Clement, son of the late Isaac and Mary S. Clement, and grandson of the late Joseph and Hannah Sharpless, of Philadelphia, aged 54 years, 11 months, and 5 days; a member of Woodbury Monthly Meeting, N. J. Interment at Upper Greenwick.

COATES.—At her home near Gatchelville, York county, Pa., Eleventh month 7th, 1889, Jehosheba Coates, in the 74th year of her age; a member of Deer Creek Monthly Meeting.

GARRETT.—At the residence of her son, Swarthmore, Pa., Eleventh month 25th, 1889, Eliza S. Garrett, in her 83d year.

HARLAN.—At his home, near Philadelphia, in the Eleventh month 25d, 1889. Amer. Harlan, aged 57 years, an esteemed member of Fall Creek Monthly Meeting of Friends.

HUNT.—On Fifth-day, Eleventh month 28th, 1889, at Chicago, Ill., whilst on a visit to her daughter, Jane C., widow of Richard P. Hunt, of Waterloo, N. Y., and daughter of the late William and Mary Master of Philadelphia, Pa., aged 77 years.

MAULE.—At Bristol, Pa., Eleventh month 27th, 1889, of pneumonia, Eleanor, daughter of John C. and Charlotte W. Maule, in her 17th year.

PENROSE.—At his residence, Horseshoe, Montgomery county, Pa., on Fourth-day, Eleventh month 27th, 1889, Jarrett Penrose, in the 75th year of his age. Interment at Horsham Friends' burying ground.

TAYLOR.—On the morning of Eleventh month 21st, 1889, after a long illness, Anne B. L., wife of Richard B. Taylor, of West Goshen, Pa.; a member of Birmingham Monthly Meeting of Friends. Interment at Friend's burial ground, West Chester, Pa.

She was the daughter of the late Robert Lamborne, of Kennett, and even as a child her thoughts and actions were dictated and defined by sincerity. Distrustful of her own powers, and physically timid, her moral bravery was of a high order. Possessed of a strong mind, it constantly sought sustenance, which was obtained from an extensive and varied course of reading.

On religious topics she preferred that which was decidedly devotional in character, expressing her desire that the youth of to-day be taught more of love and respect for things Divine, and that so far as the destructive, liberal criticism of the times tended to weaken or unsettle the sense of reverence, it was very painful to her. Orthodox in faith, she was ever patient and gentle towards others who might differ from her in belief.

Peacefully she has passed on to the great beyond, leaving pleasant memories in the hearts of many friends.

WOOD.—In Philadelphia, Eleventh month 29th, 1889. Ann H., widow of Alan Wood, in her 86th year.

WILLIS.—At his home, Poplar Ridge, Cayuga county, N. Y., on the 26th of Eleventh month, 1889, Josiah E. Willis, in the 84th year of his age; a member of Deer Creek Monthly Meeting, Maryland.

LOUISA W. EVERINGHAM.

At Brooklyn, New York, Eleventh month 18th, 1889, Louisa W. Everingham, widow of Joseph Delaplaine Everingham, in the 96th year of her age.

With the desire to give a short record of the memory of our beloved friend I write the following, although we sensibly feel that better than words can speak is the remembrance of her long and worthy life, her bright example of love, and kindness of heart. Not only as a friend and in the social circle but in her cherished home influences, she was the centre of cheerfulness and attraction. She was educated at New Britain School, and was a person of fine cultivated mind, was fond of reading, and she passed much of her time in this enjoyment, which made her the general friend for all ages, and by her loving spirit and evidences of gentle sympathy she was beloved by all who knew her.

Though having arrived at so great an age, yet her mind was bright and clear and continued up to the close, and within a half hour of her death she recognized one of her grandchildren who lived at a long distance, who had hastened to her bedside to say the solemn words. Her general health was good, and on present day she was able to

walk around the yard and had been very well able to take these walks alone. She remained in bed on Friday morning, in the evening of the 17th, and died on the 18th time. We always had to hear what Friends had contained her interest in the memory of the dead.

This dear friend lived on the same happy life years with a beloved and devoted daughter, Mary Hawley, at whose house she died and whose funeral took place. She leaves four unmarried daughters, eleven grand-children, twelve great grand-children and two great great grand-children; those who were comforted in being young witnesses of her loving work. She was born in Troy, N. Y., and was an intimate friend of our late beloved Sarah Hunt, with whom she corresponded up to within a short time of the death of the latter, she being a few months the elder. When alluding to her death, although she deeply felt the loss of her friend and contemporary, yet in the same sweet resignation with which she met all her joys and sorrows, she remarked, "Deborah Warren has gone, and Sarah has gone. Yes, gone home to rest, evidencing that they had found only a little while before, what she had long desired rest, only rest. It was the first time, four weeks ago, in many years, we saw change in her health; and the last few days of her life were marked by much suffering, but at the close, her prepared and gentle spirit, ready for the welcome messenger, was wafted peacefully away. How precious are the thoughts which will ever cluster round her memory; while her bright example of a long and well-spent life will be our incentive, and in a measure fill the void we feel in the removal of another loved land mark.

"God calls our loved ones, but we lose not wholly
What He hath given.

They live on earth in thought and deed as truly
As in Heaven."

S. M. H.

A VISIT TO BUCKS QUARTERLY MEETING.

AN easy journey of less than two hours from New York, over the Central R. R. of New Jersey, on what is known as the "Bound Brook Route" to Philadelphia, brings us to the pleasant village of Langhorne, where, about one mile from the station, in the outskirts of the old village, (long known as Attleborough), the meeting-house is situated. Approaching it from the village we are impressed with the beauty of the location, the ample and spacious grounds in the enclosure, and the solidity of the substantial, old stone building which has so long been devoted to the simple and spiritual worship of the Friends. The ancient grave-yard also claimed our notice, with the date 1734 still plainly legible on the stone wall surrounding it, and the large area of unmarked graves, without stone or mound to give evidence that beneath this smoothly mown surface lie worthies who, may we not fondly trust, have left their impress upon the lives of those who have followed them more lasting than the granite or marble could have done to perpetuate their memories? Yet the thought comes sadly. How many of these are now forgotten, as their graves;—passed out of memory even, except to the very few most immediately connected with them, whilst a stately few remain in the memory of the many.

The surest monument we can raise, the most enduring epitaph we can inscribe, is that written upon the hearts of our fellows, by lives of devotion to

God and usefulness to our fellow men. All others perish soon and are forgotten, and pass into the sea of oblivion as completely as the grass-carpeted meadow hides the dividing lines between grave and grave in this quiet resting place of the dead.

At the hour of eleven, on Fourth-day, the 27th, a small company of ministers and elders gathered through the storm and held sweet counsel together. A few Friends from other meetings met with them and it was felt to be a season of refreshment from the presence of the Lord. Many words of exhortation and counsel were given, and the hour of two, when the meeting adjourned, seemed quick in its arrival.

A neat and tasteful meeting room gives evidence that Friends are not neglectful in this particular, having lately thoroughly renovated and improved the same.

We enjoyed with many others the kindly welcome and generous hospitality of our friends John Wildman and wife, in their comfortable home, and on the morning of the day set apart as our National day of Thanksgiving, gathered at the Quarterly Meeting with our friends. The heavy rain of the night before had so swollen the streams that many Friends were delayed on their way, the Neshaminy Creek overflowing the roads so as to prevent a passage. But by 10.30 a. m., the house was well filled, and the holy quiet gave evidence to the truth of our profession of spiritual worship.

There were present many Friends from other meetings, Lydia H. Price and Enoch Hannum with minutes from their respective meetings; Phebe Griffith from West Chester; Watson Tomlinson and Nathaniel Richardson, from Eyberry; Robert Hatton and daughter from Haddonfield; Isaac C. Martindale and Samuel Sharp from Camden; Isaac Hicks, Robert S. Haviland, and Joshua B. Washburne from New York Yearly Meeting.

It was felt and expressed to be a precious season, and many testimonies were borne, to the edification and profit of those assembled. The meeting held about five hours, yet responded readily to the request of a Friend to have the shutters raised at its close, and ended, as it began, with religious service.

To those accustomed to smaller meetings, the presence of so large a body of thoughtful, intelligent Friends was inspiring and encouraging.

The night after the Quarterly Meeting was spent with our dear friends Charles and Harriet Kirk, from whose peaceful home shines forth the radiant brightness of loving, trustful hearts. It was a joy to mingle with these Friends and witness that, though the body may be weak because of infirmity, the spirit may be bright and strong because there abideth the Christian graces of Faith, Hope, and Love, and receiveth its strength from on high.

Leaving our friends' home in the early morning of Sixth-day, we arrived at the Abington school in time to be present at the opening exercises, and witness the array of bright-faced pupils entering upon their school work. Two hours were pleasantly spent in inspecting the buildings; the new part just completed adds much to the comfort and usefulness of

the school and is well planned; the rooms are bright, cheerful, and well lighted, and there is an air of home-like comfort not often found in boarding schools.

With pleasant remembrance of the kind attention received from those connected with the school, as well as the many kindnesses enjoyed throughout all our visit, we resumed our homeward journey, feeling that there is a value in Friendly association and Friendly ways that we at least, if not the world at large, cannot afford to lose.

R. S. HAVILAND.

Chappaqua, N. Y., Twelfth month 1.

For Friends' Intelligencer and Journal.

VISIT TO TWO STATE PENITENTIARIES.

On the 14th inst. (Eleventh month) Jonathan W. Plummer and Allen J. Flitcraft, of Chicago, and Anna M. Starr, of Richmond, visited the penitentiary at Michigan City, and were much impressed with the cleanliness, order, and humane treatment of the prisoners, as far as a single visit can be relied upon in forming a correct judgment. Warden Murdock received us kindly, and gave directions to have us shown wherever we wished to go.

There are seven hundred and forty prisoners here, all at work under the system of contract labor. They have a large woolen mill, dozens of knitting machines, a tailor shop, a shoe shop, a cooper shop, and a chair factory. Convicts are paid for over-work, and are permitted, if they choose, to send these earnings to their families. They have a fine library, and each convict being furnished with a catalogue, can have any book he may call for sent to his cell. They are allowed a light in their cells until 9 o'clock, and can read all day First-day if they wish. Their cells are clean and comfortable, each one having a shelf and looking-glass, and some of them decorated with pictures and fancy articles, really quite tasty and pretty. Have a large bath-room with fifty-five full sized bath tubs, where the men are marched in squads of fifty at a time every Seventh-day, until they are bathed. It takes the entire day to get through. The chapel is large and convenient, and their chaplain holds religious services every First-day. Every convict invited, but none compelled to go. Upon inquiring, ascertained that more than half attend. Hospital arrangements are excellent, drainage and sanitary condition good, as evidenced by only six out of 750, in the hospital. It was a sad sight as they marched lock step, fifty in number, to dinner, to behold many young faces not over fifteen and twenty years old, some of them good countenances, doubtless led into crime by evil associations, and the unlooked for penalty, oh, so fearful, so bitter! Their kitchen and laundry arrangements are extensive and convenient. They have plenty of good soup, meat, and bread for dinner, and are allowed coffee for breakfast and supper.

At Joliet, Ill., there were 1,300 prisoners. This immense building is of solid stone, and the area enclosed by the stone walls much more extensive and the grounds far more beautiful than those of Michigan City, but the officers were less obliging. The

warden being about starting to the depot to leave the city, we were turned over to an usher, who rushed us through so rapidly that we had little opportunity of examining the wonderful machinery of the manufactories as we desired. They had immense stone works, where sawing, chiseling, carving and polishing were all done by ingenious and powerful machinery; a barbed wire manufactory, saddle and harness department, chair factory, cooper shop, boot and shoe manufactory (very large) and a tailor shop. There is here a department of women prisoners, which we were much disappointed in not being able to see, as they were torn up house-cleaning, and refused to admit us. The hospital here was very fine, the rooms large, clean, and airy, and the convalescent room a thing of beauty, at least forty to fifty feet square, decorated with lovely wreaths of artificial vines and flowers creeping along the walls and twining about the centre chandelier, with plenty of sofas, lounges, and easy chairs. The dungeon opened into this room, but, there being a refractory prisoner locked up in it, we were not permitted inspection, as it makes them furious to be looked at whilst in solitary confinement. Their large library (the usher told us 23,000 volumes) the convicts here also have free access to, through catalogues in their cells. Bath room of sixty tubs, large chapel seating a thousand, over half of them attending religious services voluntarily, very First-day. The most perfect order and cleanliness reigns everywhere. The large number of young faces here also, made the heart sick, many of them frank, open faces not yet hardened in sin. The Prisoners' Aid Association hope to rescue these when their terms of sentence expire, by helping them find employment where their former record is unknown.

We also visited the Illinois training school for dependent boys at Norwood, nine miles out of Chicago (but lately admitted into the corporation), which is a place of thrilling interest, as here is where they stop the manufacture of criminals. The homeless waifs who sleep in coal barrels, empty ash barrels, stables, and under door steps, and obtain their food by beggary or petty thieving, are gathered up, and placed here under the care of a lovely Christian woman as matron, where they have a happy home, and are carefully trained in industry, morals, and religion, and when ready, placed in good homes, on farms, or among the citizens of Chicago or its suburbs. They have a broom factory and shoe shop, are sent daily to a good school across the way, and assist in the housework of the establishment. Have a library and every other privilege of a good home. Since its organization nearly two years ago, they have trained and placed in private families 202, and have 107 now in training, and the highly encouraging fact is that the demand for these well-trained boys exceeds the supply.

A young lady of wealth visiting the school, and noticing the bright, good countenances of the boys, sent them each a napkin ring and napkin, that they might the more readily be taught the home refinements. Another lady sent them 100 pillow shams, that their bed rooms might look neat and homelike, and it is not at all unlikely that they in my enter some

homes less refined in manners than themselves. A wealthy man of Chicago seeing the great blessing to the community of this work, and that their house was too small, made them a present of a fine, large farm twenty miles from Chicago, and the Ladies' Club raised means enough to build upon it a house, the dining room of which will seat 500, and dormitories for lodging the same number. This building is now begun, and should the weather be favorable, they hope to occupy it in Second month. The origin of all this was the calling together of a few of his friends by one of our benevolent Christian men. The work began in an old hotel with ten boys, increasing in three months to a hundred. Thus we see what a grand and extensive outcome is the result of simple obedience to duty in little things.

A. M. S.

NEWS OF FRIENDS.

BUCKS QUARTERLY MEETING.

This was held at Mill-town (now Langhorne), Eleventh month 28 h. It was large, and although quite late in gathering, was a highly favored meeting. Owing to the exceedingly heavy rain of the day and night previous, which caused the Neshaminy creek to overflow its banks and inundate the road leading from the uppermost meetings (an occurrence which had not happened on quarterly meeting day for the past 60 years, if ever before), many who usually arrived in good time were unavoidably late. The meeting was about half gathered when Robert S. Haviland, of Chappaqua, N. Y., was moved to appear in fervent vocal supplication to the Divine Being, which brought a great solemnity over the assembly, which continued throughout the day. Lydia H. Price, who was present with a minute from Birmingham Monthly Meeting, was the first to appear in vocal ministry; she was followed by Robert Hatton, Nathaniel Richardson, Phoebe Griffith, Robert S. Haviland, and Isaac C. Martindale, whose different discourses all tended in the same direction,—encouraging the people to more faithfulness to the Divine monitor, and thankfulness for the manifold blessings we are favored with. By this time the large meeting-house was well filled and a solemnity prevailed that could sensibly be felt, which continued to the close of the meeting for worship. After the partition was closed and the business was about to commence, Isaac Hicks, of Westbury, N. Y., who had sat quietly up to this time, expressed a concern to visit the women's meeting. Liberty was granted in both branches, and R. S. Haviland feeling moved in the same direction, a Friend was appointed to accompany them, and L. H. Price having a concern to visit men Friends, the same liberty was granted her, she being accompanied by her companion, Phoebe Griffith. The services of all were very interesting and satisfactory, as could plainly be felt by the solemnity which covered the assembly.

The answers to the first query disclosed a state of great weakness in the attendance of our meetings for Divine worship, particularly on week days, which brought an exercise over the mind of Enoch Hannum, who was present with a minute from Fallow-

field), and, up to this time had not spoken, but was now enabled to relieve his mind, and imparted good advice, which it is hoped will be profitable. Samuel Sharp, of Camden, felt called upon to labor in the same direction. The subject of Bristol Meeting having informed that they had indefinitely suspended their week-day meetings caused much exercise, and the subject was referred back to them for further consideration.

When the business was nearly gone through with, Robert Hatton opened a concern to have the partitions opened, as he felt that he had something to communicate to both men and women Friends, and although the meeting had then been in session about four hours, there seemed to be a willingness to grant his request. His communication was extended; the hour being late. Robert S. Haviland being obedient to a Divine call, appeared in a very fervent vocal supplication, which caused a deep solemnity over the assembly, and the meeting closed with the feeling that we had had cause for great thankfulness.

I. E.

—The indulged meeting held at Fair Hill Meeting-house, Philadelphia, under care of a committee appointed by Green street Monthly Meeting, continues to be a point of interest to Friends, and is winning the favor of the people of the neighborhood, though not yet in the measure that it is believed might be gained, were an effort made to give information of the desire Friends feel to have the company of more of the residents in that vicinity at these meetings. This subject is now claiming the attention of the Committee. The First-day School is large, and appears to be in a flourishing condition. It is composed of scholars whose parents are connected with various other religious organizations.

SWARTHMORE COLLEGE NOTES.

ACTING President Appleton and Professors Beardsley, Rolfe, Holcomb, Smith, Hoadley, Weaver, and others from the College attended the sessions of the College Association of the Middle States and Maryland, in Philadelphia, the latter part of last week. A paper by President Magill was read in the meeting by Professor Smith. Dr. Magill was one of the founders of the Association and greetings were sent to him by a vote of the members.

—The Sophomore classmen scored a signal triumph in athletics on Seventh-day last, by defeating the Sophomore class of the University of Pennsylvania at foot-ball on Whittierfield. The result was Swarthmore, 18 points to University, 0.

—As announced last week, William Jones, Secretary of the International Peace Union, lectured before the students on Sixth-day evening on his personal experiences in the Franco-Prussian war. His lecture was much enjoyed. With his wife he is just now on his way back to England from a trip around the world. Silas S. Neff, of the National School of Oratory, lectured on Third-day evening on "Vocal Culture." Mr. Neff came under the auspices of the Delphic Society.

—Prof. Furman has fixed upon the evening of the

17th inst. as the date for the Shakespearian recitations by the Senior class.

—The Board of Managers met on Third-day in regular session. Emmor Roberts presided at the meeting of the Executive Committee, and in the absence of Joseph Wharton, the Board was presided over by James V. Watson. One of the most important steps taken by the Board for years was the adoption of a resolution to do entirely away with the Preparatory School and to increase the number of classes in its college department to five, leaving one "sub-collegiate class." This step is hailed with great pleasure by its students and alumni. It was also decided to give Seniors and Juniors two rooms in the dormitories for each two persons, instead of one, as at present. The front room will be used as a study and the back one for sleeping. A committee was appointed to consider the vacancy in the presidency of the college, as Dr. Magill's resignation takes effect in sixth month next.

S.

MONTHLY MEETING VISITS.

[We append some extracts taken from the annual report of Birmingham, (Pa.), Monthly Meeting's Visiting Committee, giving the result of one year's work. This may seem a small service, yet it has its place in more strongly uniting the members of a meeting, if performed in a spirit of love, and we should be glad to hear of similar work in other places.—EDS. INTELLIGENCER AND JOURNAL.]

In the prosecution of our work many visits have been made, one member of our committee alone having paid fifty-seven calls, under the requirements of her appointment. Some of these have been to Friends who have recently come among us, and perhaps none value more the kindly notice of our meeting than such as feel themselves strangers, and yet those who, through age or infirmity, cannot come to us, seem at times, really gladdened by the assurance of remembrance which the Committee proves, especially those who, being poor in worldly goods, feel more keenly any neglect, and are too humble to assert themselves and to partake of the good-will of Friends, which is theirs by right; to such the cheer and uplifting which comes from the feeling that others take an interest, is peculiarly grateful. The visits made by women alone, probably aggregate one hundred. However, the spirit of visited and visitors must be of more importance than the mere number of people seen, and in some cases especial satisfaction has been felt on both sides.

Referring to their absent members the report says: "Our Recorder has sent to nearly fifty absentees a copy of our Directory, and accompanied each with a friendly letter, telling of improvements, etc., about the meeting-house premises. To some twenty-five of these letters, he received satisfactory acknowledgments, but there are, possibly, a dozen of our absent members whom it is difficult to reach, who manifest no value for their membership.

The INTELLIGENCER AND JOURNAL has been supplied to several members, though the sum appropriated by the meeting for this purpose has not been exceeded. Ours is said to be a "stiff" and "critical" meeting. Can we not, by manifesting individual in-

terest, secure to ourselves a better name? If to do so depends largely upon a committee, should we not be earnestly concerned to distribute its work among willing and interested laborers? Are not "the fields white unto harvest"? If the work must still be performed by the few, let us see to it, that the few be such as have at heart the object of the committee, else how can the pursuit be blessed?

EDUCATIONAL.

CONFERENCES OF FRIENDS IN NEW YORK.

The following circular, issued by the Committee on Education of New York Yearly Meeting explains itself:

A Series of Educational Conferences will be held under the auspices of the New York Yearly Meeting's Committee on Education, in the Library Room of Friends' Seminary, Sixteenth Street and Rutherford Place, New York.

It is the purpose of these Conferences to awaken a more general interest in the schools under the care of Friends; to foster a spirit of cooperation among the teachers connected with these schools, and to afford an opportunity for those interested in educational matters to present and consider topics connected therewith.

The first Conference will be held on Seventh-day, Twelfth month 7th, 1889, beginning at half-past ten a. m.; followed by an afternoon session from two to four o'clock. A lunch will be provided in the building for those in attendance. A cordial invitation is given to Friends and others interested to be present.

The following is the Programme of Exercises for the first meeting.

Morning Session, 10.30 a. m.

"The Educational Needs of Friends." George L. Maris, Friends' Central High School, Philadelphia, Pa.

Discussion.

11.30 a. m.

"The Distinctive Mission of Friends' Schools." Elizabeth S. Stover, Friends' Seminary, New York.

Discussion.

Afternoon Session, 2 o'clock.

"The Physical Limitations of the Student as a Factor in Education." James E. Russell, Chappaqua Mountain Institute.

Discussion.

3 o'clock.

"The relation of the Teacher's Work to the Individuality of the Pupil." John S. Lyon, Friends' Seminary, New York.

Discussion.

By direction of the Committee.

WM. M. JACKSON, Clerk.

New York, Eleventh month 21st, 1889.

THE FACULTY AT SWARTHMORE.

THE Swarthmore correspondent of the Philadelphia Press supplies the following personal details:

The members of the Swarthmore faculty of instruction have received their credentials from many institutions. President Magill, who is now on a year's absence in Europe, was a student at Yale, but left there to take advantage of the liberal elective system at Brown University, at Providence, where he graduated and received his degrees of A. B. and A. M. Haverford College a few years ago added LL. D. to his titles.

Acting President Appleton is a Harvard A. M., and last year was given a degree of Ph. D. by Swarthmore.

Professor Beardsley started in on a course at Bowdoin College, but later entered Rensselaer Polytechnic Institute, at Troy, and has a C. E. degree from there, with a Swarthmore Ph. D. given him last year.

Professor Cunningham was a student at Vassar but did not graduate. She afterward spent several seasons of study at Cambridge and other English universities, and was given a Swarthmore Sc. D. two years ago.

Professor Rolfe is an Amherst master of arts.

Professor Holcomb has a Swarthmore master of letters degree and a Johns Hopkins Ph. D.

Professor Smith is a Yale graduate and a master of arts. He is one of the four Phi Beta Kappa men on the faculty.

Dr. Day received his title at Johns Hopkins, and Dr. Trotter at the University of Pennsylvania.

Professor Hoadley has the two widely separated degrees of civil engineer and master of arts, both from Union College.

Professor Bancroft was instructed at the Massachusetts Art School.

Professor Price has a Swarthmore degree.

Professor Weaver is a Harvard A. B. and a Swarthmore A. M.

Dr. Shell comes from the University of Pennsylvania, and Dr. Peck from the Philadelphia Women's Medical College.

Professor Furman is a bachelor of oratory from the National School of Oratory.

Of the instructors, Mr. Williams is a Mercer College graduate, and will receive a Ph. D. from Johns Hopkins this year, and Mr. Cawley is a Swarthmore B. S.

FROM SANDY SPRING: CORRECTION.

EDITORS INTELLIGENCER AND JOURNAL:

I AM much mortified that such a gross representation of facts should have found its way into your paper as that copied from the Baltimore Sun about "Longevity and Stature at Sandy Spring." Only yesterday I read in the Sun an article which had been sent to the editors from women's branch of our Yearly Meeting,—*"An Appeal to the Public Press,"*—that meeting being concerned about the demoralizing influence of much that appears in their columns; and here I find in an extract from the same paper so exaggerated as scarcely to bear the semblance of truth. Few of the names given are of people who have lived at Sandy Spring, and but one even attained to the age of a hundred, Rebecca Russell, who died about two years ago; and hardly any reached the stature or weight mentioned. When we read the article in the Sun we knew it was a most fabulous account, but supposed it intended for a silly joke which no one could be so credulous as to believe. In justice to Sandy Spring and to FRIENDS' INTELLIGENCER AND JOURNAL, I think it ought to be corrected, as there is scarcely an item in it which is true.

E. G. T.

Sandy Spring, Md.

[We are sorry, of course, to have printed an inaccurate statement. As it was so definite concerning persons and places, and came from a journal claiming to be particularly careful and accurate, we thought ourselves safe in reprinting what, (presuming it true), was a highly interesting account.—EDS. INTELLIGENCER AND JOURNAL.]

THE LIGHTHOUSE.

HIGH lifted on the island cliff
Its lantern fronts the sea,
And sendeth forth a fine, straight ray
Of dazzling light to me—
A slender line of shimmering shine
Across night's mystery.

It is the path set for my eyes
To travel to the light
And warm their darkness in the blaze,
And be made glad and bright.
None other may catch just that ray,
Or have the self-same sight.

And yet, a hundred other eyes
Bent on that central blaze,
Find each its separate, shining path,
Its line of guiding rays;
And all eyes meet in concord sweet
By all these differing ways.

No voice shall say: "The Light is mine.
All other eyes are dim!"
No hand the glory hold or hide
Which streams to ocean's rim,
None claim or seize one ray as his
More than belongs to him.

O Light of Truth, which lighteneth all,
And shineth all abroad,
What favored soul or souls shall say,
"Mine is the only road."
Each hath his own, to him made known,
And all lead up to God.

—Susan Coolidge, in *The Independent*.

WHEN.

If I were told that I must die to-morrow—
That the next sun
Which sinks, should bear me past all fear and
sorrow
For anyone,
All the fight fought and all the journey through,
What should I do?

I do not think that I should shrink or falter,
But just go on
Doing my work, nor change, nor seek to alter
Aught that is gone;
But rise, and move, and love, and smile, and pray
For one more day.

And, lying down at night for a last sleeping,
Say in that ear
Which harkens ever, "Lord, within thy keeping,
How should I fear?"
And, when to-morrow brings Thee nearer still,
Do Thou Thy will."

I might not sleep, for awe; but peaceful, tender,
My soul would lie
All the night long; and, when the morning splendor

Flashed o'er the sky,
I think that I could smile, could calmly say,
"It is His day."

But if a wondrous hand from the blue yonder
Held out a scroll
On which my life was writ, and I with wonder
Beheld unroll
To a long century's end its mystic clew,
What should I do?

What could I do, O blessed Guide and Master,
Other than this—
Still to go on as now, not slower, faster,
Nor fear to miss
The road, although so very long it be,
While led by Thee?

Step by step, feeling thou art close beside me,
Although unseen;
Through thorns, through flowers, whether tempest
hide Thee
Or heavens serene;
Assured thy faithfulness cannot betray,
Nor love decay.

I may not know, my God; no hand revealeth
Thy counsels wise;
Along the path no deepening shadow stealeth;
No voice replies
To all my questioning thoughts, the time to tell;
And it is well.

Let me keep on abiding and unfearing
Thy will always,
Through a long century's ripe fruition
Or a short day's.

Thou canst not come too soon; and I can wait
If thou come late.

—Selected.

From *The American*, Philad'a.

BLUE-JAYS.

"WHAT is the most characteristic feature of November?" asked a shivering friend from town, as we stood with our backs to the rain-laden winds. "Birds and blossoms," I replied. Of course he thought me trifling with him, and I asked if he expected me to say "rheumatism."

What have birds and blossoms to do with such a dreary outlook? This was evidently the tenor of my friend's thought, although he said nothing more. To him, as it was raining hard, the world was unutterably dreary, and he longed for the crackling blaze upon the andirons which he knew awaited us. In a few moments, as we skirted a bit of woodland, I remarked, "Blue-jays are a feature of this month. See! here are half-a-dozen!" They were very tame and full of merry ways. They bunted the leaf-strewn ground and played bo-peep among the lower branches of the oaks. They screamed, laughed, chattered, and at times uttered that peculiar flute like note which sounds so strangely in the woods, particularly when the silence of mid-winter broods over all. My friend forgot that it was a dull November day.

These dandies in their cerulean suits can do no mischief now and I love them for their vivacity. Their cunning shows out continually, and it needs not the dictum of the naturalist to learn that they

are consins of the crow. That they lived so largely upon eggs during May and June told against them at the time, and they were then the incarnation of fiendishness. Let the dead past bury its dead. One cannot be happy who is ever cherishing dislikes, and I find the blue-jay of the present sufficient unto November days. For my part he is right welcome to the woods as he finds them. While the six merry jays were before us, I picked a violet, a blueet, and a daisy, and offered them as proof that November blossoms were not a myth. There are, I assured my friend, more than a score of flowers to be found, by a little careful searching. What then, if summer's glory has departed; if her skies are no longer overhlea; if her songs no longer fill the air; if the odor of her blossoms no longer scent the breeze; is it not a poor wheel that cannot spare one spoke? Nature is not so niggardly with her gifts, in November, as summer tourists, for instance, are apt to suppose. November is comparatively bare, it is true, and positively ragged; but it is not always safe to judge a man by his coat.

A jay is something more than a bird with blue feathers. October 23, 1889, it snowed violently for three hours and the ground was white. Masses of snow too, clung to the limp foliage that remained, and gave a curious aspect to the wooded hillsides. It was then that the jays were moved to unwonted activity and I saw them at their best. The snow puzzled them, and being intent upon their own affairs, they paid no heed to my proximity. "What does this mean?" was the question, I fancied each asked of his comrade, and then a dozen would attempt explanation at the same time. Such a chattering! Although the air was thick with snow, it did not muffle the harsh sounds; noises as distracting as cracked sleigh-bells. A great company of these birds had been for a week in the hillside woods, sociably inclined but not intimately associated. The snow brought them together, and after an hour of vain discussion, as a compact flock, they left the woods and flew in a direct line for a cluster of cedars half a mile away. It appeared to me that some one of these birds made the suggestion that the cedars were a better protection than half-leaved oak woods, and all took up with it. At any rate, that is where the birds went and remained until the snow-squall was over. Of course, it might have been a mere coincidence, and all their chattering mere meaningless noise, and so, to the end of the chapter; but I am not disposed to view bird-life from such a stupid standpoint. It may suit the "feather-splitters," as Burroughs aptly calls them, to look upon birds as mere conveniences for their nomenclatorial skill, but he is happy who escapes them and seeks directly of each bird he sees to know what thoughts well up from its little but lively brain. Now, I have never seen but upon this occasion, a large number of blue-jays, a dozen or more, fly in a compact flock. Here, on the home hillside, and I know nothing of them elsewhere, they wander about, during the autumn, in companies, but always in an independent manner, as if a very general knowledge of the company's whereabouts was quite sufficient; but to-day, such a method would have been impracticable. The air was too thick

with snow, and therefore, predetermining the direction, they gathered upon the same tree, and then, when closer together than ever I saw red-winged black-birds, off they flew. To say that this simple occurrence does not prove beyond question a wide range of mental faculties, is to deny that two and two make four. Probably the unhappy growler who descants upon the all essential importance of "the element of accuracy," which no one denies, will find this incident contrary to the officially recorded conditions of jay life and insist that I saw red-winged black birds and mistook them.

An ornithologist once wrote to me: "some of your birds in New Jersey have strange ways," but this is not true in the sense he intended. Birds about home are simply, here, as elsewhere, wide-awake, cunning, quick to scent danger, and wise enough to suit themselves to their surroundings. This latter fact goes far to explain many a point, for it must be remembered that it is the country that decides the bird's habits, and not that the latter are a stereotyped feature of the country. The same people may dwell among the hills and upon the sea-coast, but how different are the mountaineer and the 'long-shore man! Concerning birds, the difficulty lies in the fact that so many people, even naturalists, are too little concerned with birds' ways, and rest content with a mere knowledge of their names. I once attended, with a prominent naturalist, an ornithological meeting. There were a score of bird-men present, and very soon they fell to egg-measuring! My companion fell asleep!

But what of the flock of blue-jays?

They had not long to wait for clearing weather. Soon the sun shone brilliantly and Nature for a brief hour wore a strange garb. Many a tree was yet green, many were brilliant with gold and crimson, and all were flecked with masses of glistening snow. It was a splendid spectacle, a swiftly falling pageant, that, like a glowing sunset, is remembered long after it has passed away. And how the lively blue-jays rejoiced at the return of the sunshine! "Now for the oak woods again," I could hear them scream, even though so far away, and sure enough, one after the other came trooping back to the same trees whereon they had sported when the snow commenced. How differently now was their every movement from the time that they counselled together and took refuge in the cedar. Now again, they are blue-jays that every country lad well knows; when I saw them but a short time ago, they were almost as strangers to me. It is something to have an outing during an October snow-storm; when the next comes, let me have blue-jays again for company.

It was two weeks later when I next saw the blue-jays, and under widely different circumstances. November had accomplished much in the way of marring the fair face of nature. Scarcely a leaf was left upon any tree except the oaks, and the damp mist that veils the ground was during November, was never denser, gloomier, and more forbidding than on the eighth of the month. Long before sunrise I was out of doors, and not a bird greeted me until I came to the creek bank when out from gloomy depths came

the shrill scream that of itself is hideous, but at such a time almost musical. I tried in vain to locate the sound, but could not while the fog lasted; but this mattered little. All other birds seemed depressed and moody. Not a sparrow chirped until the sun made the world a little more distinct; not even a robin, if there were any about, cared to salute such a sunrise. It was something, then, to have one brave heart making merry, and I shall long thank the jays for cheering a lonely traveler.

An hour later, the birds thought better of the day, and every hedge-row rang with merry music, but the pleasure of the earliest sounds I had heard was not forgotten when their continuing screams marred the melody of red-birds and foxie finches. But why were they so persistently noisy, and so confined to one spot? My curiosity was aroused and I threaded a tangled brake to my sorrow. In a cluster of sassafras sprouts were several jays and all intent upon an object upon the ground. I hurried on, held back by green-briars that were really my friends, and finally reached the spot. By mere accident I escaped a serious encounter with our most treacherous if not dangerous mammal. A skunk had caught a blue-jay and scattered its feathers far and near. The victim's companions were bemoaning its fate or berating the murderer, I know not which, nor did I pause to determine. I assume the former as more creditable to them and so score another point in the favor of these malignant birds.

What though there are violets still in the meadows, nature is rugged now; and among the gnarly branches of the oaks, better the shrill cry of the jay, as the north wind sweeps by, than the soothing melody of summer's tuneful thrushes. November needs all the help that she can get to escape our malediction; and the cry of the blue-jay prompts me, at least, to be charitable.

CHARLES C. ABBOTT.

Near Trenton, New Jersey.

JOSEPH BRANT, THE MOHAWK CHIEF.

IN the summer of 1778 this horrible border warfare became the most conspicuous feature of the struggle, and has afforded themes for poetry and romance, in which the figures of the principal actors are seen in a lurid light. One of these figures is of such importance as to deserve especial mention. Joseph Brant, or Thayendanegea, was perhaps the greatest Indian of whom we have any knowledge; certainly the history of the red man presents no more many-sided and interesting character. A pure-blooded Mohawk, descended from a line of distinguished sachems, in early boyhood he became a favorite with Sir William Johnson, and the laughing black eyes of his handsome sister, Molly Brant, so fascinated the rough baronet that he took her to Johnson Hall as his wife, after the Indian fashion. Sir William believed that Indians could be tamed and taught the arts of civilized life, and he labored with great energy, and not without some success, in this difficult task. The young Thayendanegea was sent to be educated at the school in Lebanon, Connecticut, which was afterwards transferred to New Hampshire and developed into Dartmouth College. At this school he not only

became expert in the use of the English language, in which he learned to write with elegance and force, but he also acquired some inkling of general literature and history. He became a member of the Episcopal Church, and after leaving school he was for some time engaged in missionary work among the Mohawks, and translated the Prayer Book and parts of the New Testament into his native language. He was a man of earnest and serious character, and his devotion to the church endured throughout his life. Some years after the peace of 1783, the first Episcopal church ever built in Upper Canada was erected by Joseph Brant, from funds which he had collected for the purpose while on a visit to England. But with this character of devout missionary and earnest student Thayendanegea combined, in curious contrast, the attributes of an Iroquois war-chief, developed to the highest degree of efficiency. There was no accomplishment prized by Indian braves in which he did not outshine all his fellows. He was early called to take the war-path. In the fierce struggle with Pontiac he fought with great distinction on the English side, and about the beginning of the War of Independence he became principal war-chief of the Iroquois confederacy.

It was the most trying time that had ever come to these haughty lords of the wilderness, and called for all the valor and diplomacy which they could summon. Brant was equal to the occasion, and no chieftain ever fought a losing cause with greater spirit than he. We have seen how at Oriskany he came near turning the scale against us in one of the most critical moments of a great campaign. From the St. Lawrence to the Susquehanna his name became a name of terror. Equally skillful and zealous, now in planning the silent night-march and deadly ambush, now in preaching the gospel of peace, he reminds one of some newly reclaimed Frisian or Norman warrior of the Carolingian age. But in the eighteenth century the incongruity is more striking than in the tenth, in so far as the traits of the barbarian are more vividly projected against the background of a higher civilization. It is odd to think of Thayendanegea, who could out yell any of his tribe on the battle field, sitting at table with Burke and Sheridan, and behaving with the modest grace of an English gentleman. The tincture of civilization he had acquired, moreover, was not wholly superficial. Though engaged in many a murderous attack, his conduct was not marked by the ferocity so characteristic of the Iroquois. Though he sometimes approved the slaying of prisoners on grounds of public policy, he was flatly opposed to torture, and never would allow it. He often went out of his way to rescue women and children from the tomahawk, and the instances of his magnanimity toward suppliant enemies were very numerous.—*John Fiske, in Atlantic Monthly.*

THE divine training of humanity begins with, and leads through the human, in order to end in the divine. Out of love of children for parents, the divinest of all analogies, there arises the love toward God. "He that loveth not his brother whom he hath seen, how shall he love God whom he hath not seen?"—*Prof. Allen's "Jonathan Edwards."*

VACATION SCHOOLS.

One of the most important results served by the well-organized vacation schools is found in the fact that the student is called on to pursue for one or two months a single subject of study, to which he gives his entire attention. In the ordinary curriculum of our schools, even those of professional grade, the scholar is required to subdivide his time; rarely can he give the whole of his attention for even a single day to one department of work. Generally, it is nine to ten grammar, ten to eleven geometry, eleven to twelve history, etc. There is no chance for connected thought; indeed, the system appears as if designed to make all orderly and vigorous inquiry impossible. The youth learns from it alacrity, the power of swiftly changing from one line of thought to another, which may be worth something as a preparation for the burly-burly of the outer world; but it fails to give him the far more precious training in the habit of patient devotion to one appointed task. The result is that the most of our college graduates have never done a single piece of thoroughly consecutive work, such as they will be called on to perform in the walks of life to which they must betake themselves.

The profit of scientific training cannot be had through work done in the scattered hours which in a way suffice for the other forms of training. The work the student has to do in natural science must be done in the laboratory or the field; it must be done continuously, all day and from week to week, while the student can attain to the profit which awaits the true naturalist. To all who adequately conceive the need of such work, the hour-here-and-there system for any other than purely informational purposes is preposterous. The student may gain a measure of information concerning botany, geology, or other branches of natural science from occasional lectures or laboratory exercises, but the training he receives is not worth anything. The elder Agassiz was used to say that the student of natural science must take time to "let the facts soak into him," and he considered a month a short time for even a small body of facts to penetrate in this manner into the student's mind: all teachers of such learning will agree with that master in this opinion. The only chance for this consolidated work which our school system affords to the new education is found in the vacation periods. By making avail of those parts of the year which cannot be made to serve the needs of the humanities, science may hope to win a firmer place in education than can be obtained in any other way.—*Prof. N. S. Shaler, in Atlantic Monthly.*

NEWS AND OTHER GLEANINGS.

Our friends Mahlon K. and Harriet W. Paist, of Philadelphia, returned on the 26th ult. from their trip to the Pacific Coast, having been absent since the Seventh month. They went as far north as Chilkut, in Alaska, and southward made an excursion into Mexico. Returning from Alaska in Eighth month, their steamer ran on the rocks, in the night, and was entirely wrecked. All on board got to land, however, and after remaining five days, without special discomfort or danger, were rescued by a passing steamer, for which they had been waiting. Mahlon speaks

highly of the Canadian Pacific road, which they took, going west from Toronto to Vancouver. The cars are very comfortable, the officers attentive, and the trains run very regularly, the one they took reaching the Pacific Coast precisely on schedule time. The eating stations allow half an hour, and the fare is good. Returning from San Francisco our travelers came over the Central Pacific to Ogden, and thence by Salt Lake City through the Rocky Mountains to Denver,—the passage of the mountains by this route affording some of the grandest scenery in the world.

—Our friend George Watson, of Philadelphia, and his wife, who went on a tour to Europe some months ago, are still abroad, and his brother, J. W. H. Watson, of Newport, Del., sailed to join them, in the North German Lloyd's steamer, on Fourth-day of last week. George's wife has been extremely sick, having been taken at first, while traveling on the Continent, with pneumonia, and after a partial recovery, having again been seriously ill. (The latest accounts report her improved, but George also has been unwell.) They have been for some time at Salzburg, Austria, where Joseph expected to find them.

—Silk thread, says *Sanitary News*, is soaked in acetate of lead to increase its weight; and persons who pass it through the mouth in threading needles, and then bite it off with the teeth, have suffered from lead-poisoning.

—The Anti-Slavery Conference now being held in Brussels is discussing a proposal to establish military stations in the interior of Africa with sufficient force to overcome slave hunters.

—The Annual Report of the General Superintendent of the Life Saving service shows at the close of the fiscal year, the establishment embraced 225 stations, 172 being on the Atlantic, 45 on the lakes, seven on the Pacific, and one at the Falls of the Ohio, Louisville, Kentucky.

—We are advised that the proposed Museum of American Archeology of the University of Pennsylvania is now an assured fact. A very considerable collection has been obtained, commodious rooms have been assigned for its proper display, and active measures are being taken to bring the matter before many who can materially aid in the advancement of the enterprise. Dr. C. C. Abbott, who has for so many years been identified with the Peabody Museum of American Archeology, at Cambridge, Mass., has been appointed the curator.—*The American.*

—The announcement that the infliction of corporal punishment on peasants is to be abolished in the Baltic provinces of Russia is another sign of the steady progress being slowly made by this great empire. The liability to corporal punishment infallibly prevents a man from acquiring a proper sense of self-respect. It is doubtful whether such punishment ought ever to be inflicted on adults, even in the case of the most brutal criminals. But to employ the lash for petty offenses, or as a means of extracting rent or taxes from simple peasant folk, is a distinct mark of barbarism. Unfortunately it is impossible to get rid of this primitive remedy in a day; but it is encouraging to find that the Russian government is making an effort to remove from the empire one of its worst blots.—*Pall Mall Gazette.*

CURRENT EVENTS.

The Congress of the United States assembled at Washington on the 2nd inst. Thomas B. Reed, of Maine, was elected Speaker of the House of Representatives. The annual message of the President was presented and read the next day.

DESTRUCTIVE fires, attended by loss of life have occurred in several cities. In Lynn, Mass. on the 26th ult., a fire destroyed many business places, including shoe man-

ufactures, etc., causing a loss of three to five millions of dollars. It is estimated that seven thousand people were thrown out of employment. On the 27th ult., a fire in Boston, burned over two acres of business blocks, causing a loss estimated at \$4,000,000. The fire raged for six hours. Five persons lost their lives. Late on the night of the 30th ult., the building of the *Tribune* newspaper, at Minneapolis, was burned, and ten to fifteen persons were burned or killed by the falling. In Philadelphia, early on the morning of the 2d instant, a store and bakery, occupied by Gustavus Gross, at Second and Huntingdon streets, was burned, and seven persons, including four women and children, lost their lives.

THE subscriptions for the World's Fair in New York exceeded the five millions point on the 30th ultimo, the total being now \$5,028,942. The World's Fair Committee decided to continue to receive subscriptions. The cities of Chicago, St. Louis, and Washington, all claim the Fair, in competition with New York, and the matter must be decided by Congress.

It is announced that the President and his wife will leave Washington on the 6th instant, for Chicago, to attend the opening of the Chicago Auditorium. They will be accompanied by a number of prominent persons.

Two shocks of earthquake were felt in Alton Bay, New Hampshire, early on the morning of the 2d instant. Crockery and glassware were broken, and people rushed from their houses. The hull on a steamer in the middle of the bay was rung.

THE temperature fell 20 degrees along the middle and upper Hudson Valley, on the 2d instant, and several inches of snow fell at different points. Heavy snows fell last week in Canada, fourteen inches being reported from Montreal.

THE Department of State is informed by our Minister in Persia of the increase of cholera in that country, and of the proposed establishment by the Russian authorities at Baku and Julfa of a general quarantine against arrivals from Persia.

NOTICES.

A portion of Philadelphia Quarterly Meeting's Committee to visit the smaller branches, will attend the meeting to be held at Haverford, on First-day morning, Twelfth month 8th, 1889, at 10 o'clock.

Train leaves Broad street station at 8.45 a. m., for Wynnewood station. Returning, leave Wynnewood station at 11.56 a. m., 12.40, and 1.56 p. m.

CHAS. E. THOMAS, Clerk of Committee.

Lydia H. Price expects to attend the First-day morning meeting at West Philadelphia, on the 8th inst., and Girard avenue at the usual hour in the evening of the same day.

The regular monthly meeting of Young Friends' Association will be held Second-day evening, the 9th inst., at 8 o'clock.

All Friends and others interested in the objects of the Association are invited to attend.

A Religious Meeting will be held at Friends' Home for Children, 4011 Aspen street, West Philadelphia, First-day, Twelfth month 8th, at 3 p. m.

A cordial invitation is extended to all interested persons.

On behalf of committee.

SARAH T. ROGERS, M. D.

The Evening Meeting of Friends, in Philadelphia, on First-day, is now held unitedly (Green street, Race street, and Girard avenue combined), and during Twelfth month will be at Girard avenue at 7.30 o'clock. Let all our

members feel that it is their meeting individually, and not only attend themselves, but invite others to do so.

Friends' Charity Fuel Association, stated meeting this (Seventh-day) evening at 8 o'clock, in Race street parlor. Wm. HEACOCK, Clerk.

The Burlington First-day School Union will meet at Mt. Holly, Seventh-day, Twelfth month 14th., at 10.30 a. m. All interested Friends cordially invited.

WM. WALTON,
SALLIE T. BLACK, } Clerks.

Quarterly Meetings in Twelfth month will occur as follows:

7. Whitewater, Maple Grove, Ind.
9. Prairie Grove, Marietta, Ia.
12. Haddonfield, Haddonfield, N. J.
15. Fishing Creek, Millville, Pa.

Circular Meeting in Twelfth month as follows:
15. Roaring Creek, Pa., 2 p. m.

Philadelphia First-day School Union will meet on Sixth-day evening, Twelfth month 13th, at 8 o'clock, in Green street meeting-house, Fourth and Green streets. The subject of promotion in our First-day Schools will be discussed. Also exercises by Green street First-day School. All interested are invited to attend.

DAVID L. LUKENS,
SARAH M. HOLCOMB, } Clerks.

Nebraska Half-Year's Meeting.—Nebraska Half-Year's Meeting of Friends will be organized at Lincoln, on the first Second-day in the Twelfth month, (Twelfth month 2d.), 1889, at 11 o'clock a. m. The meeting of Ministers and Elders on the Seventh-day preceding, at 2 p. m. Meeting for worship on First-day at the usual hour.

The committee of Illinois Yearly Meeting are expected to be present to assist in the organization.

Isolated Friends of Nebraska and Kansas are especially invited to meet with us on this occasion.

Any further information will be furnished by either of the undersigned:

Moses Brinton, Lincoln, Neb.; Charles P. Walter, Lincoln; J. Russell Lownds, Lincoln; Joseph Webster, Monroe, Platt Co., Neb.; Isaiah Lightner, Matson, Platt Co., Neb.; George S. Truman, Genoa, Nance Co., Neb.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. Sold only in cans. ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

FRIENDS' INTELLIGENCER AND JOURNAL.

INTELLIGENCER,
Vol. XLVI, No. 50. }

PHILADELPHIA, TWELFTH MONTH 11, 1889.

{ JOURNAL,
Vol. XVII, No. 881.

PRAY MUCH.

Pray much! God loves a sweet, dependent spirit

That owns itself too weak to walk alone.
No plex goes forth but listening angels hear it,
Sometimes in ways mysterious and unknown
Their answers come; but surely as the light
Hears the dawn calling, and dispels the night,
So do those blessed messengers on high
Hear when we cry.

Pray much! The friends with whom we hold
communings,

Exert a subtle influence hour by hour.
Furn often, then, with soulful importunings
To those celestial comrades. By their power
Thou shalt be girded for the times of strife
That try the strength of every human life;
Thou shalt become a victor in the field
Where others yield.

—*Elta Wheeler Wilcox.*

OLD YEARLY MEETING ADVICES.

SOME Advices given forth from time to time by the Yearly Meeting for New Jersey and Pennsylvania held alternately at Burlington and Philadelphia.

1685. Friends of Chester Quarterly Meeting desired to have the judgment of this meeting whether it is allowable for the father and the son to marry two sisters. The meeting, well weighing the same, did give it as their present sense, such marriages ought to be discontinued.

1694. Take heed of giving your sons and daughters (who are believers and profess and confess the Truth) in marriage with unbelievers, for that was forbidden in all ages, and was the main cause that brought the wrath of God upon *Old Israel*.

1700. Declared and agreed (that if any widower or widow professing truth shall make or accept an offer, application, or procedure in order to marriage before nine or ten months be expired after the death of wife or husband of such person or persons so proceeding) to be the sense of this meeting, such offer, acceptance, or procedure is over-hasty and indecent, and thereupon the respective Quarterly Meetings are hereby desired to give cautions against the proceedings.

1702. It is the advice of this meeting that none that make profession of Truth, and would be accounted of us, do take one another in marriage, or join in marriage any other way than by the consent and approbation of the Monthly Meeting belonging

to the place where they live, and if any should proceed any other way, that they be dealt with according to Truth.

1712. As to the proposal what shall be done with such as go out from Friends in their marriage, the sense of this meeting is, that such be forthwith again dealt with, and if possible brought to condemn their so doing, but if such persons remain obstinate after tender and due dealing with, they ought to be disowned.

1714. Agreed that it be recommended to the Quarterly Meetings that according to the ancient decent practice among Friends, they take care that such men and women Friends as do make suit, or concern themselves in proposals of marriage one to the other, do not dwell together in the same house from the time they begin to be so concerned until their marriage is consummated.

1716. Advised, that Friends everywhere avoid all extraordinary provision at their marriages, and also as much as may be avoided inviting such as are not Friends, or that will not be under our discipline, and it is left to Friends' liberty to consummate them at week-day meetings where it conveniently can, which may prevent great expectations.

1719. Advised, that such be dealt with as keep company in order for marriage with one not of our profession, or with any bound servant, without the leave of her master or mistress. And such as marry out of the unity of Friends, or by any other method than the orderly and decent way used among Friends.

1721. It appears to be most unanimous the sense of Friends that no marriages with first cousins or any other nearer degree of relation be at all allowed, and it is not thought safe or very comely for second cousins to intermarry. It is advised that friends and relations do not encourage such marriages, but endeavor to persuade against them, when such proposals may be made.

1722. It is the sense of this meeting that if any who profess themselves to be of us, do go from among us in marriage, and have been precautioned thereof, that they may be testified against without further dealing, unless they condemn their proceedings themselves to the satisfaction of the Monthly Meeting whereunto they belong. But where any marry that have not been precautioned as aforesaid, that all such be first dealt with, before they are testified against, which ought not to be neglected.

1724. Whereas by the last year's epistle from London it is advised "that parents who have children to give in marriage may not make it their chief care to obtain for them large portions and settle

ments of marriage, but rather be careful that their children be joined in marriage with persons of religious inclinations, suitable dispositions, temper, sobriety of manners, and diligent in business, which are things essentially necessary to a comfortable life in a married state, and carefully guard against mixed marriages and unequally yoking of their children therein."

1725. Chester Quarter, requesting the advice of this meeting whether they may receive satisfaction from a couple being first cousins and intermarried, who seem under great trouble of mind, it is left to that meeting to receive their acknowledgment in a manner which may not approve or encourage such marriages.

1729. In that of marriages, there wants reformation; some not keeping within the bounds of decency and modesty, have gone into great excess, which hath been burdensome and grievous to all the sober and well-minded. This meeting therefore recommends to the Monthly Meetings, that, care be taken that all amongst us have regard to our discipline, and in that of our marriage entertainments as well as in all other acts of life, let our moderation appear to all men, which becomes the professors and followers of the blessed Jesus.

1731. This meeting, resuming the consideration of the proposal from Burlington Quarterly Meeting relating to "How near of kin the degrees in marriages in affinity, as well as consanguinity, shall be allowed of amongst us as a Society of people;" and also the reports from the several quarterly meetings on the subject, declare it as the sense of this meeting that as to the degrees in affinity allowable in marriage no farther prohibition be laid at present than is already made by the laws of England; and as touching the degrees of consanguinity allowable in marriage, they refer to the former minutes of this meeting.

1732. The Quarterly Meeting of Burlington signify that they are not fully satisfied with the answer of the last Yearly Meeting, relating to the nearness of kindred in affinity allowable in marriage, and request it may be solidly considered, and that they may have a more particular answer in that affair, hoping for the excuse of this meeting therein, they having been exercised of late with sundry marriages of that kind, viz.: one man married two sisters, etc., by persons professing Truth.

Which was referred to a committee of 14 Friends to consider thereof, and bring their sense thereof to the next Yearly Meeting.

CHRISTIANITY AND QUAKERISM.¹

It would seem as if little could be added at this day to the many statements that have been made as to the belief of the Society of Friends, a Society which, probably more than any other church organization of its numbers, has been prominent since its rise two and a quarter centuries ago, and has exerted an influence on the Church and the world at large quite out of proportion to its size as a body.

The essential spirit of the belief of this Society

¹Read at the Conference, after meeting, at 15th and Race streets, Philadelphia, Twelfth month 8, 1889, by Isaac H. Clothier.

consists in its simplicity of religious faith; and as in its outward manifestation of worship it dispenses with church rituals, so its creed may be said to be an absence of creed, or dependence upon any outward statement or form of belief, but consists of an inspiring and complete faith in the essentials of true religion as manifested by God in the soul of man. This internal and ever present manifestation is the "Inner Light"—Christ within—which doctrine or belief is the foundation and rock of Quakerism.

Now in this brief essay it is not proposed to criticize other beliefs, except as may be necessary to state the position of Friends in the Christian world. That position, as I understand it, is to *spiritualize* that which the Church accepts in the outward and literal sense, and holds to be the very basis of the Christian religion. The church belief on its central doctrine, that of the atonement, is briefly stated,—that Jesus Christ, whom we all recognize as our Divine Pattern, was the Father himself—in the sense of being one of the three persons of the Godhead,—who was divinely conceived, and came to the earth in human form, and being crucified by the Jews, became the mediator between God and His creature man, and the Savior of mankind by his atoning grace. This doctrine is accepted by all evangelical churches, and by the other branch of the Society of Friends. Now it is not proposed to argue against this belief or against any other reverent belief, honestly entertained. But our branch of the Society of Friends, not feeling satisfied with the requirement of the evangelical church, that this belief is necessary in order to be a Christian, are content that each of its members shall judge for himself or herself in matters purely of belief, holding that beliefs are after all non-essential as compared with the *essential* of a pure and blameless life, which can only proceed from obedience to the divine light, "that light which lighteth every man that cometh into the world." This light within is the Christ spirit, that spirit which Jesus had in perfection, and a portion of which is vouchsafed to every human being. Friends believe in letting alone the vexed questions of theology, and in adherence to the practice of vital religion, as exemplified in the life and teachings of our divine pattern, also that "He who doeth the will of the Father shall know of the doctrine." The beautiful idea of the "Fatherhood of God and the Brotherhood of man" is one of the beliefs of Friends, as also, "in essentials, unity; in non-essentials, liberty; in all things charity." Is not this charity which is stated to be the chief attribute of divinity, that wherein the Church has always been lacking? though less and less so as the centuries pass, no doubt. Witness the burning of the martyrs in the early days, and the persecution of Friends within two hundred years, compared with the religious toleration of to-day.

Is not this charity for the beliefs as well as the practices of others most needful to the development of Christian character and a rounded Christian life? Can there be full development of Christian character and life without it, even though the belief may be in full accord with evangelical doctrines? With charity in perfection, what matter what the belief may be as

to the history or doctrine, provided the monitions of the divinity within are heeded, and a life is lived full of love to God, and showing it daily by love to man? Not what we shall think, but what we shall do is what concerns us; the living of a pure life is evidence that the belief is all sufficient for the Father's acceptance. This, to me, is the essence of Quakerism and of Christianity, as taught by the Master.

George Fox came out from the church and founded our Society because he believed that the church and its teachers held on to the letter and missed the spirit, depended upon the outward manifestation, instead of the sanctifying grace within; on the education of the schools as a preparation for the ministry, instead of the Inner Light; a man made ministry instead of a divine commission to preach the Gospel. He felt also called upon to bear his powerful testimony against wars and fightings, and in favor of simplicity of life, dress, and manners. While some of his minor testimonies may have been intended especially for the times in which he lived, has not the Society still a work to do in holding up the standard of Christianity in its simplicity, as taught by its founder? While the spirit of Quakerism has leavened the entire church and liberalized the Christian spirit of the age, we cannot believe that its work ends there, but that as a distinct Society it still has a mission in inculcating simplicity of faith and of life, calling its followers from the outward manifestation to the Spirit of God within them.

"For what doth the Lord require of thee but to do justly, to love mercy, and to walk humbly with thy God."—Micah.

"Pure religion and undefiled is this, to visit the fatherless and widows in their affliction, and to keep himself unspotted from the world."—James I.

"The letter killeth, but the spirit giveth life,"—II. Corinthians.

THE RELIGIOUS LIFE: ITS RELATION TO THE CAUSE OF TEMPERANCE.

SAID the great German philosopher, Kant, "Two things fill me with ever-renewed wonder and awe, the starry heavens above me and the moral law within me." I would that we might fix this thought so deeply in our minds that we should find it impossible to gaze up into those wondrous depth ablaze with countless stars, without a reverent thought of those far more wondrous, far more awe-inspiring depths within our own being, of that moral law, that God in the soul, through which are shining, clear and constant, the countless revelations of his truth, and clearest and most constant of all, the unwavering pole-star of duty. The moral law within us! What does it mean to us that we are moved and guided by this law which is the very thought of God? Does it not mean that we are, in a very deep and wonderful sense, his children, and if children of God "then heirs of God and joint heirs with Christ?" But heirs to what? To lives of ease and luxury and selfish indifference to our brothers, who have a like inheritance with ourselves, that we can stand idly by and

see them go down to darkness and destruction and death? Nay, we are heirs to a great and universal love which unlocks the doors of all hearts. We are heirs to the boundless power of an infinite and eternal Energy which works in and through us to the accomplishment of great ends. It is a beautiful, an awful inheritance. To be a child of God! To be a member of the great human family! What does that mean to us? It means simply this, that God intends that we shall each and every one of us have his share in the universal life of the world, that we shall make the suffering of other men our suffering, and their joy our joy, just as we do in the family life of every day, just as we are forced to do whether we will or not. The man who has any sensibility feels always that the honor or disgrace of any member of his family is his honor or his disgrace. The time will come to every man in the course of his development, here or hereafter, when he shall realize the true nature of his responsibilities to his fellows, and shall feel, whether he will or not, that the triumph or defeat of a brother man, no less than that of an own brother, is his triumph or his defeat.

As children, we accept lightly our duties and our influence in the home circle; but how differently we view these in our maturer years! We are most of us very blind and ignorant children in this universe of God. We shall have to learn, simply and naturally if we will, otherwise violently and painfully, that all limiting of our human sympathies to individuals and classes is numbing to the soul and checks the free action of the divine spirit, and that all estrangement from our fellow-men means to us estrangement from God, from good, from truth, from happiness and peace. All men are our brothers; and the redeeming power of Christ lay in the fact that he really knew and felt this as no other has ever known and felt it. If we could understand this truly, we should feel the same right to make our country a safe place for our human brethren to live in that we feel to make our houses safe places for the sons and brothers of our family-circles. If you ask me what right any man has to urge the prohibition of intoxicating liquor, I shall answer you, "The right of the stronger,—not in brute force! The day for such power is past. The right of the stronger in mind, in will, in soul, in spirit. The right of the man who has the head to understand, the heart to feel, and the will to maintain that which is for the highest benefit of the race. That right *must* prevail. It has its own weapons of subtlety and of power; its weapons of argument which, like the sword of king Richard, can cleave asunder the hardened iron of a selfish policy, its weapons of influence which, keen as the scimitar of Saladin, can sever the veil of ignorance."

What gives a mother the right over her child save the greater maturity of mind? What gives the more enlightened class of the community the right to urge any measure of reform which does not meet the approval of the great mass of mankind? What constitutes *moral right*? I have heard of parents who thought they had no right to punish their children. That is an illustration of the dangerous extreme to which individualism is running in these our modern days,—an exaggerated individualism which would

¹An Essay read at the Temperance Conference at Friends' meeting house, Wilmington, Del., Eleventh month 21, 1889.

sacrifice to the one the good of the whole. It is well to stop and ask ourselves the searching question, "What constitutes *moral right*?" I should say that a man's moral right is in exact proportion to his power to recognize the Supreme Right and his will to execute it. Just in proportion as he does recognize the Supreme Right and strive to execute it, he will labor for the universal good of mankind. And just so far he will have the right, yes the *power* to direct the destinies of mankind.

I need not say that human law has ever fallen far short of the divine law. If they were one and the same thing, the millennium would be at hand. But they are coming nearer together. The more enlightened portion of mankind are beginning to recognize a law that is not written on tablets of stone, but is traced on tablets of the human heart; and they are endeavoring to transcribe upon their written codes those letters of light which the finger of God has traced upon the aspiring heart of humanity. How the thirteenth and fifteenth amendments glowed in the thought of such men as Woolman, Garrison, Sumner, Whittier, Lowell, and of such women as Lucretia Mott, long before they took their place among the laws of our land! When, side by side with these, shall be placed another law which lives already in the hearts of those noble men and women who really long for a higher destiny for the race, a law prohibiting the manufacture and sale of intoxicating liquors, then men shall no more ask what right we have to enslave the minds and wills of others, than they now ask what right we have to forbid the buying and selling of the negro race. . .

Until we are ready to banish wine from our tables, and above all from our cooking, where it often offers temptation to those least able to resist it, let us at least have sufficient honesty to fold together the covers of that sacred book wherein we read, "It is not good to eat meat or drink wine or anything by which thy brother stumbleth, or is offended, or is made weak;" and again, "If meat make my brother to offend, I will eat no flesh while the world standeth;" and again, "None of us liveth to himself and no man dieth to himself." Until we believe that God's kingdom *shall* come on earth and that his will *shall* be done; until we believe that his will, working in and through us, is to help toward bringing in that kingdom everywhere, in business life, in the home, in the school, in the State, in the religious life of our people, let us cease to bow our heads and say the Lord's prayer as if it were indeed the prayer of faith.

But if we do truly believe these things and believe them with our whole heart, let us live them. Let us begin to-morrow, to-night, if possible, to determine what it is that God wishes us to do, what our part is to be, in the great work of lifting our fallen brethren, and in that far better work of preventing more falling. The philanthropist of the future, like the physician of the future, will look to prevention rather than to cure. Let us then bend the whole energy of our thought towards the prevention of that evil which is to-day desolating so many homes and wrecking so many human lives.

There is one crying evil of our day which lies back of much of this craving for strong drink. It is the lack which many suffer of good and sufficient food. It has been well said that "If intemperance is one cause of poverty, poverty is also a fruitful cause of intemperance." . . .

We cannot pretend that these inequalities in our social life are caused merely by difference of character, and determination to rise in the scale of being. We know too well in how very many cases a life of unceasing toil gives a man and his family the barest possible subsistence. There is too much underpaid work. It is all very well to say that such a man is paid well enough but spends his wages for drink. But was his father before him paid well enough, and did he have the education which would have made him respect his manhood? It is not right that human beings should be cast off from those means of development to which every immortal soul is entitled. We teach our children the Scriptures in our First-day schools; but how many of them, even of those who are growing into manhood and womanhood, have learned enough of that Scripture of human life that is being revealed to us day by day through the newspapers and through the thoughts of our best writers on political and social questions, to know that there is a crying evil of injustice at the bottom of our social system, and that they have before them the stupendous work of bettering in their day the disgraceful failure of preceding generations. The world has yet to learn the value of faithful, honest labor of hand and brain. The children whom we are training must have the mind to learn it and the conscience to recognize it. They must have their hearts opened to the great needs of the world and their minds trained to an understanding of social conditions, and of the way to better them by legislation and by an honest recognition of honest work. Above all they must have their consciences enlightened, and must be made to understand that no man has a right to possess anything in this world save "as not possessing it," save as holding it in trust from God for the good of his fellow-men. Every gift of God becomes a curse to the possessor, if it be not used for noble and unselfish purposes.

The only cure for those who have grown old in this dreadful evil of intemperance, is prohibition as fast as we can get it; but for the young people, for the men and women of the future, to whom our hearts go out with such unspeakable love and interest, the great hope lies in education. Some one has said that there are three cures for intemperance. The first is schools! The second is schools! The third is schools! Yes, friends, there are and must be schools of three kinds. There are reform schools for that unhappy class that must have them, there are the public schools for the great middle class, and there are select schools for the more fortunate classes. It is for the last that I have named, that we must all have a great concern. I feel so deeply the overwhelming responsibility of the teachers, parents, and students of such a school that I often wish we could have emblazoned above the entrance to our school-house and over the door of every class-room the

text, "To whomsoever much is given, of him shall much be required."

And now I want to close with a word to these young people to ask them to co-operate with teachers and parents in the great work of making their own growing lives a growing benefit and blessing to the world in which they live. I have spoken in a general way of what we hope for you in future in the way of a broader, deeper knowledge of life than men and women have had in the past, and a more earnest spirit in making it better; but I have a teacher's practical way of wanting to begin at once. If I do not give you some thought which you can remember to-morrow and next day and the days that follow, I shall feel that I have talked in vain. What I want to ask of you is that you should take your lives seriously,—not gloomily, not solemnly, but seriously. You will be all the gayer in your free hours for taking your work in earnest.

The deeper and stronger the current of your life, the more merrily will it break into a thousand waves and ripples when the hours for fun and frolic turn it aside from the daily routine of duty. It is the heaviest billows which toss their spray highest into the sunlight. "Life," said a great Frenchman, "is serious business, to be entered upon with courage, and ended with self-sacrifice." Courage and self-sacrifice! Let these be the angels which guard the door of that house of character which you are building. The masculine virtue of courage, that spirit which never says, "I can't"! The feminine virtue of loving sacrifice! These two should be combined in every character whether of man or woman, boy or girl; but the self-sacrifice is the hardest to cultivate. When you really have that, you have the very spirit of the Master. You who say you believe in Christ, have you ever asked yourself the question whether you would have left all to follow him in that little country of Palestine, nearly nineteen centuries ago? If you want to know truly, put yourself to this test. Do not let a single day pass without making some sacrifice which nobody knows anything about, without doing some good for which nobody will ever praise you. You remember dear, good Mr. Jarndyce, in "Bleak House," who would never allow any one to thank him without changing the subject by remarking that the wind was in the East.

When you have learned to know what it really means to sacrifice yourself for the sake of truth and right, and with no hope of reward, you will know better whether or not you are made of such stuff as were those heroic men of whom Christ said, stretching forth his hand toward them, with that affectionate gesture we should so have loved to see, "Behold my mother and my brethren, for whosoever shall do the will of my Father which is in heaven, the same is my brother and sister and mother."

There comes to every man a time when he must throw the whole weight of his influence on one side or the other of some great question. One great question of our day is prohibition, and the choice of such men and measures as will forward the cause of prohibition. The stand you will take in this, as in other great questions, depends on what you are making

yourself now through courage, self-control, and self-sacrifice. Be brave! Be unselfish! Have at command all the great forces of your God-given natures! Be ready for those "stern crises" which shall decide the character of your life in this world and in all worlds to come!

When you have put aside all personal considerations, and have placed yourselves manfully on the side of truth and right, then shall you feel a divine happiness arise in your hearts, and you shall possess that peace which passeth all understanding. Then, as you gaze up into the heavens, you shall feel the nearness and supporting strength of the Creator of all those glorious worlds, as you repeat with reverent joy those words of the great philosopher, "Two things fill me with ever-renewed wonder and awe, the starry heavens above me and the moral law within me."

GERTRUDE B. MAGILL.

SCRIPTURE LESSON No. 48.

TWELFTH MONTH 22, 1889.

CLOSE OF SOLOMON'S REIGN.

GOLDEN TEXT:—Fear God, and keep his commandments, for this is the whole duty of man.—Ecc. 12. 13
READ I. Kings II: 26-43.

The course pursued by Solomon in the later years of his life was in strange contrast with the beginning of his career, which we have seen was so full of hope and promise for the nation. At fifty years of age, when maturity of judgment and the knowledge gained through the experience of the past should have filled up and completed the character of one so wonderfully gifted, we find this royal monarch given over to the lowest and most demoralizing self-indulgences. Broken in health, and rebelled against by those in whom he had confided, the close of his life at the age of sixty was a fit illustration of the truth of the words of the great teacher, "The wages of sin is death,"—death to all the higher and better instincts of the soul, death to every pure and noble impulse that gives dignity to the character, and makes a man worthy of honor.

Jeroboam the son of Nebat. This was a man of great valor, who, though the son of Solomon's servant, was observed by the king to be industrious and worthy of promotion, on which account he gave the young man a place of honor in the government.

The prophet Ahijah. This is the first mention of Ahijah. Nathan was the prophet during David's reign, and had the education of Solomon, and was the counsellor of the young king in the early years of his reign. We find no mention of him or of his interview with Jeroboam, in the account of the closing years of Solomon's reign as recorded in 2 Chron. 9; by referring to it we get no hint of the degeneracy of Solomon, or of any circumstances that in haste failure on his part in the maintenance of the laws and institutions under which the government was administered. Ahijah lived at Scythia.

And Ahijah smote the golden calf. It was very common in those times for the seer or prophet to give forth his message or prophecy by some symbol or figure, which would impress more forcibly the truth of God, or the Divine will, than the simple declaration

prefaced as was the custom by a "Thus saith the Lord."

Thou shalt reign. This promise of Abijah that ten tribes of Israel were to receive Jeroboam for their king foretold a revolt from the heir to the throne of Israel after the death of Solomon, which actually took place.

Solomon sought to kill Jeroboam. This was in accordance with the summary way of dealing with offenders of that class. The rule of the king was absolute; no subject had the right to question his authority.

And Solomon slept with his fathers. This is a striking and beautiful way to record the passing from this life to the eternal world, and is very frequently made use of in the Hebrew Scriptures.

In the history of Solomon we see the melancholy fact that man has no strength within himself,—that even Solomon, in all his glory and wisdom, digressed from God's laws, and became but a broken cistern and a wasted torch unto his people whom God had intrusted to his guidance. After Solomon had disobeyed God, strayed off, and worshipped strange and imaginary gods or idols, our Heavenly Father was displeased with him, and sought to find another ruler over Israel. We cannot say that it was chance that threw Jeroboam in the way of Abijah the prophet to receive the appointment of God to be ruler over the ten tribes of Israel. It was rather the unseen hand of the Creator who moves in a wise, but to us mysterious way.

Though Solomon was a man of great wisdom, fame, and devotion to God's service, yet we find in him, as in all mankind, the tendency to human depravity. Without that Divine light to guide us, we go down as did he to an ignominious grave.

"Let us hear the conclusion of the whole matter: Fear God, and keep his commandments; for this is the whole duty of man." We have in this lesson a powerful commentary upon human effort in our probationary condition.

King Solomon, who is acknowledged to have been one of the wisest men that ever lived, and especially favored with the Divine recognition, failed to reach that perfect condition that is necessary for the true Christian. His life, to a certain extent, was a failure. We have only to take deeply to heart the words of the Golden Text, as the summing up of Solomon's conclusions, and live up to them as far as the grace of God will allow the humble, seeking soul to do, leaving the result in the hands of Providence.

NOTES ON THE LESSON.

"Little more is left to be said of the wise and learned yet apostate Solomon than that he slept with his fathers . . . and his son, said to be his only son, reigned in his stead. In Chronicles, which succeeds Second Kings in the Old Testament order, and are mainly a repetition of the history of the Hebrew people as given in the two Books of Samuel and First and Second Kings, nothing is said of the degeneracy of Solomon, or of his apostacy in the closing years of his life, while all that was worthy of remem-

brance in the forty years which he reigned over the nation is carefully recorded. Had we no other source of information than what we find in Second Chronicles 1st to 9th chapters inclusive, we might with great reasonableness regard Solomon as a monarch worthy to be had in remembrance by all succeeding generations. There is only one conclusion to be reached which at all meets the case. The Books of Chronicles are a compilation from these earlier histories, and were written especially for the Jews after their return from Babylon. . . . The writer of the Chronicles having the Books of Kings before him, made those books to a great extent the basis of his own. But also having his own personal views, predilections, and motives in writing, composing for a different age, and for people under very different circumstances; and moreover, having before him the original authorities from which the Books of Kings were compiled, as well as some others, he naturally re-arranged the older narrative as suited his purpose and his taste." (Smith.) As we look back over these older records of the life of Solomon we may gather some useful lessons out of the evils that befell him in consequence of his departure from the Divine law and disregard of the line of conduct revealed to him as the basis upon which the favor of God and the prosperity as well as the stability of his government must depend. He began his downward career by adopting the usages of the kings of surrounding nations, which were at variance with the Hebrew customs,—the great accumulation of riches. The fame of his wisdom, the extension of the borders of his kingdom, and the glory and renown that gathered about him, filled him with pride and made him unmindful of the God of his fathers and regardless of the worship which his religion enjoined. He built temples and altars to the gods of the idolaters, and encouraged the heathen rites by permitting the residence of foreign priests in the nation. That a man whose mind was capable of achieving so much as his earlier years displayed should have fallen away from the high purpose with which he began his career, is a sad commentary on the uncertainty of the future, and the fall of such cannot be complete without bringing remorse and bitter anguish to the soul of the transgressor; an anguish made all the more poignant by the height from which he has fallen.

We have nothing to base the hope upon that Solomon repented of his wide departure from the law of the Lord or sought with humility and confession of his sin the forgiveness of God. In this respect he was unlike his father, David, who never forgot to turn to God and seek his restoring mercy when the consciousness of his wrong-doing showed him that he needed to be forgiven.

No human word can express the whole even of human love, or the burden of human sorrow. What then? Shall man be like the caged eagle that beats out its brains on the bars of its cage? Ah! no. He can go into the closet and speak to God; if he cannot express all his feelings there, there are groanings which cannot be uttered that God hears. God is felt after.—*B. M. Palmer.*

STANLEY'S BRIEF NARRATIVE OF HIS
TOUR.

The New York *Herald* printed on the 4th instant a very interesting despatch from Henry M. Stanley, the explorer, dated at Msuwah, Africa, Eleventh month 30. It was written at the request of the *Herald* correspondent in Africa. The letter is as follows:

First of all, I am in perfect health and feel like a laborer of a Saturday evening, returning home with his week's work done, his week's wages in his pocket, and glad to-morrow is Sabbath.

Just about three years ago, while lecturing in New England, a message came from under the sea bidding me to hasten and take a commission to relieve Emin Pasha at Wadelai, but, as people generally do with faithful pack horses, numbers of little trifles, odds and ends, are piled on over and above the proper burden. Twenty various little commissions were added to the principal one, each requiring due care and thought. Well, looking back over what has been accomplished I see no reason for any heart's discontent. We can say we shirked no task, and that good will, aided by steady effort, enabled us to complete every little job as well as circumstances permitted.

Over and above the happy ending of our appointed duties we have not been unfortunate in geographical discoveries. The Aruwimi is now known from its source to its bourne. The great Congo forest, covering as large an area as France and the Iberian Peninsula, we can now certify to be an absolute fact. The Mountains of the Moon, this time, beyond the least doubt, have been located, and Buwenzori, "The Cloud King," robed in eternal snow, has been seen and its flanks explored and some of its shoulders ascended, Mounts Gordon Bennet and Mackinnon Cones being but giant sentries warding off the approach to the inner area of "The Cloud King."

On the southeast of the range the connection between Albert Edward Nyanza and the Albert Nyanza has been discovered, and the extent of the former lake is now known for the first time. Range after range of mountains has been traversed, separated by such tracts of pasture land as would make your cowboys out West mad with envy. And right under the burning equator we have fed on blackberries and bilberries and quenched our thirst with crystal water fresh from snow beds. We have also been able to add nearly 60,000 square miles of water to Victoria Nyanza.

Our naturalist will expatiate upon the new species of animals, birds, and plants he has discovered. Our surgeon will tell what he knows of the climate and its amenities. It will take us all we know how to say what new store of knowledge has been gathered from this unexpected field of discoveries.

I always suspected that in the central regions between the equatorial lakes something worth seeing would be found, but I was not prepared for such a harvest of new facts.

This has certainly been the most extraordinary expedition I have ever led into Africa. A regular diary seems to have hedged us while we journeyed, I say it with all reverence. It has impeded us whether

it would, effected its own will, but nevertheless guided us and protected us.

What can you make of this, for instance? On August 17, 1887, all the officers of the rear column are united at Yambuya. They have my letter of instructions before them, but instead of preparing for the morrow's march to follow our track, they decided to wait at Yambuya, which decision initiates the most awful season any community of men ever endured in Africa or elsewhere.

The results are that three-quarters of their force died of slow poison. Their commander is murdered and the second officer dies soon after of sickness and grief. Another officer is wasted to a skeleton and obliged to return home. A fourth is sent to wander aimlessly up and down the Congo and the survivor is found in such a fearful pest-hole that we dare not describe its horrors.

On the same date, 150 miles away, the officer of the day leads 333 men of the advanced column into the bush, loses the path and all consciousness of his whereabouts, and every step he takes only leads him further astray. His people become frantic, his white companions, vexed and irritated by the sense of the evil around them, cannot devise any expedient to relieve him. They are surrounded by cannibals and poison-tipped arrows thin their numbers.

Meantime I, in command of the river column, am anxiously searching up and down the river in four different directions; through forests my scouts are seeking for them, but not until the sixth day was I successful in finding them.

Taking the same month and the same date in 1888, a year later, on August 17, I listen, horror-struck, to the tale of the last surviving officer of the rear column at Banalya, and am told of nothing but death and disaster, disaster and death, death and disaster. I see nothing but horrible forms of men smitten with disease, bloated, disfigured, and scarred, while the scene in the camp, infamous for the murder of poor Bartelot four weeks before, is simply sickening.

On the same day, 600 miles west of this camp, Jameson, worn out with fatigue, sickness, and sorrow, breathes his last. On the next day, August 18, 600 miles east, Emin Pasha and my officer, Jephson, are suddenly surrounded by infuriated rebels, who menace them with loaded rifles and instant death, but fortunately they relent and only make them prisoners, to be delivered to the Mahlists.

Having saved Bonny out of the jaws of death we arrive a second time at Albert Nyanza, to find Emin Pasha and Jephson prisoners in daily expectation of their doom.

Jephson's own letters will describe his anxiety. Not until both were in my camp and the Egyptian fugitives under our protection did I begin to see that I was only carrying out a higher plan than mine. My own designs were consistently frustrated by unhappy circumstances. I endeavored to steer my course as direct as possible, but there was an unaccountable hindrance at the helm.

I have as much regard with my duties as the strictest honor would compel. My faith that the party to my motive deserve to be so was firm, but I have been

conscious that the issues of every effort were in other hands.

Not one officer who was with me will forget the miseries he has endured, yet every one that started from his home destined to march with the advance column and share its wonderful adventures is here to-day, safe, sound and well.

This is not due to me. Lieutenant Stairs was pierced with a poisonous arrow like others, but others died, and he lives. The poisoned tip came out from under his heart eighteen months after he was pierced. Jephson was four months a prisoner with gnards with loaded rifles around him. That they did not murder him is not due to me.

These officers have had to wade through as many as seventeen streams and broad expanses of mud and swamp in a day. They have endured a sun that scorched whatever it touched. A multitude of impediments have ruffled their tempers and harassed their hours.

They have been maddened with the agonies of fierce fevers. They have lived for months in an atmosphere that medical authority declared to be deadly. They have faced dangers every day, and their diet has been all through what legal serfs would have declared to be infamous and abominable, and yet they live. This is not due to me any more than the courage with which they have borne all that was imposed upon them by their surroundings, or the cheery energy which they bestowed to their work or the hopeful voices which rang in the ears of a deafening multitude of blacks and urged the poor souls on to their goal.

The vulgar will call it luck. Unbelievers will call it chance, but deep down in each heart remains the feeling, that of verity there are more things in Heaven and earth than are dreamed of in common philosophy.

I must be brief. Numbers of scenes crowd the memory. Could one but sum them into a picture, it would have a great interest. The uncomplaining heroism of our dark followers, the brave manhood latent in such uncouth disguise, the tenderness we have seen issuing from nameless entities, the great love animating the ignoble, the sacrifice made by the unfortunate for one more unfortunate, the reverence we have noted in barbarians, who, even as ourselves, were inspired with nobleness and incentives to duty—of all these we could speak if we would, but I leave that to the *Herald* correspondent, who, if he has eyes to see, will see much for himself, and who, with his gifts of composition, may present a very taking outline of what has been done, and is now near ending, thanks be to God forever and ever.

Yours faithfully, HENRY M. STANLEY.

DR. H. I. BOWDITCH, of Boston, is reported as saying of his advocacy of beer in moderation: "It was the mistake of my life, which I entertained but a brief period, that beer was beneficial to anybody under any circumstances. I regard it not as merely worthless, but as productive of a most diseased state of the whole system, the worse that it is often not suspected until too late."

RESPECTING THE RIGHTS OF OTHERS.

A DISREGARD of the rights of others, especially the rights of property, appears to be a growing evil of our times, and it behooves all who are concerned for the preservation of righteousness in our nation, to bestir themselves to seek a remedy. To us it seems in this, as in most other defects of character, the beginning place to apply the remedy is in the training of the children. To so train these that honesty and integrity shall be ingrained in their very constitutions.

If to obtain this some mind culture must be omitted, let the latter go, but we are not prepared to see why both cannot be accomplished.

But how is it to be done? It is a serious problem, and has many sides to it, as all will admit. But let us look at it closely and see if we can find a beginning place.

As a nation we are too apt to overlook the little things in life, yet we have not, nor can we outgrow the wisdom of the ancients in their quaintly expressed maxim, "He that contemneth small things shall fall by little and by little."

In our great desire to elevate all classes, do we not expect too much at once of those who flock to our schools with consciences untrained as to right doing? We like to be broad and liberal, and so take too much for granted regarding the masses. In our system of public instruction does not the entire freedom from responsibility in the one small matter of the free use of books, tend to foster a feeling in the child that "the State owes me my education, and the tools are mine to do with as I please?" It may be said the teacher is there to restrain, but do we not place upon him a Herculean task when we say that all children must be trained to care and gratitude? The first instinct of nature is self-preservation, and it is natural for a child to protect its own. There should be some limit even to freedom; and some struggle to gain and to hold even a book may lay the one foundation-stone in the growth of a strong character.

"Character can never be formed by deputy," says one, and also, "There is a fundamental immorality in the attainment of success for which a man has not

NEWS OF FRIENDS.
CENTRE QUARTERLY MEETING.

THIS meeting was held at West Branch, Clearfield county, Pa., on the 18th of Eleventh month. The meeting of Ministers and Elders was held on Seventh-day the 16th, at 2 p. m. It was small, but just at the close of the meeting we were favored with the arrival of Isaac Wilson from Bloomfield, Ontario, he having been detained in not making the close connection at Buffalo with the Rochester & Pittsburg road (to come via Dubois.)

On First-day morning, as regards the weather it was all that could be desired, and at the meeting hour, at 11, the meeting assembled and the house was well filled with interested and intelligent-looking people, made up of Friends and other religious denomination and non-professors. As regards the outward, all settled down into stillness, when Isaac Wilson arose and expressed these words: "And they all ran down a precipice and were choked." The attention of the large audience was turned toward the stranger with the quotation from that remarkable circumstance, but the minds of the people were soon directed by the speaker to the spiritual interpretation of that occurrence. The truths of the Gospel were opened and set forth as represented in the teaching and example of Jesus, and to the many wonders performed by him in connection with his attention to the wants and needs of the people at that day. This was explained and represented in a spiritual sense to be applicable to our needs and wants at the present time. After some expression by other Friends the meeting was closed by I. W. in supplication.

An evening meeting was arranged to be held at Pennville, a village near by. Although the weather was unfavorable a fair audience assembled. The subject of the resurrection as carried out and explained by Jesus in the raising of Lazarus was introduced by I. W., and set forth in its spiritual application now in this life, and that this cannot in any way interfere with any view that may be entertained as to another life in the future, when the transition from our present life may take place. The meeting being held in the Methodist church, many of their members were present, and manifested much unity with the views set forth.

On Second-day morning, the rain still continuing, the meeting gathered, some coming six to eight miles through the rain. It may be remembered that the membership here is much scattered, and under the circumstances the meeting was not large. The voice of our visiting friend was again instrumental in opening and presenting the truths of the Gospel. The meeting was brought into such feeling through the earnest manner in which the truth was set forth, that many were tendered into tears.

In entering upon the business of the meeting, which is held jointly, Owen Underwood and Annie E. Underwood, clerks, the routine of business was gone through. A minute for Isaac Wilson to attend this meeting was read, and expression of unity in his company and Gospel labors was given. He responded in an impressive manner, and explained how

he had been drawn towards this meeting in the love of the Gospel, and much that was strengthening and encouraging went forth in a way that found lodgment in many minds. The speaker here remarked that he might be intruding on the time for transacting business, but we appeared to have but little of that to attend to, and as his heart was full of that which seemed to be of so much more importance, it was well it was so. He continued and enlarged upon concerns of life and the building of ourselves and our religious Society, so that many were brought to see these things as they never had before. The meeting closed in an earnest and feeling supplication, and Friends separated, feeling that the blessing from our Father in Heaven had descended upon us.

N. MOORE.

--At Haverford Meeting, on First-day morning, the 8th inst., there were present of the Philadelphia Quarterly Meeting's Committee to visit and encourage the members in the smaller branches, Isaac H. Hillborn, Margaret P. Howard, Louisa J. Roberts, Martha Hough, and Lukens Webster.

The attendance was good; the end of the meeting-house usually occupied was well filled with an attentive audience, many of whom were in the younger walks of life, some bringing their little children, which was a pleasant feature of the occasion. A member of the Meeting had personally given extended notice that the Committee were to be there which brought many out who otherwise might not have been numbered with the worshippers.

The spoken word as it was handed forth bore testimony to the value of public worship. Mankind, it was said, have in all ages, and in every part of the habitable globe, recognized the necessity of presenting themselves before the Great Ruler of the Universe, and by some act or form of devotion, even if very crude, have sought his favor. The simplicity of the worship which is acceptable to our Heavenly Father, and its spirituality, as it has been revealed through the testimony of Jesus, and the duty of assembling ourselves at stated times, were dwelt upon, and those present were tenderly encouraged to be mindful of this reasonable service. They were reminded that worship is not confined to the public assembly, that a preparation for it must be found in retirement from all that distracts and disturbs in the quiet lifting up of the soul to its great Helper, seeking for that strength which will enable the true worshiper to be obedient to the revealings of truth, made manifest to his inner consciousness.

There was a harmony of thought running through all that was spoken, the strong point being individual faithfulness to the Divine requirements. This will enable us to give our religious obligations their right place in the carrying out of the purposes of life. Parents were cited to the example of the Hebrews as it is recorded in the testimonies of the Scriptures, who early led the feet of the children to the place of worship, and inspired them by their own faithfulness with a love for the religion of their fathers. Friends in the earlier time were careful to train the children to love the meetings of the Society, and there is no

reason to doubt but the same guarded care now brings similar results.

The meeting was felt to be helpful and encouraging to the little band who are doing what they can to keep alive the interest in the society in that vicinity. R.

—Our friend Lydia H. Price, is pursuing her service of attending meetings in Philadelphia Quarter. As proposed, (and mentioned in last week's paper), she was at West Philadelphia meeting on First-day morning, and Girard Avenue in the evening. She expects to be at Spruce street on next First-day morning, and at Haverford in the afternoon.

ANNUAL MEETING OF SWARTHMORE COLLEGE.

THE annual meeting of the stockholders of Swarthmore College was held at the meeting-house, 15th and Race streets, Philadelphia, on the 3d instant, at 2 p. m. There was a good attendance. The meeting of the "Stock Trust Association" had been held just previously in the same room.

George W. Hancock and Rachel W. Hillborn acted as Clerks of the meeting. The annual reports were read. The report of the Treasurer, Robert Biddle, showed receipts for the year as follows : Tuition, \$73,106.37; tuition payments from endowment fund, (through Endowment Committee), \$11,725; stock account, \$400; teachers (board) \$6,159.75; farm, \$2,215.38; dinner money, \$386.68; interest, \$136.98; Isaac H. Clothier professorship, \$2,000; from various sources, \$1,361.64; which, with a balance due the Treasurer at the close of the year, Ninth month 1, 1889, of \$3,784, made a total of \$101,275.80. The expenditures were: Drafts of Finance Committee and Superintendent, \$91,099.84; paid on account of Strath-Haven mill property, \$4,000; return tuition, \$868.80; appropriation endowment committee, \$1,699.77; which, with a balance due the Treasurer at the beginning of the year, (Ninth month 1, 1888), made \$101,275.80.

(It appeared from this statement that there was a slight increase in the year's deficit, over 1888, but as \$4,000 had been used for purchasing real estate, there was a gain of over \$3,800, in the operations other than that.)

Separate statements were made of the funds of the Museum, the Library, and the Museum of Natural History. Clement M. Biddle, Treasurer of the Committee on Endowments, also submitted a separate account. The receipts of income from the general endowment fund were \$549.00; from the educational endowment, \$8,671.00; and from the special endowment, \$2,500; making \$14,720, which was paid to the Treasurer, (and appears in his receipts above). The endowment investments now are: general fund, \$29,000; educational, \$10,415.16; special, \$0,000.

A committee was appointed to retire and bring forward nominations for the places whose terms expired at this time. This committee, upon returning, presented the names of the old officers, as follows: Clerks, George W. Hancock, Fannie Willets Lewthorp; Treasurer, Robert Biddle; Managers to serve

four years, John T. Willets, Charles M. Biddle, Daniel Underhill, Emma Roberts, Jane P. Downing, Sarah H. Powell, Helen Conly White, Elizabeth B. Passmore; and they were duly elected.

The report of the Board of Managers was of interest, conveying the information that it had been determined to drop, after this year, another of the preparatory classes, leaving but one, which will be considered "sub-collegiate," and made a part of the College course. This is done in accordance with the general plan of making the institution strictly a College, and also in view of the establishment of a number of good preparatory schools, and the prospective opening of the John M. George school. The price in all the five classes will be uniform,—\$450 a year.

The proposed change in the Constitution, to give each share of stock one vote, was then taken up, and as there was no disposition to press a vote upon it at this meeting, a motion by Isaac H. Clothier, that it was inexpedient to adopt it at this time, was adopted. Clement M. Biddle then gave notice that he again proposed, for consideration at the next annual meeting, the same change.

Emma Roberts, president of the "Stock Trust Association," stated that it had appointed a committee of three, and had invited the Board of Managers to appoint a corresponding committee, for the purpose of considering several proposed changes in the Association's constitution, with the view of deciding whether it could be made more advantageous to the interests of the college. The stockholders approved the appointment of such a committee by the Managers, and the meeting concluded. (The Managers, at a meeting held subsequently, named the committee, as proposed.)

REPORTS ASKED FOR THE CENSUS.

THE Superintendent of the Census, Robert P. Porter has sent a circular to this journal, expressing the desire that aid may be given Dr. H. K. Carroll, (of the New York Independent), who has been appointed a special agent to collect "Church Statistics." It is proposed to obtain information under five heads: (1) Organizations or societies; (2) Church edifices; (3) Seating capacity; (4) Value of Church property; (5) Communicants. This is as much, in the judgment of the Superintendent as it will be wise to undertake in this direction for the Eleventh Census.

The Superintendent also sends us the following:

DEPARTMENT OF THE INTERIOR, }
CENSUS OFFICE, }
WASHINGTON, D. C., Dec. 1, 1889. }

EDITORS FRIENDS' INTELLIGENCER AND JOURNAL:

This office desires to secure the best results possible regarding the schools of the country with a few salient inquiries.

James H. Blodgett, A. M., of Rockford, Illinois, a gentleman of long experience in educational work and in public affairs, has been appointed a special agent for the collection of statistics of education for the United States.

Public schools are so related to systems of public record that their statistics are obtainable through established methods.

Incorporated private schools have a place in public records.

Parochial schools generally render stated reports to some controlling body.

Unincorporated private schools form a considerable element of usefulness hitherto unmeasured. It is desirable to gather reports of the number of teachers and pupils in such schools, without troubling them for the financial statements that schools supported by public funds owe to the tax-payers.

The enumerators of population will report each person who has attended school within the year, and whether at a public or at a private school; and, for all persons ten years of age and over, those who can read and write. This will be more than has been done heretofore. Other educational statistics must be reached by different methods, in which every one interested may render some aid.

Any lists of private schools, no matter how brief, or names of single schools, no matter how humble, open in any part of the present school year, with the address of the principal teacher of each, will be of assistance to this office.

Very respectfully,

ROBERT P. PORTER,
Superintendent of Census.

PROGRESS AT THE AIKEN SCHOOL.

In her report of the work at the school at Aiken, S. C., for the first month of the school year, Elizabeth Criley, the principal teacher, says:

School opened October 14th with an attendance of about seventy-five, an unusually good number for the first day, which has gradually increased until we now have about two hundred and fifty, thirty of whom are boarding students.

The primary department has become so crowded that we were compelled to make a division, and engaged two of our boarding students to assist. One takes charge of the class in the morning and one in the afternoon for one week, then exchange places for the next, so they are enabled to keep up with some of their classes, and are really proving very good teachers. There seems to be a call for teachers from our school, just now. Several of the first class have taken schools for a few months, and there is a prospect of the rest of the class doing likewise. They all obtained certificates last spring, and Mr. Croasland, (the Commissioner), was so much pleased with them that he recommends them wherever there is a vacancy. We advised their not graduating this year,—they are nearly all too young to leave school,—and a little experience in teaching will be of great value to them.

In the Industrial Department the boys are doing their usual work in the line of carpentry and printing. Owing to the absence of a sewing teacher, the girls have not yet gotten under full sway with their work, but we are trying to do a little, and have used up the patch-work on hand by putting it together and making it into comforts. Six are completed, and two more almost ready. We took up this line of work because we will need these things should the weather suddenly become cold.

Altogether the past month has been a very encouraging one, and we hope to do good work during the remainder of the term. ELIZABETH CRILEY.

YOUNG FRIENDS' ASSOCIATION.

The regular monthly meeting of Young Friends' Association was held on Second-day evening of this week, at Fifteenth and Race streets, in the library-room, the parlor having been on a previous occasion uncomfortably full. Robert M. Janney presided. There was a good attendance, nearly all of the seats being occupied. The reports of the several Committees on History, Literature, Discipline, and Current Topics, were called for, and progress generally reported. A classification and indexing of Friends' books is one of the subjects under the attention of the Literature committee.

As the election of officers will occur at next meeting, (1st month 13th), a committee was appointed to bring forward nominations.

The feature of the evening was a lecture by Professor Arthur Beardsley of Swarthmore College, on the activity of Friends in Science and Art. He mentioned a number in England, including the Darbys, who established the great iron-works at Colebrookdale, and began the casting of iron utensils; Richard Reynolds, who was connected with them, and greatly advanced the industries they had begun; Bouiton, the partner of James Watt, and founder of the great works at Soho; the Peases, who did so much to develop the earliest railway construction in England; Huntsman, who improved the processes of making steel, and placed the cutlery of Sheffield,—in spite of the opposition, at first, of the cutlers,—on a new scale of superiority; John Dalton, the eminent chemist and meteorologist; Dr. Thomas Young, the great physicist; and others born in the 17th and 18th centuries, in England. He also referred to the great service rendered by Philip Thomas, of Baltimore, in promoting the establishment of the Baltimore and Ohio railroad, one of the very earliest in the United States. Professor Beardsley's address was listened to with close attention, and at the close he was thanked by the Association. The question was asked whether David Rittenhouse, our Pennsylvania astronomer and scientist, was not a Friend,—which Prof. Beardsley answered in the negative.

EDUCATIONAL.

LECTURES AND INSTRUCTION IN CLASS WORK.

At the third Educational Meeting at 15th and Race Sts., Philadelphia, on Seventh-day, Twelfth month 7, the attendance of teachers from the Friends' schools was good, with a sprinkling of school committees and other friends of Education together with a large class of students from Swarthmore College.

The first period was occupied by Prof. Silas S. Neff, on "How to Teach Reading." The main point in good reading is to bring out by the reading the full meaning of what is read. Let children catch the spirit of the writer, and they will know where to place the right emphasis. If correction is needful in pronunciation, position, etc., let the criticism be made aside from any direct reference to mistakes in any

particular reading, so as to avoid all training to self-consciousness, or the next reading lesson will be spoiled. Happy reference was made to the unconscious yet paramount influence of the inspiration and will-force in the successful accomplishment of vocal work.

He was followed by Mathilde E. Coffin, on "Method of Teaching Geography." The personal magnetism of this speaker and her evident study and full grasp of her work were calculated to arouse enthusiasm in her hearers. The beginning place in this study is to teach observation of the immediate environment of the pupils, and then train the imagination to broader areas. The points were well presented and illustrated and the hour seemed all too short for what was to be told.

Much interest is manifested in these meetings. The next one in the course will be at 15th and Race Sts. on First month 4th, 1890.

SWARTHMORE COLLEGE NOTES.

At the meeting of the Board of Managers last week the department of the German Language and Literature was raised to a full professorship, and Assistant Professor Gerrit E. H. Weaver, A. M., was raised in rank to a full professor.

—College will close for the Christmas holidays on Sixth-day afternoon, the 20th inst. The vacation will extend to the second day of the new year.

—The faculty and instructors have issued invitations to the several college classes for a reception to be held in the college parlors on Seventh-day next. The faculty reception has become a regular annual event in Swarthmore social circles.

—The young women's gymnasium classes have commenced work under the instruction of Mary J. Murphy. Dr. Shell will start in with the young men's classes this week. The regular physical examination which is required of all the young men will not take place until after the holidays.

—The advanced English classes are enjoying a series of lectures on the Elizabethan age, and are reading Bacon's Essays. Considerable extra work is being done this year. Professor Rolfe's Latin Seminar holds interesting bi-weekly sessions; Professor Cunningham frequently takes evening classes to the Observatory, and Prof. Weaver is reading German drama to a large and interested class.

—At its last meeting the college Athletic Association voted to change its constitution that there might be but one field meeting each year instead of one each in the fall and spring. The meeting will be held in the spring, and in the fall the attention will be given to other branches.

—Acting President Appleton lectured at Moorestown, N. J., in the town lecture course, on Third-day evening. His subject was "Greece, Ancient and Modern."

—Aaron B. Ivins, formerly principal of the Friends' Central School, lectured before the class in pedagogy on Third-day afternoon. Quite a number of students belong to the class and attend the lectures here and at 15th and Race streets.

S.

GOLDEN WEDDING.

EDITORS INTELLIGENCER AND JOURNAL.

BARTON HEACOCK and his wife Rachel, celebrated the fiftieth anniversary of their marriage on the 14th of the present month, at their home in Alliance, Stark county, Ohio. All their children that are living attended; and all their grandchildren except one. Two of his brothers also and one sister, and one sister of hers, were present; all that live in the neighborhood, and a few other invited guests. After partaking of a bountiful dinner, Barton made a few remarks. Speaking of the situation fifty years ago, when these parts were an almost unbroken forest, and the great changes that have taken place, the unproductive wilderness of that day being now a beautiful country and a fruitful field. He feelingly alluded to the struggles of their early married life, and especially to the second winter, when both were prostrated with disease, neither able to assist in the care of the other for many weeks and even for months. But through the vicissitudes of all the years, from that time to the present, he recognized the care of a kind Providence in the blessings thus far bestowed upon them, with full assurance that it would continue with them the remaining years of their pilgrimage here, if they were careful to follow its guiding hand. Excellent letters were read from a sister of Rachel's and her daughter in Iowa, each expressing the satisfaction it would have given them to have attended their anniversary, and the deep interest they felt in their present and eternal welfare.

Their youngest son, William Antrim, in the name of the children and grandchildren, presented fitting gifts, as did some of the company. These tokens of remembrance were thankfully received, though each saying they had enough, and that the feeling would have been the same without any of them.

As the shades of evening were closing around, the company separated, all feeling that it had been a season of enjoyment, and especially the younger children, who had been allowed liberty to engage in the merry laugh and the exclamation of delight known only to happy childhood.

Barton and his wife Rachel (formerly Barber), were born near Salem, Columbiana county, Ohio, and reared in large families of children; at the time of their marriage they resided on adjoining farms, a few miles east of where Alliance now is.

ESOS HEACOCK.

Alliance, Ohio, *Evening* month 30.

A HYMN OF THE BRAHMO SOMAJ.

We fast and plead, we weep and pray
From morning until even;
We feel to find the holy way,
We knock at the gate of heaven!
And when no silent awe we wait,
And word and sign forego,
The hinges of the golden gate
Move, motionless, to our prayer!
Who hear the eternal harmonies
On high no outward word
Blind to all else, is he who sees
The vision of the Lord!

—Giles W. Wallcut.

 PRES. MAGILL'S LETTERS.—VIII.

A DAY AT ST. CLOUD AND SEVRES.

PARIS, Eleventh month 25.

THE home of my professor of French being at St. Cloud, some seven or eight miles down the Seine, in the summer, before coming to Paris for the winter he invited me to come out and spend an afternoon, and in company with himself and an English friend who is studying with him, to make a visit to the world renowned porcelain manufactory at Sévres. It was to be not merely a pleasure excursion, but a practical lesson in French. Taking an early *déjeuner*, I reached the wharf at the Tuileries and took the little steamer on the Seine at 12. Its speed was hardly what might be expected from its name, as, in common with the steamers plying on the larger excursions beyond the city limits, it was called a *hirondelle*—swallow; while the still smaller ones, on the shortest routes, are called *mouches*,—flies. The Seine pursues a very winding course through the city, and on each side are very fine substantial stone quays most of the way. Ships of considerable tonnage come up as far as Paris, and in order to pass under the numerous low bridges, their masts are so arranged that they can be dropped to nearly a level with the deck. As is to be expected in a level country, the current is very slow, so that here, as at Rouen, it is sometimes difficult to say in which direction the river flows. We soon began to pass the esplanade of the Invalides and the Champ de Mars on our left and the Trocadero on our right, and observed with much interest the changes which are being so rapidly made here since the close of the Exposition. Some of the principal buildings, among which I should especially mention Machinery Hall, are to be left standing; and of course, as I said in my last, the Eiffel Tower and some of the large fountains remain as permanent mementoes of the greatest Exposition which the world has yet beheld.

As we passed between the Tower and the Trocadero it seemed as though the Pantheon, Notre Dame, the Tower of St. Jacques, the great dome of the Invalides over Napoleon's tomb, and all other high points of the city were dwarfed into figures beside the Tower. And the further we went from the city, the greater seemed the contrast. Although the day was a misty November day, and not very favorable for distant views, we saw as we passed, the "ascenseur" gradually approaching the top of the Tower, carrying a few sight-seers towards the summit. This was very different from the crowded closing day of the Exposition, when one car at each of the four corners was constantly ascending or descending as far as the first story, and two for the stories above, all being crowded with visitors to their utmost capacity; and hundreds waiting in lines at the base until their turns came to make the ascent. Though the price was moderate,—one franc to the first story, and five francs to the summit,—the sum realized by the company during the six months of the Exposition is said to have reached millions. Being merely *on dits* I will not pretend to give the figures.

As we approached St. Cloud we observed long

lines of trees on either side of the river, bare of leaves, but having great green bunches hanging among their branches. This was the mistletoe which I remember to have seen many years ago in the forest of St. Cloud in greater quantities than I have ever seen it elsewhere. Our "swallow" reached the end of her flight (?) a distance of not more than seven miles, at the end of an hour, and landed us on a quay at St. Cloud almost as substantial as those left behind in Paris. Meeting my professor and his English student, we set out for a pleasant walk to Sévres, about a mile or so up the river, through the fine Park. Although the trees were bare and the day very like late autumn, we recalled the beautiful days spent there on the occasion of a previous visit, and much earlier in the season. It is a favorite place of resort for the people of Paris in the summer months; and the number who come out, many bringing their lunch to spend the day in the shady nooks and pleasant walks, is said to be sometimes, on First-day of the week, as great as 250,000. As we passed through the Park we saw upon the high ground to the right the ruined walls of the Palace of St. Cloud, which was one of the most beautiful palaces of France in 1867-8, when we visited it near the close of the reign of Napoleon III. with a special card of admission with the broad seal of the Emperor upon it, upon the presentation of which all closed doors were quickly opened before us. I might say here that we secured this card by a degree of assurance for which Americans are sometimes said to be famous. Finding it difficult to secure the admission that we desired, and the time of our stay drawing rapidly to a close, I addressed a note to the Emperor himself, stating who we were and what was our desire. Of course it was rather a joke than otherwise, but what was our surprise and that of our host, to have an officer of the imperial household call at our hotel the next morning and leave for us an immense envelope, containing the desired card of admission to several places that we much desired to see. But that was twenty years ago; and in those years what changes France has known! The Emperor, then in the very zenith of his renown, has passed away; his son, then the heir apparent to the throne of France has lost his life in Africa; the Empress Eugenie, then the idol of the French people, is living in sad widowhood, in exile; and the French Empire has given place to a Republic probably more like our own to-day than any other government in the world. The ruined walls of the palace that we were passing were all that the French army left, when in the late war, they burned it to prevent its falling into the hands of the Germans. As we were following the broad avenue, the English student and myself exchanged a word or two in English, which our professor quickly forbade with the words: "*L'Anglais est tout a fait défendu aujourd'hui.*" And of course we obeyed his directions willingly, for we did not forget that of whatever interest our visit might be, our leading object,—as indeed every day,—was the acquisition, as far as possible, of a practical familiarity with French.

The porcelain manufactory is but a short distance beyond the end of the park, and on entering it, as

our professor had a friend who was an artist there, he quickly secured for us the opportunity to see the whole establishment from the atelier in the basement to the elegant and finished workmanship displayed in the upper rooms. In the atelier we were first shown the material in its rough native state, and then the various changes that it passed through were pointed out. In one instance a workman took a large piece of the plastic substance and placing it on his wheel, by a variety of rapid and skillful motions he made figure after figure, making the transformations by manipulating it with his hands, scarcely touching a tool of any kind; and after going through with the various changes to show us how the vases and other figures were built up, he crushed it in his hands and threw it back among the unwrought material of which the cups, dishes, vases, etc., were being formed. We passed through the large room where the ovens were situated. When the vases are properly formed they are carefully packed, to prevent touching each other and so as to exclude the air, and then these piles of earthen receptacles are ready for the oven. They are packed into the ovens with great care, and then the door is walled up by a brick and cement wall some 1½ feet thick. Around the conical-shaped oven, thus packed full of the vases, are three open fire-places leading to three spiral chimneys passing around the ovens, and in these only wood is burned, the smoke from coal endangering the purity of the ware. Each oven burns about a cord of wood per hour, and this is kept up for about thirty hours, after which a gradual cooling process is begun. The heat to which the ware is subjected was said to be 1800° centigrade. The beautiful coloring and enameling, and various pictures are placed upon the ware when in a plastic state, by skillful artists, who have been trained for this especial service, and give their lives to the work. We then passed through the rooms above where the finished ware was exhibited. In the middle of one of the rooms was a vase about 6½ feet high, the largest ever made—to show what could be done, rather than for any special use. The duplicate of this was sent to Philadelphia, and exhibited in our Centennial Exhibition there. Single pieces of china were pointed out to us that were valued at from 30,000 to 50,000 francs. In one room were cups and saucers and various objects of use and luxury, that were marked for sale at not altogether fabulous prices; and visitors can have their sets marked permanently with their names or initials, or decorated in any way that they may desire. Having other uses for the money at our command, we were not among the buyers in this elegantly furnished room. On the walls were copies of some of the finest pictures of Raphael, painted upon porcelain. One of these, "La vierge au roile," is beautifully executed, and to the unprofessional eye seems almost superior to the original.

After seeing the work of the Sèvres manufactory, we went to the upper rooms to look through the museum there. About fifty years ago it occurred to some wealthy patrons of art that it would be a matter of great interest to make a collection of all the most beautiful and perfect specimens of porcelain

manufacture, representing all ages and countries. It was thought well to collect these at this renowned establishment, to furnish a constant basis of comparison. The result is this fine museum. As we wandered through the galleries, and saw the wonderful collections from China, Japan, Greece, Saxony, England, etc., we looked in vain for something from our own country. On inquiring we were told that these collections were of the more ancient porcelain, and for that reason our newer country was not represented. But I am sure that I saw some modern work in this upper hall; and I would suggest that some of our American friends, who are especially interested in this species of manufacture (and there are some who are turning out superior work) make an effort by the gift of suitable specimens, to have America at least represented in this great collection. That any of the porcelain here exhibited would compare favorably with that now produced by the Sèvres manufactory, I suppose that no one would claim.

As the sun was setting we again walked through the Park of St. Cloud; and taking my seat in a little steamer at twilight, and finding an intelligent Frenchman to talk to about what we had seen, the home ride passed more rapidly than I could have supposed possible, and soon we were within the built up limits of the city; and passing between the bright rows of lights on the quays, and under the well lighted bridges, we were soon at our starting point, and landed at the quay of the Tuileries, whence, by a short walk, we reached our pension just in time for the diner, feeling that the afternoon had been pleasantly and profitably spent.

EDWARD H. MAGILL.

For Friends' Intelligencer and Journal.

GRAY DAYS.

TO-DAY is one of my gray days,
I am weary of the rain,
When will these dull clouds pass away,
And the sun appear again?

I would that we might remember
That the sun does always shine,
That earth-born mists alone prevent
Our seeing it all the time.

God's grace is our smallest sunshine,
But it is not always seen,
For clouds of sorrow and sadness
Will cope rolling in between.

When we try our tent again I wish
To the windous Home above,
Where all the City is shining,
With light from the Father's love.

But we still may trust His goodness
And must wait and humbly pray
That our Father in his mercy
Will sweep over the clouds away.

WHEREVER souls are being tried and ripened, in whatever commonplace and homely ways, there God is heaving out the pillars for his temple.—Phillips Brooks.

THE CALL OF GOD.

It sounds along the ages,
Soul answering to soul,
It kindles on the pages
Of every Bible-scroll:
The psalmists heard and sang it,
The prophets heard and spoke,
The martyr tongues enrag'd it,
Till nations heard and woke!

It echoed from old Sinai,
It breathed from Buddha's tree,
It charmed in Athen's markets,
It gladdened Galilee;
The hammer-stroke of Luther,
The Pilgrim's sea-side prayer,
The oracles of Coucord,
One holy call declare.

And every soul that listens
Can hear the inward chime
Of temple bells from countries
That know not space or time:
A mother's voice will stir them,
A child's appeal will start,
A hero's deed will shake them,—
Thy summons in the heart.

Once more thy call has sounded;
The eager spirit heard,
And fain would go thy angel
To hear thy living word.
O holy voices, call her
From self and fear to cease,
Till God is all her strengthening,
Her gladness, and her peace!
—*W. C. Gannett, in Christian Register.*

WINTER APPLES.

WHAT cheer is there that is half so good,
In the snowy waste of a winter night,
As a dancing fire of hickory wood,
And an easy chair in its mellow light,
And a pearmain apple, ruddy and sleek,
Or a jenneting with a freckled check?

A russet apple is fair to view,
With a tawny tint like an autumn leaf,
The warmth of a ripened corn-field's hue,
Or golden tint of a harvest sheaf;
And the wholesome breath of the finished year
Is held in a winesap's blooming sphere.

They bring you a thought of the orchard trees
In blossom April and leafy June,
And the sleepy droning of bumblebees
In the lazy light of the afternoon,
And tangled clover and bobolinks,
Tiger lilies and garden pinks.

If you've somewhere left, with its gables wide,
A farmhouse set in an orchard old,
You'll see it all in the wintertide
At sight of a pippin's green and gold,
Or a pearmain apple, ruddy and sleek,
Or a jenneting with a freckled check.

—*Hattie Whitney, in St. Nicholas.*

AN OBJECT LESSON.

A MAN associated with one of the most notable business successes in this country, a man of wonderful organizing power, of statesmanlike grasp of business principles, of royal large-heartedness, recently broke down in the midst of his inspiring work, and is probably out of the race for the rest of his life. He is a man still in his prime; a man who has reached the years that bring the long wisdom of experience, but not the declining vitality of age. He is a man who ought for the next decade to be at the very summit of his power and usefulness; but his work is done, and he must henceforth lie idle in the harbor while others sail the seas. There is a tragedy in this brief statement of fact; the tragedy of arrested purposes, of failed ambitions, of wasted strength. And this tragedy has come into this man's life because of a very simple and apparently unimportant defect in his nature: he had no power to amuse himself. He was always in dead earnest; always at white heat; always intensely preoccupied. His mind never got any vacation; there was never any diversion of thought. If he sailed or drove, if he traveled or made a pretense of resting at home, the busy workshop of the brain was never closed; day in and out, year after year, the work of building up a great enterprise went on with relentless regularity. At last the body turned on the mind, the workshop is closed and probably will never be opened again. The lesson is obvious; it has been taught in this country again and again by the most striking object teaching. So long as we refuse to learn, the inexorable teacher will continue to set it before us. When shall we understand that rest is as much a duty as work? that amusement is as obligatory as labor? There are times when the supreme duty of the hour is to entertain one's self. There are different ways of taking one's life, but the offense is the same, whether one invoke the aid of powder, or the slower, but almost equally sure, process of draining brain and body by persistent over-work.—*Christian Union.*

To be content with what one has means more than not to be covetous, or than to be resigned. It means to be true to one's situation and calling—a truth, not of mere letter and mechanical detail, but truth of spirit. To mind one's own business is to believe in one's self and in that which one has to do. It is to serve and to wait as seeing behind the petty routine of life that which is invisible; it is born of the faith which finds nothing so small that it is not big with divinity, nothing so frail that it does not carry God with it. The world is constantly astonished with exhibitions of heroism in circumstances where it is least expected, and it wonders in what school such grandeur of conception, such energy of execution, were learned. And the answer is that they were learned, not in surveying heaven and earth for some noble deed to be done, but in the daily doing of one's business. The guarantee of life is found in the fact that in the minding of one's occupation, in faithfulness to the necessities with which one is encompassed, there is found such benediction, such promise, such infinite unfoldings.—*Christian Union.*

MORE than half the difficulties of the world would be allayed or removed by the exhibition of good temper.—*Arthur Helps.*

PIONEER LIFE IN THE WEST.

ELAINE GOODALE, the young woman poet, who has been for some years engaged in missionary work among the North-western Indians, has been traveling among the poorer classes of settlers, in the "Sand-Hills" of Nebraska. She writes in the *New York Independent*:

"The people hereabouts seem to be an intelligent class, superior, generally speaking, to the poorer classes in the east. Most of them have evidently come from better homes than they have here, and the reminders of former respectability, in the midst of grinding poverty, are sometimes really touching, I saw lace curtains, framed photographs, and a volume of "Moore's Poems" in a dreary little one-roomed cabin where they said that they "lived upon bread and gravy," where the children were barefoot, and the little mother, though her manner and speech were refined, went literally in rags. A contrast was seen on another ranch, not far away, where everything in and about the house was indescribably dirty and squalid, but where the people appeared happy and contented, and certainly had the materials of a good dinner on the table.

"It has afforded me a good deal of amusement to be accosted with, 'Do you speak English?' (or, in Western dialect, 'Can you talk American?') 'Why, you've been to school, haven't you?' or, doubtfully 'Were both your parents white folks?' Seriously, however, many people have been very hospitable and kind to me, especially as I am traveling in so unconventional a manner and am quite unknown to them, and no one has been less than civil, even while taking me for a half-breed maiden or the wife of an Indian. As for my friends the Indians themselves, I want no greater courtesy and consideration than they show me every hour in the day."

THE CHARM OF RIGHTEOUSNESS.

The moment we see loveliness, we cannot help desiring it; and the moment we desire it, we begin our effort after it. To do this is one of the instinctive passions of our nature. We wish to be like that which we admire, and we no sooner wish for and admire it, than we grow like to it. And the more like we grow to the beautiful thing, the more we desire to be more fully at one with it, till out of our love of beauty arises an endless aspiration and a pressure towards perfection which we cannot conceive otherwise than eternal. . . . Nothing which was false, or impure, or unjust was, in itself, beautiful to Christ; and the first glory of his grace and charm was in harmony with righteousness. . . . Christ's charm has its root in love, and is identical with truth, and justice, and purity and courage. . . . That grace will make you at one with moral good, just, and true and pure. And it will take all that is loving in humanity, and all that is fair, and all that is moral, and link them to the love of God, and to God's love for all men; so that to human love, and moral love, and imaginative love will be added the spiritual love which gathers them all into perfection.—*Stopford A. Brooke.*

IS ORTHODOXY MORE EARNEST?

A JOURNAL of one of the "Orthodox" and "Evangelical" bodies quotes with evident satisfaction the following from James Martineau, the cultured leader of the Unitarians of England:

"Ebionites, Arians, Socinians, all seem to me to contrast unfavorably with their opponents, and to exhibit a type of thought and character far less worthy, on the whole, of the true genius of Christianity. I am conscious that my deepest obligations, as a learner from others, are in almost every department to writers not of my own creed. In philosophy I have had to unlearn most that I had imbibed from my early text-books, and the authors in chief favor with them. In Biblical interpretation I derive from Calvin and Whitby the help that fails me in Crell and Belsham. In devotional literature and religious thought, I find nothing of ours that does not pale before Augustine, Tauler, and Pascal. And in the poetry of the Church it is the Latin or the German hymns, or the lines of Charles Wesley or of Keble, that fasten on my memory and heart, and make all else seem poor and cold."

NEWS AND OTHER GLEANINGS.

A DISPATCH from Boston, Twelfth month 9th, states that a paragraph is published in the newspapers of that city, under the caption of "A Request by the Poet Whittier," in which the hope is expressed that the 82d anniversary of the poet's birth, which is near at hand, will pass as quietly as possible, owing to the delicate condition of his health. He would gladly welcome his friends, but is scarcely able to bear the excitement, and for the same reason, though appreciative thereof, he may not be able to answer as he could wish all letters and tokens of regard which reach him.

It is now announced that Katherine Drexel, who some months ago entered a convent at Pittsburgh, and became subsequently a member of the Order of the Sisters of Mercy, has secured sixty acres of land at Andalusia, Bucks county, adjoining Philadelphia, where she proposes to build a convent for the training and education of a sisterhood to work among the Indians and colored people. She will be at the head of the institution herself, assisted by Father Stephen, a priest who has been in charge of the Indian Bureau of the Catholic Church, in Washington. The training of the young women who may enter the convent will be shaped to prepare them for missionary work among the masses which Miss Drexel has interested herself in.

The Presbytery of Philadelphia has been engaged in an earnest discussion of the proposed revision of the Westminster Confession of Faith. A meeting for the purpose was held on the afternoon and evening of the 9th inst. The Presbytery is made up of the ministers, and one elder from each church. Among those who have spoken in favor of revision are Dr H C. McCook and Prof R E. Thompson, and Dr Stephen W. Dana. Judge Robert N. Wilson, an elder, favors it. There are a number of strong opponents, including Dr Wm. Fountain Greene, Elder George Junkin, and others, who believe in someone who wish to pursue and discuss, making some specific changes in the Confession, without a general revision. Dr Charles A. Dickey represents this view.

—It seems to be certain that rats are increasing in numbers. In many parts of the country they have become a serious scourge. The Burlington (Iowa) *Herald* says: "The pest of rats seems to be general in this part of the

country. Knox county, Ill., has them bad, and from all sides come complaints of the number and voracity of the rodents. Some farms are reported to be almost honey-combed with their holes. The general direction of the army is to the south and can be traced by their burrows. Many farmers around here are now shelling their corn and putting it on the market to save it from these pests."

—An epidemic of "colds" is reported as prevailing in Russia. A dispatch from St. Petersburg, on the 3d instant, says: "There are 25,000 persons suffering from influenza in this city. The malady affects the people more or less in all towns in Russia." Later dispatches announce that the epidemic is moving westward across Europe, and that some cases have appeared in London.

—Work on the Nicaragua canal is being pushed at an encouraging rate, new gangs of workmen and supplies of material are constantly arriving on the ground, and the Nicaraguan authorities are very cordial and friendly.

Of the twenty-one young women now at the Brussels University, ten study pharmacy, seven physical sciences, three general medicine, and one philosophy.

—Matilda Wallin, a Swedish lady, who has for the past two years taught gymnastics and practiced massage and the Swedish movement cure at St. Paul, Minnesota, has been placed in charge of the gymnastic department at the Baltimore Woman's College, which makes a specialty of physical culture.

—"There are four products of California," says a Pacific Coast journal, "which will shortly command the market of this country, and will seek outlets abroad. These are raisins, prunes, figs, and olive oil."

A new use has been found for the carrier pigeon in Russia, carrying negatives taken in a balloon to the photographer's. The *Nova Vremya* gives an account of some experiments to this end, recently made, in which the czar's winter palace was photographed in the air, the plates being sealed in paper bags impervious to light, tied to a pigeon's foot, and sent to the developer.

—In France, if a patient who is under chloroform shows any sign of heart failure, those in attendance hold him head downward till he is restored. This method is said never to fail; and so convinced are some surgeons of its efficacy that they have operating tables made in such a fashion that one end can be elevated at a moment's notice, and the patient be practically made to stand on his head for an instant or two. —*Court Journal*.

—The testimony of Prof. Orton, the State geologist of Ohio, given in a natural gas case at Toledo, is not calculated to pull natural gas very far out of the slump in which it is. Natural gas, he said, is now a fixed quantity, its manufacture having ceased long ago. Hence, the more that is taken out of the earth, the less that remains to be taken out. With care and economy, the North-western Ohio field, with the present draft upon it, will last for from five to eight years, but not for ten, he thinks. Three years he gives as the average life of a gas well.—*Pittsburg Commercial Gazette*.

—Owing mainly to the vast extent of their country, the Portuguese settlers have not been able to assimilate the Indians whom they found in possession, in the same degree in which the Spaniards in Mexico had by 1530 managed to assimilate the Aztecs. Then, again, the black freedmen in Brazil, owing to the relatively late date at which the slave trade ceased, are far less fitted to exercise the suffrage than were the emancipated negroes in our Southern States at the close of our Civil War. To confer the franchise indiscriminately on Indians and blacks who have scarcely acquired the rudiments of civilization and who have but a fragmentary ac-

quaintance with the Portuguese language, will be fraught with the gravest perils to property and public order.—*New York Sun*.

—The Kennett (Pa.) *Advance* says: "The Orthodox Friends who worship in this borough are looking for a location upon which to build a meeting-house." It is also stated by the Norristown papers that the Orthodox Friends of that borough have selected a site, and will build a meeting-house. Their vacant one is at Plymouth.

—Here is fitness: Guinness, a London brewer who has grown rich in a business that does more to create and maintain poverty than any other human cause, has donated one million of dollars for the erection of dwellings for the laboring poor of London.—*Kennett (Pa.) Advance*.

—New South Wales is about to make some extensive and important experiments by sinking artesian wells. Drouth is the great plague of Australia, and the dark spot in its future has been the fear that, owing to the scarcity of water, the land could never support a large population. But, according to the experts, it has now been discovered that there are several rivers flowing under the surface of New South Wales, and if this water can be "struck," and then stored, the whole face and future of Australia would be changed.

—The latest London idea in the way of insurance is a scheme to insure against burglary. A private residence and its contents are insured for 62 cents a year. Articles especially insured, like jewelry and plate, cost extra.

CURRENT EVENTS.

HENRY M. STANLEY, the African explorer, reached Zanzibar (island) on the east coast, on last Sixth-day, the 6th instant. Emin Pacha, whom he rescued from the insurgent "Mahdists," met with a bad accident at Bagamayo, (on the mainland), having fallen from the balcony or parapet of a dwelling-house, and injured his head. His recovery was at first not expected, but later reports are to the effect that he may survive.

The reported slaughter of Dr. Carl Peters, the German explorer in Africa, with all his party, by African natives, is now confirmed. None escaped. It took place some weeks ago, the camp being surrounded at midnight by 1,200 of a tribe called Somalis. Dr. Peters was a young man who became prominent in Africa about five years ago.

JEFFERSON DAVIS, who was President of the Southern "Confederacy," 1861-65, died at New Orleans early on the morning of the 6th instant. He was born in Kentucky, Sixth month 3, 1808, and moved to Mississippi, with which State he has usually been identified, in 1835. His wife was the daughter of President Zachary Taylor.

NOTICES.

* * * Lydia H. Price expects to attend Spruce St. Meeting, Philadelphia, next First-day morning the 15th inst., and an appointed meeting at Haverford at 3 o'clock, the same day.

* * * The Monthly Temperance Conference under care of Western Quarterly Meeting, will be held at Londongrove, on First-day next, the 25th inst., at 2 o'clock.

All are earnestly invited to take part in the deliberations.

ELMA M. PRESTON, Sec.

* * * Quarterly Meetings in Twelfth month will occur as follows:

15. Fishing Creek, Millville, Pa.

* * * Circular Meeting in Twelfth month as follows:

15. Roaring Creek, Pa., 2 p. m.

SLEEP.

I LIKE that happy phrase which calls
Sleep the parenthesis of sorrow—
Between the grief to-day that falls
And that which waits for us to-morrow;

When for a while sad sighings cease,
And sobbings die in slumber sweetly;
And night's repose and perfect peace
Shut out the day's keen pains completely.

"He giveth his beloved sleep":
Oh tender words, oh true and treasured!
Their full significance, how deep,
The stricken soul alone hath measured.

Then bless His name who thus hath set
For weeping eyes such intermission,
When hearts in dreamless rest forget
The bitterness of their condition.

Phil'p Burroughs Strong, in Independent.

"WHAT SHALL I DO TO BE SAVED?"

"WHAT must I do to be saved?" This momentous question comes to every one of us, at some period of our lives, and becomes for the time the absorbing thought. When this question was put by the trembling, conscience-stricken jailor to the Apostle, the answer given was, "Believe on the Lord Jesus Christ and thou shalt be saved." This marks the first step towards salvation, and what this belief implies has been a subject of controversy during all the centuries that have passed since that time.

We find ourselves in danger outwardly, from which we see no way of escape, until there comes before us something which promises relief;—we believe that relief can come to us through its agency, and we cry out for help! We all have known this, and we all have known that unless we saw some hope of being saved from the impending calamity through the help of another,—that if we had not believed this possible, we should have sunk under the calamity that threatened us. This is our outward experience, and it becomes plain to every one of us that if we are in need of help we must apply to those who can help us. If we are in danger of losing our lives we must turn to those who can save us from the peril that is before us. All spiritual relations are subject to the same laws of cause and effect that govern us in the outward world, and that which is outward becomes the type of that which is inward, spiritual, and eternal.

A sermon at Green Street Meeting, Philadelphia, Eleventh month 12, 1889, by LOUIS J. REED. From phonographic notes by Sue R. WILKIN. (Published by request of hearers.)

Now we come back to the thought of salvation by Christ; and this is the point that most concerns us in relation to this spiritual life of ours. What is it to be saved,—saved spiritually? It may be to be rescued from some danger into which we have plunged, it may be to be preserved from some danger that threatens us, into which we have not yet fallen; it is either to be taken out of the trouble or to be preserved from the danger which confronts us. And it is just here, as I apprehend, that the line of divergence comes when we speak of being saved by the Lord Jesus Christ, as the expression is given. Our Christian brethren of other persuasions, sincere and earnest as ourselves, have a "scheme of salvation," based upon the earlier thought of *sacrifice*, upon that idea which came into the world perhaps among the first religious thoughts of the human family, that we must offer something to the Power whose force and energy were seen through the phenomena of nature, but who was invisible to the eyes of men and must be appeased,—must be made the friend of man through the offering of something he values as his greatest treasure. Thus he gave his first born for the sins of his body; he gaveth the treasures of the field, the firstlings of his flocks and herds and hoped thereby to gain the favor of the Power he feared. And so sacrifice came to be considered the way to salvation; and man was saved,—brought into the highest favor,—through what he offered of his treasures to the Divine Majesty.

As the years rolled on and the centuries passed, man began to see more clearly the basis upon which his acceptance rested, and some thought came to the foremost thinkers of the race that it was not by anything that man could offer outwardly that acceptance with God was gained, but that the fruit of his lips, the meditation of his heart, and the desires of his soul must be in harmony with that which was his highest conception of God to bring him that peace which to be saved seems to imply. And so, down through the ages, as we come to the time of the manifestation in Judea of the blessed Son and sent of the Father, there was growing in the thoughts of men a more divine idea of salvation by sacrifice, and a purifying of the minds of many of the lowly ones of Israel for the salvation that was promised in the coming of the Messiah. And when his coming and his teaching made this clear to all who were willing to free themselves from the traditions and usages by which the souls of men had been bound for all the centuries that had passed.

And there were a few humble, sincere ones who heard him gladly, for it was then as it is now, the

only the simple-hearted were willing to accept the truth as he taught it—the sorrowing ones seeking help, seeking rest for the weariness, of the body, the weariness of the soul. He said to these, “Come unto me all ye that labor and are heavy laden, and I will give you rest. Take my yoke upon you and learn of me;”—and here, precious friends, comes in the grand culminating thought—“for I am meek and lowly in heart, and ye shall find rest for your souls.”

This is what he taught concerning the part that he has in the saving of the souls of men. And shall we go from Him and his testimony to those who see in Him the representation and type of all the forms and ceremonies, the offerings and sacrifices, from the first effort of man to be at peace with God down to the tragedy of the Cross? Shall we turn to this act as the only means by which we may be saved? Shall we affirm that only as we believe Him to have been God sacrificed for man,—dying on the Cross to expiate the sins not only of those of his own time, but of all those who had lived before him, and of all who would live afterward to the latest day of humanity upon earth,—are we to hold that only as we believe this can we have any hope or any part in the great salvation?

O, my friends, when my mind is turned to contemplate this perversion of the simple truth as it was in Jesus,—of how men have labored to make such a mystery of salvation, that only the learned ones can follow the idea and reach to that which is real and lasting,—when I think over it all, I feel like lifting up my heart in thankfulness that though the Apostle declared that not many of the learned and mighty ones have been called into the simplicity of the Gospel as taught by Jesus, it meets the want of every earnest, seeking soul, every soul that in meekness and lowliness of heart is following Jesus in the way of his coming to that soul; following him in all that relates to his intercourse with his fellow-men,—following him in his intercourse with the Father, who, he declared, was not only his Father, but our Father. That relationship makes Jesus our brother, not our God to be sacrificed by another part of himself that we might escape the punishment due to our transgressions. O, my friends, Jesus never so taught, and the instincts of our own souls if yielded to,—the natural instincts that God has given to every one of us revolt from the thought of being saved through the sacrifice of the purest, holiest son of God that has ever walked the earth. The soul turns from the thought, and would rather bear its own iniquity, if it is true to the highest instincts that God has placed in the human heart,—would rather bear its own iniquity, than owe its salvation to the cruel, cruel scourging and death of the Immaculate One. And it is a precious thought that brings gladness to my heart, that the world is rising out of this, and coming to understand what the believing in the Lord Jesus Christ is, which saves us.

Precious friends, if this does not seem clear to you now, rest under it. I found ten years well spent in struggling through the question of what salvation by Jesus Christ meant, and it seemed to me that when the answer came and the truth was revealed that

emancipated me from the errors of tradition and theology as I then saw them, that twenty years—thirty years—would have been as nought to the joy and peace that came with believing in the Lord Jesus Christ in the way of his coming to save men, and so may you find it if any of you have up to this time felt that you must rest your salvation upon what was done for you by another. The true atonement is that coming to be at one with God, through living the life of the blessed and holy son who could say: “I do always the things that please my Father in heaven.”

Precious young Friends I am glad so many of you are here. I want you to start right in the world on this great question of “What must I do to be saved?” and starting right is not by accepting from this one what he says, or what another says, but to inquire for yourselves; you are not, any of you, too young to make this a matter of investigation, each for himself or herself, and as you investigate, divest yourselves of every other desire but to know what you must do to be saved,—to be preserved in the innocency of that life which your Heavenly Father breathed into you,—to be preserved from yielding to temptations, to those appetites and desires which in their proper exercise are all given us for the development of the highest and holiest purposes in life, but perverted, become the chains that drag down to the very pit of destruction. Learn, precious ones, how that preservation shall be accomplished, and accept the Lord Jesus Christ in the way of his coming to each one of you. Here comes in that great thought of the present age, the thought of individual accountability, started in the Christian Church by George Fox, who, when a question arose in regard to some article of adornment, made answer “wear it as long as thou canst,” or words of like import, recognizing the perfect right of private judgment in all those things that relate to our peace with God; and this is one of the foremost questions in the Church to-day. Even those denominations that have been bound with creeds as with bands of iron, are finding that this question must be met. We have never been bound in this way, but we are bound by tradition and usage. Happily for you who are now coming to the front and taking your places in the work of the Church, these bands of tradition and usage are weakening—are coming to be but as wisps of straw when compared with the higher obligations we owe to each other and to our God, who has given us the right of deciding for ourselves all questions that pertain to our relations with Him.

This great truth of believing in the Lord Jesus Christ, believing in the Christ-Power as we would express it,—“the Power that makes for righteousness,” as one of our modern writers has said,—that Power which in the fullness, was, in Jesus, and enabled him always to do the things that pleased his Heavenly Father, that is the saving power. Precious young Friends, if you have not yet set out with that as the leading thought of your lives, consider it well. Consider that this is the most momentous question of your lives; that upon your decision as to what you can do to be saved, will rest all the future of your

lives here; and that the life hereafter will be influenced by your decision now.

I would that I might be made the instrument this day to awaken some of you to this thought, if you have never been awakened to it before. I would that our Father might so inspire me with this great truth that the influence will reach to every heart,—to those who have just been awakened to the thought, and to those of you who, having traveled thus far through life understand better the meaning of what we must do to be saved. O, that all may be encouraged to be faithful to the revealings of the divine Law in your own souls, that we may carry about with us that peace of God, which under every circumstance of our human lives will bless, strengthen, and encourage us to go on as he leads us, as he directs us.

What is life as we come to the silent shadow of its declining sun, to that man or that woman who in looking back finds that it has been spent so that it yields only thorns to his or her soul? What has such a person to look forward to in the future? Those who believe in a place of material punishment, show in ghastly pictures the soul writhing in torment. Believe me, precious friends, there is no picture that man can make of that outward torment which can compare with the torment of the soul, that looking back after a pilgrimage of three or four score years, finds it has gathered nothing but apples of Sodom, beautiful to the outward eye, but filled with dust and ashes inside. Dear friends, let none of us feel that we have no need to be saved, that we need not ask for divine preservation; let none of us feel that we have gotten so near the sanctuary of the inner court that we need not fear of stumbling. All along our pathway we need guidance; we need help; and our Father in Heaven has promised, through the testimony of those who have lived faithful and true lives, that he will be with us, that he will even go with us through the deep waters of affliction, that he will guide us through all the perils of this transitory existence, and as we lean upon him and trust in him, he will bring us safely across the Jordan of death, into the beatitudes of eternity.

May this be the portion of every soul here present, is the earnest prayer of my heart.

THE STUDY OF HUMAN NATURE.¹

THE study of men and women, whether in books or in social life, is a most interesting and fascinating study. It is the secret of the novel's hold upon us, that it places before us with more or less of vivid portraiture both the outward and the inner life of men and women. According to our own measure of imagination do we see these pictured men and women act their parts in the story; and beside, it is a part of the novelist's prerogative to lay bare for us this hidden purpose, or that secret motive, just as in the ingenious manikin of the anatomist one layer after another is lifted to reveal the structure of the eye or the mechanism of the heart. This enticing study of men and women in books is not without its

perils, inviting us as it does to lose ourselves in the lives of pictured men and women, working their work, intriguing their intrigues, loving their loves, fearing their fears, acting their heroism or their cowardice. It is a study which wisely directed gives us help and happiness; but which changes easily to dissipation of mental and moral force.

It is our interest in men and women that is the root of our fondness for gossip. We like to know how our neighbor is prospering in his undertakings; who are the people he values; what are the books that most minister to him; what are the ideals that go before him—a "cloud by day, and a pillar of fire by night." But here again is perilous ground. If we have not a delicate sense of our neighbor's reserves; if we are not quick to perceive the bounds of his openness towards us, our interest may become a very obtrusive, disagreeable thing. More than this—we may be easily betrayed into mounting the judgment seat, and according to our half lights and our restricted vision, there to pronounce judgment upon our neighbor's motives, undertakings, and achievements. And when our judgment is spoken, it is like a winged thing escaped from our control. It is no longer ours, it cannot be recalled; it speeds away on its desolating career, scattering seeds of doubt and suspicion. It is related that: A lady visited Philip Neri on one occasion, accusing herself of being a slanderer. "Do you frequently fall into this fault?" he inquired. "Yes, very often," replied the penitent. "My dear child," said Philip, "your fault is great, but the mercy of God is greater; I now bid thee do as follows: Go to the nearest market and purchase a chicken just killed and still covered with feathers; then walk to a certain distance, plucking the bird as you go. Your walk finished, return to me." The woman did as directed, and returned, anxious to know the meaning of so singular an injunction. "You have been very faithful to the first part of my orders," said Philip; "now do the second part and you will be cured: Retrace your steps, pass through all the places you have traversed, and gather up one by one all the feathers you have scattered." "But," said the woman, "I cast the feathers carelessly away, and the wind carried them in all directions." "Well, my child," replied Philip, "so it is with your words of slander; like the feathers which the wind has scattered, they have been wafted in many directions. Call them back now if you can. Go sin no more."

I bring this thought to you of the deep significance of our spoken judgments, because there comes to my ear now and then, by some indirect way, a story of unappreciation among you, wrought by cruel, thoughtless words. In a life of such close contact of each to each, as our associated life, there is need that a very special guard be placed upon our lips. But, whether here or in the smaller community of our own homes, the same right principle should guard our speech; and the young cannot too early be directed to this right principle. Those of you who have been accustomed to attend the Preparative and monthly meetings of Friends, and to listen to the queries whose stated purpose is "that Friends may be led to an individual examination whether their

¹ Address by Elizabeth Powell Bond to the students of Swarthmore College.

practice is consistent with their profession" will instantly recall the query that directs attention to this right principle of guarded speech: "Do Friends avoid and discourage tale-bearing and detraction?" And in this hour, set aside for meditation, I would press home upon each soul this right principle of guarded speech, as one of the most blessed that make for peace. Bullets and cannon-balls are not the only implements of war. They tear and bruise the flesh and make wounds that the surgeon's skill can heal; but words pierce the impalpable soul that the surgeon's art cannot reach, and there they fix themselves like the vulture upon the breast of Prometheus to sting, and rangle, and embitter life.

"One day a hard word, rashly said,
Upon an evil journey sped,
And like a sharp and cruel dart,
It pierced a fond and loving heart;
It turned a friend into a foe,
And everywhere brought pain and woe.

"A kind word followed it one day,
Flew swiftly on its blessed way;
It healed the wound, it soothed the pain,
And friends of old were friends again:
It made the hate and anger cease,
And everywhere brought joy and peace.

"But yet the harsh word left a trace
The kind word could not quite efface;
And though the heart its love regained
It bore a scar that long remained;
Friends could forgive but not forget,
Or lose the sense of keen regret.

"Oh, if we would but learn to know
How swift and sure our words can go,
How would we weigh, with utmost care
Each thought before it sought the air,
And only speak the words that move
Like white-winged messengers of love!"

I have brought this theme into this hour, because I feel so deeply that it is religious service—that it is doing our Heavenly Father's work to sow the seeds of permanent peace—to establish conditions in which human souls, his children, can best unfold their powers and grow to the full stature of manhood and womanhood. We have drooped and desponded under the clouded skies of these last weeks; believe me that it is in our power, if we but see our privilege, to keep the atmosphere for souls always bright and sunny. If we strive after the spirit that was in Christ, the great patience and the broad charity, it will temper all our words, and make us speak only the words that help or heal.

"No word thou utterest, or good or ill,
But sounds forever,—wild, or soft, or shrill,—
Fast held within the vibrant air's embrace,
If words of thine shall brighten one sad face,
Thine accents ease a brother's heavy load,
Thy daily task reveal where Truth is strained,
Then rest content! For there shall come a year
(And soon shall come) when back into thine ear
With ten-fold power thy words, or ill or good,
Shall speed with force that may not be withstood.
Then happy thou, if in thine ear shall ring
Words that shall crown thee servant,—helper,—king!"

For Friends' Intelligencer and Journal.

A VISIT AMONG FRIENDS IN INDIANA.

THE evening after the close of Indiana Yearly Meeting the writer, in pursuance of his prospect of visiting the meetings of Whitewater Quarter, bade adieu to many kind friends at Richmond, and was taken by Abraham Shoemaker to Westfield, about 16 miles south, in Preble county, Ohio. It was a very pleasant ride in the bright moonlight night, over a most excellent road,—which was a distinguishing feature where I visited in Ohio and Indiana. There are many gravel knolls and deposits of a coarse material, which soon becomes packed by travel, and are seldom in bad condition in any season of the year. The meeting the next day was composed of Friends and a few of the neighbors, not members, and as was the case in all the meetings that were visited, satisfactory. The meeting-houses I attended varied but little in size, were frame buildings with no youths' galleries, and the number in attendance would range from 35 to 50. In the afternoon I returned to Richmond to my former pleasant home with William and Anna Starr. Next day, the Seventh of the week, we went to Dunreith, on the railroad to Indianapolis and St. Louis, and were met there and taken some 8 miles north to Greensburg, where Duck Creek Meeting is located. The meeting on First-day was somewhat disturbed by several persons coming in near the close. It seems that some of the neighbors were in the habit of attending the First-day school at the Orthodox meeting at Spiceland, near by, which was held before their meeting hour, and then going to Duck Creek First-day school, which was held at the close,—preferring in both cases the schools to the meetings for worship.

The meeting-house (Orthodox) at Spiceland is a very large, pretty, brick building, nearly new, and it is said that Spiceland Quarterly Meeting is the largest in the world of any branch of Friends. In the course of my travels among Friends it is surprising, and as it appears to me, unreasonable, for Friends of intelligence continuing the uncouth names to so many meetings. It is sometimes misleading and indefinite to strangers, especially when we find these meetings located either in or near some well known place; and often the county is not given, or a clue to find where the many creeks, hills, and rivers from which the meetings in their early settlement were named, are to be found. Some names of meetings once well known are now almost unused and unknown. Would it not be best to use the name of the place and thus give others desiring to visit them means to know where our friends live?

On Second-day morning we took our departure for a visit to Highland Creek Meeting belonging to Blue River Quarter of Illinois Yearly Meeting. A few hours' waiting at Indianapolis gave an opportunity to see there what is said to be the second largest and finest rail-road station house in the world. It was indeed both large and handsome, and the perfection of all its arrangements for the comfort and safety of the passengers was admirable. It appeared impossible for one to go wrong, if of ordinary intelligence, for we had to pass three inspections before entering

the cars. The distance to Salem was about 150 miles on the Terre Haute, New Albany and Louisville railroad. Salem is a town of about 1,000 inhabitants, noted for its most excellent building-stone, and from the quarries in that section of Indiana were sent building stones to New Orleans in the South, and Boston, Mass., in the far East. Next morning I was taken to Ellwood Trueblood's, three or four miles from the town. Friends here were mostly from Carolina. After making a few calls on Friends, we held a parlor meeting at Charles Brooks', in the evening. Here was the home of that lovely, gifted minister Priscilla Cadwalader. A very pleasant feature was the company of so many young people; their honest and healthy appearance and orderly behavior were encouraging to one who had traveled so far to visit them in Gospel love. The meeting next day was well attended, and as they are so seldom visited by ministering Friends, they were in that receptive condition which makes the labor of the messenger easy and satisfactory. This part of Indiana is quite hilly and the hills are very steep we thought. Many fossils are found here; occasionally a geode, and specimens of many varieties of coral. About twenty miles from here, to the east, and near the Ohio river, is the famous Wyandotte cave which has been explored to the distance of thirty miles and if near a railroad or city would be better known and frequently visited. Salem is about twenty miles north of Louisville, Kentucky, on the line of travel from the North to New Orleans.

Departing, we took the train at 9.30 at night, and arrived at Indianapolis at 4 a. m., and went thence north to Pendleton, a small town on the Michigan railroad. About two miles to the east we found another creek meeting, called Fall Creek Monthly Meeting, located in a beautiful level country, well wooded, with nice farms, and as it appeared, a prosperous people, and interesting body of Friends. They were originally from Ohio and Pennsylvania. The writer felt like being among old acquaintances. The towns-people of Pendleton had just closed a contract with a large plate glass company to give them the exclusive right to bore gas wells in a circuit of ten miles, I think, for a term of years, and they would erect the works which would give employment to some hundreds of hands. The town then would grow and flourish as it never had before. I was amused at the request of a Friend in the town, that some one would come and take her nice, dry wood away, for gas was so much better in all respects, that she would gladly give it away.

The next day I parted from Fall Creek friends to go to Rush Creek on the same railroad line. Wabash, on the Wabash river, was the stopping point for the next meeting, called Maple Grove Monthly Meeting, held alternately at Maple Grove and Rush Creek. It was held in joint-session, in a nice new house, and was one to be remembered for the life and unity that prevailed. In the afternoon James Plummer took the traveler in charge on the way to Maple Grove. His mother, Sarah O. Plummer, we all loved. The next First day at Maple Grove was an interesting First day school, and the young peo-

ple remaining added to the interest and life of the assembly. The wonders of creation were enlarged upon in the meetings; the goodness and wisdom of the Creator in long ages past, in forming their State, so wonderfully blessed with rich minerals, and good soil, coal, and gas, which he in his prescience knew his creature man would require for his future need and development. But far transcending these wonderful phenomena were His dealings and purposes with our spiritual existence. It was indeed to me a further evidence that His paths laid out for us are in the deep, and His ways are past finding out except through His enlightenment. Second-day morning, early, I left Huntington, a large and pretty town of 8,000 inhabitants, on the Pittsburg, Fort Wayne & Chicago road, and went to Kingsland, and thence on south to Montpelier, in Jay county. Having several hours to wait, I visited a tile factory, and also a large saw-mill and manufactory of fellos for wheels of all sizes and kinds. There were several loads of condemned fellos, for carriage wheels, but gas is so cheap that they were not of any worth for fuel. There is much excellent timber in Indiana, mostly of large size, and I have not seen in any State so many and such fine large white oak and hickory trees, with beech and sugar maples. Saw-mills and manufactories of wood for all uses were of frequent occurrence along the railroads.

Third-day, having enjoyed the company and kindness of a friend who met me at Montpelier, we went to Balbec to dinner, the home of Joel Birlsall. There I found a company boring for gas near by, and I went to see the operation. The town of Bluffton, some miles north, being unsuccessful in boring for gas had contracted with the owners of land in the town for the right to bore here. It was found at a depth of about 900 feet. Sometimes they have to bore deeper, to the depth of 1,200 feet. They had a well near by just completed, and a pipe laid from there fed the steam-engine. They had already reached a depth of 900 feet through a light blue slate, and after passing through this slate strata, they find the Trenton lime-stone, where the gas is reached. The meeting was appointed at half-past two, and a goodly number of mostly plain farmers and citizens, with some young people, assembled, and it was an instructive season, wherein it was manifest that the Father doeth all things well, and sendeth and makes use of whomsoever he will to bear witness to truths of the Gospel of Christ.

Thus ended the visit among Friends, and next morning I gladly and cheerfully returned to my eastern home. The visit and mingling with Friends at their homes was both pleasant and profitable, for the state and condition of Friends are much better known when mingling socially and religiously at their meetings at home, than in the large gatherings of both quarterly and yearly meetings, where too often some who at home take little interest in the maintenance of our meetings or our testimonies, take up much of our time, being gifted with a fluency of speech not to the edification of the body. While traveling in Truth's service I always find much in the places to interest and enjoy, and the retrospect

of this last visit affords a field of much instructive reflection, for Indiana is a noble State, gifted with great privileges. A nearly level, fertile country, fast-growing, prosperous towns, with excellent building material in abundance, coal and gas underneath, magnificent timber, and educational facilities almost unequalled,—supported in part by a school fund of nine million dollars,—why should not Indiana be prosperous and progressive, and the principles of Friends increase also in that favored State?

ISAAC HICKS.

Old Westbury, L. I.

GOD IN MAN.

"I cannot escape the fact that Christ's humane-ness (beautiful and all-to-be-followed as his character and ethics are) make his God-being-ness impossible."

THE above extract from a letter which lies before us represents a common thought; one which has disturbed the faith of the Church in all ages, and thwarts and hinders its ministry in our own age. The philosophic thinker will perceive that it rests upon an implied assumption that humane-ness and God-being-ness, to use this somewhat Carlylesque but very significant English, are incongruous and inconsistent; that to be human is not to be divine, but something undivine, and to be divine is not to be human, but something unhuman if not contra-human. And, indeed, this notion has more or less underlaid the Church's conception of Christ. Humane-ness and God-being-ness have seemed to the Church, at least to the scholastic mind, incongruous; and accordingly we have had in the Church a portrait of a Christ who was not exactly God, nor exactly man, but yet was perfect God and perfect man, or, in church phrase, the God-man. And this hyphenated God and man, in which, in a sort of Siamese twins, the divine and human have been conceived as united, has been made in theology to stand in lieu of the simple and thoroughly human life of Jesus as it is portrayed in the four Gospels.

Now, it is not at all strange to us that this conception is gradually fading out of thought, or is even violently repudiated. It makes large demands on belief, and requires a larger degree of historic evidence to warrant acceptance than history can be expected to furnish. It shocks the philosophic sense, which demands unity, or at least harmony, in all its conceptions of life; which can find a place for the divine and a place for the human, but consciously or unconsciously protests against being asked to find a place for the God-man, who is neither God nor man, and yet is both God and man. But, most of all, it is unsatisfying to the religious spirit, since it presents the central object of faith, the foundation of religious truth and life and institutions, the object for reverence, the pattern for imitation, a Someone who is abnormal, and so makes faith and truth and life and reverence and conduct abnormal. Religion reared on such a foundation becomes itself not the true, normal life of a healthy soul, but something exceptional, peculiar, out-of-common, different from life, unhuman. It belongs to set days, or special occasions, or canonized saints, or classes set apart to a religious life, or

"specially elected people." And we even hear of men who are good but not religious, and occasionally of men who are very religious but not specially good. It is not strange that to escape all this inextricable tangle, not of ideas only but of life as well, men, in the interest of clear thinking and true living, reach the conclusion that Christ's humane-ness excludes the idea of his God-being-ness; that he was a Hebrew Socrates, a Jewish Siddartha, and so that all that which the Church had counted as divine and authoritative in his mission and teaching are to be discarded.

But we submit to those who leap to this conclusion, that they base it upon an unconscious premise which they have not really examined, and which requires examination before its truth can be accepted. This is the premise that humane-ness and God-being-ness mutually exclude each other. How if, on the contrary, they mutually presuppose and include each other? How if perfect humane-ness is God-being-ness only in a sphere of embodied action, and with the limitations of our earthly tabernacling? How if, on the one hand, we all live, and move, and have our being in God, and, on the other, He is the All who is in all? How if there is and can be no ideal man except as God be in him, and no manifested God except as he appear in man? Before one rejects the Scripture doctrine of incarnation he must make sure that he understands what it is; that it is the Scriptural, not the ecclesiastical conception which he repudiates. And the Scriptural doctrine of incarnation begins with the creation and ends with its hint of the time when Christ shall have delivered up the kingdom to God, even the Father, that God may be the All in all. It begins with the declaration that God made man in his own image; it goes on to aver that he is seen in a glass, darkly, through human experiences and relationships—as a king, a shepherd, a father, a mother; that he thinks, reasons, considers, loves, hates; that he dwells in men and speaks to men, not through stars, as the astrologers imagined, not through entrails of animals and flight of birds as the soothsayers imagined, but through the interpreted experiences of prophets; that he is reflected from the heart of man as the heavens from the surface of a lake, only, alas! the lake is ruffled and the reflection broken. According to the Bible, he is a God, not of mere power, might, mystery, as the gods of Egypt and Phœnicia, represented therefore by the vital forces of the external world, but a God of justice, purity, righteousness, mercy, love, represented therefore by the highest and holiest experiences of human life. In short, it may be said, without irreverence, that, according to the Scripture, God is ideal man infinite, ideal man is God finite. Men are therefore children of God, born of God, heirs of God, and participators of the divine nature. Sin is self-will attempting to break away from God; as if the earth should be endowed with free will, and should decide to leave its orbit round the sun and try its fortunes in a life of its own careering individually through the universe. Redemption is a coming back to unity with God again; as if the world, weary of its winter and its night, should

be won back to its old-time orbit. The prodigal comes to himself when he goes to his father. The only true humane-ness is God-being-ness. Christ is God manifest in the flesh: because he is the One and Only truly, ideally human. And his work will not be ended till the Christ in us, the hope of glory, brings us all back to oneness with God, brings God to indwelling with us, and the vision of the seer is fulfilled, the tabernacle of God is with men, and the prayer and hope of Jesus is realized: "I in them and they in me, that they may be made perfect in one."

Our correspondent may think this view more difficult of credence even than the one which he rejects. He may be unable to accept the idea that God and man are in essential characteristics one, that the Infinite and Eternal Energy from which all things proceed is a moral and spiritual as well as a physical energy, that the Power not ourselves which works for righteousness works only as it is in us and becomes our own power, that religion is not a something super-added to life, but the life of God in the soul of man; that Christ is not a God-man, but God in man, the God-being-ness because the perfect humane-ness, and that incarnation will not be perfected until the ideal prefigured in Christ is realized in a race in which God dwells, and which he fills with himself. But if this view be rejected, it cannot be upon the ground on which is rejected the traditional view which it is gradually supplanting—the ground that God and man mutually exclude each other, and that Christ cannot be a manifestation of God because he was an ideal of perfect humanity. No other manifestation of God to man is possible than a manifestation in perfect humanity; and the end of that manifestation is that humanity, perfected, may become the eternal manifestation of the divine glory, eternally the tabernacle of God.—*Christian Union.*

THE SCRIPTURE LESSONS.

It has been the custom not to prepare any lesson for the last First-day in the quarter. The committee having charge of the matter recommend a Temperance or a review lesson instead.

The lesson for the 22d, published last week, closes for the present our series on the Old Testament. This doubtless will be satisfactory to many Friends, both those who take part in the work of the schools and others who have not identified themselves with the schools.

The accounts of the strife and bloodshed, intrigue and falsehood in the old records placed before us as having in great measure the sanction of the Supreme Being, it was thought by some might do more harm than good, in that false ideas of God and his relation to the human family might be inculcated.

The course pursued has been carefully considered in all its phases, and from every possible standpoint; and the result has been a deep and abiding conviction that we cannot set aside any of the records of Scripture as not of value to ourselves or to those who succeed us.

The Old Testament is regarded as the most important part of the sacred literature of the world, and as such worthy a place in the studies of the rising gen-

erations. It is also felt that we owe it to the youth among us to present those records in the light of an inquiry into the motive power that animated the lives of those whose acts and words make up the history therein given, and find if possible the progress the nations of the earth had made in the several periods covered by the history.

The lessons for 1890 will be on the New Testament, taking up Luke's Gospel, and supplementing the teaching with corroborative testimony from the other evangelists. That the references may be found during class study, it is very desirable that every scholar should have a copy of the New Testament in hand, and where it is practicable that the New Version be used, as all the quotations as well as the lessons themselves follow the text of the New or Revised edition. And in beginning anew the line of study so much more consonant with our views as Friends, it is very important that those who enter upon the work as teachers study to acquire themselves as good stewards, that the principles and testimonies which we regard as fundamental may be brought to the attention of the scholars, and they be assisted in every query which may arise concerning the truth as it is in Jesus.

LOOKING TO, OR COMING TO, CHRIST.

We hear a great deal about looking to Christ, coming to Christ, believing on Christ, and so on. I ask how are we to do this very important requiring? For my own part I cannot understand how it can be done in any material way as his material body has been out of existence for almost eighteen hundred and sixty years; but his good example, for us all to imitate, is still before us, to do which successfully we must be under the influence of the same spirit which he was under and influenced by. It was the spirit of love to all humanity which shone forth in the acts of kindness and good will in his eventful life; and to come to him or to believe on him is to be under the influence of the same heavenly power of Love, for "God is Love, and they who live in Love live in God; He in them and they in Him," as shown forth in the blessed Jesus; and so we will be blessed also by this heavenly power which will keep us from sin, and consequently be our redeemer from it. This is what I call coming to Christ or believing on or in Him. It appears to be all a spiritual work, and there is no other name given by which we can be saved, and we thus know it to be an experimental spiritual state leading us on to acts of righteousness, kindness, and all the heavenly virtues—preparing us to come up higher.

Now if the whole community of mankind were influenced by this kind, loving disposition or spirit, there could be no train robbing or evil doing of any kind; even wars and rumors of wars would cease, and we would be redeemed from all these evils, and joy and rejoicing would cover the earth as the waters do the sea. Well, we have it so! Let us one and all try. He has prayed that His will be done on or in earth as it is done in Heaven, where all is joy and peace.

PERMANENT UPLIFTING.

The season is upon us when the numerous organizations for the relief of want and distress are making their appeals for help to carry out the benevolent purposes of their associations. These have had their origin in an unselfish desire to share whatever one may have in abundance, with the neighbor who lacks, and by associated labor to accomplish the object more efficiently and with more satisfactory results than when left to individual effort.

And the object is a most worthy one; yet in the multiplying of these means of relief, and employing hired agents to dispense the gifts, as is sometimes done, are we not in danger of compromising that self-respect which is the birth-right of every individual whatever his social status, that should be guarded and cherished as an inalienable inheritance? The tendency of much of our benevolence is to pauperize rather than to encourage self-helpfulness, and this is largely the condition of our present work among the poor. The problem of helping without demoralizing is coming to the front in a manner that indicates the great importance of a wise and judicious investigation of the whole subject from the standpoint of our present social conditions, and the claims of a common humanity.

Helpful church work, for all those who can be reached through that channel, will always stand among the best agencies that can be devised; but it should not stop with the dispensing of a few warm garments for the women and children, and dainties, or even necessities for the aged and the sick. The holy profession of Christianity requires that we make the cause of the poor our cause, and bases our acceptance with the Father, at the end of all, upon our faithfulness in this particular. For the larger number, the plan of organized charity adopted a few years ago in all our large cities seems well adapted to secure the best results, if there is as its right arm, a corps of women, wise, earnest, and discriminating, to carry into the homes of destitution a word of helpful cheer, of kindly advice and suggestion; women whose hearts are in the work not as a sentimental effort to give to the needy, but as a spur and incen-

tive to the faint-hearted and discouraged, who from various causes find themselves going behindhand and see no way out of the difficulty. It is not so much the actual giving that our poorer neighbors want. Sometimes a small loan to tide over present difficulty is more helpful than the dole of charity, and no better service can be rendered such, than what might be secured through Loan societies, where a few dollars, loaned for a short time without interest, and paid in installments as the recipient was able, would be of the greatest assistance.

This plan is pursued in some of the ward organizations of our City, and while there are those who forget to repay, there are many examples of uncompromising fidelity that it is a privilege to help. This reaches down to a class below that which our Savings Funds and Loan Societies are intended to benefit. Often it is a worn and weary woman widowed or deserted with two or three or more helpless little children to provide for, (and such cases are all about us). She is toiling at the most laborious occupations, denying herself the common necessities of life that the little ones may not lack, and in her desire for their welfare resorting to every expediency the mother-instinct suggests, that when she sends them out to be among their fellows they may show no hint of the struggle or hardship she has undergone that they may be clean and comfortably clothed. It is, such as these, both men and women, that need our kind and helpful sympathy, and to whom it comes as a benediction. If half that is now doled out in indiscriminate charity were wisely invested in ways that could be made available to the thousands among us who are deserving our consideration and encouragement, the uplift it would bring to the deserving poor now struggling against odds the most formidable can scarcely be estimated. Let this subject have the thought and attention that it deserves and there is no reason to doubt that a way out of the difficult problem will ere long be found.

DEATHS.

HUNT.—At her residence, near Rising Sun, Md., on the morning of Twelfth month 9th, 1889, Elmire Hunt, widow of Marshall J. Hunt, in her 63d year; a member and overseer of West Nottingham particular and Nottingham Monthly Meeting.

LINCOLN.—At her residence, near Rising Sun, Md., on the morning of Ninth month 1st, 1889, Sarah D. Lincoln, wife of Joseph H. Lincoln, in her 63d year; a member and overseer of West Nottingham particular, and Nottingham Monthly Meeting.

McILVAINE.—At Chester, Pa., Twelfth month 13th, 1889, Spencer McIlvaine, in his 57th year. Interment from Chester Friends' meeting-house.

"It were better to be of no church than to be bitter for any."—*Wm. Penn.*

MARY JANE FIELD.

EDITORS INTELLIGENCER AND JOURNAL:

It was with a deep sense of personal loss and bereavement that, after a brief absence, I attended here this morning our Friends' meeting, and realized that in the interim death had made vacant the accustomed place therein of our beloved friend, Mary Jane Field. To me and to mine she has been not only a tenderly loving friend, but in a certain sense, as a mother. This she has been indeed to many. Especially has she sustained relations of closest sympathy with the young. Early in its inauguration among Friends she engaged heartily and earnestly in the work of the First-day school. For many years, in connection with George Nathan Harper, assisted by others, she has contributed by her personal service very largely to the continuance and usefulness of the Plainfield First-day School. Though few of the children have been from the families of Friends, all have loved her devotedly, and her personal presence and loving ministrations have been as a benediction to all. The First-day School anniversaries, sometimes commemorated at the meeting-house, and sometimes at her own home, have been occasions of much happiness, and to none more than to herself.

In explanation of her deep interest in, and devotion to, First-day School work she once told me how she was led to engage in it. There came to her the great sorrow of the death of her beloved companion in life. In that hour of great need the early lessons of her own childhood concerning the indwelling Divine Spirit as an unfailling source of strength and support afforded her great comfort. It happened that at about the same time an intimate personal friend, not of the Society of Friends, was called upon to pass through a bereavement kindred to her own. But this friend, whose education concerning spiritual things had been of a more outward type, suffered greatly, without consolation. Human sympathy, however grateful, was inadequate to her sore need, and the Divine arm, looking outward, seemed beyond her reach. In grateful memory, Mary Jane said, of the great blessing her own early education among Friends had been to her in that season of bereavement, and in view of the unconsolable suffering of her friend, she felt it to be her duty to do all she could henceforth to teach the children of others the simple spiritual faith which in her own experience she had found to be of such priceless value.

She was a Friend in the true representative sense. Through her many years of acceptable service in the Yearly Meeting as clerk, and through frequent visits with traveling Friends in her own and in other yearly meetings, as well as through the bountiful hospitality of her own delightful home, she had become widely known, and as generally beloved. Many indeed will mourn her loss. She was an active and useful member of our quarterly Meeting Temperance Committee, and a wise counsellor in the general affairs of our religious body.

By the death of this dear Friend I am afresh reminded of the significance of this inscription, which not long ago I read upon one of the historical memorial tablets in Westminster Abbey: "God removes

His workers, but He continues His work." Another beloved worker has been removed from our vineyard, but the work must be continued. While our own opportunity lasts may we who survive realize the responsibility which it confers, and each in our own way render the best service of which we are capable in the field from which she has been called.

Though suffering much pain during her comparatively brief illness, her mental consciousness continued till near the close, and her death was peaceful and serenely triumphant. Her funeral was largely attended, and by many not of Friends, in the old meeting house, on the 9th instant. Tenderly sympathetic and impressive testimonies were borne upon the occasion by Samuel B. Haines, Robert S. Haviland, and Elizabeth Thistlethwaite.

AMON M. POWELL.

Plainfield, N. J., 12th month 15.

FRIENDS' CHARITY FUEL ASSOCIATION.

This Association, during last winter, distributed 320 half tons of coal, relieving nearly 1400 persons connected with the several families, of whom 582 are reported as minors. Of the heads of the families 187 were widows or widowers, 38 single, 110 colored, 213 American, 90 Irish, 22 German, 10 English; the remainder of various nationalities.

A sketch of the Association may not be out of place. In First month, 1831, men Friends procured fuel, which was distributed by the Women's Association, previously organized. One very cold day in the severe winter of 1834-35, the late George Truman had brought to his attention a very suffering case, which so affected him that at the close of meeting, (being a Fourth-day), at old Cherry street meeting, he mentioned the matter; the result was a meeting of men who decided, First month 8th, 1835, to organize "The Association of Friends for the Relief of the Suffering Poor." At first all contributors had the right to bring suffering cases to the notice and examination of a committee who attended to drawing orders for relief; afterwards the intervention of the committee was done away with, trusting that all would be careful to aid only such cases as could not promptly be relieved by the Guardians of the Poor. When the funds collected ran out a fresh collection was made, and most generally the books were closed.

After the removal to the meeting-house on Race street, greater publicity was given to the organization, resulting in a larger number of contributors and consequently a larger participation in its operations.

A Friend who was actively interested conceived the idea of starting a fund which should aid in keeping the books open as long as the season seemed to require, and joined with other members of his family and the late J. Gillingham Bell in the donation of coal, (which also secured the relinquishment of tithes by the Reading R. R.), and by this operation, for several years, the nucleus of a fund was started which has been increased by legacies and the donation of a small dwelling by the late L. V. Williamson.

Sixth month 11, 1869, a charter was obtained under the title of Friends' Charity Fuel Association

Its privileges are open to such members of the Society of Friends or those in profession with it as may contribute to its funds, such contributor being permitted to draw half a ton of coal for really needy cases coming to their notice during the season, not exceeding the number of dollars they have contributed.

(The association, it may be added, was not intended to furnish coal to Friends; our discipline discourages the exposure of cases in that way.)

It will be seen that this is a very liberal arrangement, as the receipts from contributors are about one-third less than the coal costs the Society; therefore it is no more than reasonable to expect that a care should be exercised not to give coal where there is not absolute necessity, and further that those desiring to avail themselves of its benefits should make their own contributions, instead of pauperizing themselves by the solicitation of accommodation from others who are contributors. There are very few among Friends who could not contribute if they were willing to withhold from some gratification or the dispensing with some unnecessary appendages to dress or living. If we cannot curb self for the benefit of others, what reward have we? Let us remember that the poor widow whom the Divine Master commended gave her entire living, and cheerfully incurred the danger of being without the necessaries of life until she earned more means.

I may add that the book for the delivery of coal will open on Second-day, the 30th inst., at Friends' book store. Contributions should be sent previous to First month 7, to the Treasurer, T. Morris Perot, 314 Vine street, or left in the box at the book store.

J. M. T., Jr.

MISSION WORK IN NEW YORK: LETTER FROM ABBY D. MUNRO.

EDITORS INTELLIGENCER AND JOURNAL:

THE Young Friends' Aid Association of New York City, held its fourth Annual Entertainment on Sixth-day afternoon and evening, Twelfth month 6th. The weather was good, Friends generally were interested, the occasion was enjoyed, and the financial result was satisfactory. The most interesting feature came as a surprise, from our friend Abby D. Munro, of Mt Pleasant, South Carolina. She had promised some moss for decorations and sent what dressed the whole room, and was very profitable to sell. She also sent, as the following letter will explain, a quilt made by the children in her orphans' home. It seemed too bad that she should not have for herself the quilt prepared for her with such loving care, so it was decided to exhibit it for the benefit of the Young Friends' Aid Association, and at some future time, to return it to Abby. This was done. A little boy, Thomas Garrett, a great-grandson of the Thomas Garrett whom we all remember, showed the quilt to the visitors for a small sum, and the result was quite as good as if the quilt itself had been sold.

The letter from A. D. M. is appended, as likely to interest Friends generally.

A. M. J.

New York City.

MT. PLEASANT, S. C., NOV. 21.

My Dear Friend:—Agreeable to promise, I send by to-day's steamer, two barrels of Tillsandia or South-ern moss, to be used in decorating for your tea-party. With it I have sent some rice, which you see is very pretty and graceful for your decorations, and may be a curiosity to some. I send also a few little baskets made by an old colored woman, from grass and palmetto. Had I time, I would send more of them—as I believe they could be easily disposed of. Then in one of the barrels you will find a bundle, and "thereby hangs a tale." In that bundle is a patchwork quilt, and we've had a quilting bee. It came off in this wise: During my absence in the summer, it was planned, that these deft little fingers, boys, and girls, should learn to use the needle skillfully enough to piece and put together a quilt as a surprise to me upon my return. So about it they went, with childish zeal. Thimbles were fitted to fingers that had never worn thimbles, and needles took the place of axes, and seams were ripped out to be sewed over again, and sewed to be ripped out; but they persevered "even unto blood," as the stubborn needles persisted in penetrating the flesh instead of the patch. But perseverance conquered, as perseverance enough is sure to do, and the result you will see. Then came the presentation. I knew—I could tell by a certain feeling in the air, when I returned—that something was on their minds. There was considerable whispering, and many a look at me, which implied that I didn't know quite everything, etc. At last the auspicious evening came. I had gone to my room after tea, and just settled for a little quiet, when all at once sounds of music and singing floated up from the entry, and I opened the door, and they came marching in—Aunt Tamar, Mrs. Leveen, (housekeeper) and all. They ceased their singing, formed a circle, and spreading the quilt upon the floor, sang again, lustily, too:

"Miss Abby had a patchwork quilt, oh, oh,

Of prettiest colors it was made.

And in the prettiest patterns laid,

And oh, how gay was Miss Abby's patchwork quilt."

Then came the presentation with a little speech, and each eagerly pointed to the part put together by himself or herself, and after it was sufficiently praised and admired, they withdrew to their beds, as happy as birds. Then came the thought into my head, that this quilt should be quilted and sent to you—in the barrel of moss—both as a specimen of work done by the children and with the thought that perhaps it might be sold at auction, after its history was known. So the same fingers prepared the lining, spread the cotton, and got it ready for the quilting. I am not sure but that you would have thought it worth a dollar's entrance fee to see that quilting bee. I wished so much I might but photograph the scene as boys and girls they stood up on either side, twelve at a time, almost breathlessly running their needles in and out, as earnest as if the welfare of the nation depended upon every stitch. They have worked at it before school and after school, until the last stitch was taken and it was pronounced "finished." Now I wouldn't have you to think this comes to you with-

out any self-denial on my part, but I give it as a specimen of their work—and of their spirit, too, hoping you may be able to dispose of it to advantage.

Tues. 26. The barrels did not get off as I anticipated, and the two in the interval have grown to three. Our colored friends, small and great, became interested; little bundles of rice came floating in to us, packages of cotton balls, and a stalk with the buds on it, which will yet open we are told. Jacob, James, and Augustus climbed the live oak trees and gathered the moss, and our neighbor (white) contributed the beautiful holly from a tree in her yard, and we all packed the barrels, for every member of the family had a hand in it. The older boys wheeled them to the boat in a wheelbarrow, and Miss Nicholas (our Sewing School teacher) went over and shipped them. And so they come to you, laden with kind wishes, and with the hope that the friends at that end will enjoy the contents as much as all enjoyed getting them together.

ANBY D. MONRO.

TEMPERANCE DATA.

EDITORS INTELLIGENCER AND JOURNAL.

I ENCLOSE two papers, which I think would do good if published in the paper.

J. K. T.

Baltimore.

GRAND HOTEL, Paris, Sept. 21, 1889.

We, the undersigned, members of a European Excursion Party which sailed from New York City June 26th, 1889, having practised total abstinence from all intoxicating beverages, do most respectfully recommend this course to all American travelers abroad as well as whilst at home, as most productive of good health and morals. We are unable to account for the prevailing idea at home that Americans must drink beer and wine when in Europe, unless this is the result of appetite and social custom on the one hand and a desire to sell a most profitable and plentiful article on the other. Many physicians, managers of parties, guides, and many citizens seem to vie with each other in creating and promoting the belief that pure life-giving water is not to be found on the Continent of Europe. Those who drink beer for its nourishment, certainly forget that the great German Chemist Liebig declared that there was not as much nutriment in a gallon of beer as in the meal that could be held on a knife point. We have found excellent drinking water wherever we have been. Should impure water be found elsewhere we submit that it does not seem rational to attempt purification by adding alcoholic mixtures, which are poisonous to the human system. Among the places visited by us are the following,—Liverpool, London, Antwerp, Brussels, Cologne, Wiesbaden, Heidelberg, Munich, Verona, Venice, Florence, Rome, Naples, Pisa, Turin, Milan, Lucerne, Interlaken, Berne, Chamouni, Geneva, and Paris.

Respectfully submitted, J. K. Taylor, Baltimore, Md.; Rev. Simon S. Hurlston, Newark, N. J.; Rev. Cornelius Scheuick, Plandford, N. J.; Dr. C. E. Latimer, New York City.

New York City, Oct. 10th, 1889.

Dr. R. H. Plummer of San Francisco, California, professor in Cooper Medical College of that city, who has just returned from a twelve months' trip around the world, through Asia, Africa, and Europe, with his wife and two sons, confirms the above, and says that in their travels they discarded alcoholic drinks, finding no necessity for their use.

Baltimore Yearly Meeting of Friends, composed of delegates from Maryland, Pennsylvania, and Virginia, at its recent session in this city, Park avenue and Laurent street, adopted the following on high license: "The sale and use of alcoholic liquors is a matter in which the Society of Friends together with other religious bodies is greatly concerned. How to suppress their use is one of the most serious and important questions of the day. The method called High License is not in accord with the principles of our Society, since it allows an evil traffic to continue for a price, and is a compromise with wrong. The opinion of those who have given this subject the closest attention is, that the only efficient method,—a method which has been the most effectual wherever it has been given a fair trial,—is the prohibition by law of the manufacture, sale, transportation, and importation of alcoholic beverages, and the proper enforcement of such laws."

GEORGE WASHINGTON'S HUMANE VIEWS.

EDITORS INTELLIGENCER AND JOURNAL:

In the lately published correspondence of John Lothrop Motley, I find printed an interesting letter from George Washington to Motley's grandfather, John Lothrop.

H. T. C.

MONR VERNON, June 22, 1788.

Reverend and Respected Sir:

Your acceptable favor of the 16th of May, covering a recent publication of the Proceedings of the Humane Society, has within a few days been put into my hands.

I observe with singular satisfaction the cases in which your benevolent institution has been instrumental in recalling some of our fellow-creatures as it were from beyond the gates of eternity, and has given occasion for the hearts of parents and friends to leap for joy. The provision made for shipwrecked mariners is also highly estimable in the view of every philanthropic mind, and greatly consolatory to that suffering part of the community. These things will draw upon you the blessings of those who were nigh to perish. These works of charity and good will towards men, reflect in my estimation great luster upon the authors, and presage an era of still further improvement.

How pitiful in the eye of reason and religion is that false ambition which desolates the world with fire and sword for the purposes of conquest and fame, when compared with the minor virtues of making our neighbor and our fellow-men as happy as their frail conditions and perishable natures will permit them to be!

I am happy to find that the proposed Genera

Government meets with your approbation—as, indeed, it does with that of most disinterested and discerning men. The Convention of this State is now in session, and I cannot but hope that the Constitution will be adopted by it—though not without considerable opposition. I trust, however, that the commendable example exhibited by the minority in your State will not be without its salutary influence on this.

In truth, it appears to me that should the proposed government be generally harmoniously adopted,—it will be a new phenomenon in the political and moral world, and an astonishing victory gained by enlightened reason over brutal force.

I have the honor to be, with very great consideration, Reverend and respected Sir, your most obedient and humble servant,

G. WASHINGTON.

ANNIVERSARY MEETING OF THE PEACE SOCIETY.

THE twenty-third anniversary of the Pennsylvania Peace Society was celebrated on Fifth-day of last week, the 12th instant, at St. George's Hall, Philadelphia. The several sessions were held in the morning, afternoon, and evening, according to the announced programme. The attendance at the morning session was small, about 30 persons being present when the President, Dr. Sarah T. Rogers, called the meeting to order. In her opening address Dr. Rogers said that the cause of peace has made steady progress since the first society was formed in America. There are now 43 organizations in this country, six in France, four in Germany, eight in Great Britain, four in Italy, and one each in Denmark, Holland, Hungary, Norway, and Sweden.

The annual report was read by the Secretary, John J. Lytle. Reference was made to the deaths of Edwin K. Burgess and Dinah Mendenhall, and a resolution was adopted providing for an appropriate memorial. Letters of regret from Senator Sherman, Jonathan W. Plummer, of Chicago; William Lloyd Garrison, Dr. James E. Rhoads, Paulus Moort, Herbert Welsh, John Swaney, H. S. Kent, from several members of the Pan-American Conference, and from several others, were read.

A letter was also read from Conrad F. Stollmeyer, of Trinidad, Vice-President of the Universal Peace Union, who went to Venezuela in the interests of a peaceful settlement of the pending dispute between that country and Great Britain. He reported that as a result of his efforts steps had been taken to reopen diplomatic relations between Venezuela and England. The United States Minister to Venezuela, Colonel Scraggs, has written to Secretary Blaine (with the approval of the President of Venezuela), requesting him to inquire, through the American Minister at the Court of St. James, whether England would receive in a kindly manner an envoy from Venezuela, with a view to treat on and arrange the difficulties in reference to boundaries in Guiana, the 30 per cent. extra duties levied upon goods coming from the West India Islands, and the British claims on Venezuela.

A letter from Dr. Daniel P. Breed, of Washington, offered a series of annual prizes for school work in the interest of peace. Out of this, A. H. Love explained, a plan for a permanent fund for the spread of peace literature had taken shape, and to this Dr. Breed has subscribed \$1,000. Frederick E. Whipple, of Mystic, Conn., reported the progress of the movement to purchase the grove at that place and to erect a "peace temple."

Addresses were made at the morning session by S. Burns Weston, on the "Connection of Peace with Ethical Science;" by Amanda Deyo, of New York; and by M. A. Roberts, who was one of the two commissioners selected by Governor Beaver to represent Pennsylvania at the Paris Exposition. The last named believed there was an increasing sentiment for peace in London and Paris. She also spoke of the missionary preacher in Liberia, Paulus Moort, who, she said was earnestly desirous to establish better commercial relations between this country and Africa, and, if possible, resist the usurpation of the French in that country. On motion, this subject was referred to a committee.

At the afternoon session officers were elected as follows: President, Sarah T. Rogers, M. D., Vice-Presidents, Alfred H. Love, Thomas E. Longshore, Lydia H. Price, Henry S. Clubb, Edward H. Magill, Josiah W. Leeds, Hannah E. Longshore, M. D., Peter Smedley, John M. Broomall, Rabbi Jos. Krauskopf, J. M. Wallace, Caroline H. Spear, M. D., Jabez P. Campbell, D. D., William Dayton Roberts, T. Judson Whitney, Dr. George Dana Boardman, Emily Longstreth, N. S. Upham, and Thomas Walter; Secretary, John J. Lytle; Corresponding Secretary, John Collins, and Treasurer, H. Taylor Rogers.

Resolutions were adopted declaring in favor of arbitration as a substitute for war; that, in lieu of a War Department, or in addition thereto, there should be a Peace Department, with an International Court of Arbitration; recognizing the happy omen presented by the sitting in Washington of the conferences of the maritime powers and of the American States; declaring against the taking of human life, either on the scaffold, or on battle-fields, or by any other so-called legal means; favoring temperance; declaring against appropriations for coast defenses, etc., and in favor of the encouragement of commerce; protesting against military statues around municipal buildings, against appropriations for the militia, and the political preference given to military men, and the constant increase of pensions.

Belva A. Lockwood, of Washington, made an extended argument during the consideration of the resolutions, to show that peaceful arbitration could be and had been enforced, citing the case of Belgium's neutrality. She took exception to the resolution against the increase of pensions, and was followed by Alfred H. Love, on the other side.

Addresses were made at the afternoon session by Levi K. Joslin, of Providence, R. I., on "War, Destructive; Peace, Constructive;" by Hannah J. Bailey, of Maine; and N. B. Grubb on "The Mennonite Testimony for Peace." Further minutes were adopted declaring that the peace movement is and should be free from sectarian and partisan bias; con-

gratulating Conrad F. Stollmeyer, of Trinidad, for his successful interposition in behalf of peace between Venezuela and Great Britain; thanking Daniel Breed for his offer of money for peace prizes to the Friends' schools of Great Britain, America, and Canada; requesting the President of the United States to formulate a treaty of permanent arbitration between the United States and France; urging continued peaceful efforts for "Home Rule for Ireland;" and sending congratulations to Brazil on the peaceful accomplishment of its recent revolution.

At 6 o'clock a supper was served in the parlor of St. George's Hall, at which a large number attended. In the evening, beginning at 8, addresses were made by George Dana Boardman, on "Disarmament;" Amanda Deyo, peace delegate to the European Peace Congress, who spoke of "Peace, the Real Golden Medal;" Aaron M. Powell, of New York, on "Things that Make for Peace;" J. H. Clifford, of Germantown, on "The Greetings of the Promises;" Rabbi Joseph Krauskopf, on "The Demand for Peace," and by others.

PHILADELPHIA FIRST-DAY SCHOOL UNION.

PHILADELPHIA First-day School Union met at Green street meeting-house on Sixth-day evening, 13th inst. The attendance was encouraging. Reports from most of the schools gave evidence of improvement and growth. Reports from the three departments of Friends' Mission,—First-day school, Temperance, and Sewing school, were read. A Friend spoke of his being particularly interested in the reports from Frankford and Fair Hill, which have such a small proportion of Friends' children as to rank them as mission schools, as well as the one at Friends' Mission. In reference to the latter it was stated that when Geo. B. Cook was one of the teachers he encouraged the children to save money by depositing in the Penny Saving Fund. This has been continued, and at the present time more than twenty-five have such accounts, with a balance to their credit of nearly 90 dollars.

A number of pupils of the Green street school gave an interesting and profitable exercise, Scripture and sacred poetry combined, which was admirably recited.

The question of the promotion of scholars in First-day schools was dwelt on by Wm. W. Biddle, Mary R. Drinkhouse, and Wm. W. Birdsall, the idea mainly being that this, in the usual understanding, could hardly be carried out in such schools, that if the teacher is under the influence of love she will attract the children, and they will not wish to be separated from her class, but they will advance together.

The Business Committee proposed the raising of a larger sum of money, as the Union had been in debt to the Treasurer on general account, both last year and this, which should not be. This was approved, and auditors of the Treasurer's account were appointed. After some other business, adjourned to meet at Girard Avenue. It was considered to be an interesting meeting.

SWARTHMORE COLLEGE ANNUAL REPORT.

We make the following extracts from the Annual Report of the Board of Managers of Swarthmore College presented to the recent annual meeting of Stockholders. Eds.]

The "Strath Haven Mill property" has been purchased by the College, subjected to a mortgage of ten thousand dollars.

During the last summer much attention was given to putting the College property into excellent order. A great improvement was made in the sanitary condition of the west end of the building, which was carefully examined and thoroughly painted.

The farm continues under the same satisfactory management as heretofore. The condition thereof improves year by year, while it contributes in no small degree to the material comfort of the College.

From President Appleton's report to the Board we extract the following:

"During the past year there have been no changes of importance in the curriculum of studies, and no new departments have been created. We are still working on the former lines of study which were carefully arranged a few years ago. I refer to the four regular courses of the college, leading respectively to the degrees of Bachelor of Arts, Bachelor of Letters, Bachelor of Science, and Bachelor of Science in Engineering.

"The changes in the organization of our College work referred to in the last report, i. e., the division of the year into semesters, or two distinct terms of study, had its complete trial last year; and having been found satisfactory is continued the present year. The special feature of this arrangement, it will be remembered, is the concentration of the attention of the student upon fewer studies at a time, certain branches which formerly extended over the entire year being now made to alternate with each other, each one, however, during its own half-year, receiving the same amount of time as under the old arrangement. . . .

"Certain needs in various departments of instruction may be specified; larger and better accommodations for students are needed in the department of Engineering, of Chemistry, of Physics, and of the Fine Arts. Certain improvements in the Physical Laboratory are an absolute necessity."

In addition to the regular work of the department of History, it affords us pleasure to commend the effort made to uphold our testimony against war, and to instruct, not only in the history of the Society of Friends, but also in its "beliefs and early labors." In addition to the above work, during the past two years a class of twenty-five or fifty students have met regularly on First-day afternoons for the study of the Discipline of Friends, the history of the rise and growth of the Society, its essential principles and testimonies, and the lives and influence of those prominently concerned in the work of building upon the foundation laid by George Fox, William Penn, Robert Barclay, and others. The aim has been to make the students more thoroughly acquainted with the faith we profess, that they may carry hence to their homes and meetings an interest in the promotion of the fundamental principles of our Society.

More than ever before in our college work is stress laid upon English education. Great effort is made to have our students able to apply their knowledge to the practical affairs of life. Instruction in Elocution and Oratory, Rhetoric and Composition, Logic, English Literature, and Psychology, is given great prominence in our course of study.

Those who aspire to become teachers may enjoy opportunities to study, as well as to observe, the best methods of teaching, and to hear lectures by successful instructors and eminent thinkers on pedagogical subjects.

The home-life at the College is on a very healthy and safe foundation, to maintain which the Board, as well as the Faculty, realize fully that untiring vigilance and unceasing care are necessary.

The efforts for the intellectual, moral, and physical development of the students are producing results which are highly gratifying to those who have been giving close attention to these matters, and enthusiasm among the professors and students is general.

The Board has labored in conjunction with the Faculty to elevate the standing and increase the usefulness of the College. In this way we have been brought into an intimate knowledge of its needs, and have been made to see opportunities for further growth. Departments which were well provided for a few years ago now need more room. It is our duty to keep abreast of the times and to make the best provision for all. To do this we appeal urgently to friends of higher education to afford us all possible aid toward enlarging Swarthmore's opportunities for growth.

The Board of Managers feel that the past year has been one of progress in the career of Swarthmore. At its beginning the Board approved of dropping the lowest class; and in Ninth month, 1889, for the first time but two Preparatory classes entered. This course has proved a wise one, as it has resulted in the advancement of the standard of work in the College, while in many instances it has inspired preparatory schools to advance their requirements.

It is with satisfaction we announce to the Stockholders another forward step in elevating the standard of the College. At the meeting of the Board of Managers held this day, it was, after due consideration, decided to discontinue after the present year the Second Preparatory class, thus leaving below the Freshmen only one class, to be known as the Sub-collegiate class. For admission to this class such attainments as will enable the student after one year's work to enter the Freshman class will be required.

This step may be said practically to do away with the Preparatory School, and to constitute Swarthmore a College in a stricter sense than it hitherto has been. This action, following the dropping of the third class last year, has long been contemplated but has not before been thought practicable.

This change enables the Managers to give members of the Senior and Junior increased study room, obviating the necessity of using their chambers for study purposes.

We believe that all friends of Swarthmore everywhere, and especially our now considerable body of

Alumni will approve this step, as a decided advance towards the objects desired by the founders of the College, and by the friends of higher education in the Society of Friends everywhere.

On behalf of the Board of Managers.

M. F. LONGSTRETH, Secretary.

SWARTHMORE COLLEGE NOTES.

NONE of the buildings on the college campus at Swarthmore have ever been given the distinguishing or commemorative names as is customary at other colleges. A suggestion has been made that the several buildings be named for the parties mainly instrumental in building them or for some of the benefactors of the college, and by so doing it is argued that these persons or their descendants would be shown that their gifts of money or services have been appreciated. The professorships have been named in this way and the similar custom of naming the buildings is, at least, a pretty one. Edward Parrish, the first president of the college, was probably the most influential worker for its establishment, and in view of the fact that his name is not to be found attached to any of departments of the institution which he labored so hard to found, it has been suggested that the main college edifice be dignified with the title of "Parrish Hall." For similar reasons there should be the "Cunningham Observatory," while the Scientific Building might well be named in honor of Samuel Willits, or others of Swarthmore's great benefactors.

—The annual reception tendered the students by the members of the Faculty and the instructors was held in the college parlors on Seventh-day evening. There was but little formality, all of the instructors acting as the hosts of the evening. After the usual period of enjoyment, refreshments were served in the college dining-hall and the Glee Club rendered several selections. A very enjoyable time was had by all of those present.

—Professor Cunningham visited Bryn Mawr College on Second-day at the invitation of the authorities of that institution.

—Dr. Shell commenced the required gymnasium classes for the young men on Fifth-day last. Each class spends three hours a week in this gymnasium and a physical examination will be held later in the year.

—The Senior "Evening with Shakespeare" was held in its college hall on Third-day. A very entertaining programme of recitations and personifications of some of the scenes were presented. The entertainment was given under the personal direction of Professor Furman and proved so interesting and instructive that it is proposed to make something of a similar nature an annual occasion. S.

A GREAT deal of sorrow and suffering might be averted if the confidence of children continued through life to run to their parents; if the time never came when there were words and deeds that they would not like mother or father to know.—Selected.

TWO SONNETS.

A DREAM OF REST.

ALL dream of rest, yet very few possess
The way for it. Along the road to gain
Day after day, year after year, with pain
We set our marks, and think some time to gain
To some sweet realm beyond the pale of care.
Those goals we reach set them ahead, and from
Unrest anew, thus never peace attain.
Miss it its paths, nor any pleasure share.
A hundred wayside inns of vantage passed,
Footsore and weary, burdens' heart and old,
Right on we plod and drag our hopes of late
Through all the mire of earth, of mind, at last,
Instead of any happiness we hold.
We are but hollow mockeries of fate.

—Eugene Field, *Chicago*.

ACTION.

Deluded age! which thinks or seems to think
That naught is action save what can be seen;
And sets a brand upon the brow serene
Of those, who from the gaze of crowds would shrink
And they, who rush not boldest to the brink
Of novelties, seem coward souls and mean;
And they, who pause and meditate between
Their deeds, at wisdom's well ne'er learned to drink
Action! prayer upon the sick man's bed;
Action is silence, where a word might wound;
Action is bold resolve, where crowds are led
To assault the walls which guard old truth around.
Action seeks shelter, when the wind's abroad,
While those who'd ride the stormy waves are drowned.

—Theodore D. Woolsey.

THE FIRST LETTER.

A LETTER came to me to-day so very quaint and strange,
I knit my brows in doubt from whom, for not within my
range
Of kindred dear or absent friends could I the least decide
Who'd spell my name this awkward way, with pin lines for
a guide.
A monogram of finger-tips my correspondent had,
Yet as I slowly broke the seal by wond'ring heart beat glad,
Tho' few the loving words begun—so few I felt quite vexed—
Until I found how many eaves—this writer's mind perplexed,
For with the hieroglyphic marks whose shapes to letters
leaned—
"Twixt little 'i's and capital 'V's," and blots that inter-
vened
Were words that formed, "if Tray gets out O mamma ti him
up
And send my slay, and please don't let Job Carr hurt my
pup!"
"I've wade two lakes in both my toes send me A nother
part
And grandmascus now I wear a top boots I'd better wear."
As other boys have I had a will to my Aton time.
The chubby cheeks and brown mark yes bent over the young
name.
O little man to be of it come some duty and may dwell
On thoughts your washed hand will pen, a lover's hope to
tell.
But never can your latest page that bring a loath of joy
Have sweeter welcome than the signal from my absent
boy.

—Fida B. Hunt, *in July*.

DEATH OF OLIVER JOHNSON.

ONE of the last surviving of the circle of active Abolitionists, Oliver Johnson, died in Brooklyn 12th Mo. 10th, after an illness of about a month. He took cold, in the first place, while out walking and bronchitis set in, which was added to a heart trouble from which he had suffered some time. He was constantly attended by his daughter during his sickness.

The family of Oliver Johnson originally lived in Massachusetts, although his parents, shortly before his birth, had removed to Vermont. He was born in Peacham, in that State, on Twelfth month 27, 1800, so that he was on the edge of four score when he died. He was more fortunate than many of the young men of his neighborhood in having the advantage of an occasional session at the academy. His school education was finished at eighteen, and he was apprenticed in the office of the *Wabbanan*, at Montpelier, Vt., of which Ezekiel P. Walton was the proprietor. After he became familiar with the various branches of country newspaper work, his ambition widened, and at the age of twenty he went to Boston to find a wider scope for his talents. Obtaining from Leonard W. Kimball a place as journeyman printer, he soon became very useful to his employer. When the latter, in 1831, began the publication of a semi-monthly paper, the *Christian Soldier*, he took Oliver Johnson as his partner. This magazine, of which Oliver Johnson was the editor, was established to oppose the spread of Universalism, and had the support of the Drs. Beecher, Wisner, Jencks, and other "evangelical" clergymen of Boston. Its popularity was not unmixd, for many of its adherents were not pleased with its attacks on slavery. Oliver Johnson was an Abolitionist from the beginning of his career.

In 1830 the young editor became acquainted with William Lloyd Garrison, who had been released only a few months before from a Baltimore jail, into which he had been cast for his denunciations of a citizen of Massachusetts for carrying a cargo of slaves from Baltimore to New Orleans. From that time Johnson was a most hearty and aggressive enemy of slavery. He became a warm adherent of Garrison, and like that great leader was uncompromisingly in favor of immediate emancipation.

Twelfth month 13th, 1831, fifteen persons met at the office of Samuel E. Sewall, in Boston, to consider the expediency of forming an anti-slavery society. It was the understanding that such a society should be formed if twelve persons could be found who would unite on the basis of immediate emancipation. Only nine could be mustered and no action was taken. A month later another conference was held, at which there were present Mr. Sewall, Mrs. Gray Loring, and David Lee Child, all Boston lawyers; William Lloyd Garrison, editor, and Isaac Knapp, publisher of *The Liberator*; Oliver Johnson, Robert B. Hall, Isaac Child, John Cotts Smith, and Joshua Coffin. Mr. Child, Mr. Sewall, Mr. Garrison, Mr. Loring, and Mr. Johnson were appointed a committee to prepare a constitution, which was adopted on January 1, 1832. The organization was known as the New England Anti Slavery Society. Mr. Johnson was appointed a member of the board of counsellors, consisting of six

persons. He at once made the *Christian Soldier* a champion of the cause. He had intended to enter the ministry, but from that time he threw his whole soul into the cause of the negro. The intervals of rest were very few and scant during the next thirty-three years. He labored almost without ceasing, both as a lecturer and editor, in arousing public sentiment against what he considered a National curse and a wicked blight on American civilization. Mr. Garrison and his followers, in December, 1833, organized the American Anti-Slavery Society at a convention held in Philadelphia.

Two years after its foundation, the *Christian Soldier*, of which Mr. Johnson had become sole editor and proprietor, was sold to Henry K. Stockton. While Garrison was in Europe, in 1833, Mr. Johnson had charge of *The Liberator*, and was afterward assistant editor. After spending a year in Port Clinton, Ohio, with his brother, he was for a short time a printer on the *Free Press*, at Middlebury, Conn. During this interval his zeal against slave-owning had not diminished, and in 1836 he gave up work on the newspaper to devote all his time to the interests of the great crusade. He became an agent of the American Anti-Slavery Society, and traveled over various parts of the country, lecturing and organizing branch societies. After visiting Pennsylvania, he spent several years in Rhode Island, where his doctrines met, on the whole, with a hospitable reception, since he was mobbed only once while there. He went from town to town, often on foot, lecturing wherever an opportunity presented itself, and everywhere preaching against the national iniquity, as he regarded it. From 1837 to 1839 he was corresponding secretary and general agent of the Rhode Island Anti-Slavery Society, becoming afterward publisher of *The Liberator*, Mr. Garrison's paper.

In 1840 he went to New York city to become the local editor of the *Anti-Slavery Standard*, which place he gave up a year after, Lydia Maria Child succeeding him. After a year spent in Eastern Indiana, he made a lecturing tour in Western New York with Jacob Ferris, returning to Boston in 1842 to print the *Liberty Bell* and other anti-slavery publications. He was also correspondent of the *Tribune*, which was founded by Horace Greeley in 1841. Mr. Greeley acquired so high a regard for Mr. Johnson's abilities as a writer that in 1844 he made him an assistant on the editorial staff of the *Tribune*. After four years Mr. Johnson's health was so seriously impaired that he was compelled to abandon the work. He next went to Blackstone, Mass., where he founded the *Chronicle*. This enterprise fell through in six months, owing to the failure of friends to fulfill their promises of assistance, and Mr. Johnson came to Philadelphia as assistant editor of the *Republic*, a daily published during the campaign of 1848 by the Free Soilers. The next work in which he engaged was the editing of the *Practical Christian*, the organ of the Hopetale Community in Milford, Mass., of which he became a member. He also joined the "Practical Christian Ministry" which had just been organized. The next few years witnessed a series of transfers from one journal to another. First he was editor of the *Anti-*

Slavery Bugle in Salem, Ohio; then of the *Pennsylvania Freeman* in Philadelphia; next he was again a member of the staff of the *Tribune*, during Mr. Greeley's absence in Europe, and then he joined Sydney Howard Gay in the editorship of the *Anti-Slavery Standard*. In 1857, upon Mr. Gay's retirement, Mr. Johnson became sole editor, holding this place until 1865, when the mission of the journal and the labors of the advocates of emancipation were ended. After being managing editor of the *New York Independent* from 1865 to 1870, Mr. Johnson, at Mr. Greeley's personal solicitation, took control of the weekly edition of the *Tribune*, which post he resigned in 1872. He remained a stock-holder in the *Tribune*, and at the time of his death was a trustee of the association. For three years he was managing editor of the *Christian Union* under Henry Ward Beecher, and afterward for three years he published the *Orange* (N. J.) *Journal*.

For several years Mr. Johnson devoted most of his time and energies to the writing of his "William Lloyd Garrison and his Times; or Sketches of the Anti-Slavery Movement in America," which was published in Boston in 1880. From the author's intimate connection with the chief leader of emancipation, the book is of great interest and permanent value. In late years Mr. Johnson had been a writer for a number of newspapers and magazines.

Oliver Johnson's first wife, Mary Ann White, was born in Westmoreland, N. H., in 1808, and died in New York city in 1872. She was for a time assistant matron in the woman's State prison at Sing Sing, and was active in promoting many reforms in the management of the institution. Subsequently she delivered lectures before women on anatomy and physiology. His second wife, who, with a daughter, Helen Hunt, age fifteen, survives him, was the daughter of J. S. C. Abbott, the popular author and biographer.

Mr. Johnson, throughout his protracted and honorable life, was a man of generous impulses, warm sympathies, noble aspirations, and restless activity. The heroic period of Abolitionist reproach and contumely, left a permanent impress upon his character. When the slaveholders had broken out in war, and the shackles were torn from millions of slaves, his chief work was done; but so inflexible had been his purpose, and so intense had been his interest in the Abolition movement, that he could not look upon any phase of American public life with serenity and repose. To the very end he was a controversialist always in earnest, with a soul ready at slight provocation to be wrought anew into white heat. In his friendship he was constant and true, and with all his aggressiveness of manner and nervous excitability, he had one of the kindest of hearts—one of the sweetest albeit most resolute natures.

Love is the first comforter; and where love and truth speak, the love will be felt where the truth is never perceived. Love is indeed the highest in all truth; and the pressure of a hand, a kiss, the caress of a child, will do more to save sometimes than the wisest argument even rightly understood; and where love seems to fail, it is where self has stepped between and dulled the potency of its rays.—George McDonald.

MARIA MITCHELL: REMINISCENCES OF THE FAMILY LIFE.

"One morning," writes Maria's sister Anne, "we were preparing for school, and were about ready to start, when my father put his head into the room and said: 'Which one of my children will count seconds for me? The quicksilver is ready.' The quicksilver found an artificial horizon, as I learned 20 years after. Maria knew it then. No one replied to my father's question, but my mother, who had long since discovered the inclination of my sister's remarkable powers, and knew very well what direction her future studies were to take, said quietly as she looked at Maria: 'There is the one to help father.'

"Maria readily drew off her mittens and went to him. My father at that time had the chronometers of the 95 ships which composed our large whaling fleet, in his hands, as they were from time to time brought into port. His observations supplied the rate for the next voyage. Maria began this morning to help my father, by counting seconds, and from that day continued his assistant, finally rating them herself as accurately as her teacher. She was but 11 years old, and from that time her studies were never interrupted."

As long as he lived William Mitchell continued to instruct his daughter, and Maria, his only unmarried child, was never weary of expressing her affection and gratitude. A few hours before he died at Vassar College, in April, 1860, she ventured to ask him a question concerning a matter which had puzzled her for many months, but whose solution she expected the moment her father was sufficiently recovered to give it his attention. He had already told her that he had but a few hours to live, adding, as he finished what he had to say, "but do you go to Iowa, in August, to observe the eclipse all the same." Encouraged by this manifestation of his undying interest in her studies, she ventured to put her question. He turned away, as she thought, in weakness, and she felt herself rebuked. But no! In a few moments he resumed his original position, and in a clear voice explained the matter fully. This was at 2 o'clock in the afternoon and he died at sunset.

We have said that in his earlier years Mr. Mitchell made his own illustrations for his astronomical lectures and constructed various machines to show the motions and relations of the planets. As fast as more elegant proportions were accessible by purchase these were stored away under the eaves of the old garret.

"Some of them," writes Mrs. Macy, "were made of white cotton cloth, a good background to represent space." In the centre of one of these big white squares was the sun, made of orange-colored flannel, pinked and pointed to make believe it shone. A narrow black braid at a suitable distance represented the orbit of "Mercury." The greater and lesser distances from the sun of the planet itself were represented by bits of yellow flannel sewed on the braid. Another black braid a little further off carried a "Venus" made of blue broadcloth. The "Earth" clothed in black, the little "asteroids" in purple, "Mars" in blood red, "Jupiter," "Saturn" and "Uranus" in

gray, stone color, and brown, were all running a race on black braids. Many such curtains were packed away under the eaves, and rolling round the garret floor were many balls of hard wood, from 6 to 12 inches in diameter. One which represented the "Earth" was painted white, while a wire ran through it to serve both as axis and handle.

Her father's devotion to science brought to the home of Maria Mitchell, in her younger days, all the men of learning or talent who visited the island. Among others came Nathaniel Bowditch, Edward Everett, and Benjamin Silliman. After Maria began to compute for the Nautical Almanac, and while her father's leisure moments were still occupied in determining latitude and longitude for the government, Agassiz, Baché, and Audubon were frequent guests. Her home became full of intellectual stimulus, and in the observatory erected on top of the bank building by Mr. Mitchell, Maria was now installed as assistant, and here she made many remarkable observations.

"One lovely evening in October, 1847," writes her sister Anne, "we had a tea party of some 15 or 20 friends, about her own age and her especial companions. As soon as tea was over she said to them: 'Now, you must excuse me; the heavens are so clear I want to sweep the skies. Who knows what comets may be roaming at large?' About an hour after we heard my father running quickly down stairs. He opened the parlor door, his observing cap down to his eyes, and exclaimed: 'Maria has found a telescope comet!' The general rejoicing of the guests contrasted oddly with the quiet demeanor of the mother and sisters. When Maria heard the stir of the departing guests and came down to say good-night, her friends clustered about her with congratulations. 'It was there,' she said simply; 'how could I help seeing it? There was no merit in that.'—*The Woman's Cycle.*

NEWS AND OTHER GLEANINGS.

A CURRENT newspaper paragraph speaks of the memorial stone which has been placed at the grave of John Bright, in the burying-ground of Rochdale meeting. Our readers will recall that we gave a picture of the meeting house, some time ago. The paragraph says "The gravestone is remarkable for neatness and simplicity, and just in keeping with what he desired should be placed at the head of the grave of his late wife. It is white marble, but only two feet six inches in length and two feet in breadth, bordering with a plain groove all round the margin and the lettering is of plain English characters, the wording being 'John Bright, died March 27, 1889. Age 77 years. This simple record and unadorned stone lies horizontally at the head of the grave, and soft green grass now covers the remainder. A similar slab of marble of the same size now marks the place by his side where his late wife peacefully reposes, bearing the inscription 'Margaret Elizabeth Bright, died May 11, 1878. Age 37 years.'

The lash has never been abolished as a means of discipline in penal institutions of Germany. Generally they use a thong twenty inches long, fastened to a handle a yard long. The lash is thicker at the end. The thickness varies according to the provinces. But the smallest lashes are two inches thick. Only in Saxony are the dimensions fixed by

law, the handle there being thirty-nine inches long and the lash thirty-six inches. The maximum number of blows is left to the judgment of the prison directors, but it must not exceed twenty-five in Mecklenburg and Oldenbourg, thirty in Saxony and sixty in Prussia.

—“Aunt Mary Tyler,” as she was familiarly called, died at her residence in Somerville, Mass., on the 10th inst., aged 83. She was born in Sterling, Mass. Her maiden name was Mary F. Sawyer, and she was the subject of the rhyme, “Mary Had a Little Lamb.”

The work done at the Lick Observatory in California is highly appreciated by European astronomers. They say that by combining Mr. Barnard's fine series of negatives of the total solar eclipse of last January, Professor Holden has produced a perfectly marvellous wealth of detail.

—Amelia B. Edwards will publish an article in the *January Century*, in which is given the first popular description of the recent extraordinary discoveries in Bubastis, Egypt. It is stated that all the monuments produced in this number are now published for the first time. One of the stones of these ruins is almost sixty-one centuries old. Bubastis, as old as the world itself, was considered as passing away when Olympia rose.

—Iron is rapidly increasing in its use for houses. You can buy a complete iron house at the manufacturer's, and have it sent anywhere in pieces. A large number of iron villas have been sent from England to the Riviera and put up there upon plots of land purchased or leased, with the provision that when the lease expires the house can be taken away. A comfortable house can readily be built in a month. The price of a room measuring 20 by 13 feet is about \$250.

—Considerable damage has been caused in Northern and Central California by the rainfall, which is asserted to be the heaviest that has taken place there since the memorable year of 1849. The small farmers and fruit growers who developed lands along the Sacramento river appear to be the principal sufferers, and their losses will be heavy. The levee system proved of but little avail against the forces of nature, and bad breaks occurred at many points. The towns of Colusa and Chico were in considerable danger at one moment, but were finally saved after great efforts on the part of the citizens.

—“The slave trade in its worst and most repulsive form,” says the *New York Tribune*, “exists to this day in Turkey, and there are at the present moment at least ninety regular and recognized slave brokers openly plying their trade at Constantinople. There are, moreover, thirty separate slave markets in the Turkish metropolis, held in public buildings devoted to the purpose. Indeed, the Sultan himself is one of the best clients of the trade, no less than 1,500 slaves of both sexes being employed in the imperial seraglio.” Large shipments of slaves from Abyssinia pass almost every week through the Suez Canal, bound from Jeddah and other Turkish ports on the Red Sea coast of Arabia to the Turkish capital.

The news dispatches report that on the 7th instant a thrilling accident occurred to the Canadian Pacific through express train, in the mountains along the Columbia river. “A rail gave way at a point on the mountain side, high above the river. The engine passed over safely, but the two coaches following swung about and toppled over. The bank was nearly perpendicular, and the cars would have tumbled several hundred feet below into the flowing river had it not been that the coupling twisted around and held the tremendous weight. There were the two cars, one with its head of passengers, suspended between heaven and earth. The weight of the engine and the balance of the train prevented the suspended cars from drawing the whole train

down. The suspense was dreadful. The frightened passengers were compelled to remain in their perilous position until the train hands built a platform around and underneath the hanging cars, enabling all to make their escape. The place where the accident occurred is considered the most dangerous point on the mountains.”

—A despatch from Montreal on the 13th instant says: “Since the visit of the Montreal aldermen to Duluth, Minneapolis, and St. Paul, most of them have become red-hot annexationists, and freely express themselves as such, and to-night the Club National, the leading Liberal organization in the Province, put themselves on record. The question was whether Canada would benefit by annexation. The principal speaker was Premier Mercier's son-in-law, Mr. Gouin, a prominent lawyer, who made a speech in which he showed conclusively that annexation was preferable even to independence. Mr. Tremblay, the other speaker, made one of the most telling speeches ever heard in behalf of annexation, at the end of which the club rose *en masse* and declared unmistakably for union with the States.”

CURRENT EVENTS.

DISPATCHES from East Africa state that Emin Pasha is recovering from the injuries caused by his recent fall.

E. E. HIGBEE, Superintendent, since 1881, of the Public Schools of Pennsylvania, died at his home at Lancaster on the 13th instant. He was born in Burlington, Vermont, in 1830.

A TELEGRAM printed on the 13th inst. alleges that 250 families in Morton county, Kansas, are in desolate circumstances, and that unless immediate aid is given many of them will die from want of food and clothing.

FRANKLIN B. GOWEN, a distinguished lawyer, who for a number of years was President of the Philadelphia and Reading Railroad Company, was found dead in his room at Wormley's Hotel, in Washington, on the 14th inst. Death had been caused by a pistol shot, and it is assumed that he took his own life. He was in his 54th year.

The jury at Chicago who had been hearing the testimony against the five men charged with the murder of Dr. Cronin, brought in a verdict on the 16th inst., (after being out three days), convicting three of them of murder, (with imprisonment for life), and one of manslaughter, (with three years imprisonment.) The fifth, Beggs, they acquitted.

The “influenza” which is said to have been epidemic in Europe is reported as existing in New York City. Dr. Edson, of the Board of Health, reported on the 16th that there were eight cases in one family, who it is supposed contracted the disease from a family just returned from Europe. The first patient was a young lady, whose first symptom was vertigo, speedily followed by headache and chills. Then she became deathly sick, with pains in her limbs and muscles. This was succeeded by bronchial catarrh, soreness of the throat, and coughing, followed by a high fever and an exceedingly rapid pulse, which at times reached 120 to the minute. The health officers say it is not dangerous. The treatment is the spraying of the affected membrane freely and frequently with a solution of quinine, and the internal administration of quinine, belladonna, and camphor.

NOTICES.

36. An address on the subject of “Social Purity” will be delivered by Edward O. Janney, M. D., of Baltimore, in Girard avenue meeting-house, corner of 17th street, on the evening of Twelfth month 26th, 1881, at 8 o'clock, to which

FRIENDS' INTELLIGENCER AND JOURNAL.

INTELLIGENCER,
Vol. XLVI. No. 72. }

PHILADELPHIA, TWELFTH MONTH 28, 1889.

{ JOURNAL
Vol XVII. No. 88.

A GERMAN TRUST-HYMN.

Just as God leads me I would go;
I would not ask to choose my way,
Content with what He will bestow,
Assured He will not let me stray.
So as He leads my path I make,
And step by step I gladly take,
A child in His arms confiding.

Just as God leads I am content,
To rest me calmly in His hands;
That which He has decreed and sent,
That which His will for me commands,
I would that He should all fulfill,
That I should do His gracious will
In living or in dying.

Just as God leads I will resign;
I trust me to my Father's will;
When reason's rays deceptive shine,
His counsel would I yet fulfill—
That which His love ordained as right
Before He brought me to the light—
Myself to Him resigning.

Just as God leads me I abide—
In faith, in hope, in suffering true,
His strength is ever by my side
Can aught my hold on Him undo?
I hold me firm in patience, knowing
That God my life is still bestowing,
The best in kindness sending.

Just as God leads I onward go;
Oh! amid thorns and briars seen,
God does not yet His guidance show,
But in the end it shall be seen
How, by a loving Father's will,
Faithful and true, He leads me still.

—Lampertus, 1625.

THE FORMER MEETINGS AT CAPE MAY AND MAURICE RIVER, N. J.

EDITORS INTELLIGENCER AND JOURNAL :

IN the paper dated Eleventh month 2, 1889, is an article signed A. E., respecting the meeting at Cape May, which attracted my attention, and having the old records in my possession, I have looked them over and made a copy of those relating to the establishing of the Monthly Meeting composed of Cape May and Maurice River Preparative Meetings, also the minutes discontinuing the same, with dates, which I enclose, thinking perhaps you might find data enough for an article that would perhaps be interesting to many that in the past were members of that meeting, as we have found in revising our list of members that the members who came to us from Maurice River

Monthly Meeting, are very widely scattered; whatever disposition you may make of the enclosed will be entirely satisfactory.

Respectfully,

JAMES STEWART.

Greenwich, N. J., Twelfth month 14.

Friends of Cape May and Maurice River Preparative Meetings, believing it right for them to join in a monthly meeting, accordingly laid it before each of their monthly meetings, for their approbation, as one Preparative Meeting belongs to the Monthly Meeting of Egg Harbor, and the other to the Monthly Meeting of Greenwich, and having their concurrence it was laid before each of their quarterly meetings held at Haddonfield and Salem for their concurrence, which was obtained, and a minute sent from the Quarterly Meeting of Salem being as follows: "At a Quarterly Meeting held at Woodbury, the 29th of Second month, 1891, the Committee appointed at last meeting on the request of Friends of Maurice River made the following report, to wit: 'We, the committee appointed by the Quarterly Meeting of Haddonfield and Salem, having (in company with women Friends under similar appointment) generally attended the Preparative Meetings of Cape May and Maurice River and endeavor to feel after the propriety of granting the request of said meetings, agree to report as the sense of the committee that their request be granted, and that a monthly meeting be held alternately at Cape May and Maurice River, and do further propose as our judgment, that said Monthly Meeting should be a branch of Salem Quarterly Meeting, and that for the present the Select members be joined to Greenwich Select Monthly Meeting, and that the monthly meeting of business be held the Sixth-day after Greenwich Monthly Meeting; which being solidly considered is united with by this meeting, and if united with by Haddonfield Quarterly Meeting, the Monthly Meeting is directed to be held as proposed, and the time of opening thereof referred to our next meeting."

At a Quarterly Meeting held at Woodbury, 20th of Eighth month, 1891, a copy of a minute of the Quarterly Meeting of Haddonfield was received, setting forth their unity with the report of the joint committee on the request of Maurice River and Cape May. The following Friends are appointed to attend the opening of the Monthly Meeting at Maurice River in the Ninth month next, as proposed: Joseph Whitall, James Cooper, Joseph Allen, Joshua Owen, William Carpenter, Richard Smith, Atna Broadway and John Miller; and it is the sense of this meeting that the week-day meeting of Maurice River and

Cape May in the week of their monthly meeting be dropped and that the meeting be called the Maurice River Monthly Meeting. Agreeable to Friends' request, and the direction of Salem Quarterly Meeting, on the 18th day of Ninth month, 1804, the committee generally attended, and the Monthly Meeting was opened according to direction.

At Maurice River Monthly Meeting, held First month 2nd, 1818, an exercise prevailed and was spread before the meeting respecting the situation of the Preparative Meeting of Cape May, there being no member of that meeting attending this. Upon weighty deliberation it appears to be the judgment of the meeting to appoint a committee to sit with them at their next preparative meeting and report their sense of their situation to our next meeting. The following named Friends are appointed: Jonathan Jones, Nathaniel Buzby, and George Craft.

At Maurice River Monthly Meeting, held First month 30, 1818, the Committee appointed to visit the Preparative Meeting of Cape May report as follows: that they all attended and sat with them in the transacting of their business, and after conferring with them were unitedly of the opinion that to continue a preparative meeting there any or much longer would not be beneficial to the welfare of Society, with which this meeting unites, and a copy of this minute is directed to be forwarded in the report to the Quarterly Meeting.

At Maurice River Monthly Meeting, held Second month 27, 1818, the Quarterly Meeting confirmed the judgment of this meeting in discontinuing the Preparative Meeting of Cape May, and that it is not to be considered a preparative meeting any longer, and it is further agreed that there should be no week-day meeting there the week of our preparative meeting.

At Greenwich Monthly Meeting of Friends held 28th day of Twelfth month, 1854, the following minute was received, (which being read was directed to be recorded on our minutes), to wit: "At Salem Quarterly Meeting held at Woodbury, Eleventh month 16th, 1854, the Committee appointed at last meeting on the subject from Maurice River Monthly Meeting, produced the following report, to wit: The Committee appointed to attend Maurice River Monthly Meeting, etc., report that they all except two Friends attended said meeting, the members being nearly all present. The business was conducted in unity and harmony, but in consequence of the small number of Friends now left within the verge of said meeting, and the inconvenience of attending their meeting together, being situated several miles apart in different directions, rendering a regular attendance almost impracticable, and not feeling strength to appoint either overseers or elders, we are of the judgment that no advantage can arise from the continuance of said meeting. We would therefore recommend to the Quarterly Meeting that the monthly and preparative meetings at that place be discontinued as soon as way opens for it, and the members become attached to another monthly meeting. Signed, etc., Thomas Edwards, Waddington Bradway, Sarah W. Griscom, Elizabeth T. Andrews, Keturah T. Saunders, William

Griscom, and George W. Ward. Which in connection with a report from that monthly meeting on the same subject was united with and adopted, women Friends approving; said meeting to be discontinued after their next monthly meeting, and the members thereof attached to Greenwich Monthly Meeting. The clerk is directed to furnish Maurice River and Greenwich Monthly Meetings with a copy of this minute. Wm. Haines, clerk for the day.

From the British Friend, (Glasgow).

THE MANNER AND MANNERS OF FRIENDS.
 "DID I tell you," said Weston, as we were all chatting together after supper, "revelling in the liberty," as some writer puts it, "of light unpreparedness of thought,"—"that during our Scotch trip last August, as we were coming by steamer down Loch Long, and were amusing ourselves with feeding the beautiful sea-birds that followed the vessel, we met with and made the acquaintance of an old Friend and his wife, who were, like us, heartily enjoying the fun, and the scenery, and the fresh breezes, and all the other delightful surroundings? They were very nice people—simple, but refined and well informed; and the point that first drew our attention to them was that the lady wore the dove-colored dress and bonnet of a Friend of that olden-time when you and I were young together. I can't tell you how this affected me for the moment! It recalled vividly to my recollection the figure and dress of my revered mother, who was taken from us when I was only fourteen years old, but whose gentle influence and loving spirit still speak to me almost every day of my life. I don't wonder that a sensitive soul like Charles Lamb, who knew something of the 'gentle Quakers,' should have been specially impressed by them. You remember his somewhat extravagant words: 'Every Quakeress is a lily; and when they come up in bands to their Whitsun Conferences, whitening the easterly streets of the metropolis from all parts of the United Kingdom, they show like troops of the Shining Ones?' These Shining Ones are still to be found in the easterly streets of the metropolis and elsewhere, but they have doffed their beautiful and appropriate plumage, and I suppose you could not find half-a-dozen Friends' bonnets in Great Britain!"

"Possibly not," I replied; "but the sweet spiritual lineaments that formed the chief attraction have happily not disappeared, and I trust—notwithstanding all our changes—are not likely to disappear. I mean of course those gentle characteristics that thou hast already referred to, and which Harriet Beecher Stowe so strikingly outlines in her wonderful story. Thou remembers her beautiful sketch?"

"Yes, in a general way," said Weston, "but if you could find it and read it to us, it would fit in nicely with our talk."

"I must take a sentence here and there and piece them together, to give the portrait I am thinking of," said I. "This will do to begin with:

"In a large, roomy, neatly-painted kitchen, its yellow floor glossy and smooth, and without a particle of dust, sat Rachel Halliday, with a bright tin pan in her lap, into which she was carefully sorting some

dried peaches. She might be fifty-five or sixty; but hers was one of those faces that Time seems to touch only to brighten and adorn. The snowy lace crape cap, made after the straight Quaker pattern, the plain white muslin handkerchief lying in placid folds across her bosom, the drab shawl and dress, showed at once the community to which she belonged. Her face was fresh and rosy, with a healthful downy softness, suggestive of a ripe peach. Her hair, partially silvered by age, was parted smoothly back from a high, placid forehead, on which Time had written no inscription except peace on earth, good will to men. Beneath shone a pair of clear, honest, loving brown eyes, which revealed a heart as good and true as ever throbbled in woman's bosom.

"Mary, thee'd better fill the kettle, hadn't thee?" gently suggested the mother to her oldest daughter. Mary took the kettle to the well and soon reappearing, placed it over the stove, where it was presently purring and steaming—a sort of censer of hospitality and good cheer. The peaches moreover, in obedience to a few gentle whispers from Rachel, were soon deposited by the same hand in a stew-pan over the fire.

"The next morning was a cheerful one at the Quaker's house. 'Mother' was up betimes, and surrounded by busy girls and boys, who all moved obediently to Rachel's gentle '*thee had better*,' or more gentle '*hadn't thee better?*' in the work of getting breakfast ready. If there was any danger of friction or collision from the ill-regulated zeal of so many young operators, the mother's gentle '*come, come*,' or '*I wouldn't now*,' was quite sufficient to allay the difficulty; and so on, and so on."

"Thank you much for your ingenious mosaic work," said Weston. "How fresh and yet how familiar it all sounds! Mrs. Stowe was not drawing on her fancy for those sketches, we may be sure. We have all come across such gentle women many a time, and though happily they are not an exclusive heritage of the Friends, yet the Society has been specially rich in these sweet, gracious natures. In fact one often felt that the old-fashioned garb—quiet, subdued, dove-like—beautifully harmonized with a life 'so full of tenderness and restraining modesty,' as Charles Lamb puts it."

"Some one," I said, "in speaking of the Friends of the olden time—as I suppose we must now call them—with their peculiar dress, deportment, and speech, has compared them to a religious Order in the Church universal, having for their special mission the promotion of charity and peace. No doubt these outward badges gave color to that benign though narrow idea; but whether such externals were good in the long run, or even were consistent with the freedom and spirituality of true Quakerism, is, I should think, no longer an open question. Human nature is so fond of something outward to rest upon and to cultivate—some kind of ritual to observe—in preference, shall I say? to the deep realities of spiritual religion, that even the Quaker peculiarities—simple and well-grounded as they were in their origin—grew in many instances into a terrible snare, by diverting attention from mighty foundation truths to mere forms and surfaces."

"I am afraid there is no disputing that," said Weston. "But did you ever consider how much influence these externals of Quakerism have had in holding the Society together during quiet unenthusiastic times, and so keeping it in a measure ready, when the opportunity and impulse came, for active, united service?"

"I freely admit," said I, "that the gradual adoption and inculcation of these Quaker observances have in multitudes of instances been overruled for good, and that many noble souls have been trained thereby to sensitiveness of conscience and to an anxious desire to respond to the call of duty even in little things; and so have been faithful, though perhaps not always enlightened, servants of Christ; and no doubt the badge has been in some sense a bond of union. But there has been another and a less noble side to the question, which is perhaps not worth discussing, because that danger, at all events in this country, has passed. By the way, was it Coleridge or Sydney Smith who said, '*Bark a Quaker, and what have you left?*'"

"It seems to me," said Weston, "to be much more after the style of Sydney Smith—slashing and often superficial. I should think, from what I know of his writings, that Coleridge really understood more of the great fundamental truth of Quakerism, and of the real solid substance enclosed by the 'bark,' than to hazard such a reckless remark. At the same time, there was, and perhaps still is, such a wide-spread notion that Quakerism is nothing but a system of externals—nothing but 'bark,'—as to indicate that the Society itself, by its exclusiveness and reticence, has been to a large degree the cause of this ignorance. If you hide your light under a bushel, it is obvious that it cannot be seen; and it will soon be equally obvious that the light will grow dim and at last go out."

"Thou keeps bringing us," said I, "face to face with the great problem of the Quaker Church in the present day: how to be active and enthusiastic and zealous, without being artificial; and unquakerly; that is to say, without trying to do our duty by substitution and pre-arrangement and professional help. We want life, and not calvanism; and how to promote life wisely and healthily, is the question which all churches are being drawn increasingly to consider. But we were talking about a less important matter just now—one that belongs to 'the day of small things,' though not on that account to be despised. I note that we have said nothing yet about what used to be called the 'plain language.' Dost thou know, I rather grieve over the loss of that."

"You mean the numerical terms for months and days in place of what George Fox called heathenish names?"

"No, not those so much, as the loss—so far as ordinary use goes—of those personal pronouns in which our tongue is more deficient than that of any in Europe. When the old idea was disappearing that a question of conscience was involved in the maintenance of these observances, it would, I think, have been so easy to have retained the 'thee' and 'thou' for home use, and made these words the language of

intimacy and affection. Had this been generally done among the Friends—and for that avowed purpose—the practice might very likely have spread, and we should have had a valuable addition to the more refined resources of the English language. How touching it is to see W. E. Foster always resorting to this *lingua domestica* when writing to his wife! He evidently felt the closeness of intimacy implied in these little words, and so he found himself instinctively recurring to them when seeking to express his deepest and most abiding affection."

"I wish you had published that suggestion earlier," said Weston. "Who can tell how eagerly it might have been taken hold of by many who loved the Quaker vernacular whilst strongly dissenting to the claims of ecclesiastical authority on such matters. The use of this phraseology was no doubt at first a noble protest in favor of Equality and Fraternity, but it ended in a conventionalism which in my judgment seriously disqualified the Society from effectively carrying out its more important work. Do you remember the strong language used by J. J. Gurney in advocating the rigid maintenance of these peculiarities?"

"Please remind me of it," said I. "I am not sure what special quotation thou hast in view."

"Well, he actually says in one of his Essays, that these outward observances to which we have been referring, 'may be regarded as forming an external bulwark, graciously provided by our Heavenly Father, by which Friends are separated from the world, and in some degree defended from its influence.' No doubt many wiser men than he held the same view with equal rigor. But wasn't it a great mistake? Well! well! As I said before, it has not been all loss. I very much doubt the bulwark; but it has certainly been a uniting bond—a sort of encircling 'bark' which has served a purpose during a somewhat unheroic time. Still, notwithstanding my affection for venerable customs, I must confess my astonishment at the importance once attached to these observances. I fail to see their consistency with the great underlying principle. At the same time, we are bound to acknowledge the sincerity and singleness of purpose with which our forefathers faithfully carried out their conscientious convictions, even on these comparatively small things."

"Referring again to those ordinary 'heathenish names' for 'days' and months, hast thou ever heard the story of the little *rencontre* between an eminent Quaker Minister, George Withy, and a blustering barrister at the Exeter Assizes?"

"I think not," said Weston. "I should like to hear it."

"It is of course a good many years ago—perhaps fifty or sixty—that it took place. Thou must understand that George Withy was a man gifted with much vivacity, great readiness in smart but kindly repartee, and a fund of dry humor which was sometimes a trial to the grave elders of his meeting, because it occasionally bubbled out in his ministry. Well, George Withy was summoned as a witness in a certain dispute; and after giving his evidence he was severely cross-examined by the opposing counsel.

In reply to one of his questions, the Friend said that something he was speaking of occurred 'in First month.'

"First month!" shouted the barrister. 'Who is to know which is first month? Why can't you Quakers speak rationally? Tell the jury what month you mean by First month.'

"Well," said George Withy, with, I fancy, a merry twinkle in his eye, 'I should say that the man must be more than a common fool who doesn't know which is First month! It might take some reckoning to count up to the Ninth or Tenth months, but surely the First month is simple and clear enough.' At which, as the old records say, 'the court fell a-laughing.' 'My lord!' said the barrister to the presiding judge, after battling with the witness for some time, 'I can do nothing with this witness. He is positively insolent. He calls me and the jury common fools!' 'Nay!' said the judge, 'I understood him to say that some one—perhaps you—was more than a common fool. You don't dispute that!' At which the court again 'fell a-laughing.'

"The old Friend was, I think, rather rough on the barrister," said Weston, "but probably he deserved it. The story reminds one of some of those *rencontres* which Fox and Penn had with the judges and lawyers of their day, and in which they so often showed their coolness and tact. To turn to another item of the Quaker peculiarities: What do you think was the original ground of objection on the part of the Friends to the wearing of wedding rings?"

"I should suppose," I replied, "though I have never looked into the matter, that the scruple against their use was one of the heritages from our Puritan ancestry. As we know, the Puritans hated Popery, and with good reason. The ring had come down from Popish and even from heathen times, and so it was condemned. Of course many good things came down from Popish and heathen times, but in the excitement of the Reformation this was perhaps overlooked. It will be interesting, I think, to search into the matter, and see what history says respecting it. Meanwhile, on all these questions we must think for ourselves, find out *our* duty, and mind our calling." Clio.

SYNOPSIS OF W. H. H. MURRAY'S ARTICLE.

[An address by W. H. H. Murray, of Boston, well known as a writer, and as a minister, (for six years in charge of the Park street Congregational church), has lately been published in *The Arena*, a new periodical established in Boston. The address has attracted considerable attention, and we find a synopsis of it in an exchange paper, which we copy below.—Eds.]

The speaker commences by remarking on the strange fate that has befallen the great religions of antiquity, those of Confucius, Buddha, and Zoroaster. The religion of Confucius, as he conceived and expressed it, was a thing of beauty and of power. It had in it both the energy and the benevolence of the skies. But all of us know that pure Confucianism died with Confucius; that scarcely had he passed before the truth that he proclaimed and lived began to be formulated into a system and organized into a structure so inert, so complex and cumbersome, so inelastic

and unresponsive to spiritual energies that what was vital and truly divine in his teachings was made comparatively inefficient. The spirituality and effectiveness of the Master's wisdom and piety were buried and lost under the mass of formalism which his followers, with the best intent, piled upon them. The same may be said of Buddha and Zoroaster.

Christianity has suffered in much the same way. No sooner had Christ departed than his religion became a matter of dispute between his followers. Peter had his views and Paul his. Jerusalem, Antioch, Alexandria, and Rome had separate gospels and separate interpretations. The Jewish wing were determined that the simple faith of Jesus should be made to harmonize with the symbolism of Judaistic rites. The Gentile wing were equally determined to fashion it into adaptations to the philosophic opinions of the Greeks and Romans, while a third and influential party strove to influence it in the direction of Alexandrian thought and speculation. From these three sources and from each equally perhaps, came misunderstanding and error. He who came to introduce a new and blessed habit of life, a sweet and holy manner of thought and conduct, redeeming the world collectively by reforming the world individually, was compelled to occupy a lower plane as the author of one more religion.

The letter which killeth was exalted and the spirit which giveth life was debased. The adoption of Christianity as a State religion by the Roman Empire in its then condition was a misfortune. Then on through the centuries from all kinds of churches came a long list of dogmas and theories, half right, half wrong, good, bad, or neither, or simply foolish, which have been piled, a mighty mass, upon the Divine Man and his teachings, until he himself and the sweet simple truths he taught, have almost been buried out of mortal sight.

This, Mr. Murray says, is why Christianity has failed to fulfill its mission—to convert the world. Christ came to bring peace and the world is filled with war. He came to introduce the era of forgiveness—what nation has learned the lesson? He came to redeem society from selfishness, but when was society more selfless? Men were to love God and their neighbors as themselves: Do they? His followers were to be lowly minded and humble: are they? Two thousand years have passed and Christianity has not triumphed. This has made many flippant and irreverent, and many sad and despairing, but I do not despair, because while Christianity as it is known and applied, has failed, the real Christianity, the religion of Jesus himself, has not failed, for it has never been tried. The church has stood in its pulpits silent with politic dumbness and the age of fear. The question will soon be, Shall we have the religion of Christ or the religion of the schools, and who can hesitate? But to learn what the religion of Christ is we must go to Christ himself, and not to Edwards or Calvin or Luther or to Augustine or Peter or Paul. Not even a professor of theology will dare to say that Jesus did not fully explain himself and his mission, but left his plan of salvation in the condition of a house half builded when he died. Not will anyone

say that Jesus had hazy or indistinct views of his mission, or expressed himself so imperfectly that those who heard him got hazy and indistinct views of it. On the other hand, all men believe that Jesus knew perfectly who he was, what he was, and what he came to do, and that he spoke in so plain and simple a fashion that every one could understand him. Therefore it is not in the writings of Paul or Peter, nor in those of ancient worthies nor modern theologians that we are to find Christianity defined and enforced, but in the words and life of the Master himself.

Mr. Murray recognizes that good men may have doubts about some passages in the Bible, and says, it is true that Jesus in his conversations was wretchedly reported and that the imperfection of memory marred the sequence of his sayings and lessened the value of the record. Nevertheless the Gospels do still give the honest seeker a clear understanding of the man and of his mission as he himself understood it, a perfect conception of Christianity as expressed and embodied in the person, the spirit, and action of Christ.

Jesus did not come to establish a new religion of formulas, or a new philosophy or a new theology, or to inaugurate a new ecclesiasticism, but to introduce a new habit of feeling and conduct among men, to persuade them to adopt a new habit of life.

With him a new manner of living, not a new manner of thinking, was born; a new life, not a new creed; and by imitating the life and not by believing a creed were men to be saved. He did not know men by what they believed but by what they did. "By their deeds ye shall know them." He did not ask men to believe in any form of truth; he said, "believe in me and you shall be saved." His idea was to establish a religion of heart and not of mind, of love and life and not of thought and creed; and he showed us the way of life by living such a life himself. You cannot bring men to God through the portals of the mind; they are too small for the soul to pass out or for God to pass in. The Christianity of the schools is a vast system of intellectualism and the result is a religious world broken into fragments and each fragment thinking itself the whole, with incessant quarrelling and contention.

Mr. Murray thinks that humility of intellect is just what the Church lacks now. Religion is not a mystery, but a plain, simple way of living. Jesus never thought he was saying things which would take twenty seminaries to understand. Many have taught Christianity in the stalk, in the branches, in the twig tracery and interlacing, rather than in the root. This has been the great error of the churches—the root of Christianity is life—the life that Christ lived.

How can an unbroken bark, God's broken
Resounding Heaven, be one by one
From those who fly the chain, be broken
Use the philosophy to do so.

THESE THINGS I HAVE ALL
CONSIDERED AND COME BEHIND THESE
THINGS THAT I KNOW ARE GOOD AND TRUE
I TRUST YOURSELF

SCRIPTURE LESSONS, 1890.—No. 1.

FIRST MONTH 5.

THE FORERUNNER ANNOUNCED.

GOLDEN TEXT.—Behold, I send my messenger, and he shall prepare the way before me.—Mal. 3: 1.

Read Luke 1: 5-17.

The statement of our lesson locates the time and the place of the birth of him who was to prepare the way of our Lord, and make the path straight and plain for the Messiah, whose coming had been prophesied for many centuries (Deut. 18: 15), and was confidently looked for at any moment of time. So earnest in their expectation were the devout Hebrews that they had several times been deceived and imposed upon by enthusiasts and designing men, who claimed to be the promised Messiah. They had endured much sorrow and been brought into suffering on this account. Yet their faith and confidence in God and in the fulfillment of this promise made to the fathers, was strong and abiding, and they waited patiently for his coming.

Herod, the King. Judea, over which Herod reigned, was a part of the Hebrew nationality. It had been conquered by the Roman army under Pompey, about sixty years before the time of our lesson, and was now a province of the Roman empire, to which tribute was paid. Herod held the throne under sanction of the Roman government, and had been the king of Judea for more than thirty years.

Priest of the course of Abijah. In the reign of David, the priests had become very numerous, and it was found necessary to adopt some plan by which they might all be brought into service. Accordingly they were divided into courses or classes, of which there were twenty-four; each class ministered at the altar one week. The one to which Zacharias belonged was the eighth in the course.

They were both righteous. Both belonged to the family of Levi, and were descended from Aaron, the first high priest of Israel, so that the son born to them in their old age was of priestly origin, and this, added to the righteous life and example of his parents, gave promise of one worthy to be the herald or forerunner of the Messiah.

Walking blameless. What a beautiful record! How reassuring it is that in an age when there was so much strife and bloodshed, and such a wide departure from the law of the Lord, it could be said of these servants of the Most High, that they were "blameless."

While he executed the priest's office. This was to burn incense, morning and evening (Ex. 30: 7). It was while Zacharias was performing this service that the messenger, called an angel, made known to him what was so soon to come to pass.

Thy prayer is heard. His desire to have a son was granted. No Hebrew couple felt themselves blessed of God until children were given them. To go childless was the greatest misfortune that could befall them.

Shall go before him. This indicates the place the son that would be born to them was to fill in the new dispensation that was about to come to the Hebrew people.

There comes a time in the life of a young person when his thoughts and feelings are drawn toward and dwell upon the various phases of religion, and with new interest and vigor.

Whether he has been less or more thoughtful during his childhood than most children makes little difference, for it comes to all in a greater or less degree. Happy is he who when his first religious doubts, queries, or beliefs arise within his mind, takes them up, searches and sifts for himself, and comes in time to a clear, firm belief and knowledge that there is a God.

A doubt on questions of religion should not be feared nor despised. Although it is not as truly valuable as a knowledge, for it is but "as a voice crying in the wilderness, Prepare ye the way, make the path straight," still it is of value as a forerunner, and if rightly heeded and the path made clear, the higher, better knowledge will follow.

The messenger comes differently to different natures; not as a doubt to all, but perhaps as a sudden burst of sympathy or forgiveness, or a yearning for a greater field of action. All are an indication of the energy of the better part of us,—the spiritual nature.

Quench not this life and activity!—but rather by searching after and absorbing the best, the truest, and highest, develop it, and the time will come when you will realize it to have been but the forerunner of the knowledge that God is Light, that God is Truth, that God is Wisdom and Love.

NOTES ON THE LESSON.

Entering as we now do upon a course of study which begins with the beginning of the ministry of John the Baptizer, the forerunner of Jesus, the Christ, it is of interest to those who are taking up the course to know something of the conditions of social and civil life at this important epoch of the world's history. With this view a few facts are here presented—collected from various sources—chiefly from Geikie's "Life of Christ," which is considered as reliable and trustworthy, and from Albert Barnes's "Notes on the Gospels," which confirms many of the statements made by Geikie, as do other writers who have made church history a special study.

The first fact that presents to the inquirer relates to the conditions of the Roman government, to which Palestine had become tributary above a half century before. In a degree unknown before or since, the world presented the striking spectacle of being united under one Empire. From the Euphrates river to the Atlantic, from the German ocean to the slopes of the Atlas mountains, the Roman Emperor was the sole monarch. The Mediterranean sea was in the truest sense a Roman lake, and the multitudes on its northern and its southern shores, now divided into separate nations, always distinct, often hostile, reposed in peace under the shadow of the Roman eagles. The merchant or the traveler might alike pass freely from land to land; trading vessels might bear their ventures to any port, for all known lands and coasts were under the same laws, and all the inhabitants of the civilized world were citizens of a common state, and Augustus at Rome was the sole power to which all nations gave homage.

The world might be said to have exhausted itself in the prolonged strife which ended only with the triumph of Rome. And the relief that came to her when the gates of the temple of Janus were for the first time in all her eventful history closed, and universal peace reigned supreme, was worthy the ushering in of the Prince of Peace, whose advent was heralded by the glad anthem, "Glory to God in the highest, and on earth peace among men."

Palestine was only a little corner of this vast world-empire, but it was the chosen jewel in the crown of her glory. Holding in its grasp the virtue, the excellence, the indomitable courage, and the steadfastness to conviction of duty and devotion, this little province was the only spot of territory in which the Roman power was simply yielded to, because the people were too few to make resistance and too much attached to the faith of their fathers to become assimilated with the other conquered provinces. The Hebrew, wherever found, was a Hebrew still, and whether trading or as the scholar he found his home at the farthest verge of the empire, his heart still turned to Jerusalem, the city of his God, and his highest aspirations were for her restoration to royal dignity. Months were gladly spent in going to the great feasts celebrated annually in the Temple, and to be buried in the sepulchre of his fathers was what he most longed and labored for when the end of all appeared near at hand.

The narrative of the birth and parentage of John, the forerunner, are only given in Luke's gospel, and the little therein recorded is of value in several particulars, but chiefly as giving an insight into the social and religious life of the people at that time. We are introduced to a family who belong to the priestly line and we find them leading "blameless" lives. They are childless, and this is their only cause for sorrow. Zachariah has no son on whom the priestly garments may be placed when the hour arrives that he must lay them off, and he and his wife, who is well advanced in years, have no longer hopes that a son will be given them. There is an atmosphere of true and beautiful wedded life breathed through every line of the brief and simple story, and we may well be content to leave to the Majesty of heaven the ordering of the affairs of men, when we find that amid all the dignity, the might, and the power of the earth's greatness, from which human reason and human ambition would choose its leaders of men in the higher realm of thought and effort, he turns from these to the pure in life, the simple-hearted, earnest souls, whose chief concern it is to "walk in all the commandments and ordinances of the Lord blameless." It is from such as these that the spring of true and pure manhood and womanhood flows, clear and sparkling, renewing the life and vitality of the race, and making possible the advent of prophets and seers, and the ultimate redemption of the race from the weaknesses, the transgressions, and the follies that mar and hinder its upward progress.

The happiness of life is made up of minute fractions—countless infinitesimals of pleasurable thought and genial feeling.—*Calverley.*

VERSES FOR THE SEASON.

EDITORS INTELLIGENCER AND JOURNAL

THE following lines were written for the Christmas gathering of Friends' First-day School Association of Brooklyn, held Twelfth month 20th. They seem to me so appropriate to the occasion, that I have obtained from the Friend who wrote them, her consent to send them to you for publication. E. M.

Brooklyn, N. Y., Twelfth month 23.

Do you wonder for the children
Why we're gathered here to-night,
With our hearts so full of gladness
Bubbling over with laughter bright?

'Tis to celebrate the Christ child,
And His coming unto man,
Here to give us by His teachings
Depths of thought no mortal can.

Thoughts of joy and tender kindness
Precepts breathing only love,
God will and peace on earth to us
Glory to God who reigns above.

Teaching us to love each other
With no thought of self or gain,
Finding happiness in serving
Present help to those in pain.

Then when Christmas gathers round us
With its joys so pure and true,
Let us think how we can make it
Happy to the sad ones too.

Lend a helping hand in sorrow,
Help the poor to lighten care,
Let the joyful light from Heaven
Shed its radiance everywhere.

No one is too small or humble
His sweet messenger to be,
Could we ask a higher mission
To be sent to you or me.

Then when 'Merry Christmas' greets us,
May it in our hearts give place
To that love which Christ has taught us
Is the living means of grace.

The highest relation of man to man is that of compassion. Hardly separable from love in words, it may be in conception; it is love at its best, love quick, love in its highest gradation, it is the brooding, the yearning feeling, the love that protects while it enfolds. . . . God forbid that any of us should pass through suffering and come out of it, not only unchastened, but with no tender feeling for the whole suffering humanity! It should be the first question with one who in any way suffers, as it is nearly always the first impulse: To what service of ministering pity am I called?—*T. F. Munger.*

The bitterest tears shed over graves are for words left unsaid and deeds left undone. "She never knew how I loved her." "He never knew what he was to me." "I always meant to make more of our friendship." Such words are the poisoned arrows which cruel death shoots backward at us from the sepulchre.—*H. R. Stoue.*

 PHILADELPHIA, TWELFTH MONTH 28, 1889.

LOOKING BOTH WAYS.

WHILE it is true that "every day is a new beginning," it is well that we have milestones planted along the roadway of life, where we can pause, not only to see to what end we are traveling, but also to look backward and note the baps and mishaps on the road already passed over, that we may profit thereby. To one of these milestones, the one that marks the end and the beginning of a year we are now approaching. The most natural impulse, perhaps, is to look ahead; but strain our eyes as we may we cannot see far. We must take the future largely on trust. From those who have passed over the road before us, we have multiplicity of record, and counsels without number; yet each individual must make his own record, though there may be absorbed from the experience of others something that may strengthen and sustain, or baffle and hinder, his right progress. Let us repeat, then, that the future must be taken on trust. And this is not hard to do, when we consider the mercy and goodness of Him who is our ever present Helper to guide and direct in the right pathway, if we only environ ourselves with an atmosphere through which He can be revealed. To help in the creation of this atmosphere we can observe with pleasure the increase of good deeds done to our fellow men, and can make it our purpose to add to them. We can keep a sharp lookout all along the road to see the good as well as to avoid the evil. From a recent paper we clip this cheery mention which reveals the growing appreciation of unselfish action.

"The report of the French Academy on the 'rewards of virtue,' comes like a garland from that country which is generally recognized as the home of frivolity and iniquity. In this report the Immortal Forty give to the world the heroic deeds of men and women, which, for self-sacrifice and Christian charity, make them examples of virtue in its broadest sense and mark their names as, indeed, worthy of recognition from that association which sits in solemn judgment on those who are worthy of immortality. No name of artist, author, scientist, or philosopher is more worthy to be handed down to posterity than those which are of humble origin, but which represent heroes from among the common people.

"In 1783 M. de Monthyon left a fund to the academy for the reward of virtuous conduct. In that year one example of virtue rose above the common level to make it worthy of such public recognition by the highest authority in France. Since then others have added to the fund, and in 1889 the academy report eighty-six cases and bestow prizes to attract public attention to the conduct of those so recognized. Some of these cases reported read like romantic traditions of a heroic age."

But we do not need to go abroad to note the good, though we gladly record it, for in our own near past, when disasters by fire and flood have been most conspicuous, heroic actions have been numerous too. Would that the common every-day walks of life were thus brightened by forgetfulness of self. Let these rare occasions, which bring to the surface as it were the good lying dormant, increase our faith in human nature, and cheer us onward to a fresh beginning. But what of the far past? Let us for a moment look back and take the early part of the seventeenth century with its religious activity in breaking away from the iron rules of priest and creed. Surely that was a better time for effort when there was so much of ignorance and superstition to overcome, than in our day of liberty of thought and action. Reverently let us ask, have we yet reached the ideal of Christ's Kingdom? A close look now will reveal opportunities just as great, changes just as important, for this is a world of motion and no period can be called inactive, for if there is no progression there is retrogression. We can not stand still on our road lest we retard those who may follow us. We can rejoice over the freedom gained for us religiously by heroes of the past, and it is our work to maintain it by not permitting it to run into the license of irreligion. It was not for them to unfold all of truth, and it is for us to be on the watch for fresh unfoldings.

In the religious organization of Friends we have much to encourage us in the greater zeal and activity that has marked the recent past in upholding our fundamental principle, and the fruits thereof are being made manifest. True, some of the early usages are passing away that were once highly prized, but can we regard them as essentials? If grounded in the root of truth they must endure, and passing time is the test to which they must be subject. It is not to be expected that even in our cherished fold perfection has been reached, therefore we must not mourn unduly if with the good unessential things found foothold, and must needs decay.

"Evil springs up, and flowers, and bears no seed,
 And feeds the green earth with its swift decay,
 Leaving it richer for the growth of truth;
 But Good, once put in action, or in thought,

Like a strong oak, doth from its boughs stand
down

The ripe germs of a forest."

Standing on the threshold of the new, let us cherish all that was good in the old, and if on self-examination there are revealed hard places not wisely overcome let us not be dismayed, for by close watchfulness we can ascend the distant heights with joy and rejoicing at the end.

We give elsewhere an interesting letter from a correspondent describing the first of the sessions of the new Nebraska Half-Year's Meeting. A private letter from another Friend who was present, says:

"I have just returned from the organization of Nebraska Half-Year's Meeting, which was held at Lincoln, and was a memorable occasion. Members of the Society were brought together from various parts of this State and some from Kansas who had not attended Friends' meeting for some years, and no one who has not passed through the experience can realize the effects of such a coming-together."

MARRIAGES.

THOMAS HUNT.—At Spruce street Friends' meeting-house, on Fourth-day afternoon, Twelfth month 18th, 1889, under the care of the Monthly Meeting of Philadelphia held at Spruce street, Charles H. Thomas, son of Robert J. Thomas, and Annie, daughter of Sidney and the late Lloyd Jones Hunt, all of Philadelphia.

DEATHS.

DARLINGTON.—At the residence of her parents, Richard and Lizzie Darlington, East Bradford, Pa., on Twelfth month 19th, 1889, Sarah Edith Darlington aged 11 years and 7 months; a member of Birmingham Monthly Meeting of Friends.

HARLAN.—On Eleventh month 30th, 1889, Amer Harlan, aged 87 years; a member of Fall Creek Monthly Meeting of Friends, Indiana.

HENSZEY.—In Philadelphia, Twelfth month 18th, 1889, Susan S., wife of Alexander Wilson Henszey.

JAMES.—On Eleventh month 29th, 1889, of typhoid fever, Charles James, aged 25 years; a member of Fall Creek Monthly Meeting, Ind.

KIMBEL.—Near Hattons, Pa., Twelfth month 18th, 1889, Richard Kimbel, in his 69th year.

KIRK.—Twelfth month 17th, 1889, Eliza P., widow of Jeremiah Kirk, a member of the Monthly Meeting of Friends of Philadelphia held at Spruce street.

LEWIS.—At the home of his son, B. F. Lewis, in La Grange, Cook county, Ill., Ninth month 11th, 1889, Samuel Lewis, in the 83d year of his age. He was the second son of the late Abner Lewis of Redford, Delaware county, Pa. Interment at Friends ground, near Pottsville, Ind.

PALMER.—At the residence of Lewis Palmer, Concord, Pa., on the 23d of Eleventh month, 1889, Anna S., widow of the late Charles Palmer, in the 79th year of her age.

PANCAST.—In Philadelphia, Twelfth month 16th, 1889, Seth Pancast, M. D., aged 66; a member of the Monthly Meeting of Friends of Philadelphia.

POTTS.—At her residence near Lawrenceville, N. J., suddenly of heart failure, on Fourth-day, Ninth month 19th,

1889, Mary B. Potts, of Concord, N. J., aged 82 years; of Jehoid Herald Office of Philadelphia, N. J., No. 177 (1840-2 months and 10 days; a member of Philadelphia Monthly and Trenton Yearly Meetings.

RICHARDSON.—At Concord, Saratoga, Twelfth month 20, 1889, Abigail W. Richardson, widow of James Richardson, M. D., of Philadelphia; a member of the Monthly Meeting of Friends of Philadelphia, held at University.

SHALLCROSS.—At University, Philadelphia, Twelfth month 17th, 1889, in the 74th year of her age, Frances Shallcross; for a number of years clerk of Berry M. D. Meeting of women Friends.

UDALL.—At her residence at Great Neck, Long Island, Twelfth month 12th, 1889, Margaret Van, widow of the late James Udall, after a short illness in the 73d year of her age.

The week previous she had attended her usual meeting at Manhasset, but soon after her return home was taken with a chill which ended in the closing of her peaceful life.

A few friends gathered at the house, giving words of comfort and consolation to her invalid daughter who was not able to attend her funeral, she who had watched her parents with more than filial tenderness, not only in their declining years, but throughout her whole life. Truly it may be said, she was the friend, the counsellor, and the care-taker of them both.

Her remains were thence taken to the meeting house at Manhasset, through an unusual snow-storm. A most solemn and quiet gathering had assembled there, and after a time of silence, listened to the impressive and touching testimonies of those who were permitted to speak of her exemplary life and character.

As she was being removed from mortal sight and placed beside her loved companion in the "silent city," the beautiful snow falling upon her grave seemed a fitting emblem of the purified spirit that had left its clay tenement for its home evermore in the Father's Mansion, there to receive the reward of a well spent life, "doing justly, loving mercy, and walking humbly;" she has now become a bright inhabitant in that "city," whose walls are salvation and whose gates are praise.

E. H. P.

HANNAH C. DIXEY.

"Blessed are the dead that die in the Lord from hence forth; yea, sayeth the Spirit, that they rest from their labors and their works do follow them."

The decease of Hannah C. Dixey, Twelfth month 2, 1889, deserves more than a brief notice. When her relatives and friends gathered at her late residence for the last tribute of affection and respect to her, after a season of solemn and impressive silence, the above text was feelingly rehearsed by one who had known her intimately in health as in sickness, he could testify to her many virtues and unflinching trust in the wisdom and goodness of her Heavenly Father's love and care, and the varied allotments of a long life, extending over four-score and nine years.

Love was the embodiment of her life, entering its daily duties, obeying as she did the new commandment given to the Disciples by the Master: "That they love one another." The influence of her loving spirit was felt in the social circle among the afflicted ones of those with whom she mingled, particularly the young. To the sick, distressed and needy, she was a kind sympathizing friend, ready to relieve, and give words of encouragement and cheer. The orphans under her care received a motherly, protecting love. In her own afflictions and bereavements, there was a great calmness, evidencing that her true prayer was resignation to the Divine will.

She was the daughter of Caleb and Deborah D. Pancoast, of Mullica Hill, N. J., and a birth-right member in the Society of Friends. In early life she married Samuel Risley, M. D., of Woodstown, N. J. Their union was short, he being removed by death. Some years after she became the wife of Captain Thomas Dixey. He not being a member with Friends she relinquished her right in the Society, but kept her interest in the meeting and its testimonies by her regular attendance and maintenance of its principles. She was again widowed, with the prospect of blindness from cataract. In all, she was true to her convictions of duty. As the outward vision became obscured, the inward, or spiritual, grew brighter. She discovered it was required of her to associate with her Friends in a Society capacity. With this feeling she applied, and was received a member in Green street Monthly Meeting, Philadelphia, to which she was greatly attached; when health and regained sight permitted she enjoyed mingling with her friends in social worship.

She loved the Scriptures, reading them daily, generally preceding it by the text and promise for the day from J. Johnson's watchword; this was continued to the last day she lived, and when her loving daughters were preparing for it, selected the 51st Psalm and remarked on its beauty, afterwards desired the 23d be read. It was a favorite one; she had experienced the staff to lean on in life, it was now a support as she approached the dark valley; but the Angel of Death came not to her with "raven plumage," but a messenger of light to guide her to one of the many mansions in the Heavenly Kingdom. Her sickness was short, occasioned by a fall: she bore it patiently and without complaint. On the early morning of the 2d of Twelfth month she passed gently and peacefully to her everlasting rest, a sweet expression on her features as though the joys of the unseen world had opened to her view, comforting survivors with the assurance she had not lived in vain.

THE LIBRARY.

AMELIA E. BARR'S STORY, "FRIEND OLIVIA."

The *Century Magazine* is now publishing a story called "Friend Olivia," the first installment having appeared in the number for Eleventh month. We mention it here in order to state some facts about the story itself, and also others in relation to its author, Amelia E. Barr. The scene of "Friend Olivia" is in England, and it opens in the northern counties, the period being that of Oliver Cromwell. At Sandys Hall, in Westmoreland, a "seat" belonging to Roger Prideaux, "a wealthy goldsmith of Paul's Walk, London," we are introduced to a company of the just-gathering followers of George Fox. For Roger is a Friend, and he entertains at his country home many of those who accept the views of the young preacher of Leicestershire. George Fox himself is described as one of the company at the Hall, and in her description the author of the story deals with him in the most respectful manner. She represents a young man, Nathaniel Kelder, as entering the room:

"He looked at the group towards which he was advancing, but mainly at the man who sat in a large chair at one side of the blazing fire. The majestic figure, the noble sweetness of the face, the luxuriant hair,—not cut short, Puritan fashion, but falling upon the shoulders with a slight natural curl in it,—the impressive manner in which he was speaking, and the rapt attention of those who lis-

tened to his words, made an instant impression on Nathaniel.

"George," said Roger Prideaux, when they reached the side of the speaker, "this is my neighbor, Nathaniel Kelder."

Then George Fox rose and took Nathaniel's hand, and gazed at him with those piercing eyes which more than one judge found themselves unable to bear. "I have heard of thee, Nathaniel," he said; "now I see thee, and of the rest God will take care." As he spoke he looked at Nathaniel and he loved him, and there came into both men's faces that mysterious something which is the recognition and salutation of souls. This incident scarcely interrupted the conversation. Slowly relinquishing Nathaniel's hand, Fox sat down and turned his solemnly radiant face upon Duttred.

"Thee must not say that this doctrine of the indwelling Christ is a new one. Oh, no! To it give all the Scriptures witness. This is that divine change described by Paul, when he exclaims, 'I live; yet not I, but Christ liveth in me.' This is that divine union which Christ willeth, 'I in them, and Thou in me, that they may be made perfect in one.' This is that glorious fellowship promised: 'If a man love Me, . . . my Father will love him, and we will come unto him, and make our abode with him.' Christ in us the beauty of holiness, the hope of glory. This is the keynote of the Gospel."

Some argument follows presently between the Independent minister of the neighborhood, John Duttred, and George Fox, the closing portions running thus:—

"Well, I know not what Quakers would have; and I wish they knew themselves. As for me, the old religion is good enough."

"The old religion! John, that is what Quakers want—the religion of Christ, and of the apostles, and of the primitive church."

"The church of Christ, which is the kingdom of Christ—"

"Is within us. Its real enemies are within. They are spiritual, and must be fought with spiritual weapons."

"In a word, then, how does a man attain to this condition of union with the Unseen?"

"By faith; for faith is the victory over whatever separates from God. Thou knowest what men have done through faith—how they have 'subdued kingdoms, wrought righteousness, obtained promises, stopped the mouths of lions, quenched the violence of fire, escaped the edge of the sword, out of weakness were made strong, waxed valiant in fight, turned to flight the armies of the aliens.' If faith can do these things, and more also, can it not open the door of the soul when he knocks, and say, 'Come in and dwell with me?' Can it not give him the whole heart, and enter into covenant with him? I can tell; for I have felt him nearer to me than breathing. He has beset me behind and before, and laid his hand upon me."

Fox rose as he spoke, and an indescribable majesty and authority clothed him as with a garment. His face shone, his clear, sweet voice penetrated into the secret places of every heart. The atmosphere of the room trembled to spiritual influence, and a feeling of infinite tenderness brooded over the small assembly. Duttred stood silent, tears were in his downcast eyes, and when George Fox stepped forward and offered his hand he took it with a troubled, questioning look.

"We are made poor by what we miss, as well as by what we lose, John. Go into thy room and enter into that spiritual communion which is beyond all visibles. Open the

door of thy heart and ask Christ to come in and dwell with thee. Verily, he will keep his promise." And as Fox stood surety for his Maker he lifted up his face; and it grew like an angel's and an old man on the out-skirt of the little assembly cried out:

"It is true! It is true!"

Then Dutton explained at some length his views of the Atonement, and the necessity for a formulated creed and a regularly trained ministry. But after Fox's burning interferences his words were cold, for he spoke of Christ in a distant way, as of one holding the central place in a theological system, but far off from daily love and life.

"Oh, no!" answered Fox. "There is no such thing, John, as a system of divinity in the Bible. Nothing there but a living record of personal relations between the Creator and the souls he has made. No dogma in all the Book. Only human life touched by the Spirit of God. And as for trained ministers, when God says to a man, 'Preach the Gospel,' he needs no other preparation or authority. Schools cannot make ministers, and God dwells not in temples made with hands. 'I was no prophet, neither was I a prophet's son; but I was . . . a gatherer of sycamore fruit'; but the Lord miseth the poor out of the dust."

It can hardly be questioned that this is stating very clearly and strongly much of what George Fox many times did say,—if not at Sandys Hall, in Westmoreland, then in many other places, to many different men and women. Amelia E. Barr, the author of this story, is of English birth, but has resided for many years in this country. She was born at Ulverstone, in Lancashire, near Swarthmore Hall, in 1831, her father being a minister, William Huddleston. She was educated in the high school at Glasgow, and in 1850 married Robert Barr, the son of a minister in the Kirk of Scotland. Four years later they removed to the United States, and settled in Texas, where, in Galveston, in 1867, her husband and three sons died of yellow fever. Almost overwhelmed by the calamity, she came in 1869 to New York with her three daughters, and after teaching for two years began to write miscellaneous sketches, etc., for magazines and newspapers. Since 1872 she has published a number of books, chiefly stories with a moral quality. One of these, "Jan Vedder's Wife," is regarded as a particularly strong work, and has been very popular. She lives at Cornwall-on-Hudson.

From a private letter written by Amelia E. Barr, when she was preparing "Friend Olivia," we have had the opportunity of making some extracts, which will doubtless prove of interest. She says: "It is a tale embodying the trials and sufferings of the first Friends, in Oliver Cromwell's time. During my last visit to England I bought many Friends' books at the store of S. Harris & Co., in Bishopsgate, London, and afterward others in Philadelphia. I think I have made myself quite familiar with their faith, and their customs, and I have given special attention to my own blessed conviction of their chief tenet, *The Inward Light* that lighteth every soul that loveth not darkness better; and *The Inward Christ*. These noble truths, for which they cheerfully suffered are now acknowledged by all creeds. . . . I was born at Ulverstone, one mile and a half from Swarthmore Hall, George Fox's home, and my mother's family have been Friends since that memorable service in Firbank Chapel, which Fox led, when the building

shook with the presence of the Holy Spirit, and sixty men rose up after that mighty prayer and gave themselves to the preaching of the new Truth. So that I came to the work with reverence and love. . . . I am going to Boston soon to gather facts regarding the persecution there under Governor Endicott."

Responding to some remarks of the correspondent to whom her note was addressed, she says: "I can fully sympathize with your honorable pride in being the descendant of noble and free men. Good fruit comes from good stock; the children of righteous men are blessed. It is bred in me, also, to love mountains; I was born among them, and often, spiritually, when low in the Valley, I have 'looked unto the hills from whence cometh my help.' . . . God has done everything for this lovely spot [Cornwall] and especially up here on the Heights. Last summer [1888] I was in the mountains of Arran and Argyle, but I came back here most gladly. . . . As to 'Sunlight all the Way' I am very much pleased to see you have taken the trouble to write it out. I wrote it years ago for the *New York Ledger*; it contained originally five verses, but it has been tramping all over the English-speaking world, and has been altered and curtailed to suit the various copyists. For a great many years I wrote a poem for the *Ledger* every week, and though I have ceased for years to do so, I scarcely can lift a paper but I find some one or other of them, though generally crippled and nameless."

NEWS OF FRIENDS.

NEBRASKA HALF-YEAR'S MEETING.

THE beautiful morning of the 30th of Eleventh month found us on our way to Lincoln, Nebraska, the object of our going being to attend the Half-Year's Meeting of Friends, to be held there on the 2d of Twelfth month. Anticipations of meeting dear friends thrilled us with pleasure as we approached the city, bright in the freshness of youth, filled with a multitude of homes, from the elegant mansion down to the neat cottage, each with an individuality of its own. We were met at the train by Russell Lownes, who took us to the place of meeting, it being the time of the select meeting, but as an exception to what is customary it was made a general meeting.

Many expressed themselves as being very grateful for the unlooked-for privilege thus afforded them of meeting with the Friends who had come hundreds of miles for the purpose of meeting with us. Edward Coale, Abel Mills, and Benjamin F. Nichols, ministers from other States, were present. We think all felt it to have been an instructive and profitable season.

First-day dawned in glory, giving promise of an almost perfect day, and was received with special gratitude by those who had many miles to ride, many of them in open conveyance. The meeting was held in the rooms of the W. C. T. U., and they proved sufficiently commodious to accommodate those present, though the meeting was larger than had been anticipated, and we feel assured that if the notice of it had been more general, and before the public

longer, that there are many who would gladly have availed themselves of the precious privilege of attending. We think there are many who can bear living testimony of a spiritual baptism on First-day, when it could be said that the depths were stirred and the spirit seemed to flow freely from the dedicated souls to those hungering for the bread of life, and we feel assured that many blessed fragments gathered from the Master's table have gone forth for the satisfying of a multitude of hungering and thirsting souls who were unable to be present to partake of the feast. The meeting separated about one o'clock, and after physical refreshment, was again assembled at three.

Second-day proved to be another beautiful day, and the meeting was about the same as to numbers. The meeting for worship was again a satisfactory season. The business meeting was opened by the reading of the minute establishing the Half Year's meeting. A clerk was appointed and the general business entered upon. The answers to the First, Second, and Eighth Queries, which had come up from the meetings composing this meeting, were read, and suitable summaries agreed upon. The importance of giving live, truthful answers to the Queries was dwelt upon. Four of the committee appointed by the Illinois Yearly Meeting to be present answered to their names, but we could not wonder that no more could be with us when the season and distance were considered.

After the necessary business of the day was transacted farewells were spoken, and under a feeling of love, and in that peace which is not of the world, the meeting concluded, to meet at Genoa, Neb., in Eighth month, 1890.

Genoa, Neb.

WHITEWATER QUARTERLY MEETING.

On Sixth-day morning, Twelfth month 6, quite a company of us started for Whitewater Quarterly Meeting, to be held at Maple Grove. Arriving at the railroad station in due time, we were kindly met by our friends, and hospitably cared for. The meeting of Ministers and Elders that convened at 2 o'clock was not large, but as was expressed by several present, a very good one.

On Seventh-day morning, the Friends and those in sympathy with them gathered in the meeting-house, until nearly all the seats were occupied, and in the silence that was thought to be precious, many hearts were tendered. In due time way was opened for Anna M. Starr to pour forth from her loving heart advice and counsel to her hearers. William W. Foulke followed in his usual eloquence and power. The meeting for business varied little from our ordinary path; all through a spirit of love and unity prevailed. At the suggestion of our venerable and beloved friend, William Parry, the Clerk made a closing minute expressing the pure love and friendship and unity of purpose that had prevailed in our meeting.

In the evening, the house was again almost filled to transact the business of the First-day School Association. The reports from our different schools

were generally encouraging. An essay on the life of George Fox, as prepared and read by one of the young Friends, was excellent, showing that she was well informed on the subject. Several recitations were well rendered by others, all being members of the meeting or the school here. This was cause of thankfulness, for this school had been organized since our last Quarterly Meeting at this place. Friends have much to be encouraged for here. The First-day School is held before meeting.

As we again gathered into silence in our meeting, we realized that we had the presence of the Head of the Church. Many gave vocal testimony to the truth as we understand it. These meetings of ours being held as they are at different places within our limits, bring us together where we can mingle with those who cannot get to all our quarterly meetings, and a feeling of freshness, and richness, and sympathy is engendered that binds all, old and young, the strong and the weak together in nearness of feeling, and we return realizing that we have been led into new pastures of our Heavenly Father's planting.

Pendleton, Indiana.

*

PHILADELPHIA NOTES.

LYDIA H. PRICE, in the prosecution of her religious concern, attended the several monthly meetings in Philadelphia last week. On First-day (22d inst.), she was at Germantown in the morning. In the afternoon, at Fair Hill, there was quite a good attendance, and after Lydia had spoken at length, Edward Hopper spoke briefly, and Edwin L. Pierce offered a prayer. She proposes being at Frankford to-morrow (29th inst.)

—At the Monthly Meeting of Friends of Philadelphia, (Race street), on the 18th inst., Alfred Moore and Howard J. Lukens were reappointed clerks of men's meeting, and Jane P. Grahaime and Annie Cooper of women's meeting. William C. Smyth, Charles M. Biddle, Howard J. Lukens, and Wm. W. Birdsall, were approved trustees of the school lot at Seventeenth and Girard Avenue, in conjunction with those of Green street (appointed next day) viz.: Harrison Streeter, Alfred Ogden, Nathan W. Buzby, and Aquila J. Linvill. The Committee on Education reported the amount expended in the several years since its first appointment. As most of the schools are either entirely free, or at very moderate charge, to members, during the past five years about three-fourths of the expenditure was on behalf of those having one parent a member.

—Isaac H. Hillborn having requested the company of Friends, but the young in particular, the evening meeting at Girard Avenue on the 15th inst., was large, and he was favored to speak at much length, dwelling particularly on the importance of the principles and testimonies of our Religious Society, and urging on the audience to seek to live up to them. It was felt to be a profitable opportunity.

—On the 22nd inst., Matilda J. Underwood, a minister of Miami Monthly Meeting, Ohio, attended Girard Avenue, and was called into the ministry.

She proposes attending West Philadelphia meeting to-morrow, (20th inst.)

—Friends' Boarding House having received the legacy of the late J. Humphreys Melvain, is now in a condition more fully to carry out its original aim, but a liberal contribution from other friends would enable it to be located in a more desirable neighborhood. It is now hoped that this may be accomplished before long.

FROM THE AIKEN SCHOOL.

EDITORS INTELLIGENCER AND JOURNAL:

The school filled up much faster than usual, until we number 300, about 40 being boarding students. This has added to all our work. There were fifty more than could crowd into the primary room, and we use the boys' sitting-room in the old school building. They are taught alternately by two girls anxious to have the experience and to earn their board. The Senior class have been sent out to teach, having received certificates from the Board of Examiners last spring. Schools are only open two and three months, and then they will return to finish for graduation. The girls are young, and have their own troubles to meet and overcome. One was sent for, taught a week, walked home ten miles to "scour Ma's room," and "before Monday" was told by the teacher who had it last year that she was going there, having failed to secure another she was hoping to get. The same girl hunted about and engaged to go in a week eighteen miles on the train, on the day the trustees fixed. She went, only to find another had already opened the school. She borrowed fifty cents to come back, and then next week a man came after it, though it was entirely *their* fault in not letting her know. One walked nine miles to see the trustee, as she could not draw pay unless she had seen him. They came for one, (who lives in Aiken), eight miles, and reaching there she found a man had gone the day before and claimed the school, on the ground that the patrons did not want a woman. The husband of a former pupil here held the crowd but would not let them organize the meeting until she arrived, and the majority voted for her, and so she has it. Men totally *unfit*, but with a vote, and political influence or *bribery*, get and keep schools, term after term, often making the parents believe only a man will do. They know after a competent woman is once in their chance is gone.

Our young men are fitted in book knowledge. Two walk six and nine miles, at the close of each week, to be here at the Literary and Temperance Society, doing a day's work for board. They come as to a home, and pour out their troubles thus, (to me this morning):

What am I to do? I am always there in time; some days at 9 o'clock not a scholar, at half-past nine, not two. Then I get mad,—so mad, when they come, I'm not fit to read the Bible and pray." Honest confession' and we answer, "Suppose you pray before they come; ask the Lord to put you in the right spirit to meet them to make you so full of Divine Love, you will draw them by its power, and only punish the way it will do *them* good," etc., etc.

"Yes, I will try." Another said "I tell them, and tell them to be there at 9 o'clock. Last Thursday at nine not one, at quarter after, not one; at half past I read the Bible, sang a hymn and prayer all to myself, and then waited. At ten they were there, and at recess I made all clean up the house and yard, and work without speaking to each other. I walk my school room floor and think a thousand times of the trouble I've given my teachers. Oh! if Miss Criley would let me I'd give up and come back to school to-morrow. I'd rather work here at the hardest kind than teach school."

Both these young men are good debaters in the Literary, and are finding the full meaning of the favorite phrase, "I want to help my people." Each week they go away stronger, to do better and more conscientious work.

The A. M. E. Conference is now in session here, and one morning we had Rev. Campbell who was born and raised in Africa, also Dr. Blyden, "the most scholarly man of his race," and at one time Minister to the Court of St. James from Liberia. The same day there was a crowded meeting of citizens at the court house. The white school marched to it in a body, the stores were closed and draped, the church bells tolled for one hour and cannon fired in memory of the man who led his people into war to fight for *human slavery* and against the government that had educated him.

We also had a visit from two Trustees, both Southern men. With one or two exceptions, no white native Trustee has ever seen the workings of the School before. The son of one is at the Greenville University, but when he saw the broken chairs mended, and other repairs done in our Industrial Department, he said, "I believe I'll go home and make my boys do it; there are plenty of broken things about." The other is Intendant of the Town, and will now use his influence to keep idle boys off the street. We hope to get some public money, but the amount will not do much, as the white school is only open three months in the year.

We are very busy getting ready for a fair on the 20th. Have mended and marked all toys that have come in barrels since last spring, tied ribbons, hat trimmings, etc., into five and ten-cent bundles, sorted buttons and put in bags for three cents, priced many articles of clothing, etc. The selling of needless garments at low prices helps those who are trying to help themselves, and teaches them to save pennies and nickels. We *give* to the aged and sick. Two hundred and fifty marched to the "Old Folks' Home" with Thanksgiving offerings of bacon, meal, rice, wood, and many a little pocket was tugged at to get out the big potato to give away. Our boarding students lumped their money, and thus each gave two cents' worth of soap, while their own "extra" was a small orange to each, which cost us a cent and a half apiece. Every First-day, before their own Sabbath School, some go and read and sing to the people in the Home.

Yes, dear friends, we always need money, but it is not for us to say who shall give or who shall withhold. Our responsibility and our work are here.

Aiken, S. C., First month 11. M. SCHOFFELN.

AN ESTIMATE OF ROBERT BROWNING.

THE following brief statement of the quality of Robert Browning's poetry is contributed to *The American* (Philadelphia), by Professor Appleton,—now acting President,—of Swarthmore College:

To my mind the finest thing about Browning is that grand, far-reaching sympathy, with which he seems to comprehend all sorts and conditions of men. We have had no poet so myriad-minded since Shakespeare. This marvellous power is due, partly to his learning, obtained by wide reading and observation, but far more, I think, to that divine gift of insight, which belongs only to the highest genius and which defies all our power of analysis and all our theorizing as to its source. Unshrinkingly, he yet tenderly lays bare all human weakness. He recognizes as fully as does St. Paul the war of the flesh against the spirit. But even in the most debased he can see the divine. Hence he preaches everywhere the sweet evangel of charity. The taint of blood, the environment, the awful stress of circumstance—these must temper the severity of our judgments. As for cold, untempted, unfor- giving Pharisees he says of them—

"Leave their honorable world to them. For God
We're good enough though the world cast us out."

When we come to the form in Browning, we find no poet more varied in the use of all the resources of his art. He has lyric strains that ring like a trumpet, and others soft and musical as Apollo's lute. Blank verse he has written worthy of the greatest masters of that stately measure.

As for the now stereotyped charge of obscurity in Browning's poetry, those who make it would seem either to be ignorant of, or at least to forget, the large amount of his work of a different sort. The total amount of his production is so great that the so-called obscure poetry of Browning might be omitted and he still be left in possession of a wealth of verse, direct and perspicuous enough to satisfy all demands in this regard. Indeed it is unfortunate that so many genuine lovers of poetry should be frightened off from Browning by this bugbear of obscurity; should fancy that they can afford to neglect the author of such exquisite poems as "In a Gondola" or "One Way of Love;" and such noble dramas as "Luria" and "A Blot in the Scutcheon." Much, too, of the so-called obscurity of Browning is but a surface difficulty. The mere form of his dramatic monologues has repelled many readers who might with a little application find the solution to their seeming mystery. Indeed it is surprising how difficulties vanish after a little patient effort on our part to get the secret of Browning's method. Then the reward is found so ample that we come finally to echo the enthusiasm of the admirer of "Master Hugues of Saxe Gotha—"

"Friend, his fugue taxes the finger.
Learning it once who would lose it?"

W. H. APPLETON.

EXACT justice is commonly more merciful in the long run than pity, for it tends to foster in man those stronger qualities which make them good citizens.—*Dante.*

A LEGEND.

I READ a legend of a monk who painted
In an old convent cell in days bygone,
Pictures of martyrs and of virgins sainted,
And the sweet Christ Face with the crown of thorn.
Poor daubs, not fit to be a chapel's treasure—
Full many a taunting word upon them fell;
But the good abbot let him, for his pleasure,
Adorn with them his solitary cell.
One night the poor monk mused: "Could I but render
Honors to Christ as other painters do,—
Were but my skill as great as is the tender
Love that inspires me when His Cross I view!
'But no; 'tis vain I toil and strive in sorrow;
What man so scorns, still less can He admire;
My life's work is all valueless; to-morrow
I'll cast my ill-wrought pictures in the fire."
He raised his eyes within his cell—O wonder!
There stood a Visitor; thorn crowned was He,
And a sweet voice the silence rent asunder:
"I scorn no work that's done for love of Me."
And round the walls the paintings shone resplendent
With lights and colors to this world unknown,
A perfect beauty, and a hue transcendent,
That never yet on mortal canvas shone.
There is a meaning in the strange old story:
Let none dare judge his brother's worth or need;
The pure intent gives to the act its glory.
The noblest purpose makes the grandest deed.

—Selected.

A SONNET TO WHITTIER.

IT may not be generally known that of the five Bryant brothers, all except William Cullen, the poet, emigrated to Illinois nearly sixty years ago. The youngest brother, John H. Bryant, still lives in the enjoyment of a serene and honored old age, in Princeton, Illinois. William Cullen is usually spoken of as the poet, but John H. is also a poet of no mean ability. A sonnet to Whittier from his pen has just been sent by a friend to the *Boston Commonwealth*. Though its author is eighty-two years old, its vigor suggests the man of forty.

WHITTIER.

O venerable man! before whose sight,
For four-score years has swept the tide of things,
The rise and fall of Empires, States, and Kings,
And man's great progress in the path of right.
Friend of the bondman, when his friends were few;
Our hearts were thrilled by thee in days gone by,
With glorious songs for truth and liberty,
That rang like trumpet peals our country through,
Yet not for these alone, nor length of days,
The blessings of mankind are with thee now;
The halo of a life of goodness plays
With tender radiance round thine honored brow.
The broken fetters of the ransomed slave
Shall emblems be to deck thy sacred grave.

As women do most of the teaching, and hence are responsible for the success or failure of their methods of instruction, it seems fair to allow them to have a voice as to how the schools ought to be conducted.—*Baltimore American.*

THE WEAVER.

BESIDE the loom of yore I stand
 And watch the loopy shuttle go;
 The threads I hold within my hand
 Make up the filling, strand on strand
 They slip my fingers through, and so
 This web of mine fills out apace
 While I stand ever in my place.

One time the web is smooth and fine
 And colored with a sunny dye,
 Again the threads so roughly twine
 And weave so darkly line on line,
 My heart misgives me. Then would I
 Fain loose this web—begin anew
 But that, alas! I cannot do.

Some day the web will all be done.

The shuttle quiet in its place,
 From out my hand the threads be ran;
 And friends at setting of the sun
 Will come to look upon my face,
 And say: "Mistakes she made not few
 Yet wove perchance as best she knew."
 —*Mary Clark Huntington, in Independent.*

THE INDIANS: EXTRACTS FROM SECRETARY NOBLE'S REPORT.

[We make the following extracts from the annual report of the Secretary of the Interior, John W. Noble, just presented to the President, and by him communicated to Congress.—Eds.]

BESIDE this general treatment individual education of the Indians in the schools has received from the beginning of the administration, and will continue to receive, increased attention. The subject has been much discussed both in preceding reports and in Congress; but it will never be exhausted until the Indian has become self-supporting. That was the condition in which he was found by our forefathers, however savage the means of maintenance, and it is to this state of independence we must restore him by the only way civilization will permit—that of his own intelligent labor. The results of efforts heretofore made for the civilization of the Indians are convincing that it is to be mainly effected by the education and proper training of their children. Little can be accomplished for the elevation of those who have passed the period of their youth and are habituated to the customs of their race. Our Government for years has shown a great willingness to train their rising generations for usefulness and to qualify them as good citizens, and there is no purpose more worthy attention than that of relieving their present physical suffering and of elevating their character.

But it would be unjust to previous Secretaries and many able legislators, to claim that all the work is yet to be done. A great deal has already been accomplished, the results of which have been most beneficial, and by the broader and more systematic application of these results alone, it is deemed that the problem of making the Indian self-supporting may be solved.

To maintain this statement, and in order to emphasize the recommendation I shall make, that all the youth of the Indians be brought within the folds

of the Indian schools, I submit a few statistics and reflections thereon. There are already 270 Indian schools supported by appropriations made by Congress, 147 of which are controlled directly by the Indian Bureau, and the average attendance therein is between eleven and twelve thousand pupils. The number of Indians in our country, not counting those of Alaska) is about 250,000; they occupy or have control of a soil 11,000,000 acres.

The number of school seats estimated to be	40,000
Under school age	10,000

Making a total of 50,000

Through many trials and long experience, as well as through the exercise of signal ability by the superintendents and their assistants, these schools have reached a high development, and strike with astonishment any one who has never beheld them, and thus had demonstrated to him both the Indian's adaptability to school life and industrial training, and the wisdom of the government in its organization and support of these excellent institutions.

Attention is particularly called to the school at Carlisle, Pa., not by way of invidious comparison with others, but as an instance of what the Government has accomplished. The system therein adopted by Captain Pratt, its able superintendent, is an excellent example of theory carried into practice and thus shown to be reliable. He has had for his object the preparation of the Indian youth for physical labor guided by school education, and by means of this combination fitting him to *earn his own living*.

The pupils, taken from various tribes and of both sexes, are educated together. The gradation of study is well defined and based upon an experience now extending over many years. The studies begin with the rudiments of learning, and reach to the high branches of primary education. With the teaching of letters is combined daily manual labor; labor whose products are valuable, supplying not only clothing for the scholars themselves, but making many articles for sale, from which a considerable revenue is derived. During the year before last this revenue amounted to \$10,000, and during the last year to \$12,000. These pupils also help to till the fields, to take care of the live stock, to sow and reap. Every boy and girl old enough to be effective is required to work one-half of each day, except Sunday. The good Indian there is he who performs his daily task, and the best is he who performs it most skillfully and efficiently; all being instructed in the school-room and in the workshop, that the purpose of the Government is to enable them to become self-supporting, hard-working, and thus independent American citizens. The scholars are taught most excellent manners, and, both by precept and example, the principles of morality and honor.

It was the good fortune of the present Secretary to preside at the exercises of a graduating class of fourteen this year, and to present to them their diplomas. He was thus brought to scan closely their composition and elocution, and the general behavior of that portion of the audience where all the other

Indian scholars were congregated; and he can say without hesitation that he has seen few school exhibitions that excelled those at Carlisle, whether the thought, style, or elocution of the speaker be considered, or the intelligence, cheerfulness, and good manners of the Indian audience.

It has also been the practice there for years to let the scholars out during such periods of the year as would least interfere with their studies at the school itself, to serve on farms or in private families, and thus to gain the advantage of a home life among our people. This practice is so conducted as on the one hand to enable the scholars to earn money, which becomes their own, and on the other, to help many of them who are taken upon the rolls of the ordinary common schools to attend them along with the white children. Thus both at home and at school they profit by the civilization surrounding them. They are excluded from all Indian influence, the boys and girls being severally "homed" in different districts.

Nearly four hundred of these Indian pupils were thus placed during the last fiscal year from Carlisle alone, and I am told by the superintendent the number could be increased to not less than a thousand if the proper means were furnished by Congress. The applications for such pupils are constant from all portions of the surrounding country. They are found apt to learn, industrious in service, and docile in character. Agents of the Carlisle school visit these pupils regularly, and both they and the persons with whom the children are placed (farmers chiefly) report to the superintendent monthly upon their condition and progress.

The signal success of the Carlisle school will not depend, as it has heretofore, upon the selection of pupils of peculiarly bright minds or evident individual excellence. The Indian is quick to learn, and responds to just treatment with alacrity in renewed efforts to deserve it.

By the example of the Carlisle training school (which is not insisted upon as in every respect the very best that can be, but as one of great excellence and well fitted for the end in view) we may see how far and how admirably the Government has already advanced in Indian education.

This school system, with its attendant practices, is worthy of adoption and expansion until it may be made to embrace all the Indian youth. It is a model produced by the Government's own generosity and by the ability of those selected by it for superintendents and teachers. It is not something newly discovered or to be advocated as a recent invention. It has been in full operation for years. In the department of letters it gives a good common-school education. In the department of labor it inculcates both a love for labor and a habit of working. It may be easily systematized so as to have its form adopted in schools of different grades, and so that its pupils may be gradually, when fitted and entitled, transferred to the white common schools.

It therefore seems but a step to extend this system so as to have it embrace and affect, with the cooperation of the church mission schools, the whole youth of the Indian tribes. This cooperation has

long existed; the missions have placed much reliance upon it, and its sudden withdrawal would be neither generous nor fair. The national system may grow very rapidly and yet others be most welcome as co-workers in this benevolent cause; but the national system should have precedence, and in case of conflict it should be preserved and advanced.

When an Indian has been taught that he ought to work, a great change has been wrought in him; when he does work profitably and intelligently he has been transformed indeed. This does not idealize him nor treat him in a sentimental way, but it puts him on the plane where our own people have had to work out their fortunes in the hand-to-hand struggle with the forces of nature.

THERE is a faith cure not often considered, but which is in constant operation, and quite as effective in its workings as that practiced by professional "healers" or "metaphysicians." It is the cure brought, or assisted, by the patient's faith in his doctor. Every physician knows the desirability of inspiring this feeling; and the best methods of establishing this confidence in persons under his treatment are made matters of professional study. It is only in part a question of medical skill. He may be recognized as a man of great knowledge and ability, and may lack that one essential characteristic that makes him welcome in every household. The possession of this quality is largely a matter of temperament, and its usefulness is hardly recognized by the fortunate practitioner, though he may conscientiously cultivate it through knowledge of the fact that cheerfulness is better than gloom in all the relations of life. It is the gospel of cheerfulness that this man unconsciously teaches; not the aggressive gayety and unsympathetic jocularly that is an offense to an invalid and his friends, but a brightness of spirits that makes glad all who meet him.—*Indianapolis Journal*.

ONE of the most remarkable events of history has just occurred in South America—the deposing of an emperor, and the transformation of a great nation from a monarchy into a republic by wholly peaceful means, without the sacrifice of a life. It is, perhaps, the most striking proof yet furnished that the era of the people has come. Is it a foregleam of an age, by and by to appear, when the affairs of nations shall be conducted by methods of reason and justice, and not by the old brutal method of arbitration by the sword?—*Unitarian*.

"LET the world have peace for five hundred years, the aristocracy of blood will have gone. The aristocracy of gold has come and gone, that of talent will also have come and gone, and the aristocracy of goodness, which is the democracy of man, the government of all, for all, by all, will be the power that is. Then, what may we not look for? Hitherto our hero has been of force, his symbol the sword or the sceptre of command. It will not always be so. We are now developing the hand, and shall one day the head, and then the heart."—*Theodore Parker*.

QUICK TEMPER.

A MATTER not unworthy of remark is the almost universal claim laid to that supposed-to-be undesirable possession, a quick temper. "I have a frightfully quick temper!" is an assertion often made without any sign of regret; rather with evident self-complacency. And how often when, with the intention of saying something pleasing, we remark upon the sweetness of a friend's disposition to the friend in person, are we met with the reply, "Oh, you're quite mistaken; I'm one of the quickest-tempered people in the world!" given in a tone that does not imply modest deprecation of a compliment, but a decided sense of unappreciated merit.

Now, this willingness—eagerness, it may even without exaggeration, be called—to be convicted of what is acknowledged to be a fault, strikes one as a curious anomaly. No one would answer, if told, "You are very truthful," "Oh no, I'm a constant liar;" nor, if complimented upon consistent attention to her own business, would respond, "On the contrary, scandal-mongering is my favorite occupation." At least, no one would give either of these answers in the serious way in which the claim to the possession of a hot temper is made. May there not be, underlying this inconsistency, and explaining it, a misconception of the real meaning and source of a quick temper? To many minds, this undesirable trait seems to be the ecotone of many admirable qualities. To be hot-headed means, inferentially, in such mental vocabularies, to be generous, and large-minded, and unselfish, and—after a little lapse of time—forgiving. But I maintain that it means exactly the reverse of all these things. If a man be quick-tempered, if he gave way to anger quickly and *unrighteously* (for I leave out of the question entirely the righteous wrath which rises for good reason only, and is quite a different matter from temper), he is not generous, for he shows no regard for the comfort of those around; he is not unselfish, for it is safe to say that in nine cases out of ten, if not ten out of ten, his fury is kindled by some fancied slight to himself, and is allowed to blaze simply as an illumination in honor of his self-esteem; he is not forgiving, because, though he may recover quickly from his aberration, and soon be perfectly urbane to the whilom victim of it, the restoration is simply forgetfulness, and to forget the injury inflicted upon another by his own hasty words is by no means synonymous with forgiveness of injuries he himself may have received. Last of all, he is not large-minded. I am convinced that a quick temper is an unfailling indication of a limited intelligence and a lack of mental quickness. If the mind were large enough to grasp the true relations of things, to see how small a point in the universe this temper-rousing episode occupied, and if it could see this quickly—in a flash of thought—the outburst would be averted.—*Atlantic*.

But we shall on the upward go.

The eternal deep of Progress beats

To that great nothing, calm and slow,

Which God repeats.

THE careful thinker and listener finds so much to moderate his preconceived ideas, so much to correct in them, sometimes so much reason to change them, that he is in no hurry to give voice to them in their present callow form. He often prefers to wait for more light; and when he does speak, it is modestly and, perhaps, rather in the tone of inquiry than of assertion. In fact, he finds it needful to have something to say that is worth the utterance, before he proceeds to take any large share in the conversation. But the loquacious have no such scruples. The less they think, the more they talk. Their stream of discourse, shallow as it is, pours forth continuously and noisily, while the deep waters of the thoughtful soul are comparatively still.—*Phildad's Ledger*.

AND, as the path of duty is made plain,

May grace be given that I may walk therein.

Not like the hireling for his selfish gain,

With backward glances and reluctant tread,

Making a merit of his coward deed.

But, cheerful, in the light around me thrown

Walking as one to pleasant service led;

Doing God's will as if it were my own,

Yet trusting not in mine but in His strength alone!

Whittier

NEWS AND OTHER GLEANINGS.

THERE has been a recent conference of the Anti-Bird Killing Society of London to make loud protest against the revived fashion of wearing birds and birds' plumage upon the bonnet and gown. The recent slaughter of birds has been most heavy and ruthless. It was announced at this meeting that it takes over 5,000,000 birds to supply the demands of American dealers, and as many more for the export trade. One Highland dealer alone sends every month a thousand beautiful sea birds, which abound in the Hebrides and Orkneys, to France. The destruction of small insect-destroying land birds has greatly increased the prevalence of harmful insects, so that in our own country during the past season both trees and crops suffered largely and seriously from the blind or stubborn and foolish caprice of women.

A description of the new Croton aqueduct, given in the *Catechist*, helps to give some idea of the magnitude of the work by comparing it with railroad tunnels. It is slightly smaller in diameter than these tunnels, but very much longer. The Hoosac Tunnel is 21,000 feet long, the Mount Venus is 16,000 long, the St. Gothard, 91 miles, while the new Croton Aqueduct will be nearly 70 miles long. It is a very much greater work in every way than the old Roman aqueducts, about which so much has been written, but less is heard of it because it has been built in this day of great things.

A SIOUX Indian named Henry Hokiwin Lyman, 27 years old, has entered the Yale law school, and intends to practice among his tribe when he graduates. If he should be a man of prudence and sound judgment it may be of much use to his people, now that they are to become citizens and have their lands.

It is stated that the new cotton mill just commenced at Florence, Alabama, will have 50,000 spindles, which will be the largest mill ever built in the South. The next highest is a South Carolina mill with 49,000 spindles, and the third in the list is the Englewood Flannel Co. at Columbus, Ga., with 46,000 spindles. The contracts for machinery for the

Florence mill have been let, and it is expected that it will be completed in the summer.

—Dr. Elizabeth H. Conly Howell, Edith V. Lane, Kate C. Stevenson, Emma B. Foulke, and Elizabeth B. Parrish, with others have filed an application in Court of Common Pleas No. 1, (Philadelphia), for a charter for the "West Philadelphia Hospital for Women." The purpose of the proposed corporation, as set out in the charter, is for "maintaining a hospital and dispensary for women and children."

—The oldest inhabited town in the world is said to be Damascus.

—The season has been so mild in England that quantities of violets were at the end of last month growing in the open near Sittingbourne. Cherry trees were budding in the same locality, while at Bredgar, another village in the vicinity of Sittingbourne, a field of poppies was in full bloom.

—The burial of the remains of the late Oliver Johnson, of New York, took place at the cemetery grounds at Longwood, near Kennett Square, Pa., on the 14th instant.

—A despatch from Amesbury, Mass., on the 17th inst. said: "The birthday of John G. Whittier was observed quietly at this place, his home. The public schools held exercises appropriate to the day, a flag raising being a feature of the Whittier School. Mr. Whittier is in his usual health. He received a few callers and many letters and gifts."

—The decrease in the number of women registering in Boston this year, as compared with the phenomenally large vote of last year, is quoted as an argument against woman suffrage. The decrease is chiefly in the vote of the Roman Catholic women. Acting under the advice of their leaders, they have almost all refrained from registering this year. Of the Protestant women who voted last year, the large majority have renewed their registration.—*Women's Journal*.

—The joint convention of the two suffrage associations, —the National, of which Elizabeth Cady Stanton is President; and the American, of which William Dudley Foulke is President,—will be held at Washington, D. C., on the 18th to the 21st of Second month, 1890. The call states the importance of the gathering, and urges "every State Society, whether it has hitherto been auxiliary to the National or to the American Woman Suffrage Association, or to neither, to become auxiliary now to the united society, elect its representative on the National-American Executive Board, and send delegates to the annual meeting at Washington to plan for organized and united work."

—The woman suffragists should not neglect to use the Australian ballot law for all it is worth as a remover of objections to women as voters. It is worth a good deal in that way. The polling-places are much more decent places now than they were under the old system, and a woman can now vote as quietly as she could buy a pair of gloves, and far more quickly. The "degrading surroundings" argument against woman suffrage is as dead as Julius Caesar.—*Boston Globe*.

—The Wilmington, Del., *Morning News*, of the 23d inst., says: "The two large magnolia trees in front of William G. Pennypacker's residence, southwest corner of Tenth and West streets, and also one in the yard of Dr. Maull, southeast corner of Eighth and West streets, are in full bud. These trees usually put forth their blooms early in April, just before the foliage appears on other trees. The appearance of buds at least three months before the regular time to put forth blooms is unusual in this latitude."

CURRENT EVENTS.

ROBERT BROWNING, the eminent English poet,—regarded as the only living poet comparable in rank to Tennyson,—died at Venice, of acute bronchitis, on the 12th instant. He was born Fifth month 12th, 1812, at Caubervell, a suburb of London, his father being a clerk in the Bank of England. He was educated in London, attending lectures at University College, and then traveled abroad. In 1846 he married Elizabeth Barrett, and they went to Florence to live, remaining there until her death in 1861. After that he made his home chiefly in London. His first work, "Pauline," was written at the age of nineteen, and published in 1833. His last, "Asolando," has just appeared. He leaves one son, Robert Barrett Browning, an artist, whose wife was an American.

THE Legislature of North Dakota has passed a Prohibition bill, and it was signed by the Governor on the 20th inst. It will go into effect Seventh month 1st.

THE "Influenza," which had been prevailing in Europe so extensively, was reported to have reached this country last week, and many cases have been reported in all directions. At Berlin, on the 19th inst., Professor Leyden, lecturing on influenza, dwelt upon the necessity of removing the anxiety and fears of patients as to a harmless malady which seems to be causing the disappearance of more dangerous diseases such as typhoid fever.

DISPATCHES from Brazil indicate that there is considerable agitation in some quarters over the change in the form of government, and apprehension that disturbances may break out. The ex-Emperor, Dom Pedro, and his wife left Lisbon, (where they had been since their departure from Brazil), on the 22d inst., to proceed to Coimbra, (a Portuguese city 135 miles north-east of Lisbon).

HENRY W. GRADY, editor of the *Atlanta (Ga.) Constitution*, and a prominent man in the South, died of typhoid-pneumonia after a very brief illness, on the 23d inst. He was 38 years of age.

AGITATION for the establishment of a republic is exhibited throughout Spain. There is not so much of it in Madrid, but more in the provinces. Those engaged in it are in communication with those of the same views in Portugal. A despatch says that the distinguished political leader and writer, Emilio Castelar, has all in hand and is acting with remarkable moderation and reserve. He approves of political agitation within legal bounds and deprecates violent measures on the part of the Republicans or the Government.

NOTICES.

⊕⊕ The First-day evening meeting, (Green street, Race street, and Girard Avenue combined), will be held at Girard Avenue to-morrow, (29th instant), at 7.30 o'clock, and all next month at Green street.

It is desired that all who can will attend.

⊕⊕ On First-day, 29th, at 3 p. m., a religious meeting at the Home for Aged Colored Persons. Friends particularly invited.

⊕⊕ Matilda J. Underwood, an approved minister of Harveysburg, Ohio, (Miami Monthly Meeting), proposes attending West Philadelphia Meeting on First-day morning next, at 10.30 o'clock.

⊕⊕ Home for Aged and Infirm Colored Persons. Donation Day, Fourth-day, First month 1st, 1890. Addresses and other exercises at 3 p. m. Public are invited.

⊕⊕ Lydia H. Price expects to attend meeting at Frankford, (Philadelphia), on First-day morning next, (29th inst.), at the usual hour, 10.30 o'clock.
